Sublapsarianism.
- OTTLEY (ROBERT LAURENCE), D.D.
Regius Professor of Pastoral Theology, and Canon of Christ Church, Oxford; author of *The Doctrine of the Incarnation* (1895), *Aspects of the Old Testament* (1905), and other works.
Self-culture, Sobriety.
- PATON (LEWIS BAYLES), Ph.D., D.D.
Nettleton Professor of Old Testament Exegesis and Criticism, and Instructor in Assyrian, in Hartford Theological Seminary; formerly Director of the American School of Archaeology in Jerusalem; author of *The Early History of Syria and Palestine*, *Jerusalem in Bible Times*, *The Early Religion of Israel*, 'Esther' in the *International Critical Commentary*.
Sanchuniathon.

PATTON (WALTER MELVILLE), M.A., Ph.D., D.D.
Professor of Biblical Literature and History of Religion, and Director of the Library, Carleton College, Northfield, Minnesota.
Saints and Martyrs (Muhammadan), Shi'ahs.

PEARSON (A. C.), M.A., Litt.D.
Professor of Greek in the University of Liverpool; editor of *Fragments of Sophocles*, Euripides' *Helena*, *Heraclides*, and *Phanissæ*, *Zeno and Cleanthes*: *Fragments*.
Seneca, Styx.

PETRIE (WILLIAM MATTHEW FLINDERS), D.C.L. (Oxon.), LL.D. (Edin. and Aberd.), Litt.D. (Camb.).
Fellow of the Royal Society and of the British Academy; Edwards Professor of Egyptology in the University of London.
Soul-house.

PHILLIPS (DAVID), B.A. (Wales), M.A. (Cantab.).
Professor of the Philosophy and History of Religion in the Theological College, Bala, North Wales.

Self-assertion and Self-subjection, Self-satisfaction.

PHILLPOTTS (BERTHA SURTEES), O.B.E., M.A., Litt.D. (Dublin), F.R.Hist.Soc.
Principal of Westfield College (University of London); Fellow of the Royal Society of Northern Antiquaries (Copenhagen); formerly Librarian of Girton College, Cambridge, and Lady Carlisle Research Fellow of Somerville College, Oxford; author of *Kindred and Clan: A Study in the Sociology of the Teutonic Races* (1913); *The Elder Edda and Ancient Scandinavian Drama* (1920).

Soul (Teutonic).

PINCHES (THEOPHILUS GOLDRIDGE), LL.D. (Glas.), M.R.A.S.
Lecturer in Assyrian at University College, London, and at the Institute of Archaeology, Liverpool; Hon. Member of the Société Asiatique.

Salvation (Assyro-Babylonian).

POUSSIN (LOUIS DE LA VALLÉE), Docteur en philosophie et lettres (Liège), en langues orientales (Louvain).

Professor of sanscrit à l'Université de Gand; Membre de l'Académie royale de Belgique; Hibbert Lecturer (1916); Membre de la R.A.S. et de la Société Asiatique; Membre correspondant de l'Académie impériale de Petrograd; Correspondant de l'Ecole Française d'Extrême-Orient.

Sammitiyas, Sautrantikas, Scepticism (Buddhist).

PRICE (JULIUS JOSEPH), B.A., M.A., Ph.D.
Rabbi, New Jersey; editor of Yemenite MSS of Pesahim, Megilla and Mo'ed Kaṭon.
Shekinah.

PRINCE (JOHN DYNELEY), B.A., Ph.D.
Professor of Semitic Languages in Columbia University, N.Y.; Member of the New Jersey Legislature; Advisory Commissioner on Crime and Dependency for New Jersey; Speaker of New Jersey House; President of New Jersey Senate; Acting-Governor of New Jersey.

Scapegoat (Semitic).

PUNNETT (REGINALD CRUNDALL), M.A., F.R.S.
Arthur Balfour Professor of Genetics in the University of Cambridge; author of *Mendelism*.
Sex.

REES (THOMAS), M.A. (Lond.), B.A. (Oxon.).
Principal and Professor of Theology at the Bala-Bangor Independent College, Bangor, N. Wales; author of *The Holy Spirit in Thought and Experience*, and other works.

Sensationalism.

REID (JAMES SMITH), M.A., LL.D., Litt.D.
Fellow and late Tutor of Gonville and Caius College, Cambridge; Professor of Ancient History in the University of Cambridge; editor of the *Academica* and other works of Cicero; author of *Municipalities of the Roman Empire*.

Sacrilege (Greek and Roman), Sin (Roman), State of the Dead (Greek and Roman).

REVON (MICHEL), LL.D., D.Litt.
Professor of History of the Civilization of the Far East in the University of Paris; formerly Professor of Law in the Imperial University of Tokyo and Legal Adviser to the Japanese Government; author of *Le Shinntoisme*.

Sacrifice (Japanese), Saints and Martyrs (Japanese), Sin (Japanese).

RICE (B. LEWIS), C.I.E.
Formerly Director of Archaeological Researches, Mysore, and Director of Public Instruction in Mysore and Coorg; Hon. Fellow of the University of Madras; author of *Mysore, Bibliotheca Carnatica, Epigraphia Carnatica*.

Smartas.

RICHARD (TIMOTHY), D.D., Litt.D.
Late General Secretary of the Christian Literature Society for China; author of *The New Testament of Higher Buddhism*, and other works.

Sects (Chinese).

RILEY (I. WOODBRIDGE), M.A., Ph.D.
Professor of Philosophy in Vassar College, Poughkeepsie, New York; author of *American Philosophy: the Early Schools*, and other works.

Saints (Latter-Day).

RIVERS (W. H. R.), M.A., M.D., F.R.S., F.R.C.P.
Fellow of St. John's College, Cambridge; President of the Anthropological Section of the British Association, 1911; author of *The Todas, History of Melanesian Society, Kinship and Social Organisation*.

Ships and Boats, Solomon Islands.

ROBINSON (HENRY WHEELER), M.A. (Oxon. and Edin.).
Principal and Professor of Systematic Theology and Hebrew in Regent's Park (Baptist) College, London; author of 'Hebrew Psychology in relation to Pauline Anthropology' in *Mansfield College Essays, The Christian Doctrine of Man, The Religious Ideas of the Old Testament*.

Skin, Soul (Christian).

- ROGERS (ROBERT WILLIAM), M.A., Ph.D., LL.D., S.T.D., Hon. Litt.D. (Dublin).**
Professor in Drew Theological Seminary, Madison, New Jersey; Lecturer in Columbia University Summer Sessions; author of *History of Babylonia and Assyria, Religion of Babylonia and Assyria, Cuneiform Parallels to the Old Testament, The Recovery of the Ancient Orient, History and Literature of the Hebrew People.*
State of the Dead (Babylonian).
- ROSE (HORACE ARTHUR), I.C.S. (retired).**
Superintendent of Ethnography, Panjab, 1901-1906; author of *A Glossary of Punjab Tribes and Castes*, and other works.
Shahids, Sikhs.
- SCHILLER (FERDINAND CANNING SCOTT), M.A., D.Sc. (Oxon.).**
Fellow and Senior Tutor of Corpus Christi College, Oxford; author of *Riddles of the Sphinx* (new ed. 1910), *Humanism* (1903, new ed. 1912), *Studies in Humanism* (1907, 1912), *Plato or Protagoras?* (1908), *Formal Logic* (1912), etc.
Spiritism, Spiritualism.
- SCHMIDT (NATHANIEL), M.A.**
Professor of Semitic Languages and Literatures in Cornell University; sometime Director of the American School of Archaeology in Jerusalem; author of *The Prophet of Nazareth, The Messages of the Poets.*
Sects (Samaritan).
- SELBIE (WILLIAM BOOTHBY), M.A. (Oxon.), Hon. D.D. (Glas.).**
Principal of Mansfield College, Oxford.
Schleiermacher, Subjectivism and Subjectivity.
- SELIGMAN (CHARLES G.), M.D., F.R.S., F.R.C.P.**
Professor of Ethnology in the University of London; President of the Anthropological Section of the British Association, 1915; author of *The Melanesians of British New Guinea*; joint-author of *The Veddas.*
Shilluk.
- SELL (EDWARD), B.D., D.D., M.R.A.S.**
Fellow of the University of Madras; Hon. Canon of St. George's Cathedral, Madras; Secretary of the Church Missionary Society, Madras; author of *The Faith of Islam, The Historical Development of the Qur'an, The Life of Muhammad, The Religious Orders of Islam.*
Salvation (Muslim), Sin (Muslim).
- SHOREY (PAUL), Ph.D., LL.D., Litt.D.**
Professor and Head of the Department of Greek in the University of Chicago; Roosevelt Professor at the University of Berlin, 1913; Member of the American Institute of Arts and Letters; Fellow of the American Academy of Arts and Letters.
Sirens.
- SKINNER (ALANSON BUCK).**
Member of the Scientific Staff of the Museum of the American Indian Heye Foundation; formerly Assistant Curator of the Department of Ethnology of the American Museum of Natural History, New York.
Siouans.
- SMITH (VINCENT ARTHUR), M.A., Litt.D.**
Late of the Indian Civil Service (retired); author of *Asoka in 'Rulers of India,' Early History of India, A History of Fine Art in India and Ceylon, Akbar the Great Mogul, Oxford History of India.*
Sarnath.
- STARBUCK (EDWIN DILLER), Ph.D.**
Professor of Philosophy in the State University of Iowa; author of *The Psychology of Religion.*
Self-expression.

SACRIFICE (Introductory and Primitive).—Sacrifice (Lat. *sacrificium*; *sacer*, 'holy,' and *facere*, 'to make') may be defined generally as a rite in the course of which something is forfeited or destroyed, its object being to establish relations between a source of spiritual strength and one in need of such strength, for the benefit of the latter. This relationship may be one of communion, *i.e.* one by which strength is conceived to be imparted to man (communal type); or, conversely, it may be one whereby a human weakness is held to be withdrawn and neutralized (piacular type). An instance of the first type occurs whenever the victim is consumed in a sacred meal, of the second whenever it is treated as unclean and cast away to beasts of prey.

1. Origin.—It was not until the spirit of historical inquiry had come to pervade the study of religion, during the latter part of the last century, that scientific theories regarding the origin and significance of sacrifice were put forward by anthropologists. Hitherto the institution had been usually regarded as of divine appointment, since from Gn 4³⁻⁵ and He 11⁴ it appears that the divine authority sanctioned Abel's offering, and considered it, by faith, more acceptable than that of Cain. It need not, however, follow on theological grounds that the ordinance is of divine origin because it is said that by faith Abel's offering to Jahweh was a more excellent sacrifice than that of Cain. For the Jahwistic writer treats sacrifice as a natural institution, an instinctive mode of worship, while the Priestly

creation-document ignores the existence of the rite altogether. But such a theory of the origin of sacrifice hardly harmonizes with the present tendency of historical theology or of the science of religions. To-day the divine origin of religious institutions is sought in the ever-developing minds of men rather than in sacred tradition.

(a) *E. B. Tylor*.—As soon as it became apparent that sacrifice involved a natural desire on the part of man to establish a bond between himself and that which he conceived to be sacred, the way was opened for scientific investigation of the rite. *E. B. Tylor* was the first to enter the field with the hypothesis that sacrifice was originally a gift offered to supernatural beings to secure their favour or minimize their hostility. As this purpose gradually became transformed in the mind of the sacrificers, the dominant note became that of homage, which again passed into that of renunciation.¹

Herbert Spencer was of much the same opinion. The origin of sacrifice, he says, is to be found in the custom of leaving food and drink at the graves of the dead, and as the ancestral spirits rose to divine rank the refreshments placed for the dead developed into sacrifices.² Now the conception of sacrifice as a gift to the deity is very wide-spread, especially among people in a relatively advanced state of culture. 'Gifts,' says Hesiod, 'prevail upon gods and reverend kings.' Offerings to

¹ *PC*⁵, London, 1913, ii. 375 f.

² *Principles of Sociology*³, London, 1895, i. 277 ff.

sacred trees, etc., are common in parts of Africa.¹ Sacrificial gifts are often offered to appease the soul of the victim after a successful head-hunting expedition or similar escapade;² and the numerous examples of the oblation of the firstfruits (*q.v.*) come under the same category.³ The Hebrew term for sacrifice (*minhah*, 'gift') is used of both bloody and unbloody offerings, though from the time of Ezekiel (6th cent. B.C.) onwards it became a technical term for cereal offerings (*Gn 4st*, *Lv 2*). To this class too belongs the unction of sacred stones (menhirs, etc.) to the deity in the *massēbhāh* (*q.v.*). Oblations of fruits, etc., were also presented to local *numina* by being deposited within the sacred precincts or thrown into sacred wells. Likewise the holocaust, or whole burnt-offering, that plays so important a part in the sacrificial system of the Priestly narrative in the OT can scarcely be regarded otherwise than as an offering of food—a gift—since it was all assigned to the deity. According to Robertson Smith, this type of sacrifice was evolved from the original sacramental meal by the discontinuance of the use of totemic conceptions, and the recourse to human victims to renew the bond between the worshippers and the worshipped. The eating of human flesh became in time repugnant to the mind of man, and the human victim was therefore offered as a holocaust. In process of time an animal came to be substituted for a human victim, and the whole burnt-offering resulted.⁴ Thus he makes the holocaust a late derivative of an earlier rite in which the eating of flesh and drinking of blood played an important part⁵—a theory largely based on late Arabic practice.

(b) *W. Robertson Smith*.—Robertson Smith's encyclopædia article on 'Sacrifice'⁶ marks a new departure in the history of religion. In his paper on 'Animal Worship and Animal Tribes,' in *The Journal of Philology*,⁷ after discussing the question of totemism on the strength of the evidence furnished by J. F. McLennan in the *Fortnightly Review*,⁸ he proceeded to make totemic cult the basis of sacrifice. In 1889 (two years after J. G. Frazer's encyclopædia article on 'Totemism'⁹ had appeared) he published the well-known lectures on *The Religion of the Semites*, in which, while he again suggested a totemic basis for Semitic religion, he was careful to add:

It is one thing to say that the phenomena of Semitic religion carry us back to totemism, and another thing to say that they are all to be explained from totemism.¹⁰

Nevertheless, he held that the conclusion that the Semites did pass through a totemic stage can be avoided only by supposing them to be an exception to the universal rule. He proceeded to restate his theory in order to overcome the difficulty resulting from his view that the god became identified with the animal or plant kind by the blood-bond—a custom which he now regarded as relatively late. On the new hypothesis he considered the god, the victim, and the totemic group to belong to the same kin. The original totem is female, and therefore descent 'follows the distaff' in primitive society. With the introduction of patrilineal descent the totem became male. Sacrifice in the first instance is, he thinks, a communion established by a bond of kinship.

¹⁰ *Rel. Sem.*² p. 139.

In these lectures he developed his theory of the 'theanthropic' animal, at once god and kinsman, as the originating cause of sacrifice of the communal type.¹ He considered Frazer to have proved the existence of annual totem sacraments involving actual communion in the flesh and blood of the sacred animal.²

This view distinguishes (1) honorific, (2) piacular, and (3) mystical or sacramental offerings. His leading conception is the distinction between the view of sacrifice as a gift to the deity—the worshipper laying upon the altar the offerings of the firstfruits of the harvest as a tribute to the god—and the view that regards it as a sacramental ritualistic act whereby the worshippers pass into actual communion with the god by partaking of food and drink in which the deity is immanent. In the *Religion of the Semites* Robertson Smith appears to confuse the two distinguishable aspects of sacrificial communion—the mystic and the non-mystic. The kinship of man with the divinity celebrated by sharing in a common meal, or in any other non-mystic manner, is by no means the same thing as a sacramental communion in the deeper and truly mystic sense, in which the deity and man enter into vital relationship by the latter partaking of divine food (see artt. COMMUNION WITH DEITY).

In support of his view that an expiatory function may attach to the sharing of animal flesh, Robertson Smith quotes numerous examples (such as the shedding of blood and offering of hair) in which there is no death of a victim and no idea of penal satisfaction given to the deity. In the Hebrew ritual he lays special stress on the *zebbah*, i.e. the ordinary festal sacrifices, vows, and free-will offerings, of which the deity's share was the blood and the fat of the intestines, the rest of the carcass, after payment of certain dues to the priest, being left to the worshipper for a social feast. This he contrasts with the offerings wholly given to the god, likening the distinction to that between animal and vegetable offerings, the latter not being conciliatory. This hypothesis, however, takes no account of the holocaust and the piaculum, expiatory sacrifices in which there is no communal eating. To obviate this difficulty, Robertson Smith propounds the theory of the derivation of these from an earlier rite in which the sacrificial meal played an important part.

(c) *F. B. Jevons*.—Jevons, in his *Introduction to the History of Religion*,³ derives inspiration directly from Robertson Smith's theory, basing his investigations on the assumption that a totemic system was the earliest form of society. He supposes totemism to have originated in a covenant or alliance between a human society and what the savage conceives as an animal clan organized on the same lines as his own. At this stage, he says, 'man imagines all things, animate or inanimate, to think and act and feel like himself.'⁴ But apparently he forgets that the savage, like the child, realizes that some things are not alive. The primitive mind attributes *mana* (*q.v.*) only to those things that act abnormally or that present a strange or uncanny appearance. Jevons then argues that, since savages take up a blood-feud against an animal species, therefore they may establish an alliance with them.⁵ Exactly how this alliance comes thereupon to be reinterpreted as a real flesh and blood union between man and beast is a point over which he passes lightly. Presumably he would say that it was by a natural extension of the initiation rite, whereby a youth is anointed with tribal blood and so becomes infused with a new life which is the common life of the

¹ *Rel. Sem.*² p. 409.

² *Id.* p. 405.

³ London, 1896, p. 96 ff.

⁴ *Id.* p. 92.

⁵ *Id.* p. 100.

clan. In this way the society becomes a religious community, since each initiated member participates in the divine essence of its totem. In due course the animal is advanced to the status of a sort of superman—a hypothetical father of the human group.¹

The blood-covenant established, the rite of sacrifice and the subsequent communion, he supposes, arose as the natural corollary from the savage principle that the blood is the life. The obvious procedure, if the 'real presence' of the totem—the sacred ally of the people—be desired, is to shed its blood. In such a sacrificial rite the essential feature is that the worshipper should partake of the sacred animal so that its supernatural qualities may be absorbed and evil influences expelled.

On this hypothesis the offering of an animal as a gift to a superhuman being is the result of the domestication of animals, the victim, which was originally itself sacred, having degenerated into a mere food animal, now held inferior to a stone hewn into the likeness of a human god, assumed to possess anthropomorphic qualities.² Thus arose the custom of sacrifice to non-totemic deities—the normal manner of approaching any god.³

(d) *Salomon Reinach*.—Reinach, in *Cultes, Mythes, et Religions*,⁴ also professedly adopts the theory of Robertson Smith. With Jevons he thinks that the evolutionary processes which fused the communion type of sacrifice with that of the later sacrifice by gift were agriculture and the domestication of animals, dispelling the mystery surrounding the different forms of plant and animal life. Thus little by little the idea of a divinity hedging certain species of animals faded away, and man began to create the godhead in his own likeness. Yet there remained a tradition of animals sacrificed and eaten by the community. Therefore both sacrifice and banquet were retained in the belief that the god—anthropomorphic now—smelt the blood and inhaled the smoke of the burnt-offering. To provide him with a representative, a priest assisted at the ceremony, until in the end he and his ritual completely dwarfed the part which was played by the body of the faithful, and, while the sacrifice and banquet still survived, their significance was wholly inverted.⁵

(e) *L. Marillier*.—Some anthropologists, however, refuse to regard the theory of totemic sacrifice as primitive. Marillier, e.g., argues that an original bond of union between the god and the kin eliminates the need for sacrificial rites, and therefore makes initiation ceremonies superfluous.⁶ On the other hand, if the common meal was the only bond between the god and the kin, it does not appear that the god is a totem.

(f) *H. Hubert and M. Mauss*.—Hubert and Mauss think that the evidence of Semitic types of sacrifice may be only fragmentary, and in any case there is no proof that they are primitive. They hold that the numerous forms of sacrifice cannot be reduced to 'the unity of a single arbitrarily chosen principle.'⁷ In view of the paucity of accurate accounts of early ritual, they reject the 'genealogical' or evolutionary method, and devote themselves to an analysis of the ancient Hindu and Hebrew sacrificial ritual. Thus they arrive at the following 'definition of type':

'Sacrifice is a religious act, which, by the consecration of a victim, modifies the state of the moral person who performs it, or of certain objects in which this person is interested.'⁸

Like Robertson Smith, they think that sacrifice

establishes a union between the human and the divine. This is effected by the intermediation of a victim destroyed in the rite, and eaten by the worshippers or by the priests. But the victim must be ceremonially prepared for the rite, and freed from tabu after the ceremony has been performed. It must be remembered, however, that the rituals chosen by Hubert and Mauss for analysis are by no means primitive, and therefore can hardly be said to represent fairly the essential nature of sacrifice in the earliest cults of undeveloped peoples.

(g) *E. Westermarck*.—Westermarck takes the view that 'the idea that supernatural beings have human appetites and human wants' led to the practice of sacrificial gifts being offered to them by men. 'If such offerings fail them, they may even suffer want and become feeble and powerless.' Thus 'in early religion the most common motive is undoubtedly a desire to avert evils.'¹ The practice of human sacrifice, according to this writer, is based on the idea of the substitution of a victim for other individuals whose lives are in danger, which in course of time led to the offering of animals instead of men.²

(h) *J. G. Frazer*.—Frazer, in the first edition of *The Golden Bough*, says that the central idea of his essay—'the conception of the slain god'—is derived directly from his friend, Robertson Smith. In the second edition, however, he virtually contradicts this statement, maintaining that he never assented to Robertson Smith's theory. This change of opinion was apparently due to the fact that Frazer, on further investigating the subject in the production of his work *Totemism and Exogamy*, came to lay more stress on the social side of totemism, whereas Robertson Smith throughout emphasized its religious aspect. Furthermore, to follow Robertson Smith meant destroying his newly-formulated stratigraphical distinction between magic and religion. There could not, on this hypothesis, be any sacramentalism, i.e. something religious, in an age of magic. Therefore what on the face of it appears to him to be sacramental communion is for him simply a magical rite. It is difficult to understand how he reconciles this view with the fact that, in the highest and purest form of religion that the world has so far known, sacramental union with the Deity is the essential feature. To avoid deriving the slain god from the sacrifice of totemic animals, or from any operation of vegetation magic, Frazer is forced to find the origin of the rite in the slaying of the king. But, if the slain god is to be identified with the slain king, the king must first be proved divine. Thus he argues that, since kings and chiefs are tabu, they must therefore be sacred, in the sense that they are possessed by a god or a spirit. The numerous examples quoted do not, however, cover the whole field of primitive religion. Moreover, by his own definition of tabu as negative magic,³ he divides sacred things into two classes—those that are divine and those that are not divine. Now kings are divine because they are tabu; and tabu is merely a 'negative magic.' Once more we are faced with the problem of how to derive the religious from the non-religious.

It is somewhat surprising that Frazer should have abandoned his original theory just at the moment when most remarkable evidence in favour of the mystical union between the totem or 'theanthropic' animal and the totemite was forthcoming from Australia, on the authority of Spencer and Gillen.

2. The Australian totemic rites.—By the performance of sacred ceremonies known as *intichiuma*

⁸ *Ib.*

it appears that the Arunta endeavour to secure the multiplication of some particular animal or plant, and actually enter into sacramental relations with the totem. After the performance of *intichiuma* at Emily Gap (a place specially associated with the mythical Alcheringa ancestors and the totems) the witchetty grub is tabu to the members of the totem, and must on no account be eaten by them till it is abundant.¹ The Purula and Kumara classes may eat it at any time, provided it be cooked in camp. After *intichiuma*, when the totem is plentiful, large supplies are gathered, brought into camp, cooked, and stored away in bark vessels called *pitchi*. In due course—at the period analogous to harvest-time among agricultural people—they are taken to the *ungunja*, or men's camp, where all the men assemble. The leader grinds up the contents of the *pitchi* between two stones. Then he and the other men of the totem eat a little and distribute what remains to those who do not belong to the totem. He repeats the operation with a *pitchi* from his own store. The witchetty grub totem may then eat sparingly of the grub.²

Similar rites take place in other totems in Central Australia, differing, of course, in detail, but everywhere made up of the same essential elements.³

Among the Undiara Kangaroo, e.g., when an *intichiuma* ceremony is to be performed, the men proceed to the foot of a hill on the slope of which two blocks of stone project, one above the other. One of these stones is supposed to represent a male, the other a female, kangaroo. The headman of the totem clan and a man who is in the relation of mother's uncle to him climb up to a rocky ledge, supposed to be haunted by the spirits of ancestral kangaroos, and paint it with stripes of red and white to indicate the red fur and white bones of the kangaroo. When this is done, a certain number of young men sit on the top of the ledge, while the men below sing of the increase of the kangaroos. Blood-letting follows. 'The young men open veins in their arms and allow the blood to stream out on to, and over, the edge of the sacred ceremonial stone which represents the spot where a celebrated kangaroo of the Alcheringa went down into the earth, its spirit part remaining in the stone which arose to mark the place.'⁴

After the rite has been duly performed, the young men go and hunt the kangaroo, bringing their spoils back to the camp. Here the old men, with the *alchinja* in the midst, eat a little of the flesh of the animal and anoint with the fat the bodies of those who took part in the *intichiuma*, after which the meat is divided among all the men assembled. The men then decorate themselves with totemic designs, and the night is spent in singing songs relating to the exploits of the Alcheringa men. When this has been done, the animal may be eaten sparingly.⁵

When men of the emu totem desire to perform *intichiuma* ceremonies, several of the men open veins in their arms and allow the blood to stream on the ground till it is saturated. When the serum has coagulated, they trace designs in it in white, yellow, and black, representing the different parts of the body of an emu. Several men of the totem then dress themselves to resemble emus and imitate the manners and customs of the bird. They fasten *churinga* on their heads to represent the neck of the emu, and chant a song to the emu constructed in the blood. They think that this act has the effect of preventing the totem from disappearing, by quickening the embryos of the new generation.⁶

In the Unjiamba or Hakea-flower totem an *intichiuma* ceremony is performed by the men of the Bulthara and Panunga classes at a shallow, oval-shaped pit, by the side of which grows an ancient hakea-tree. In the centre of the depression is a small projecting and much worn block of stone, which is supposed to represent a mass of hakea-flowers. After the pit has been swept and songs sung inviting the tree to flower much and the blossoms to be full of honey, a young man is told to open a vein in his arm and allow the blood to sprinkle on the stone till it is covered. This done, the ceremony is complete. The stone is regarded as a *churinga*, and the spot is forbidden to women, children, and the uninitiated.⁷ In other words, the ceremony has established a blood-bond between the totem and the totemites, and the place of the rite is rendered sacred and therefore tabu.

Spencer and Gillen, in a paper contributed to the *Journal of the Anthropological Institute*, say that for the totemite 'the one essential feature (of

the ceremonies) is the necessity of identifying himself closely with his totem.'¹ That is to say, by opening a vein in his arm upon the kangaroo rocks, or eating the flesh of the sacred animal, or having its fat—a substance which with the Australian ranks equally with the blood as regards potency—rubbed on his body, the totemite establishes a union of a sacramental nature with the totem. True, the present-day native explanation of the ceremonies is that they drive out in all directions the spirits of the kangaroos, etc., and so increase the number of the animals.² But is this the only purpose of the rites? To prevent the totems from vanishing from the land, an alliance, in the nature of a blood-covenant, is made with the animal species by means of a solemn sacrificial meal. The blood rite, therefore, has a twofold efficacy. It is with the communion aspect that we are here concerned. The slain kangaroo closely resembles a sacrificial victim, although it can hardly be described as a 'mediator' between man and the sacred species, exactly in the sense suggested by Robertson Smith in his theory of the 'theanthropic' animal. The *mana* concentrated in the victim (especially in its blood) goes out and gives strength to the communicant, neutralizing his infirmities by drawing them into itself. In this way, rather than as an intermediary between God and man, the totem may be regarded as a victim.

Another difference between the Australian and more advanced forms of sacrifice lies in the fact that the animal in this case is naturally sacred, while ordinarily it acquires this character during the rite. But a mystic sacramental union between the totem and the totemite is none the less established by the *intichiuma* ceremony. A man of the witchetty grub or emu totem believes himself to be a witchetty grub or an emu. In order to keep this quality, he assimilates the flesh of the creature, that he may dwell in the totem and the totem in him. The solemn preparations show with what reverential awe these sacramental meals are regarded by the natives. The fasts, the *churinga*, the totemic decorations, the sacred rocks and designs, all testify to the sacred atmosphere surrounding the mysteries.³ In the blood ceremonies we see exemplified not only the means whereby a blood-covenant is made with the totem, but also the psychological concept that in later cults develops into the sacrificial shedding of the blood of bulls and goats. As the Arunta sprinkle the sacred rocks or the totemic design with blood, so, in the more advanced religions, the priest offers upon the altar the blood of the sacrificial victim (Ex 29¹⁰⁻¹⁴, Lv 9⁸⁻¹¹).

3. The primitive conception of sacrifice.—E. Durkheim maintains that both the essential forms of evolved sacrifice—the act of oblation and the act of communion—are found in germinal form in the *intichiuma* rites. The only difference, he thinks, is that in the later offerings the two acts in the *intichiuma* are parts of one undivided rite, while in the Australian ceremonies they are separated.⁴ But, apart from the evidence of Strehlow that the hymn which is sung at the *intichiuma* of the kangaroo describes the offering of a morsel of kangaroo-fat to make the fat of the kangaroos increase,⁵ the act of oblation can hardly be said to form a part of the Australian totemic rites. Apart from this instance, and from offerings to the dead consisting of stone hatchets, clubs, water, and in modern times matches,⁶ there

is no evidence of gift-sacrifice in Australia. If, as we suggest, the *intichiuma* be regarded as the earliest form of sacrifice, it seems that the rite automatically involves the union of the totem and the totemite through the communication to the latter of the *mana* resident in the former (especially in the blood and its sacred flesh). The effect of this sacramental union is the neutralization or expulsion of the evil in man, by contact (as distinct from contract) with his supernatural ally. It is only when animistic and theistic conceptions arise that offerings of food are made to divine beings to secure their favour or to minimize their hostility. True, the Australian has a very real belief in tribal All-Fathers, but only as remote anthropomorphic beings in need of nothing that man can give. Therefore they are not the recipients of sacrificial gifts. Consequently we contend that, in what R. R. Marett calls the 'pre-animistic' type of religion,¹ the earliest attempts at sacrifice were means whereby the worshippers were placed in physical contact, after a sacramental manner, with their totem. But, it may be asked, do the Australians really represent a truly primitive people? Have they not had countless generations in which to evolve social and religious institutions? In order to answer these not unreasonable objections to a hypothesis founded on evidence from Australia, a brief survey must be made of the archaeological facts which we have at our disposal.

4. Primeval sacrificial rites.—Within recent years numerous paintings and engravings of animals together with other designs have been discovered on the walls of palaeolithic caverns in France and Spain,² having, it is supposed, magico-religious significance. If these caves were not 'pre-historic sanctuaries,'³ why should palaeolithic man draw outlines of animals and fish in the dark recesses of a mountain? Surely, if he were gratifying his æsthetic tastes, he would have chosen a place open to the light of day, where he and his companions might enjoy the fruits of their labours. It therefore seems much more reasonable to regard such caves as Niaux and Gargas as sacred spots where primeval mysteries were duly celebrated, and which had to be approached with solemn and esoteric rites. In the latter rock-shelter curious interlacings and arabesques have been made, either with the fingers or with some pointed instrument, in the gluey clay of the walls and roof of the cave. These have been described as imitations of the scratches left by the claws of the cave-bear, perhaps a totem of these particular Aurignacians.⁴ In support of this view may be mentioned the numerous deep striæ on the walls of the cave of Font-de-Gaume. On the floor of this cavern a great many bones of the cave-bear have been found, as well as striæ corresponding to the rows of claws on the bear's foot, and the red outline drawing of the animal at the end of the gallery. Of course, this is slender evidence upon which to base the assumption that palaeolithic man was given to totemism, but, taken in conjunction with the cave-paintings representing animals and designs similar to the totemic decorations of the Central Australians at Emily Gap, and the incised figures painted over with vermilion on the totemic grave-posts used by the American Indians, it makes it highly probable that these primeval inhabitants of Europe were acquainted with this primitive mode of social and religious organization. Moreover, the dots and bands in red and black ochre with which the pebbles found by E. Piette at Mas d'Azil are

decorated correspond to the designs on the Australian *churinga*, while the so-called *bâtons de commandement* may have played their part in primeval totemic ceremonies.¹ But, even if these palaeolithic paintings had no totemic significance, it can hardly be denied that they were used for magico-religious purposes.

It is well known that the modern savage frequently depicts the image of a creature in order to obtain magical power over the real animal. F. H. Cushing describes the images of totems carved out of stone by the Zuni Indians, with a flint arrow bound to the 'fetiché.'² Likewise among the Ojibwa Indians the medicine-man makes a drawing of the animal to be hunted and paints the heart in vermilion, drawing a line from it to the mouth, along which magic is supposed to pass at his incantation.³ Now, in the pre-historic caverns at Niaux and Font-de-Gaume bisons are represented with arrows painted in their sides, and, in the former, there is a curious design showing a wounded bison surrounded by marks which have been likened to boomerangs. Such drawings are inexplicable except as a means whereby these ancient hunters endeavoured to procure success in the chase.

It has been noticed that among the Central Australians, in order to cause a multiplication of the totem, *intichiuma* ceremonies were held in places in which the sacred animal is symbolically represented on rocks, or, in the case of the emu totem, on the ground. Since palaeolithic man, like his modern representative the Australian, was a hunter, depending on the chase for his subsistence, the conclusion seems inevitable that he too performed sacred ceremonies in the dark recesses of his 'sanctuaries' for the same purpose. Of course, it is not suggested that the totemic cult of modern aborigines is in any way identical with that of primeval man, but, judging from the numerous similarities between the two cultures, the Arunta rites appear to represent the nearest approach to the totemic mysteries celebrated by palaeolithic man at Gargas, Niaux, and similar sites. If this is so, the rudimentary conceptions of sacrifice set forth in *intichiuma* ceremonies formed part of magico-religious cult at least as early as the Aurignacian culture-period in Western Europe.

5. Ideas connected with sacrifice.—(a) *Communism*.—Jevons is of the opinion that 'the core of worship is communion.'⁴ This conception, if it is used in the wide sense of contact, is, as we have seen, the fundamental principle underlying the most rudimentary forms of sacrifice. Wherever totemism is found, a union with the sacred species is effected by physical assimilation of the supernatural qualities of the divine animal or plant. A typical instance is the well-known sacramental eating of the bear among the Ainus.⁵ The Ainus, like many other primitive people, also eat sacramentally the new crops.⁶

In New Caledonia the eating of the first yams of the season is a solemn ceremony in which the women take no part.

Seven or eight yams are dug up with the greatest precaution, wrapped in leaves, and carried before the great wooden images, rudely carved in human form. The yams are then cooked in special pots by boys, and eaten by them. The pots are afterwards buried, and the chief addresses the crowd, praying the images to give them a good crop of yams every year. The new yams are then dressed and eaten.⁷

⁴ *L'Anthropologie*, xxi. [1910] 139, 142; cf. Marett, p. 217.

The inherent tendency, the yearning of the feeble human soul to reach out towards and make itself part of the divine nature, which finds its satisfaction in the Christian Eucharist, is even more clearly set forth in the sacrificial ritual of the native tribes of America. The most notable and instructive example is the custom observed among the Aztecs of sacramentally eating bread as the body of the god Huitzilopochtli or Vitzilpaztli.

In addition to the holding of a feast at which the people ate their god sacramentally in the outward and visible shape of bread and grain,¹ they entered into a closer union by fortifying dough with human blood. A youth was chosen and named for the god. For months the person doomed to play the fatal part of divinity was treated with divine honour, and permitted to taste all the joys of the world to which he was soon to bid farewell. At the expiration of the set time he was slain on the altar and his fresh blood was mixed with dough, which was divided among the worshippers and eaten.² Thus they became partakers of the divine nature.

Savages sometimes seek to enter into communion with the dead by eating part of the body of the deceased or by holding a feast as part of the funeral rites. Sometimes the flesh provided at the banquets is that of the dead man himself, as in the case of the Dieri.³ More frequently animal victims, whose blood and soul the dead man has consumed, are slain and their flesh is eaten by the survivors to establish a sacramental union with the deceased. The Nicobar Islanders hold a feast at the grave 'in the presence of the dead' after a funeral,⁴ and in Melanesia the chief mourner takes a piece of fowl and of yam and calls the names of those who have recently died in the place saying, 'This is for you.'⁵

Robertson Smith explains the mutilation of the bodies or garments of the living as constituting a bond of union between them and the dead.⁶ It seems reasonable to suppose that by causing their blood to flow over the corpse or grave a 'covenant in blood' is established; conversely, other primitive people daub themselves with the blood, etc., of their kinsman, and thus incorporate in themselves a portion of the dead. For the same reason bones, hands, locks of hair, and the like are retained by survivors. Likewise, savages often endeavour to form a covenant with their dead enemies by establishing a blood-brotherhood with them.

Thus, 'when an Arawak Indian of British Guiana has murdered another, he repairs on the third night to the grave of his victim, and pressing a pointed stick through the corpse he licks off and swallows any blood that he finds adhering to the stick.'⁷ If this were not done, it is believed that the murderer would go mad and die.

Sometimes it is thought sufficient merely to anoint the communicant with the blood or oil exuded from the body of the deceased.⁸

Parallel with these rites is another mourning rite—that of cutting or tearing the hair and burying it with the body or dedicating it at the grave. In the case of certain tribes in Central Australia the hair is burnt instead of dedicated.⁹ The object of these rites, as with the blood ceremonies, is seemingly to form a bond of union with the dead, so as to prevent his inflicting any harm on the survivors. It may be that hair is thrown on the corpse for the same reason.

(b) *Conciliation*.—Although the most common motive in early conceptions of sacrifice is undoubtedly a desire to enter into sacramental relations with a source of spiritual strength, and thereby to obtain *mana*, yet the wish to avert,

neutralize, or expel evil is by no means an uncommon source of sacrificial offerings among primitive people. The savage is very susceptible to apprehensions of danger from supernatural powers, and, although there is no proof that fear was the cause of the earliest attempts at sacrifice, yet in the course of the development of the rite, the idea of 'conciliation' soon arose. Thus the 'piacular,' or propitiatory, offering of an atoning nature came into force. The 'gods' were thought to be displeased with men, and in consequence a sacrifice had to be offered to avert their supposed anger or indignation. In very primitive cult offerings were made to anything that was considered to be dangerous—rocks, glaciers, earthquakes, diseases, death, and so forth, or even curiously shaped stones, fish, animals, trees, etc.¹ In S.E. Australia, when a man of another clan entered a certain tract of country, he had to propitiate the local spirits by performing such rites.² On building or entering a new house or canoe, starting on a war or trade expedition, and, as has been seen, at the time of sowing or reaping the new crops, sacrifices were made to bring 'luck' and the 'blessing of heaven' on the venture. Parallel to these rites is the offering of the first-born of man and beast.³ When sin is regarded as contagious and capable of transmission, a sacrificial victim is used as a scapegoat.⁴ Such a vicarious sacrifice, however, is expiatory only in the sense that the death of the victim expiates the guilt of the actual offender.

(c) *Honorific offerings*.—Another aspect of more developed sacrifice is the free-will offering in grateful recognition of the goodness and beneficence of the deity. Although the desire of primitive man to show his thankfulness to the higher powers is secondary to the communal and piacular conception, it is by no means unknown in early cult. The offerings of firstfruits and many other gift-sacrifices conceived of as an honorarium rather than a bribe come under this division.

¹ When certain natives of Eastern Central Africa, after they have prayed for a successful hunting expedition, return home laden with venison and ivory, they know that they are indebted to "their old relative" for their good fortune, and give him a thank-offering.⁵

The 'eucharistic' conception of sacrifice—i.e. one free from the desire to secure material benefits in the future (cf. Gn 28^{20c})—is seldom found in really primitive cult.

In the higher religions the ethical notions of self-sacrifice and the oblation of a contrite heart develop conceptions involving intelligent self-unification with God through prayer, penitence, and abstinence. Such ideas, however, are entirely absent from primitive cult. In the rudimentary form of the rite the communion-theory is adequate to cover most of the facts if it be construed on liberal lines, remembering that the primitive mind is more concerned with getting into contact with his supernatural ally than in entering into elaborate and solemn contracts with him. What he needs is *mana* both to join himself on to his source of strength and to neutralize and expel the evil in and about him. The *intichiuma* rite is a means of attaining this end, since the *mana* concentrated in the victim goes out and gives strength to the communicant, drawing into itself his infirmities. With the rise of animistic and theistic beliefs,

gifts, honorific offerings, and the whole complex system of developed sacrificial ritual are gradually added to the original rite.

LITERATURE.—Sources are cited in the footnotes.

E. O. JAMES.

SACRIFICE (Buddhist).—The attitude of Buddhism towards every kind of external sacrificial ritual was one of uncompromising dissent. It judged such ritual (1) to be the futile expression of misdirected outlay and effort, and (2) in some of its forms to involve cruelty. And (3) the kind of benefits hoped for from the rites was not sufficiently, as we should say, spiritual. References to this opposition, however, are far to seek in its ancient literature, and we are tempted to infer that such sacrificial feasts as involved the taking of life or much elaborate ceremonial were not of periodical occurrence, and indeed were rare events. It is only in the tending of a consecrated fire, and in oblations made through that fire, not apparently to the deceased Vedic god Agni, but to 'great Brahmā,' that any continuity of sacrificial observance appears. Had sacrifices of animals been of frequent occurrence, it is probable that the canonical accounts of the Buddha's deeds and words would have contained more frequent records of protest publicly made. As it is, no such public protest is to be found in any of these books. There does not in fact appear to have been any sacrificial ceremonial made at stated intervals by a hierarchy acting for the people and for the people's welfare. Such sacrificial ceremonies could be arranged by the powerful and wealthy, but they were held on behalf of some individual, and not by or for the community. Thus the king of Kosala, the Pasenadi, is recorded as commanding a great animal sacrifice, explained in the commentary as advised by his chaplains to avert personal evil threatened in a dream.¹ The *setthi*, or leading millionaire merchant of Rājagaha, was supposed, on one occasion, by his brother-in-law, Anāthapindikā, to be preparing 'a great sacrifice,' so absorbed did he appear to his visitor.² In the *Kūṭadanta Suttanta* an eminent Brāhman abbot is represented as preparing a great animal sacrifice, concerning the complicated procedure of which he consults the Buddha's wisdom.³ This, as the translator points out, is a deliberate fiction full of ironical humour, since to ask such advice is 'the last thing a Brahmin of position would do.'⁴ Other allusions to 'great sacrifices' (*mahā yaññā*) may be found in the *Jātaka* stories, and are of course no less deliberate fictions,⁵ especially the story of the king consenting to sacrifice all his family.⁶ It is only on the occasion of the king of Kosala's great sacrifice just mentioned that we meet with any expressly uttered protest against such a ceremony. Even here the protest is made, not to king or people, but to the disciples who bring the news to the *vihāra* (or grove 'settlement'). It is only in the commentary, and in that of the *Jātaka*,⁷ that we read of the utterance being promptly reported to the king and of his countermanding the ceremony. And the terms of the protest are so general as to suggest with some force that verses and *sutta* were a piece of ancient editorial work carried out with very scanty material. They may be found in the writer's translation of *Samyutta*, i.⁸ The verses ran thus:

'The sacrifices called the Horse, the Man,
The Peg-thrown Site, the Drink of Victory,
The Bolts Withdrawn, and all the mighty fuss :—
These are not rites that bring a rich result.

Where divers goats and sheep and kine are slain,
Never to such a rite as that repair
The noble seers who walk the perfect way.
But rites where is no slaughter nor no fuss,
Are offerings meet, bequests perpetual,
Where never goats and sheep and kine are slain.
To such a sacrifice as this repair
The noble seers who walk the perfect way.
These are the rites entailing great results.
These to the celebrant are blest, not cursed.
Th' oblation runneth o'er; the gods are pleased.'

This is not so much a reasoned argument against such rites as a categorical impeachment of 'much ado about nothing,' of ineffective activity, coupled with an implicit contempt for acts and beliefs that could no longer appeal to men of lofty mind. Herein, as Rhys Davids writes, the early Buddhists evidently took up and carried on to complete victory the growing feeling of intelligence and humaneness to which the seal is set in that Rock Edict of King Asoka which begins: 'No animal may be slaughtered for sacrifice.'

'Isolated instances of such sacrifices are known even down to the Muhammadan invasion. But the battle was really won by the Buddhists and their allies,' especially, as is probable, by the Nigayṭhas or Jains, with their central tenet of *ahiṃsā*, or 'non-injury.' And the combined ridicule and earnestness of the *Kūṭadanta Suttanta* will have had its share in bringing about the victory.'¹

The sacrifice stories, moreover, in the *Jātakas*, especially the extraordinarily outspoken sarcasm of Bhūridatta's verses, in the *Jātaka* of that name,² will have helped later to consummate that victory, appealing, as they must have done, to popular audiences who, instead of rising in shocked wrath to stone a blaspheming narrator, sat and listened with the amused appreciation of the enfranchised.

More pointed than the above-cited protest is the rebuke against the futility of oblation by fire, which is put, with felicitous irony, into the mouth not of a teacher, but of the divine object himself. It occurs in the same book.³ A Brāhmanee, whose son is a perverter—in other words, a young *arahant* in the Buddha's order—is a habitual sacrificer to Brahmā. Her son approaches her house on his round for alms. Brahmā appears to her and utters a eulogy of the son as the more fitting recipient of the food which she is wasting:

'Far hence, O brahminee, is Brahmā's world,
To whom thou servest offerings away.
And Brahmā feedeth not on food like that.
What babblest thou unwitting of the way,
O brahminee, unto the Brahmā world?
Lo here! this Brahmadeva, son of thine,
A man who ne'er will see another world,
A man who past the gods hath won his way;

Meet for oblations from both gods and men,

Let him enjoy the choice meats thou hast served.'

Our second point, that in the 'great sacrifice' the slaughter of life was reprehensible, appears, in the *Suttas*, in the doctrine of the four classes of individuals—those, namely, who (1) torment themselves, (2) torment others, (3) torment both self and others, (4) torment neither. Of these the first practise austerities; the second include butchers, trappers, fishermen, brigands, etc.; the third include kings or mighty priests who, on some such occasion as the opening of a new mote-hall, hold a sacrifice with great ritual, with the slaughter of many cattle, goats, and rams, with wood-cutting and grass-strewing, and with much bullying and hustling of servants and slaves, working in fear of chastisement.⁴ This point as to cruelty is much more eloquently expressed in the *Bhūridatta*,⁵ in the address uttered by the *bodhisatta* (Buddha-to-be) on the futility of sacrifices practised by Brāh-

quinquennially or otherwise, seem distinctly to have had a religious sanction, and to have then been regarded as piacular. It is, however, worth considering whether the practice of ridding society of superfluous members may not have been, in its origin, independent of religious considerations, and based rather upon the co-operation of instincts of antipathy to the unfit with a state of economic pressure. The religious sanction and interpretation of the practice may well be later than the practice itself, and it is not improbable that religious and ethical development helped to mitigate the custom and to lead to the substitution of animal for human victims. It is clear from the testimony of ancient writers that the Celts of antiquity were characterized by two well-marked traits: (1) a remarkable indifference to human life in themselves and in others, and (2) an intense and scrupulous regard for religious observance.¹ With their indifference to life was closely connected their belief in its duration after death. Under the conditions of Celtic life, children must have grown up with a most vivid sense of the uncertainty of existence. Fathers, according to Cæsar,² had the power of life and death over their own wives and children, and the practice of sons not appearing in their father's presence³ until they reached manhood may have originated in a judicious concealment by the mothers of the boys from the sight of their fathers, lest the head of the household should decide to reduce the number of his children. In battle, too, it was considered improper for the attendants of a chieftain to survive him, and the institution of the *soldurii*⁴ probably constitutes, on the highest plane in the Celtic community, a practice of non-survival on the part of dependents which was originally doubtless more compulsory than voluntary. The wanderings of the Celts in antiquity speak of intense economic pressure; and, in times of famine, or in districts where the supply of food was inadequate, it is in the highest degree probable that the stronger elements in the community would not hesitate to eliminate the weaker or those whose continued existence increased rather than lessened the burden of the community. It was probably this economic pressure, combined with the idea that the dead had the same wants as the living, that caused the wives and servants of a dead man to accept death voluntarily on his decease, or the attendants of a king to be willing not to survive him. When brought face to face with sheer necessity and economic conditions which threaten society with extinction, human nature, in its crude state, is capable of great harshness in order to ensure its own preservation; and the human sacrifices of the Celts, as well as of other races, probably owe their origin to economic rather than religious ideas. The strain of living had probably much to do with the proverbial ferocity of the ancient Celts. In normal times it is not improbable that the better placed Celts came, by adjustment to their environment, to be relieved from the continuous necessity of weeding out the com-

munity; but times of abnormal stress would arise, and recourse would be had to the ancient practice of eliminating the unfit, and its employment would probably now take a double form. On the one hand, it might be adopted as a measure partly of economic, partly of religious, necessity in the actual period of exceptional stress, or it might be adopted in anticipation of a threatened calamity. Its character as a solemn and deliberate act of the whole community, in relation to events which were beyond man's control, would ensure its interpretation in current religious terms. In course of time some effort would be made to bring the practice into relation also to the needs of primitive jurisprudence, and, as Cæsar¹ states was the case in Gaul, the victims offered would, as far as possible, be those who deserved punishment for their conduct. As in all ancient customs, there would be a tendency to continue human sacrifice, especially when the idea of the necessity of appeasing angered gods and of restoring communion with them had become firmly implanted in the mind of the community; but the relief of economic pressure, through the improvement of tillage and the like, would in most cases tend to humaner practices. There would ensue, e.g., a reduction in the number of victims, and a substitution for human victims of animals, while the sacrifice would tend to change its character, from being viewed as an act of expiation or atonement to becoming mainly a remedial or medicinal rite. Thus, a practice which originally arose in the main from a real or supposed economic necessity might, at different stages in its history, receive a different interpretation. The interpretation need not necessarily be religious, but at a certain stage the practice in question and the domain of religious thought would be so closely connected that a practice of remote and non-religious origin would receive a religious interpretation, just as at a still later stage its interpretation as a charm might be purely remedial or medicinal.

The idea that the gods were specially in need of human victims before they could be appeased could have arisen only in the days of a belief in humanized deities, while there is abundant evidence from the names of Celtic deities that they were originally far from being exclusively or mainly human. The practice of human sacrifice belongs, as its wide-spread traces show, to a far deeper layer of mankind's history than the development of anthropomorphic deities; and the conclusion appears inevitable that the practice existed long before its explanation as a piacular sacrifice, whether private or public, especially pleasing to anthropomorphic deities, could have arisen.

Among the Celts, as among other races, the practice in question would appear to have become associated with certain periods of the year and with certain agricultural operations. The association of the form of sacrificial death with a tree, or with thorns, or with wicker-work images, appears to point to its connexion at an earlier epoch in its history with some of the main events of the agricultural year. And economic stress in the case of man, as in the case of cattle, would be more acutely felt at certain periods than at others, and might then lead to drastic action. Certain times of the year, too, more than others, would make clear who were the worthless members of the community. Hindrances to vegetable growth would suggest the desirability of promoting it by a clearance of such human elements as were deemed likely to check it. The Celtic year began in the beginning of November, while its second half began in the beginning of May; and, as these periods became more and more fixed, the clearances, by burning and otherwise, which took place in them might include some human elements. The Beltane fires, which continued in Scotland well into the 18th cent., clearly suggest in some of their features² that originally they included the burning of human victims.

3. General survivals in folk-custom and folklore.—Through the diligent researches of members

¹ As shown by the statement of Diodorus (v. 27) that, in spite of the fondness of the Celts for money, gold could be left unguarded among the inland Celts in temples and on consecrated ground without the slightest risk of its being touched. Cæsar (vi. 16) bears witness to the intense hold which religious scruple had upon the Celts, and the allusions to the practice of consulting soothsayers and others as to the future, even in early Christian centuries, show the strength of their old beliefs. See A. Holder, *Altcelt. Sprachschatz*, Leipzig, 1891-1913, s.v. 'Caragus.'

³ *Ib.* vi. 18.

⁴ Mentioned in Nicolaus Damasc. *Hist. frag.* 86, p. 79 D, in Athenæus, vi. 54, p. 249 A-B. Here they are called σιλοδοῦροι, and an instance is given of 600 men who, in return for the privilege of ruling with their king and wearing the same raiment, vowed to die with him, whether he fell in battle or was carried off by disease, and no one was known to have broken the vow. Cæsar (iii. 22) calls them *soldurii*.

of the Folk-Lore Society and others into the folklore of Celtic countries various traces of sacrifices have been discovered which bear the impress of the stage when such sacrifices were interpreted through conceptions of expiation and atonement and through the closely allied conception of purification.

Rhys¹ mentions a tradition at St. John's in the Isle of Man that witches were at one time punished by being set to roll down the steep side of the mountain in spiked barrels. He also tells² of the burning of a calf by a farmer to secure luck after he had lost a number of his cattle. The same author quotes R. N. Worth's *History of Devonshire* (London, 1886) as saying: 'Living animals have been burnt alive in sacrifice within memory to avert the loss of other stock. The burial of three puppies "brandise-wise" in a field is supposed to rid it of weeds.'³ He also records⁴ an account given by an old woman of the burning of a sheep in Andreas parish in the Isle of Man on Old May-day, but he was not satisfied that the narrator heard the burning spoken of, when it occurred, as a sacrifice. We are told again⁵ of a cattle-dealer in Ireland who was familiar with the practice of driving cattle through fire or between fires on May-day. Cormac is quoted⁶ as explaining that 'Beltaine (May-day) was so called from the "lucky fire" or the "two fires" which the druids of Erin used to make on that day with great incantations.' It is significant that Cormac makes no reference to sacrifice either of sheep or of human beings. In the old Welsh poem called the *Gododin* there is a reference to the lowering of a sacrifice upon a bonfire, 'Aberth am goelcerth a dsoynynn.'⁷ In *FL* vi. [1895] 164 an account is given by John Abercromby (on the authority of a MS by Malcolm MacPhail, formerly schoolmaster in Lewis and afterwards Free Church minister in Argyllshire) of the practice of 'sacrifice to procure good fishing.' This practice of sacrificing a sheep or goat at the commencement of the herring-fishing season was employed on the west side of Lewis. The oldest fisherman in the district was selected to perform the ceremony on the very edge of the sea, 'so that any of the blood that might be spilt would fall into the water.' The blood of the animal was collected with scrupulous care in a boat's bailer. When the blood had ceased to flow, the old fisherman waded into the water and poured it out to the ruler of the deep. The body of the victim was cut up into portions sufficient to give one to each of the paupers of the district. This ceremony appears to have been performed once with due solemnity within the last ninety years. There is an account (p. 165) from the same MacPhail MS of an invocation and offering to Shoni (or Sonidh) for sea-ware (i.e. sea-weed), with which it was the custom to manure the fields. The offering on this occasion took the form, not of the sacrifice of a living creature, but of a libation of malt liquor. There is also a description of this practice by M. Martin.⁸ In *FL* vi. 167⁹ there is an account of the sacrifice of a black cock to cure epilepsy. The black cock had to be one hatched in March, and was 'buried alive, with clippings of the patient's hair and nails, at the very spot where the sufferer had had his first attack.' The same article contains an account of the sacrifice of a black cock on account of disease in cattle. About ninety years ago, according to the same article, a black sheep was flayed alive, and the skin, while still warm, was placed over the diseased limbs of a person suffering from rheumatism, with a view to their cure. About the same period, too,¹⁰ it was the practice, on the first night when cattle were brought home and housed for the winter, to carry fire around them three times in the direction of the sun. Whether this was a vestige of any sacrificial practice it is difficult to say. In *FL* ii. [1891] 20 there is an account of a vestige of sacrifice at Whitsuntide in the parish of King's Teignton, Devonshire, where a lamb was killed and roasted whole in the middle of the village, for the purpose, it is said, of obtaining water. The lamb was decorated with garlands, and the roasted flesh was given to the poor. The same article speaks of the similar roasting of a whole ram lamb at Holne, on one of the spurs of Dartmoor, in a field called 'the Ploy Field,' in the centre of which is a *menhir* 8 or 7 ft. high. In *FL* iv. [1893] 493 ff., in a valuable article on the sanctuary of Mourie, there is a quotation from the records of the Presbytery of Dingwall for 5th Sept. 1656, referring to the 'abominable and heathenish practices of the people of 'Appilcross,' who used to sacrifice bulls at a certain time on 25th August. It was decided 'that quhosoever shall be found to commit such abominations, especiallie Sacrifices of any kynd, or at any time, shall publicly appear and be rebuked.' There is a similar reference in another minute of 9th Sept. 1656 to 'the sacrificing of beasts' at Gairloch as well as to the 'pouring of milk upon hills as oblations.' In *FL* x. [1899] 118 there is an account by Leland L. Duncan of the survival in Ireland of the sacrifice at the building of a house at Kiltubbrid, Co. Leitrim. When the ground for the house had been measured out, a sod was turned at each of the four corners.

The four sods would be left for two or three nights to see if the house were on a fairy 'walk,' in which case they would surely be found replaced, and another site would have to be found. If nothing occurred, a hen or some small animal would be killed, and the blood allowed to drip into the four holes, after which the building of the house might proceed. According to N. W. Thomas,¹ there was a custom in Wales at the end of the 18th cent.² of throwing a victim down a precipice, whenever a murrain broke out among the cattle.

Frazer³ refers to the practice of burning, at Lesneven in Lower Brittany on Ash Wednesday, a straw man covered with rags, after he had been promenaded round the town. This practice is strikingly similar to that at Massilia (whether Greek or Celtic) mentioned by Servius (see art. COMMUNION WITH DEITY [Celtic], 3). With this custom Frazer compares the English practice of burning Jack o' Lent. In *GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 322 f., there is a reference to an ancient rite of sacrifice that occurred in the Highlands of Scotland and in St. Kilda, described by John Ramsay, laird of Ochertyre.⁴ Here, however, there may be rather a vestige of totemistic communion, as in the passage quoted in C. Elton, *Origins of English History*², London, 1890, p. 411. In the case of the later vestiges of sacrifice the interpretation given when the sacrifice is medicinal is that of transference of the evil from the sufferer to another living creature. In *GB*³, pt. vi., *The Scapegoat*, London, 1913, p. 62, there is an interesting account of a practice, once in existence in the village of Llandegla in Denbighshire, where a fowl of the same sex as the sufferer was used to heal the falling sickness, by having the disease transferred to it. As late as 1855⁵ the old parish clerk of Llandegla remembered the practice.

4. *Survivals at bonfires.*—Perhaps the clearest traces of sacrifices, which were doubtless at one time represented as piacular, are to be found in the case of the Beltane fires of Scotland and Ireland, and of the bonfires of other Celtic countries. The fullest description of the Scottish bonfires is that given by Ramsay of Ochertyre, the patron of Burns and the friend of Sir Walter Scott. A selection of his voluminous MSS has been published in *Scotland and Scotsmen of the Eighteenth Century*. In *GB*³, pt. vii., *Balder the Beautiful*, i. 147 ff., there are quotations from this work that give an excellent account of the Beltane fires, which appear to have marked the commencement of the second half of the Celtic year in the beginning of May. There are traces in these of the ceremony of choosing a victim on behalf of the community, and also of the ceremony of burning human and animal victims for the public benefit. The choosing of a victim was probably the original object of the Beltane cake, which was divided into a number of pieces and distributed among the company. There was, however, one particular piece the obtaining of which gave the person to whose lot it fell the name of *cailleach beal-tine*, 'the Beltane carline,' a term of great reproach (i. 148). When this person was known, part of the company took hold of him and pretended to put him into the fire, but, through the interposition of the majority, he was rescued. In some places the person in question was laid flat on the ground, and there was then a pretence of quartering him. Afterwards the person so treated was pelted with egg-shells, and bore his opprobrious name for a whole year, during which time it was the custom to regard him as no longer living. In the parish of Callander the Beltane customs were in vogue towards the end of the 18th century (i. 150). There, again, a portion of the cake was marked out from the rest, being blackened with charcoal. The person who drew it was regarded as the devoted person, and had to leap three times through the flames.⁶

In some countries, as in Brittany, the chief bonfires were lit at the summer solstice, and somewhat similar customs prevailed there; e.g., in Upper Brittany people leap over the glowing

embers of the bonfires.¹ 'In many parishes of Brittany the priest used to go in procession with the crucifix and kindle the bonfire with his own hands; and farmers were wont to drive their flocks and herds through the fire, in order to preserve them from sickness till midsummer of the following year.'² There is a reference³ to bonfires in Ireland in 1782, in which it is said that the people danced round the fires, and, at the close, went through the fire, and the whole was conducted with religious solemnity. In *FLR* iv. [1881] 97 there is a statement by G. H. Kinahan that, in Munster and Connaught, it is said that a bone must always be burnt in the fire.

There are also some traces of sacrifice in the case of the Hallowe'en (31st Oct.) bonfires of Scotland, which were most common in the Perthshire Highlands. The Hallowe'en fires are described by Ramsay.⁴

James Robertson⁵ speaks of the practice of carefully collecting the ashes into the form of a circle, and putting in a stone, 'near the circumference, for every person of the several families interested in the bonfire. Next morning, if any of these stones was found to be displaced or injured, the people made sure that the person represented by it was *sey* or devoted, and that he could not live twelve months from that day.' Frazer⁶ states that, in the case of the Hallowe'en fires in some districts of the north-east of Scotland, such as Buchan, each of the youths present at the bonfire would lay himself on the ground as near to the fire as he could without being burnt, and, while so lying, would allow the smoke to roll over him. The others ran through the smoke and leapt over their prostrate companion. According to a MS of the traveller Thomas Pennant,⁷ it was the custom in N. Wales for each person present at the Coel Certh, or bonfire kindled on All Saints' Eve, to throw a marked white stone into the fire and for these stones to be examined next morning. If any person's stone was missing, he was regarded as doomed to die before he saw another All Saints' Eve. Rhys⁸ refers to the Welsh superstition which held that the *Hwch ddu gwyn* ('the short black sow') would take the man who was hindmost of those who ran away after throwing their stones into the fire.

5. Sacrifice and substitution.—In view of the foregoing accounts it appears probable that, in Celtic as in other countries, ideas of expiation and atonement once played their part in religious thought, but certain of the harsher practices of the Celts, such as human sacrifices, probably did not originate from these ideas, but were older and came to be interpreted through them, and it may well be that the ideas of expiation and atonement were helpful in diminishing the number of victims, and in gradually changing their character, through the development of the idea of the substitution of one type of victim for another. The real motive for the human sacrifices was probably, in the main, real or supposed economic pressure, and there are some traces in folk-lore of such a practice as the dispatch of an aged parent by his able-bodied son.

Cf. art. by G. L. Gomme, in *FL* i. [1890] 197 ff., containing the outline of 'A Highland Folk-tale,' collected by J. F. Campbell, after the publication of his *Popular Tales of the West Highlands* (Glasgow, 1882). John Aubrey also refers to an old custom of 'the holy mawle, which (they fanc) was such dore, which, when the father was seaventy, the sonne might fetch to knock his father in the head, as effate, & of no more use.'⁹

It may well be, too, that the human clearances from which human sacrifices may have originated were not at first regular institutions, but, like wars, arose when necessity seemed to require. Among the ancient Celts and races similarly situated the risk of a death by violence, whether in war or otherwise, was probably viewed with as little normal perturbation as the risk of death through illness, and the possibility of having to die when an occasion for human sacrifice arose was accepted as a matter of course. All the writers of antiquity who speak of the Celts refer to their remarkable fearlessness and indifference to death. Much of the ferocity which ancient writers attribute to them was probably also due to the high

tension produced by the strain of living and by preoccupation with the constant problem of procuring food for their vigorous and prolific communities.

See also artt. COMMUNION WITH DEITY (Celtic), 4, CELTS, xiii. 2, and SIN-EATING.

LITERATURE.—This has been sufficiently indicated in the course of the article. E. ANWYL.

6. Human sacrifice among the Irish Celts.—The existence of human sacrifice among the Irish Celts has been denied by E. O'Curry and P. W. Joyce.¹ But, as O'Curry's editor, W. K. Sullivan, says—

'As the Gauls, Germans, and Slavonians practised human sacrifice, it is very improbable that the Irish had not a custom which seems to have been universal among all the other European branches of the Aryans.'²

The practice certainly existed among the British Celts down to A.D. 77,³ and among the Gauls, the latter of whom were rather more civilized than the Goidels of Ireland. Hence there seems no good reason for this denial, especially as the evidence of certain passages in the Irish MSS points to it. This is the more remarkable as pagan rites are apt to be glossed over by the Christian scribes who handed down or recomposed the tales and myths of an earlier age. In the cult of Cromm Cruaich the Irish are said to have given a third of their healthy issue for the milk and corn which they asked of the god.⁴ The *Dindsenchas* also says that 'the firstlings of every issue and the chief scions of every clan' were offered to this god.⁵ Joyce compares the *Dindsenchas* notice of the custom with the mythical tales contained in it, and says that the one is as incredible as the other, forgetting that the myths were credible to the pagan Irish. The archaic evidences of ritual in the *Dindsenchas* may certainly be regarded as credible. An exaggerated memory of human sacrifice either among the Celts or among a pre-Celtic people in Ireland is found in the mythico-historic account of the peopling of the land. To the Fomorians—a group of gods who may have been evil divinities of the Celts, or perhaps the gods of the aborigines regarded by the incoming Celts as hostile to themselves—the Nemedians are said to have given in tribute two-thirds of their children born throughout the year and two-thirds of the year's supply of milk and corn.⁶ The Fomorians are here regarded as an actual race; but there is no doubt that they were supernatural beings, and that tribute here means sacrifice, exaggerated though it may be. St. Patrick is said to have preached against 'the slaying of milch cows and yoke oxen and the burning of the first-born progeny' at the fair of Tailte.⁷ 'First-born progeny' may here refer to children.

Human sacrifices to remove plague—the equivalent of the Gaulish sacrifice for health mentioned by Cæsar—are mentioned in the metrical *Dindsenchas*.

¹ During the Trena of Tailte, at sunrise
I twice invoked Mac Erc
The three plagues to remove
From Erin, though it be a woman's command.
Their hostages were brought out;
The drowning of the bonds of the violated treaties,
Immolating the son of Aedh Slane
To Mac Erc—it was not a cause of shame.'⁸

Through the obscurity of these lines may be discerned a memory of sacrifice, the offering of

hostages and of a captive prince to dispel blight and disease. Myth also refers to the necessary offering of the son of a sinless couple and the sprinkling of his blood on the doorposts and over the land of Tara during a time of blight, caused by the marriage of Conn, king of Erin, to Becuma, a goddess banished from the gods' land because of her sin with the son of the god Manannan. The son of the sinless couple was the son of a queen of the divine land. But, when he was about to be slain, his mother appeared with a cow and recommended that it should be slain in his stead.¹ The memory of human sacrifice and of its commutation for an animal offering is obvious here, in spite of its being enshrined in this curious mythical story.

Traditions of the human foundation sacrifice² are also found among both the Irish and the British Celts. In one case the legend has become attached to the account of the founding of the monastery of Iona, but must first have been told in some other connexion.

St. Columba is reported to have said to his monks: 'It is good for us that our roots should go under the earth here; it is permitted that one of you should go under the clay of this island to hallow it.' St. Oran agreed to do this, and the church was built over the grave. As a reward he went straight to heaven.³ Perhaps the story was connected with Oran because he was the first to be buried in the churchyard which still bears his name. But it is evident that memory of the old pagan rite suggested that it must have been used at the founding of Columba's monastery. This is clear, because in another version a different reason is given for Oran's death. He was buried alive as a judgment and through Columba's curse because after a visit to the other world he denied the current beliefs about it.⁴

The ritual aspect of the foundation sacrifice is more evident in the story of the building of Vortigern's castle on Snowdon, told by Nennius. The building materials disappeared as soon as they were brought together. Vortigern's 'wise men' (probably druids) informed him that he must find a child born without a father and put him to death, sprinkling with his blood the ground where the castle was to stand.⁵ The child Embreis or Ambrose escaped by showing the real cause of the trouble; in Geoffrey's *History* he is Merlin, of Arthurian fame. The foundation of the palace of Emain Macha was also laid with a human victim, as was that of a stone fort mentioned in the *Book of Lecan*, under which 'groaning hostages' were enclosed.⁶ Similar legends are attached to many buildings all over the Celtic area.

For the sacrifice of human victims at funerals see art. CELTS, vol. iii. p. 302b.

J. A. MACCULLOCH.

SACRIFICE (Greek).—I. Theistic significance of the rite.—In order to obtain a clear understanding and definition of sacrifice, in accordance with its signification for the Hellenic peoples within the Hellenic period, we must interpret it in the terms of the word *θυσία*; and, as this word had always a 'theistic' intention, always denoting a certain act performed in relation to a certain deity or semi-divine personality, we must not apply it to those acts of ceremony or ritual which might bear an outward resemblance to an ordinary act of sacrifice, but bore no direct reference to any deity, being performed solely as acts of automatic or magical efficacy. For research into the primitive origins of sacrifice impresses on us the fact that much that on the higher plane of religion is done in honour of the god is performed on the lower plane without any such intention. This is particu-

larly the case in what is often loosely called 'blood-offering.' Finding clear evidence in a story recorded by Pausanias¹ of the survival of a ritual at Haliartos in Bœotia of shedding human blood over a dry land in order to obtain water, we must not interpret this as a blood-sacrifice to the earth-goddess, though it could easily have developed into that; but, accepting the simple account as it stands, we must regard it as a magical rite, dictated by the belief common to so many primitive peoples in the automatic magical efficacy of blood. Again, when the people of Methana, near Troizen, carried round their vineyards the dismembered limbs of a cock to preserve the fruit from the baneful effects of a certain wind,² this act, as Pausanias presents it, may be best called pre-animistic magic; not a word in his account authorizes us to call it a sacrifice to a wind-god. It may be that later Greek authors applied the term *θυσία* to an act of ritual that originally had not, perhaps never came to have, any such religious character. But the application of the word proves that the author himself attached a theistic significance to the rite. On the other hand, it is clear that not every kind of offering to a deity was called a *θυσία*, which must be distinguished from mere *δραθήματα*, such as the dedication of a statue, or the spoils of war, or a woven garment. Only the ceremonial oblation of animals, vegetables, fruits, or liquids—blood, wine, milk, water, honey, oil—is normally described as a *θυσία*. It was not always necessary that these should be brought up to or laid upon an altar. A more primitive ritual, belonging to a less developed stage of anthropomorphism, appears in a passage of the *Iliad*³ describing the Trojan sacrifice to the river Skamandros; not only were bulls offered to him in the usual way, but horses were thrown alive into the water; and the fashion survived in the historic period, for we hear of horses and bulls being thrown into the sea to Poseidon,⁴ of the Rhodians sinking a four-horsed chariot into the waters for the service of Helios.⁵ That such acts were regarded as 'sacrifices' in the proper sense is proved by a ritual law preserved in an inscription of Mykonos ordaining a sacrifice of a ram and lambs to the river-god, Acheloos, of which some are to be 'slaughtered' by the altar, some 'cast into the river,' the same word being used for both acts.⁶ Other ceremonies therefore of the same type—the oblation of barley-cakes to Ge,⁷ which were thrown down into a chasm at Athens, the throwing down of pigs to Demeter and Kore into their *μέγαρα*, or underground vaults⁸—may also be described as *θυσίαι*.

But normally, and in nearly all the public as well as the private services of religion, the altar was the essential requisite for the sacrifice; and from the first the word *θύω* would imply some kind of altar or table for holding the fire, if the theory that derives it from a root meaning 'to smoke' or 'to burn' is certain. At any rate, the ideas of greatest interest attaching to the Greek sacrifice will be found to arise from its association with the altar, which gives a special sanctity to the victim and the participants.

2. Communion-feast theory.—Before we consider the different types of Greek sacrifice, it is convenient to raise the question whether they can be all interpreted from one single point of view. To explain sacrifice in general as a gift to the god seemed to some ancient writers, and has seemed to

many moderns, a satisfactory account of it. But a new theory has been brought into vogue, chiefly through the insight and researches of Robertson Smith,¹ which interprets ancient sacrifice, Greek as well as Semitic, as a communion-feast with the divinity, in which the god and his people 'become of one flesh' by partaking in common of the flesh of the victim, the animal being regarded as in some degree divine, as having the divine spirit incarnate in it. And that writer himself and some of his followers drew the corollary that, where the view of the sacrifice as a gift or mere bribe to the god prevailed, that was a later degeneracy of religion, possible only when the sense of communion had faded from the ceremony. This theory needs much modification to bring it into harmony with modern knowledge and research. It was disfigured by immature ideas concerning totemism; and modern anthropology disproves that part of it which asserts the gift-sacrifice to be invariably due to a later degeneracy. Nevertheless, it retains its value as a guide to our researches into ancient sacrifice. And, if we find two types of sacrifice—one that may be called the gift type, one the sacramental or communion type—we need not for our present purpose discuss the question whether the one arose from the other; for both are certainly older than the beginnings of the Hellenic period.

It is obvious that no sacramental character, none of the ideas associated with a communion-feast, was likely to attach to those primitive acts of oblation mentioned above, offered without an altar—the throwing of the animal victim or cakes into the water or a chasm of the earth; these must have been regarded as gifts given to please, placate, or stimulate the divine powers of earth and water.

3. Bloodless offerings.—Turning now to the much larger question of the altar-sacrifice, we are confronted at once with the important distinction, familiar to us through the story of Cain and Abel, between the bloodless offering and the blood-offering—a distinction that runs all through Greek ritual. Upon certain altars a severe local law might prevail that no blood could be shed, but only harmless cereals, vegetables, fruit, and 'sober' liquids might be offered. The most conspicuous examples are the so-called 'pure' altar of Apollo in Delos,² καθαρὸς specially connoting purity from contact with blood, and the altar of Zeus ἱερός,³ 'the Highest,' in Athens. As all blood-offerings required fire, to convey the flesh of the victim in fragrance to the divine participant, bloodless offerings might be sometimes called ἀπυρα when they consisted of fruits and liquids for which no fire was required. Thus we hear of ἀπυρα λερά being prescribed by an immemorial law of ritual in the shrine of Athene at Lindos;⁴ nor does it appear that such offerings as cakes, which required fire for the baking, needed an altar-fire for their offering, as they were in most cases merely laid on the altar;⁵ yet a fire might be maintained, even when the offerings were bloodless, for the sake of the incense thrown into it.

Cereal and vegetable offerings and fruits, as vital elements of human nourishment, were natural oblations to the deities of vegetative growth and fertility, and most of the Hellenic divinities included this among their other functions; they were natural therefore and common in the cults of

Demeter and her daughter, of the Earth-Mother, of the Great Mother of the Gods, and of Dionysos, and are found even in the ritual of Poseidon and Herakles. Yet all of these admitted and accepted, except in certain shrines, the blood-offering as well; therefore, whatever philosophers of the later period might assert about the higher refinement and spirituality of the bloodless oblation, no Greek divinity down to the end of paganism could be regarded as championing any such dogma. The worship of Athene at Lindos, for some local reason that we cannot trace, might proscribe the animal victim; but elsewhere Athene delighted in it as did Zeus and the 'pure' Apollo. In fact the divergences of Greek ritual in this respect are not to be explained by the operation of any high moral idea.¹

Such oblations were made at various times throughout the year according to the ritual calendars of the Greek states, and in accordance with the religious needs of early agrarian society. The various festivals of Demeter in Attica range throughout the agricultural year; and in one of them at least—the Haloa, or festival of the threshing-floor—we are explicitly informed that the animal victim was forbidden. The most critical time was the beginning of harvest, when all the Greek states, we may affirm with confidence, offered ἀπαρχαί, or firstfruits, of field and vintage to the protecting deities of tilth, orchard, and vineyard.

Are we to regard this class of sacrificial offerings as a pure gift to the divinity? Gifts in some sense they certainly were; and there is no evidence that the bloodless offerings of the altar were ever consumed by the worshippers in the ordinary public cults as a sacramental meal or for purposes of sacramental communion with the deity. If they were eaten by the people as 'blessed bread,' some feeling of communion might have arisen; for we may trace faint survivals of the primitive belief that Demeter was incarnate in the corn;² and some of these sacrificial cakes were shaped so as to bear the insignia of the divinity—e.g., cakes offered to Apollo in the form of lyre or bow or arrows³—whereby the essence of the divinity might be attracted into them. But we are fairly certain that such offerings laid on the altar were never eaten by the worshipper, though an unscrupulous priest might surreptitiously purloin them.⁴

On the other hand, in the ritual of the Greek mysteries—Eleusinian, Samothracian, and those of Attis-Kybele—we have some evidence, mainly indeed doubtful, that the votaries attained to a sense of communion with the divinity by eating holy bread or drinking some preparation from cereals,⁵ and on a vase in Naples we have probably an actual representation of the administration to the μύσται of the sacred cup containing the κυκεών, or the mixture of the barley-meal, which the goddess was believed to have drunk in her sorrow. But it does not appear that the κυκεών had ever been hallowed on the altar in any form of sacrifice, or that the communicant was ever penetrated with any mystic idea that it contained the divine substance of the goddess.

We must believe, then, that the average Greek offered these bloodless oblations to his divinities as pure gifts, partly to secure their blessing and favour for the year to come, partly as a thank-

offering for the blessings of the past year. But in respect of the *ἀραφαί*, of the firstfruits of the harvest and vintage, another motive, belonging to a different order of ideas, may be discerned or surmised. On the day called the *Pithoigia*, 'the opening of the wine-casks'—the first day of the Attic Anthesteria, when the new wine was ready for drinking—the citizens bore a mixture of the sweet wine to Dionysos 'in the marshes' before they ventured to drink themselves.¹ We may regard this as a religious rite instituted for the purpose of removing the tabu from the new vintage; and, as there is abundant evidence of the belief that a religious sanctity conserves and fences round the growths of the field before they are fit for the use of man, we may suppose that the *ἀραφαί* of corn had originally this significance. The most conspicuous example of these was the *ἀραφαί* sent from a great part of the Greek world to the goddesses at Eleusis; but a detailed inscription of the 5th cent. reveals that they came to be regarded as mere tributes or thank-offerings, and a certain residue of them were sold in the market, the price being devoted to the purchase of *ἀναθήματα*.²

4. Blood-sacrifices and the gift theory.—The blood-sacrifices have now to be considered, and it is to these rather than to those of the former type that certain ideas which may be called mystic will be found to attach. Before considering any general theory about them, one must review the facts. The first question is whether any general principle is discoverable governing the choice of animals. The choice was certainly a wide one, including all domesticated animals, all edible birds, even fish, and all the wild beasts of the chase. The domesticated animals are nearly always those that form the ordinary food of man. The only exceptions were dogs occasionally offered to Hekate, Ares, and Eileithyia,³ horses offered to Helios and Poseidon,⁴ and asses to Apollo and the winds;⁵ we have a record of the sacrifice of an elephant offered by one of the Ptolemies on a single occasion, which excited so much popular disapproval that it was not repeated.

Apart from these few exceptions, the facts at first sight seem to be sufficiently explained by the gift theory, namely, that the meat-offerings were tributes paid to the deity for favours received in the past or expected in the future, or to deprecate his anger. And such a rite reveals the working of the primitive idea that the deity is not of his own nature immortal and self-existing, but is dependent like mortals on continual nourishment for his continual existence—an idea plainly enough expressed in Egyptian, Babylonian, and Vedic religions. It is true that in no articulate Greek utterance, nowhere in the earliest literature, is the belief bluntly proclaimed that the divinity would perish if not fed by the sacrifices, and later thinkers scoffed at the view that the gods needed them in any sense. But we cannot avoid supposing that such an idea, however inarticulate, was in the background of the popular religious consciousness; and, in spite of the refining influence of more cultured thought, the popular faith must have long prevailed that the deities in some way actually ate of the flesh of the victim and always delighted in it. Hence arose at some indeterminate date such divine epithets as *Αἰγοπάγος*, 'goat-eater', *Ταυροπάγος*, 'bull-eater', of Hera⁶ and Dionysos,⁷ derived from the victims offered. Also, in a well-known passage in the *Iliad*, Zeus himself admits that he owes great consideration to Hektor in

return for his many offerings.¹ This is the fundamental view of the gift theory.

But, when we look more closely into the facts, whether in regard to the choice of victims or in regard to the actual forms of the sacrifice itself, the more we find that this theory, even if always true to some extent, is seriously inadequate. If the sacrifice were regarded merely as a gift to provide the divinity with food, why should the rule obtain on the whole that the god prefers the male victim, the goddess the female?² Why should it have been supposed that a maiden heifer should be more acceptable as food to a maiden goddess?³ Why should the horns of the ox be elaborately decked with gold, its neck in later times with wreaths, and why should the rule have been generally insisted on that the victims should be *καθαρά* and *ὁλόκληρα*, pure and unblemished?⁴ Certainly the primitive mind applies certain ideas of sympathetic magic to the choice of food; and we can explain, in reference to them, why a pregnant sow should be offered to the earth-goddess to stimulate her fertility,⁵ why entire male victims, *ἑνσρχα*, should be chosen as sacrificial food by specially virile divinities such as Ares, Poseidon, the river-gods, and certain heroes, and why a cock should be an appropriate offering to the war-god, to quicken his fighting powers. But the simple food theory, whether assisted or not by ideas of magical working, would not explain why black animals should be offered to the dark powers below the earth, called 'chthonian', and to the gods of storm, and animals of bright hue to celestial powers, the Olympians, and the deities of brightness.⁶ Such a choice would be dictated by the idea that there should be some resemblance or affinity between the animal of sacrifice and the divinity. And later writers of classical antiquity were evidently aware of this prevalent feeling; we find such pronouncements as that bulls were offered to Selene because the horns of the animal resemble the horns of the moon,⁷ and a general axiom that 'victims are offered because of some similitude' to the deity.⁸ The author of this phrase impairs its value by adding to it the words 'or because of some contrariety', which is explained by his later statement, 'victims are offered which are detrimental to the deity'—'immolantur quae obsunt'.⁹ This was doubtless suggested by such facts as that the goat was commonly offered to Dionysos, and the goat was injurious to vines. But we are certain that this view is false, and that it was utterly repugnant to ancient Hellenic thought and feeling that an animal should be chosen for sacrifice which was naturally detrimental or hostile to the divinity. On the contrary, evidence can be given establishing a mysterious connexion or sympathy between the victim and the divine power to whom it is consecrated on the altar, and it is this that compels us, in certain forms of sacrifice, to regard the gift theory as inadequate.

5. Sanctity of the altar.—It is now necessary to consider those forms for which the earliest evidence is afforded by certain passages in the Homeric poems. By combining some of them we can present a typical Homeric sacrifice, as offered by a tribe or a group of men.

¹ *Il.* xxiv. 64 ff.

² To this rule, formulated by Arnobius (*adv. Gent.* vii. 19), the exceptions are very numerous (some shrines were indifferent as to the sex of the victim—e.g., at Thasos [Roehl, *Ins. Graec. Ant.*, Berlin, 1882, no. 879]); but on the whole it prevailed.

⁶ Paus. iii. xv. 2.

⁷ Schol. Aristoph. *Ran.* 300.

The victim, one or many, was brought near the altar; holy water, barley-stalks in a basket, and a vessel for catching the blood were held in readiness; the sacrificers purified themselves with the holy water and formally raised up in their hands the barley-stalks, which had been sanctified by some preliminary rite; then the chief officiator—the king or chieftain or, more rarely, the priest—cut off some of the victim's hair and threw it into the fire, at the same time or immediately afterwards uttering the prayer to the deity for blessing or special aid. At this point the sacrificers 'threw forward the shredded barley (or barley-stalks)'; the victim, if a powerful one like an ox or a bull, whose struggles would be embarrassing, was smitten with an axe in such a way as to render it impotent; then, if women were present, they raised the *ὀλοθυή*, which was an auspicious appeal to the deity by name to grace the ritual with his or her presence;¹ the animal, if the oblation was to the Olympians, was lifted off the ground, its head drawn back so that its face was turned to the sky, and its throat cut; the blood was probably caught in the sacred vessel, though we do not know for what purpose; the dismembering of the carcass began, the thighs were cut away and wrapped in fat, and, with portions of meat cut probably from every part of the victim, were placed on the altar and roasted, while a libation of wine was poured over them. While these were roasting, the worshippers ceremonially partook of the inward parts—*σπλάγχνα*—which had been cooked; then the other parts of the victim were cut up and roasted on spits and provided a common feast for the sacrificers; the feast was followed by a wine-drinking, inaugurated by a libation to the deities, and in certain cases the rite might close with religious dance and singing.² There is much here that needs skilled interpretation. Homer is not an expounder of ritual; much of his account is stereotyped and has the quality of shorthand. One point of importance is obvious: the victim is not a gift to the gods for their own exclusive use; only that portion of it belongs to them which is burnt on the altar; the rest serves as a feast for the people, in which they may be supposed to be feasting with their divinity; so that the typical Homeric sacrifice may best be described, not as a tribute or bribe, but rather as a communal meal in which the people strengthened their sense of fellowship with the god or goddess. But is there any trace of the idea that the victim is in itself divine? Nowhere in the Homeric poems is there any hint of such a character attaching to it before it has been brought into touch with the altar. But we may discern in part of the ritual the intention to sanctify the animal, to fill it with the divine spirit; and, as the altar was the centre to which the divine spirit was attracted, this aim would be effected by establishing a *rapprochement* between the deity represented by the altar and the victim. Such might well have been the intention of throwing its hair into the altar-fire before the immolation, for by a well-known law the sanctification of the part means the sanctification of the whole. There is reason for thinking that this was also the intention and use of the *ὀλόχυναι*, though careful consideration is needed before arriving at any definite view of these. The acts expressed by *ὀλόχυναι ἀέλονται* and *ὀλόχυναι προβάλλονται* belong to the initial part called *ἀπάρχεσθαι*, which preceded the

¹ This has been wrongly interpreted as a cry of sorrow, also as a cry to avert evil spirits (e.g., G. G. A. Murray, *The Rise of the Greek Epic*², Oxford, 1911, p. 87); in no passage in Greek literature is *ὀλοθυή* or its cognates a sorrowful cry (the two examples quoted in Liddell and Scott, *s.v.*, are false); it is generally joyful, always auspicious.

² The two most complete passages from which this description is taken are *Il.* i. 447-474, and *Od.* iii. 440-463; cf. *Od.* iii. 5, *Il.* ix. 220.

central act of sacrifice and of which the purpose was the sanctification of the victim and the worshippers. A comparison of many later authorities suggests the following interpretation: ¹ the barley-stalks are first placed on the altar, and thus become charged with its spirit, as does everything that touches it; they are then solemnly taken up and 'thrown forward' so as to strike the victim or touch it on the forehead, whereby the holy spirit passes into it. When, elsewhere, the Achæans have no barley at hand, they use leaves,² and we know that in later ages leaves were strewn on altars. There is no hint that barley or any other cereal had this mystic power, independently of contact with the altar. Thus charged, the victim is no longer, as it had been hitherto, a merely secular beast, but becomes holy flesh, and those who partake of it are filled with the divine spirit and enter into mystic fellowship with their deity, however faintly this may have been realized by the poet and his contemporaries. This idea will also explain the ceremonial tasting of the *σπλάγχνα* before the communal feast begins; and it is in the Homeric evidence concerning this part of the whole rite that the sacramental concept emerges most clearly.³

Such is the general type of sacrifice familiar to Homer, from which we must carefully distinguish another that we may call the oath-sacrifice; this, which was known to Homer and the later periods, presents special characteristics and will be discussed below. The communal sacrificial feast, which has been described above and which may be interpreted as a ceremony in which the worshippers feasted with the deity and feasted on flesh into which the divine spirit had temporarily entered, was a genial institution, containing potential germs of advanced religion. It may have inspired Hesiod with his vision of a golden age, 'when immortal gods and mortal men had fellowship in the banquet and sat together.'⁴ And, although in the later periods the sense of inner fellowship and mystic union with the divine may have waxed dim, the forms of it certainly survived. The later literature gives us abundant testimony that the altar continued to be the radiating centre of sanctity for the whole sacrifice. The *ὀλαί*, barley-stalks or meal, continued to be strewn on the altar and used for the sanctification of the victim and even perhaps the bystanders; the *χέρνιψ*, or holy water, was sanctified by a brand from the altar being dipped in it; the *κάρᾱ*, or baskets containing cereals, were sanctified by being taken in solemn procession round the altar; and, thus charged, they sanctified the sacrificial knife which was carried in them.⁵ Connected thus by more than one link with the centre of sanctity, the victim became temporarily a sacrosanct beast, and the eating of its flesh might be felt in some degree to be a sacrament. The belief that a part of the personality of the deity might be thus incarnated for a time in the victim explains many of the old rules concerning the choice of animals: the maiden goddess might prefer a maiden victim, the bright deities a bright-haired victim.

6. Bouphonia ritual.—This view of the sacrifice emerges clearly in the ritual of the Bouphonia at Athens and in the legends concerning it, upon which much has been written in the way of con-

¹ The most important references are schol. *Hom. Od.* iii. 441, 445, schol. *Il.* i. 449; schol. *Aristoph. Eq.* 1167; *Eustath. Il.* i. 449; *Aristoph. Pax*, 961; for modern theory see Ziehen, in *Hermes*, xxxvii. [1902] 391; and Stengel, *Opferbräuche der Griechen*.

offering for the blessings of the past year. But in respect of the *ἀραχαί*, of the firstfruits of the harvest and vintage, another motive, belonging to a different order of ideas, may be discerned or surmised. On the day called the Pithoigia, 'the opening of the wine-casks'—the first day of the Attic Anthesteria, when the new wine was ready for drinking—the citizens bore a mixture of the sweet wine to Dionysos 'in the marshes' before they ventured to drink themselves.¹ We may regard this as a religious rite instituted for the purpose of removing the tabu from the new vintage; and, as there is abundant evidence of the belief that a religious sanctity conserves and fences round the growths of the field before they are fit for the use of man, we may suppose that the *ἀραχαί* of corn had originally this significance. The most conspicuous example of these was the *ἀραχαί* sent from a great part of the Greek world to the goddesses at Eleusis; but a detailed inscription of the 5th cent. reveals that they came to be regarded as mere tributes or thank-offerings, and a certain residue of them were sold in the market, the price being devoted to the purchase of *ἀναθήματα*.²

4. Blood-sacrifices and the gift theory.—The blood-sacrifices have now to be considered, and it is to these rather than to those of the former type that certain ideas which may be called mystic will be found to attach. Before considering any general theory about them, one must review the facts. The first question is whether any general principle is discoverable governing the choice of animals. The choice was certainly a wide one, including all domesticated animals, all edible birds, even fish, and all the wild beasts of the chase. The domesticated animals are nearly always those that form the ordinary food of man. The only exceptions were dogs occasionally offered to Hekate, Ares, and Eileithyia,³ horses offered to Helios and Poseidon,⁴ and asses to Apollo and the winds;⁵ we have a record of the sacrifice of an elephant offered by one of the Ptolemies on a single occasion, which excited so much popular disapproval that it was not repeated.

Apart from these few exceptions, the facts at first sight seem to be sufficiently explained by the gift theory, namely, that the meat-offerings were tributes paid to the deity for favours received in the past or expected in the future, or to deprecate his anger. And such a rite reveals the working of the primitive idea that the deity is not of his own nature immortal and self-existing, but is dependent like mortals on continual nourishment for his continual existence—an idea plainly enough expressed in Egyptian, Babylonian, and Vedic religions. It is true that in no articulate Greek utterance, nowhere in the earliest literature, is the belief bluntly proclaimed that the divinity would perish if not fed by the sacrifices, and later thinkers scoffed at the view that the gods needed them in any sense. But we cannot avoid supposing that such an idea, however inarticulate, was in the background of the popular religious consciousness; and, in spite of the refining influence of more cultured thought, the popular faith must have long prevailed that the deities in some way actually ate of the flesh of the victim and always delighted in it. Hence arose at some indeterminate date such divine epithets as *Αἰγοφάγος*, 'goat-eater', *Ταυροφάγος*, 'bull-eater', of Hera⁶ and Dionysos,⁷ derived from the victims offered. Also, in a well-known passage in the *Iliad*, Zeus himself admits that he owes great consideration to Hektor in

return for his many offerings.¹ This is the fundamental view of the gift theory.

But, when we look more closely into the facts, whether in regard to the choice of victims or in regard to the actual forms of the sacrifice itself, the more we find that this theory, even if always true to some extent, is seriously inadequate. If the sacrifice were regarded merely as a gift to provide the divinity with food, why should the rule obtain on the whole that the god prefers the male victim, the goddess the female?² Why should it have been supposed that a maiden heifer should be more acceptable as food to a maiden goddess?³ Why should the horns of the ox be elaborately decked with gold, its neck in later times with wreaths, and why should the rule have been generally insisted on that the victims should be *καθαρά* and *ἀλόκληρα*, pure and unblemished?⁴ Certainly the primitive mind applies certain ideas of sympathetic magic to the choice of food; and we can explain, in reference to them, why a pregnant sow should be offered to the earth-goddess to stimulate her fertility,⁵ why entire male victims, *ἐνσρχα*, should be chosen as sacrificial food by specially virile divinities such as Ares, Poseidon, the river-gods, and certain heroes, and why a cock should be an appropriate offering to the war-god, to quicken his fighting powers. But the simple food theory, whether assisted or not by ideas of magical working, would not explain why black animals should be offered to the dark powers below the earth, called 'chthonian,' and to the gods of storm, and animals of bright hue to celestial powers, the Olympians, and the deities of brightness.⁶ Such a choice would be dictated by the idea that there should be some resemblance or affinity between the animal of sacrifice and the divinity. And later writers of classical antiquity were evidently aware of this prevalent feeling; we find such pronouncements as that bulls were offered to Selene because the horns of the animal resemble the horns of the moon,⁷ and a general axiom that 'victims are offered because of some similitude' to the deity.⁸ The author of this phrase impairs its value by adding to it the words 'or because of some contrariety,' which is explained by his later statement, 'victims are offered which are detrimental to the deity'—'*immolantur quæ obsunt*.'⁹ This was doubtless suggested by such facts as that the goat was commonly offered to Dionysos, and the goat was injurious to vines. But we are certain that this view is false, and that it was utterly repugnant to ancient Hellenic thought and feeling that an animal should be chosen for sacrifice which was naturally detrimental or hostile to the divinity. On the contrary, evidence can be given establishing a mysterious connexion or sympathy between the victim and the divine power to whom it is consecrated on the altar, and it is this that compels us, in certain forms of sacrifice, to regard the gift theory as inadequate.

5. Sanctity of the altar.—It is now necessary to consider those forms for which the earliest evidence is afforded by certain passages in the Homeric poems. By combining some of them we can present a typical Homeric sacrifice, as offered by a tribe or a group of men.

¹ *Il.* xxiv. 64 ff.

² To this rule, formulated by Arnobius (*adv. Gent.* vii. 19), the exceptions are very numerous (some shrines were indifferent as to the sex of the victim—e.g., at Thasos (Roehl, *Ins. Græc. Ant.*, Berlin, 1832, no. 379)); but on the whole it prevailed.

The victim, one or many, was brought near the altar; holy water, barley-stalks in a basket, and a vessel for catching the blood were held in readiness; the sacrificers purified themselves with the holy water and formally raised up in their hands the barley-stalks, which had been sanctified by some preliminary rite; then the chief officiator—the king or chieftain or, more rarely, the priest—cut off some of the victim's hair and threw it into the fire, at the same time or immediately afterwards uttering the prayer to the deity for blessing or special aid. At this point the sacrificers 'threw forward the shredded barley (or barley-stalks)'; the victim, if a powerful one like an ox or a bull, whose struggles would be embarrassing, was smitten with an axe in such a way as to render it impotent; then, if women were present, they raised the *ὄλολυγῆ*, which was an auspicious appeal to the deity by name to grace the ritual with his or her presence;¹ the animal, if the oblation was to the Olympians, was lifted off the ground, its head drawn back so that its face was turned to the sky, and its throat cut; the blood was probably caught in the sacred vessel, though we do not know for what purpose; the dismembering of the carcass began, the thighs were cut away and wrapped in fat, and, with portions of meat cut probably from every part of the victim, were placed on the altar and roasted, while a libation of wine was poured over them. While these were roasting, the worshippers ceremonially partook of the inward parts—*σπλάγχνα*—which had been cooked; then the other parts of the victim were cut up and roasted on spits and provided a common feast for the sacrificers; the feast was followed by a wine-drinking, inaugurated by a libation to the deities, and in certain cases the rite might close with religious dance and singing.² There is much here that needs skilled interpretation. Homer is not an expounder of ritual; much of his account is stereotyped and has the quality of shorthand. One point of importance is obvious: the victim is not a gift to the gods for their own exclusive use; only that portion of it belongs to them which is burnt on the altar; the rest serves as a feast for the people, in which they may be supposed to be feasting with their divinity; so that the typical Homeric sacrifice may best be described, not as a tribute or bribe, but rather as a communal meal in which the people strengthened their sense of fellowship with the god or goddess. But is there any trace of the idea that the victim is in itself divine? Nowhere in the Homeric poems is there any hint of such a character attaching to it before it has been brought into touch with the altar. But we may discern in part of the ritual the intention to sanctify the animal, to fill it with the divine spirit; and, as the altar was the centre to which the divine spirit was attracted, this aim would be effected by establishing a *rapproch* between the deity represented by the altar and the victim. Such might well have been the intention of throwing its hair into the altar-fire before the immolation, for by a well-known law the sanctification of the part means the sanctification of the whole. There is reason for thinking that this was also the intention and use of the *ὄλολυγῆ*, though careful consideration is needed before arriving at any definite view of these. The acts expressed by *ὄλολυγῆ* *ἀνέλοντο* and *ὄλολυγῆ* *προβάλλοντο* belong to the initial part called *ἀπάρχεσθαι*, which preceded the

central act of sacrifice and of which the purpose was the sanctification of the victim and the worshippers. A comparison of many later authorities suggests the following interpretation: the barley-stalks are first placed on the altar, and thus become charged with its spirit, as does everything that touches it; they are then solemnly taken up and 'thrown forward' so as to strike the victim or touch it on the forehead, whereby the holy spirit passes into it. When, elsewhere, the Achæans have no barley at hand, they use leaves,³ and we know that in later ages leaves were strewn on altars. There is no hint that barley or any other cereal had this mystic power, independently of contact with the altar. Thus charged, the victim is no longer, as it had been hitherto, a merely secular beast, but becomes holy flesh, and those who partake of it are filled with the divine spirit and enter into mystic fellowship with their deity, however faintly this may have been realized by the poet and his contemporaries. This idea will also explain the ceremonial tasting of the *σπλάγχνα* before the communal feast begins; and it is in the Homeric evidence concerning this part of the whole rite that the sacramental concept emerges most clearly.⁴

Such is the general type of sacrifice familiar to Homer, from which we must carefully distinguish another that we may call the oath-sacrifice; this, which was known to Homer and the later periods, presents special characteristics and will be discussed below. The communal sacrificial feast, which has been described above and which may be interpreted as a ceremony in which the worshippers feasted with the deity and feasted on flesh into which the divine spirit had temporarily entered, was a genial institution, containing potential germs of advanced religion. It may have inspired Hesiod with his vision of a golden age, 'when immortal gods and mortal men had fellowship in the banquet and sat together.'⁵ And, although in the later periods the sense of inner fellowship and mystic union with the divine may have waxed dim, the forms of it certainly survived. The later literature gives us abundant testimony that the altar continued to be the radiating centre of sanctity for the whole sacrifice. The *ὄλολυγῆ*, barley-stalks or meal, continued to be strewn on the altar and used for the sanctification of the victim and even perhaps the bystanders; the *χέρμη*, or holy water, was sanctified by a brand from the altar being dipped in it; the *κavā*, or baskets containing cereals, were sanctified by being taken in solemn procession round the altar; and, thus charged, they sanctified the sacrificial knife which was carried in them.⁶ Connected thus by more than one link with the centre of sanctity, the victim became temporarily a sacrosanct beast, and the eating of its flesh might be felt in some degree to be a sacrament. The belief that a part of the personality of the deity might be thus incarnated for a time in the victim explains many of the old rules concerning the choice of animals: the maiden goddess might prefer a maiden victim, the bright deities a bright-haired victim.

6. Bouphonia ritual.—This view of the sacrifice emerges clearly in the ritual of the Bouphonia at Athens and in the legends concerning it, upon which much has been written in the way of con-

¹ The most important references are schol. Hom. *Od.* iii. 441, 445, schol. *Il.* i. 449; schol. Aristoph. *Eq.* 1167; Eustath. *Il.* i. 449; Aristoph. *Pax*, 961; for modern theory see Ziehen, in *Hermes*, xxxvii. [1902] 391; and Stengel, *Opferbräuche der Griechen*.

⁴ Frag. 82 (Rzach).

⁵ Athenæus, pp. 297 D, 409 B; Aristoph. *Pax*, 948-960 *Lysistr.* 1129; Eur. *Elect.* 800-814 (full account of 5th cent. sacrifice); cf. *Iph. Aul.* 955, 1111, 1471, 1540; Herod. i. 160.

¹ This has been wrongly interpreted as a cry of sorrow, also as a cry to avert evil spirits (e.g., G. G. A. Murray, *The Rise of the Greek Epic*, Oxford, 1911, p. 87); in no passage in Greek literature is *ὄλολυγῆ* or its cognates a sorrowful cry (the two examples quoted in Liddell and Scott, s.v., are false); it is generally joyful, always auspicious.

² The two most complete passages from which this description is taken are *Il.* i. 447-474, and *Od.* iii. 440-463; cf. *Od.* iii. 6, *Il.* ix. 220.

trovery and theorizing.¹ The sacred character of the ox in this ceremony is shown in strange and impressive ways: he dedicates himself to the god by voluntarily approaching the altar and eating the corn upon it; the priest who slays him flees into feigned exile, a solemn trial is held for his murder, and the axe of sacrifice is adjudged guilty and cast into the sea. All partake of his flesh, and a simulated resurrection of the ox is enacted by sewing his hide together, filling it with hay, and yoking it to the plough. This ox has been interpreted by Robertson Smith as a totem-animal, and the name 'theanthropic' has been applied to him; but the theory of totemism breaks down here when critically examined, and the name 'theanthropic' has no right to be applied to any sacrificial beast in Greece; some were regarded temporarily as divine, but none as at once divine and human. There is much more to be said for Frazer's theory that this ox is the vegetation-spirit; but the theory is not essential to explain the facts. What emerges clearly from the records of the ritual and the legends is that the ox has no innate and independent sanctity of his own; this quality enters into him only after his contact with the altar, whereto he is called by the god; henceforth he is charged with the god's spirit, and the slaying of him is felt to be an awful deed, though necessary; and the eating of his flesh is felt to be a sacrament, whereby the Cretan stranger who in the legend performs the ceremony becomes of one flesh with the citizens and is admitted to citizenship. The feigned resurrection may be an apology to the spirit of the ox. Similar ideas are discernible in the ritual of Zeus Sosipolis of Magnesia, as attested by a famous inscription of the latter part of the 3rd cent. B.C.² At the beginning of the agricultural year the finest bull that could be procured was solemnly dedicated to Zeus, 'the Saviour of the City,' in a ceremony called the *ἀνδέειν*; we are not told, but we may suppose, that the consecration took place by the altar of the god; towards the close of the year, when the harvest was ripe, the bull, having been treated with great reverence and care all through the months, was led in a solemn procession and sacrificed to Zeus, and his flesh was distributed among those who took part in the procession. There is no reason to suppose that the bull possessed any independent sanctity previous to his dedication; but by that ceremony the spirit of Zeus, who was undoubtedly a god of fertility in Magnesia, became temporarily incarnate in the bull, and those who ate the sacrificial meat would be put in communion with him; if they ate it in a communal meal round the altar, the concluding act of the ritual would be exactly parallel to the old Homeric sacrificial feast. And that this was a common practice in the State sacrifices is indicated by such not infrequent formulae as *ὅκ ἀποφορά, ὁ δαίνεσθαι αὐτοῦ*, 'let not the flesh be taken away' (from the neighbourhood of the altar), 'let them banquet there' (around the altar)³—rules which show that the flesh was considered too holy to be removed with safety into private dwellings, and that the full virtue of the sacrifice could be maintained only if the worshippers ate the sacred flesh in the presence of their deity.⁴

Moreover, the mystic power that the animal

acquired from the altar and through the sacrifice remained after its death. Its blood might be used for cathartic purposes, and specially and chiefly for washing the altar-steps,¹ probably a post-Homeric ceremony. The *δοιοί*, the 'holy' priests of Delphi, acquired their holiness from the victim that had been sacrificed to Apollo and was called *δοιωτήρ*,² 'he who makes holy,' because the beast communicated holiness to the official, probably by means of some ritual contact. Also the skin of the sacrificial animal might long retain mystic power: the *Διὸς κώδιον*, the skin of the ram offered to Zeus Meilichios at Athens, was employed in the purification of homicides;³ the consultants of the prophetic hero, Kalchas, slept on the fleece of the black ram that had been offered to him;⁴ the *αἴγλις* of Athene, probably nothing more than the skin of the goat yearly offered to her on the Acropolis at Athens, was taken round by the priestess to bless newly-married couples with.⁵ But these are exceptional cases; ordinarily the sacrificial skins—so great was their number in the Greek States and especially in Athens—formed a valuable revenue from which the priest sometimes got his dues and the State an appreciable return.

We no longer hear of the ceremonial or sacramental eating of the *σπλάγχνα* by the worshippers, and we have some evidence that these might be given to the priest or sacrificer for his private profit or burned on the altar as the deities' portion;⁶ but they evidently retained here and there a certain mystic value, for sometimes they were separately placed on the knees of the idol,⁷ and in the narrative of Herodotus the Spartan prince who desired to extract from his mother a solemn attestation sacrificed and placed in her hands the *σπλάγχνα* of the victim as she swore.⁸ We may say, then, that the belief remained vivid down through the later periods that the divine spirit was specially infused into these parts; and it was therefore these that were of chief avail in the post-Homeric ritual of divination.

7. Incarnation of deity in certain animals.—In the cases hitherto dealt with it appears that the sacrificial animal obtains his temporarily divine character merely through contact with the altar. But we are able to discover traces in ritual legend of the primitive belief that the deity habitually incarnated himself or herself in some favourite animal—*c.g.*, Apollo in the wolf,⁹ Artemis in the bear;¹⁰ and that such holy animals might occasionally be offered—an act of ritual which might evolve the conception that the deity actually died in the sacrifice. Most of such legends are vague and difficult to interpret with certainty, and, though the bear which contained the spirit of Artemis and the wolf that incarnated Apollo might at times have been sacrificed, we are not told that this was for the purpose of a sacramental feast; and no higher Hellenic divinity was supposed to die in and through the sacrifice. It is only when the Thracian Dionysos is admitted into Greece that such ideas can be traced in the legend and ritual, especially in the Maenad and Bacchic 'omophagies,' or rendings of the bull or goat, and the drinking of its hot blood, which was the very spirit or substance of the god.¹¹

⁴ That this type of sacrifice and this view of it were rife in later paganism is proved by St. Paul's phrase, *τραπέζης δαιμονίων νεύειν* (1 Co 10²¹).

Originally these were no acts of sacrifice, but acts of wild ecstatic communion, enacted without fire or altar. But in a more civilized Hellenic form they survived in a unique ritual practised down to a late period in Tenedos. The citizens selected a pregnant cow and treated it with great respect until the calf was born; the latter they dressed up in buskins—part of the human equipment of Dionysos—and sacrificed it to the god, but pelted the sacrificer with stones and drove him into exile for a time.¹ Here both animals are semi-divine, not through any contact with the altar; but the preference of the god for and his immanence in the new-born calf are quaintly and picturesquely displayed; therefore by those who devoured its flesh—and we must suppose that this was the intention of the sacrifice—the idea of sacramental communion must have been vividly realized.

8. Underworld sacrifices.—There is another type of Greek sacrifice, essentially distinct from the above, wherein none of the worshippers partook of the food, but all was made over to the divine or semi-divine power. The simplest forms of it, where the gift was offered directly without an altar, have been already considered. In other cases the victim was wholly burned on the altar, and no sacrificial meal was allowed (*δλοκαύματα*).² We find this rule most frequently, though not exclusively, in the ritual associated with the lower world, the cults of the chthonian deities, heroes, and souls of the dead. In these cases the blood was usually poured down through an opening into the *βύσπος*, the grave or the earth-hollow,³ and the flesh of the victim was wholly consumed in the altar fire. The underlying motive was, no doubt, the desire to avoid communion with the lower world lest its contagion should blast the living; hence *δλοκαύματα* were offered to the Eumenides,⁴ to Zeus Meilichios,⁵ and usually to the heroes.⁶ The words *ἐνάγισμα*, *ἐναγίζειν*, specially used for sacrifices to the last, express the tabu put upon the food-offering, and point to the same feeling, which would also explain why only the most abandoned vagrant would venture to taste the offerings placed for Hekate, the ghost-goddess, at the cross-roads.⁷ Nevertheless, it is interesting to note that this fear of the contagion of death did not so far possess the imagination of the later Greeks (more sensitive as they were in this respect than was the Homeric world) as to prevent their desire at times to enter into communion with the kindly powers of the lower world by means of a sacrificial feast of the Homeric type. An inscription records a sacrifice at Mykonos to 'Zeus of the under world' and 'Ge of the under world,' in which a communion-meal was held round the altar and only citizens could partake;⁸ and a similar rite occurred in the cult of the *θεοὶ Μετρίχιοι*, undoubtedly chthonian gods in Lokris.⁹ We have more than one example of communion-feasts with heroes;¹⁰ and in the private grave-ritual there is clear evidence of a family meal taken with the departed spirit.¹¹

On the other hand, in the case of the *ἀπορροπαῖαι θυοαῖ*, sacrifices to avert evils and to assuage the

wrath of *δαίμονες*, vaguely conceived powers of revenge and pestilence, it was an absolute rule that the offerings must not be tasted and even that the officiator must purify himself after the ceremony before returning to the society of men;¹ and the victim chosen for these rites of 'aversion' or 'riddance' was often an animal unfit for human food, such as the dog.² Akin to the 'apotropeic' rites are the 'cathartic,' those intended to purify from stain, and especially the stain of bloodshed. Much of the latter ritual does not concern sacrifice at all; but, when it was performed at an altar, as was sometimes the case,³ it is probable that a purificatory victim was sacrificed upon it. Any thought of a sacrificial meal would be repugnant here; but the animal's blood or skin would be used in the purification; the blood of the pig, the familiar animal of the lower-world powers, was specially effective in the case of homicide;⁴ and we hear of the 'fleece of god,' the skin of the ram offered to Zeus Meilichios, being used for the same purpose.⁵ In these instances the person to be purified is brought into spiritual contact, through the immanent sanctity of the sacrificial animal, with the offended divine powers. Therefore, though there is no question of a sacrificial meal, we must reckon with the possibility that the idea of divine communion underlies some of the ritual of Greek *κάθαρσις*.

9. The oath sacrifice.—Again, in the type of ritual which may be called the oath-sacrifice, if the ratification of the oath was accompanied by the slaying of an animal, the flesh was never eaten, but was either buried or cast into the sea. The flesh was tabued, because the slaying was the enacting of a conditional curse against oneself.⁶ The animal was consecrated to a divinity only in order that the divine power might be present at the oath-taking; and those swearing put themselves into communion with the deity by touching a portion of the victim;⁷ this contact ensured dangerous consequences in the event of perjury. The gift-theory of sacrifice has no meaning here.

10. 'Sober' and wine offerings.—Another special distinction in Greek sacrifices is between those that were called 'sober' (*νηφάλια*) offerings of, or with, non-intoxicant liquids and those that were accompanied with wine. The scholiast on Sophokles⁸ declares that the former were offered to Mnemosyne, the Muses, Eos, Helios, Selene, the Nymphs, Aphrodite Ourania; we have other evidence that enables us to add to this list Zeus *Γεωργός*, the god of agriculture, the Eumenides, the child-god Sosipolis of Elis, the winds, and in some cults Poseidon and even Dionysos.⁹ Merely looking at the variety of this list of names, we see that no single explanation will apply to all of them. The cheerless powers of the dark world might refuse wine, yet it was offered generally to the dead and to the heroes.¹⁰ Nor can we suppose that the rule arose in a period before the introduction of wine;¹¹ for these cults are by no means all among the most ancient. In some centres of worship the rule might be explained by the date of the

sacrifice, occurring at a time of the year when no wine was forthcoming.

11. Human sacrifice.—The most striking phenomenon in the history of Greek sacrifice, namely, the offering of a human victim, which survived either as a real or as a simulated act of ritual down to the late period of paganism, is treated separately in art. HUMAN SACRIFICE (Greek), and in art. GREEK RELIGION, § 14. Nearly all the recorded types stand in profound contrast to the cheerful Homeric conception of *θυσία*; they exclude the idea of a sacramental communion or a sacrificial meal. Only in the legends of Zeus Lykaios and King Lykaon, who sacrifices his own son and feasts on his flesh with Zeus, we may recognize the reflex of a primitive cannibalistic sacrament, in which the tribe feast on human flesh supposed to incarnate a divine life;¹ and, if this interpretation of half-incoherent legend is precarious, we can safely apply it to the legends of the rending asunder, *σπαράγμός*, of the human victim in old Dionysiac ritual.

Some of the legends concerning human sacrifice bear the print of savage religious conception: we have a glimpse of deities, especially the earth-powers, craving human blood; in others we discern a more advanced idea, but still belonging to barbaric ethics, that an angry and vindictive deity demands a life by way of vengeance for sin committed.² But what is of much more interest and peculiar value in Greek mythology is the early emergence of the belief that the high deity is merciful and hated such oblations and himself provided the substitute of the ram. In a legend concerning Tyn-dareus and Helen we have an exact parallel to the story of Abraham and Isaac, in one of Idomeneus to the story of Jephthah and his daughter, except that the Greek myth ends more mercifully.³ From an early period the higher conscience of Hellas, the most merciful in antiquity, revolted from the cruel rite; in time of great panic and peril it might be practised on an alien as late as the 5th cent.; in most centres of cult it was abolished as a regular ordinance or converted into a sham; here and there where it survived—and we hear of it surviving till the period of Hadrian—it was moralized by the selection of a criminal as the victim.

12. Conclusion.—The current Greek view of all sacrifice was that it was a gift to the gods.⁴ Apart from the inadequacy of this as an account of the popular ritual, its moral weakness was felt by the more refined natures; and a higher theory and ethical view concerning sacrifice emerge in Greek literature and philosophy. To some, as to Euripides and Theophrastos, 'the sacrifice without fire of all fruits of earth poured forth in abundance on the altar' appeared more acceptable to a merciful deity than the blood-offering of an animal victim.⁵ Even the Delphic oracle was supposed to encourage the idea that the simplest offering of the poor man with righteousness was more acceptable than the lavish hecatombs of the rich.⁶ 'Know well that when one sacrifices to the gods in piety one wins salvation though the sacrifice be little' is a sentence preserved from a lost play of Euripides.⁷ One of the last writers of Greek paganism who deal with the subject, Iamblichus, in his book *de Mysteriis*,⁸ rejects altogether the theory that

sacrifice is a gift that could bribe God, but justifies it as a symbol of friendship between the mortal and the deity. But neither he nor any other Greek theorist appears cognizant of the idea of sacramental communion.

The types and forms of Greek sacrifice here sketched present a general resemblance to those prevalent among the older leading peoples of ancient civilization. But they also show certain characteristics that mark the Hellenic spirit. The ritual belongs on the whole to real religion of the genial character proper to the Greek State and family. There is little or no magic in it, little debasing superstition: the sacrifice did not compel the deity or control the course of nature; nor did the sanctity that attached to it so stupefy the public sense that the sacrifice itself could come to be deified or that the priest who administered it could attain a detrimental degree of divine prestige. In fact in his attitude towards ritual we mark as clearly as elsewhere the characteristic difference of the Greek from the Indian and the ancient Egyptian.

LITERATURE.—See the references given in notes and also: P. 3151, 3152, 3153, 3154, 3155, 3156, 3157, 3158, 3159, 3160, 3161, 3162, 3163, 3164, 3165, 3166, 3167, 3168, 3169, 3170, 3171, 3172, 3173, 3174, 3175, 3176, 3177, 3178, 3179, 3180, 3181, 3182, 3183, 3184, 3185, 3186, 3187, 3188, 3189, 3190, 3191, 3192, 3193, 3194, 3195, 3196, 3197, 3198, 3199, 3200, 3201, 3202, 3203, 3204, 3205, 3206, 3207, 3208, 3209, 3210, 3211, 3212, 3213, 3214, 3215, 3216, 3217, 3218, 3219, 3220, 3221, 3222, 3223, 3224, 3225, 3226, 3227, 3228, 3229, 3230, 3231, 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, 3242, 3243, 3244, 3245, 3246, 3247, 3248, 3249, 3250, 3251, 3252, 3253, 3254, 3255, 3256, 3257, 3258, 3259, 3260, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325, 3326, 3327, 3328, 3329, 3330, 3331, 3332, 3333, 3334, 3335, 3336, 3337, 3338, 3339, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3347, 3348, 3349, 3350, 3351, 3352, 3353, 3354, 3355, 3356, 3357, 3358, 3359, 3360, 3361, 3362, 3363, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3371, 3372, 3373, 3374, 3375, 3376, 3377, 3378, 3379, 3380, 3381, 3382, 3383, 3384, 3385, 3386, 3387, 3388, 3389, 3390, 3391, 3392, 3393, 3394, 3395, 3396, 3397, 3398, 3399, 3400, 3401, 3402, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3410, 3411, 3412, 3413, 3414, 3415, 3416, 3417, 3418, 3419, 3420, 3421, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3441, 3442, 3443, 3444, 3445, 3446, 3447, 3448, 3449, 3450, 3451, 3452, 3453, 3454, 3455, 3456, 3457, 3458, 3459, 3460, 3461, 3462, 3463, 3464, 3465, 3466, 3467, 3468, 3469, 3470, 3471, 3472, 3473, 3474, 3475, 3476, 3477, 3478, 3479, 3480, 3481, 3482, 3483, 3484, 3485, 3486, 3487, 3488, 3489, 3490, 3491, 3492, 3493, 3494, 3495, 3496, 3497, 3498, 3499, 3500, 3501, 3502, 3503, 3504, 3505, 3506, 3507, 3508, 3509, 3510, 3511, 3512, 3513, 3514, 3515, 3516, 3517, 3518, 3519, 3520, 3521, 3522, 3523, 3524, 3525, 3526, 3527, 3528, 3529, 3530, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3538, 3539, 3540, 3541, 3542, 3543, 3544, 3545, 3546, 3547, 3548, 3549, 3550, 3551, 3552, 3553, 3554, 3555, 3556, 3557, 3558, 3559, 3560, 3561, 3562, 3563, 3564, 3565, 3566, 3567, 3568, 3569, 3570, 3571, 3572, 3573, 3574, 3575, 3576, 3577, 3578, 3579, 3580, 3581, 3582, 3583, 3584, 3585, 3586, 3587, 3588, 3589, 3590, 3591, 3592, 3593, 3594, 3595, 3596, 3597, 3598, 3599, 3600, 3601, 3602, 3603, 3604, 3605, 3606, 3607, 3608, 3609, 3610, 3611, 3612, 3613, 3614, 3615, 3616, 3617, 3618, 3619, 3620, 3621, 3622, 3623, 3624, 3625, 3626, 3627, 3628, 3629, 3630, 3631, 3632, 3633, 3634, 3635, 3636, 3637, 3638, 3639, 3640, 3641, 3642, 3643, 3644, 3645, 3646, 3647, 3648, 3649, 3650, 3651, 3652, 3653, 3654, 3655, 3656, 3657, 3658, 3659, 3660, 3661, 3662, 3663, 3664, 3665, 3666, 3667, 3668, 3669, 3670, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3680, 3681, 3682, 3683, 3684, 3685, 3686, 3687, 3688, 3689, 3690, 3691, 3692, 3693, 3694, 3695, 3696, 3697, 3698, 3699, 3700, 3701, 3702, 3703, 3704, 3705, 3706, 3707, 3708, 3709, 3710, 3711, 3712, 3713, 3714, 3715, 3716, 3717, 3718, 3719, 3720

3. Zarathushtra and animal sacrifice.—Just as *haoma*-sacrifice conflicted with the distinctly ethical character of the prophet's reform, so also did animal-sacrifice conflict with the highly spiritual conception of God to which he attained. We are prepared, therefore, to learn that under his influence the practice was discontinued,¹ and the emphasis on ritual generally was greatly reduced.² Plutarch was undoubtedly right when he said³ that Zarathushtra taught the Persians to sacrifice to Ahura Mazda 'vows and thanksgivings.' Even Anāhita, who, according to the *Yashts*, was honoured by all her other devotees with 100 stallions, 1000 oxen, and 10,000 sheep, was invoked by Zarathushtra with no animal gift.⁴ But after the death of the prophet—how long we cannot say—and with the return of the old nature-worship, the custom of sacrificing animals returned, just as did the practice of preparing and drinking the *haoma*-juice at the service.

4. Animal sacrifice and the dualism of later Mazdaism.—The revival of the custom, however, did not take place without encountering and overcoming more than one difficulty. In addition to the spiritual and religious opposition to animal sacrifices which was part of the inheritance bequeathed to his successors by Zarathushtra, the dualism of the later Mazdaism, whether inherent in the prophet's teaching or only due to a wrong and inconsequential development by the Magi, presented a cosmological problem which had to be solved before animal-sacrifice could be reinstated in the Mazdaean ritual as it existed in pre-Zarathushtrian days. All life, with perhaps the exception of that of a few noxious creatures, belonged to the kingdom of Mazda, and death to that of Ahriman. Hence to bring about the death of even a sacrificial animal seemed to limit the kingdom of the good and to extend that of evil. As to the manner in which the Persians surmounted this difficulty, Strabo's remark⁵ may have much significance when he says that the deity claimed the soul of the victim. The principle of life, therefore, as it left the animal, was regarded as returning to its original source in Mazda, and the kingdom of death was deprived of the prize that seemed to have come so near its grasp. And the use to which the flesh of the animal was put (see below) also served to assist the sacrificer's belief that the whole animal was made to serve divine ends.

5. Animal sacrifices in the later Avesta.—When we come to the period of the *Yashts* and later portions of the Avesta, the sacrifice of animals and other living creatures is fully restored. The victims used were chiefly horses, camels, oxen, asses, deer, and birds. But it is to be noted that these sacrifices were offered almost exclusively, not to Ahura Mazda or the *amesha spentas*, but to the *yazatas*, or angels. Anāhita's acceptable offerings have already been mentioned. Mithra was invoked with cattle and birds, together with *haoma* and libations.⁶ In the liturgy the *yazatas* are invited to the sacrificial feast singly or in groups.⁷ Different portions of the slaughtered animal were assigned and dedicated to various divinities. The Pahlavi *Shāyast lā-Shāyast*⁸ supplies what seems to be an exhaustive list of these assignments. Ahura Mazda has assigned to *haoma*, e.g., the jaw-bone, the tongue, and the left eye of the victim, or, according to a later tradition, the whole head.

6. Persian kings and animal sacrifices.—The sacrificial practices of the Achæmenian kings, as

described by Greek writers, seem to have been on a very large scale,¹ and uninfluenced by the reform of Zarathushtra. But it can hardly be claimed that these kings represented the orthodox Mazdaism of their age. Moreover, where the Greek historians have exceeded the limits of the bare objective facts and sought to supply the motive and significance of Persian religious customs, it does not follow that their interpretations were always right. They would naturally be for the most part in terms of Greek usages. When Herodotus,² therefore, records that Xerxes offered 1000 oxen as a sacrifice to Athene of Ilium, it may signify only that the beasts were consecrated to the deity, to whom they were regarded as sacred, before being killed for human consumption; while the deity named would probably be the Greek counterpart of the Persian god actually honoured. Xenophon³ says that at the feasts of kings consecrated flesh had to be used. The same was true of the Sasanian kings. And, when Eliseus says that Yazdagird II. caused a large number of white bulls and fine rams to be offered in recognition of his victory, it is very probably to be understood that the animals were consecrated to the deity and then employed to make a great commemorative feast for the victory.

7. Method of sacrificing animals.—The victim was led to a clean or consecrated spot, which, as Herodotus says, was frequently on the summit of a high mountain;⁴ and, after the deity in whose honour the sacrifice was made had been invoked and his favour and blessing implored on behalf of the king and the whole Persian people, the animal was slain, according to Strabo,⁵ not by the use of a knife to pour out the blood, but by striking with a log of wood or pestle. Under no circumstances was the offering burnt, although Strabo⁶ records that sometimes a little of the caul was thrown upon the fire, but only to make the fire burn more brightly. The slaughtered animal was then taken limb from limb—whether by the sacrificer, as suggested by Herodotus,⁷ or by the Magus, as Strabo states.⁸ The flesh was seethed and placed on a carpet of tender herbage, 'preferably clover,' says Herodotus.⁹ The Magus then sang his theogony or hymn of praise to the deity, whose presence was always symbolized by the fire which was the invariable concomitant of such sacrifices.¹⁰ When the flesh had remained a little longer on its vegetable altar, it was taken away and used for human consumption partly by the bringer of the offering and partly by the Magus.¹¹ The somewhat modified form of procedure employed in their sacrifices to water, as given by Strabo, has already been detailed under ALTAR (Persian), vol. i. p. 346.

8. Sacrifices and offerings other than those of animals in Zoroastrianism.—Prominent as we have found the place of animals at the sacrifices to have been in pre-Zarathushtrian and late Avestan times as well as in the usages of the Persian kings, nevertheless the impression received from the Avesta as a whole is that throughout its history, excepting the Gāthic period, the centre of the Mazdayasnian ritual was the preparation and offering of *haoma*; and the greater part of the gifts brought and spread out by the *bihdinān* for the divinities and departed spirits was derived from the vegetable world. It is true, as M. N. Dhalla says,¹² that 'up to the middle of the last

century the priest consecrated the fresh tongue, the jaw, and the left eye of the sacrificial animal to the angel Hom'; and that 'it was similarly the practice until very recently with the officiating priest to slaughter a goat with his own hands on the third day after the death of a person, and to dedicate the fat to the fire on the dawn of the fourth day.' Still at the great *yasna* ceremony to-day the only real vestige of animal-sacrifice¹ consists of three, five, or seven hairs of a white bull (*varasa*), tied together by a metal ring, generally of gold, and placed in a cup and deposited, with other sacrificial objects, on the *takht i ālāt*, or low stone table, in front of the chief officiating priest.

The other principal elements in the sacrifices were, and still are to-day, a twig of the pomegranate (*hadhānāpata*, often called simply *urvara*, or 'plant'), which is pounded in a mortar and forms one of the ingredients of *parahaoma*, or juice of *haoma*, fresh milk (*gāush jīvya*), butter (*gāush kudhāo*), *zaothra*, or consecrated water, *darūn* or *draona*² (a sacrificial wafer), and fruit and flowers, together with incense and sandalwood for the fire.

The method of the presentation of these offerings and their place in the ceremonies will be more fully and fittingly described in art. WORSHIP (Iranian). Here it may be explained that the officiating priest, after announcing the sacrifice that he is about to make and invoking the divinities whom he wishes to honour, takes up the *barsom*, sprinkles it with holy water or with milk, and repeats the invocations. He then consecrates the offerings of milk, fruit, and viands, together with the wood and perfumes for the fire. After a prayer to Ahura Mazda and the other divinities there follows the presentation of the offering.³ Then the *mobed*, as the representative of the divinities invoked, partakes of the offerings. These, however, are really only preparatory, and to be followed now by the principal offering of *haoma* or, rather, *parahaoma*—i.e. the prepared juice of the plant. After the praises of the sacred beverage have been celebrated,⁴ the *mobed* and his assistant priest drink some of it, and what remains is poured on the fire altar.

In early times, as appears from *Visparad*, iii., there were present on this occasion representatives of all the classes of Mazdayasnians. The priest closes the *yasna* ceremony by renewing the offering and invoking this time the *fravashis*, or spirits of the departed faithful. The *haoma* is twice prepared during the whole service, corresponding, as Haug says,⁵ to the morning and mid-day libation of the Brāhmans. There was no evening libation among the Parsis; for this, it was held, would benefit only the *daēvas*.⁶

In addition to the great *yasna* ceremonies, at which all the offerings are present, there are at least two lesser ceremonies which may be and are held independently of the *yasna* service, and at which some of the subsidiary offerings of the *yasna* became the principal sacrifices. The first is the *darūn* ceremony. It is with this offering

that the young Parsi is initiated¹ into the circle of believers. The *amesha spentas* and *Sraosha* are honoured with the *darūn*, which is always held also at the *Gahanbārs*.² In addition to the plain *darūn* wafers, two of which are used at the ceremony, two others are necessary in which three rows of three dents or cuts, i.e. nine in all, are made with the finger-nail before frying, while repeating the words *humata*, *hukhta*, *hvarsha* thrice, one word for each of the nine cuts. This dented cake is called *frasast*. The four wafers are placed on the *takht i ālāt*, the two *frasasts* being on the right and the plain *darūns* on the left. On one *frasast* is placed a twig of pomegranate, and a little butter as a rule accompanies the *darūn*, and between them, according to Haug,³ is placed an egg. After the formulæ prescribed for the service⁴ have been recited, into which the name of the angel or *fravashi* in whose honour the sacrifice is made is introduced, the priests and those present partake of the cakes.

The other important secondary ceremony is the *afriṅgān*. This again is in honour of a *yazata* or of the spirit of a deceased person. Special prayers called *afriṅgān* are recited by the priests. The following is a Parsi description of this ceremony.

'The prayers are recited on a carpet spread on the floor on which are placed, either in a metallic tray or in plantain leaves, the choicest and most fragrant flowers of the season, while glasses are filled with fresh milk, pure water, wine and sherbet. These prayers are recited with the object either of expressing remembrance of the souls of the dear departed or of invoking the aid of some guardian angel.'⁵

9. The Mazdayasnian conception of the purpose and significance of sacrifice.—Certain aspects of the procedure followed by the Persians at their sacrificial ceremonies, as described by Herodotus and Strabo, are highly suggestive of the meaning of early Iranian sacrifices. The custom of laying the flesh of the victim on attractive herbage and allowing it to remain for a while upon its vegetable altar before it was removed and employed (as no doubt it was) for human consumption must signify that it was offered as food to the gods. Before the time of Strabo, however, the Persians had advanced in their conception of the nature of their divinities and believed that the gods needed only the soul of the animal. Originally the idea at the root of this custom was undoubtedly similar to that underlying the phenomenon of the 'shew-bread' (*q.v.*) among the Hebrews.⁶ The manner in which some of the *yazatas* are represented as soliciting the offerings of their devotees also suggests that they thought these gods needed strengthening and encouraging as well as honouring and invoking, and consequently more abundant blessings would result to their worshippers.

In the Avesta the offerings and sacrifices are not frequently brought into relation to sin. In *Vendidad*, xviii. 70-76, however, the man who has had relations with the *dashtān* woman atones for his sin with many sacrifices, including that of supplying the carcasses of some noxious creatures. The Pahlavi literature, on the other hand, contains several allusions to the vicarious or atoning character of the sacrifices. The *darūn* offering, e.g., is regarded as a sufficient atonement for a class of transgression called *tanāpūhar*.⁷ If the *barsom* twigs were used, they possessed the virtue of raising the atoning value of the offering tenfold.

Plutarch attributes still another motive to some Zaratrustrian oblations; for, while the Persians offered vows and thanksgiving to Ormazd, they

¹ The whole ceremony is called *giti khirid*.

¹ Unless we reckon the viands prepared from meat, which are apparently still in use.

² The *darūn* is a flat cake of about the size of the palm of the hand, made of wheaten flour and water with a little melted butter, and fried. The *darūn* is not mentioned under its specific name in the Avesta, but is included under the more general term, *myazda*, which is employed to designate consumable offerings either individually or collectively. While originally and etymologically meaning 'meat' or 'flesh', *myazda* at the present day seems to be applied to fruits and flowers such as are used at the *Srōsh darūn*.

brought other offerings to Ahriman for averting evil.¹ There is, however, much improbability in this statement, inasmuch as it involves a direct contradiction of the fundamental doctrine of Mazdaism, that the evil one was not to be propitiated, but strenuously opposed.² If Plutarch was describing an actual phenomenon, it was observable only in a degenerate or counterfeit Mazdaism.

SACRIFICE (Japanese).—1. Importance of sacrifice in Shintō.—When we consider that the primitive Japanese had a very practical mind, and that their dealings with the gods were more frequently of the character of a bargain than of mystic adoration,³ we are not surprised to find that offerings occupied a particularly important place in their religion—so much so that, in the curious account of a solemn sacrifice offered by the first legendary emperor, Jimmu Tennō, the food-offering is personified, and even deified, under the name of Idzu-uka no me.⁴ Sacrifice appears also at other important parts of the mythological account—*e.g.*, when the gods themselves reveal to the empress Jingō the special offerings which will permit her to cross the sea and conquer Korea.⁵ But it is particularly in the worship that the importance of offerings may be best gauged. The eclipse-legend,⁶ which gives the divine prototype of the Shintō cult, shows the gods hanging strings of jewels on the highest branches of a huge *sakaki* (*Cleyera japonica*), a mirror on its middle branches, and pieces of cloth on its lowest branches. These primitive offerings were afterwards increased, and by the time of the ancient rituals they formed long imposing lists—in fact, the evolution of the offerings presented or promised to the gods occupies the greater part of the text.⁷ Moreover, not only are those offerings prepared with the greatest care, in order to avoid all pollution, but they are often duplicated, so that at least one portion of the things offered may escape possible blemish, which would forfeit the whole magical effect expected; *e.g.*, the rice for the coronation feast (*Oho-nihe*) was brought from two different provinces and preserved for the time being in two separate buildings; the first portion was called *yuki* ('religious purity'), and the second *suki* ('subsidiary'). Lastly, the deification which we noticed in the story of Jimmu becomes generalized in the worship: the mirror or the sword, which was at first a simple offering, comes to be regarded as implying the real presence of the god, and finally as being the god himself or at least one of his material incarnations (*shintai*, 'body of the god').

2. Psychological basis.—It is a question whether Shintō offerings are made with the idea that they may supply, in some mysterious manner, the physical needs of the god or the spirit of a dead person, or whether they are merely symbolical. W. G. Aston supported the latter theory, but he was building mainly on considerations derived from observation of the sentiments of a modern European, *i.e.* of a man who, like Montaigne and

St. Augustine before him, thinks, *e.g.*, that the funerary rites are a consolation for the living rather than a help to the dead.¹ In agreement with the majority of those who have studied comparative religion, the present writer thinks rather that the state of mind of uncivilized man was as a rule much more commonplace; and it is certain that the ancient Japanese, in particular, took a very material view of things. If the learned theologian, Hirata, in the 19th cent., did not hesitate to claim that food-offerings lose their savour in a manner inexplicable by natural causes, this crude conception must have been all the more strong among the primitive Shintōists. The question has been discussed in art. **ANCESTOR-WORSHIP AND CULT OF THE DEAD (Japanese)**, vol. i. p. 457^a; and the reasons stated there with regard to offerings to the dead apply equally to offerings to the gods, conceived by men in their own image.

3. The reason for offerings.—Offerings are made often with a general intention of propitiation, but often also as a distinct reward for services rendered by the gods or expected from them in the future. The offerings were then one of the terms of a kind of mutual contract concluded between the gods and men.² The result was that these offerings were sometimes of a conditional character.³ There were also expiatory sacrifices (*aga-mono*, 'things of ransom') for cleansing the faithful from any ritual impurity. The most famous example of these—showing also their mythical origin—is the removal of the hair and nails of Susa-no-wo.⁴

4. Recipients of offerings.—The offerings were made sometimes to the spirits of the dead, sometimes to the gods.⁵ Between the offerings to the dead and the offerings to the gods, we may mention as a natural transition the offerings to the *manes* of emperors or other deified personages. The offerings to the gods properly so called, *i.e.* especially to the powers of nature, were sometimes made to one or several individual gods, sometimes to a collective category of gods, and sometimes to all the gods;⁶ *e.g.*, the offerings of the *Toshigohi no Matsuri*⁷ were made to the deities of the 3,132 official temples, *i.e.* to all the deities in a mass.

5. The sacrificers.—Originally the offerings were undoubtedly individual, and they evidently remained so in many cases, as the accompaniment of the prayers of each worshipper. But for various reasons (the increased price of certain of the things offered, the necessity of preparing the offerings with particular care in order to avoid all ritual pollution, etc.) they naturally tended to assume a collective character. This tendency was further developed by the progressive concentration of all the powers, religious as well as political, in the hands of the emperor, who from that time officiated in name of all his people. When a subject accompanied the emperor, he had not the right to make his offering to the gods himself; his personality disappeared somehow, and was included in that of his sovereign.⁸ That is why the emperor Jimmu Tennō (see above) personally performed the sacrifice. But, the very concentration of powers having later involved their division, the Mikado entrusted his religious functions to the care of various hereditary sacerdotal colleges; and, just as the *nakatomi*

were specially commissioned to pray in place of him,¹ so the *imibe*, or *imbe* ('abstaining priests'), had the special duty of preparing the offerings. Their very name (*imi*) expresses the idea of abstinence comes from the care with which they had to avoid all cause of impurity during the preparation. Moreover, by their mythical origin they were connected with the god Futo-dama, whose name may be translated 'great gift or offering,' and whose rôle in the eclipse-myth agrees with this presentation of offerings. Historically they were probably the successors of the 'abstainer' of primitive Japan,² with the single difference that, while, like him, observing ritual purity, they were not obliged to abstain from eating meat or approaching women except during the few days before a religious festival, and that, far from not being able to wash themselves or comb their hair, they had always to attend carefully to their personal cleanliness. Their part in connexion with offerings in the chief Shintô festivals is prescribed in the ancient rituals; they officiated especially at the *Toshigohi no Matsuri* (*norito* 1),³ at the *Ohotono-Hogahi* (*norito* 8),⁴ and at the *Oho-nihe* (*norito* 14).⁵ There are also other priests, inferior to them, the *hafuri*, or *hōri*, whose name (from the verb *hoburu*, or *hafuru*, 'to slaughter,' 'to throw away') denotes that they were originally sacrificers; in fact, the *Nihongi* mentions, in the year 642, a sacrifice of horses and cattle directed by them to obtain rain. The *oho-hafuri* ('great *hafuri*'), the legendary descendant and high-priest of the god Take-minagata at Suwa, still superintends sacrifices of deer, whose heads are offered to his divine ancestor.

6. Objects sacrificed. — The most interesting question in this respect is that of the human sacrifices of primitive Japan.⁶ For these human victims others were substituted, either animal victims⁷ or effigies of baked earth or even metal.⁸ Slaves were also offered to the temples.⁹

Besides those ancient human sacrifices and their more modern substitutes, we find offered to the gods all the things that man regards as useful or even merely pleasing to them—in the first place, the things corresponding to the three primordial needs of food, clothing, and habitation, and then things corresponding to secondary requirements.

i. OFFERINGS CORRESPONDING TO THE THREE ESSENTIAL NEEDS. — (a) *Offerings of food*. — In the sacrifice of Jimmu Tennō, mentioned above, the only offerings were of food. Indeed the offering of the things most necessary for life, viz. food and drink, is the most ancient form of sacrifice. It is also the most important; more than once, therefore, in the titles of the rituals connected with the chief Shintô festivals the word *nihe* ('food-offering') appears, beginning with the *Oho-nihe* ('great food-offering'), the most solemn of these festivals. Those food-offerings include all the chief elements of Japanese feeding: as food and drink of mineral origin, salt and water; as food of vegetable origin, rice in its different forms (in the ear and in grain, hulled and in husk), and also in rice-cakes, then various kinds of pulse and fruits, especially edible sea-weed, and, as drink, *sake*, also made from rice; of animal origin, on the one hand, fish of all kinds, especially the favourite of the Japanese, *tai* (a kind of gold-bream), on the other hand, game, either with hair (deer, boars, and hares) or feathered (pheasants, wild ducks, and other birds). The ritual quoted in art. PRAYER (Japanese), vol. x. p.

191^a, gives a good example of the catalogue of foods generally offered.

(b) *Offerings of clothing*. — As the clothing of the primitive Japanese was made mainly of hemp (*asa*) and *yufu* (the fibre of the inner bark of the paper mulberry-tree), these are the materials, raw or woven, that figured in the ancient offerings. Silk, which was of comparatively recent importation at the time when the rituals were drawn up, had only a secondary place in them. As a rule, a certain weight of fibre (of hemp or mulberry-bark) or a certain number of pieces of cloth made from these materials was offered; and it was only natural that woven stuffs, which were the money of the period, should take the place of other articles more perishable, such as food, or more difficult to procure. The *awo-nigi-te* ('soft blue articles') and the *shira-nigi-te* ('soft white articles') which, in the eclipse-myth, the gods hung on the low branches of the sacred tree were respectively hemp and *yufu*. These are the *nusa* ('offerings'), the prototype of the later offerings. They afterwards took the more conventional form of the *oho-nusa* ('great offering'), consisting of two sticks set up side by side, the one of *sakaki*, the other of bamboo, from the top of which hung fibres of hemp and strips of paper, the latter representing the bark of the mulberry from which it was made.¹ This manner of supporting religious offerings was most natural, because, even in everyday life, Japanese politeness demanded that an inferior should offer anything to a superior only at a respectful distance, from the end of the branch of a tree.² With this may be connected the *tama-gushi* (probable meaning 'gift-skewer'), branches of *sakaki* or bamboo, with tufts of *yufu*, which formed a simpler way of presenting the *nusa*.³ Still later the *oho-nusa* were generally displaced by the *gohci*, made of a single stick from which hung strips of white paper, cut at right angles. This is the emblem seen at the present day in all the Shintô temples; and, having lost its primitive signification of substitute for the ancient cloth-offerings, it is now regarded by the worshippers as a symbolical representation of divinity, or even as the temporary dwelling-place of the deity himself, who, at certain festivals, by the mere pronunciation of the formula called *kami-oroshi* ('bringing down the god'), descends into it, and remains in it during the whole ceremony.⁴ One more form of *nusa* deserves mention, less important and still more simple, the *ko-nusa* ('little offerings') or *kiri-nusa* ('cut offerings'), consisting of paper with raw *sakaki* or hemp leaves mixed with rice; these are the portable *nusa*, which the traveller took with him in a small bag (*nusa-bukuro*, 'offering-bag') for the religious offerings which he might have to make during his journey.⁵

Such was the evolution of the important offerings of cloth, from the primitive *nusa* of mythology to the modern *gohci*. Besides these typical and general offerings, other articles of clothing were offered to the gods—sometimes skins of bears, boars, deer, or cattle, sometimes bright-coloured materials or even made-up garments.⁶ But these are secondary offerings and of a somewhat exceptional kind.

Along with clothing mention must be made of adornment—that accessory which was so important among primitive races that in their eyes it often surpassed clothing itself. Now, in contrast to the modern Japanese, who (even the women), with a few rare exceptions introduced by

imitation of Europeans, regard our use of jewels as barbarous, the primitive Japanese willingly covered themselves with head-ornaments, necklets, and armlets, the beads of which, some round, some tube-shaped (*kuda-tama*) or comma-shaped (*maga-tama*), and made of various stones, otherwise of no great value (chalcidony, jasper, chrysoprase, serpentine, crystal, etc.), are found in the excavations of the oldest native tombs. The celestial gods had a divine jeweller among them, whom we meet in the eclipse-legend, the god Toyo-tama ('rich jewel'), the legendary ancestor of the corporation of imperial jewellers; and in the mythology reference is continually being made to the jewels of the gods, which are mentioned even in the most important stories.¹ We gather therefore that jewels play a comparatively large part in the Shintō ceremonies and that they sometimes figure among the religious offerings.²

(c) *Offerings of habitation*.—Just as the gods desire offerings of food (*nihe*) and clothing (*nusa*), so they desire offerings of dwelling-places; and the word *miya*, applied to Shintō temples, means nothing else than 'august house'; *miya* also denotes a palace. Another word for temple, *araka*, seems likewise to signify 'dwelling-place.' In the mythology we often find the gods requesting the raising of a temple to them 'to make them rest well.' To the present writer it seems probable that the meaning of the word *yashiro*, 'house-representative,' also used to denote Shintō temples, refers specially to the rite which consisted in fixing the boundaries of an open place on the ground³ for the time being consecrated as the god's place of abode during a ceremony—just as, even at the present day, a small enclosure of this kind (*himorogi*) is reserved for the purification which precedes every great Shintō festival—but that this substitution of a temporary residence for a real building represents merely a later simplification of the more ancient, very material, conception of the *miya*.

This *miya*, being intended as the dwelling-place of the god, does not require to be very large; and it is not calculated to hold a vast assembly; it is only in the precincts of large temples that there is, among other secondary buildings, an oratory (*haiden*) meant for the imperial envoy who may occasionally come there; as a rule, the worshipper who passes a Shintō temple simply stops at the outside, says a short prayer, and goes on. This explains the fact that to-day in the Japanese empire there are close on 200,000 Shintō temples. The smallest temples (*hokora*) can be carried about on a cart; the largest, such as those of Ise, are of quite modest proportions, and of a very simple structure, which purposely intends to represent only an architectural enlargement of the ancestral thatched cottage. In the 10th cent., of 3,132 officially recognized temples only 492 were classed as important enough to have offerings deposited on an altar; in the other 2,640 they were simply laid on the ground; with still greater reason the innumerable small temples dotted over the whole surface of the country were only very slim buildings, where the offerings were as humble as the worshippers. We must mention, lastly, the modest domestic altar (*kami-dana*, 'god-shelf') in each house, devoted principally to the cult of the family ancestors, who are thought to dwell there—at least during certain festivals.

In this dwelling-place the gods required furniture. And the furniture was as simple as that of Japanese houses, which includes hardly any of the pieces of

furniture considered essential in our too complicated modern civilization. The most important piece was perhaps the *makura*, the native wood-pillow, for the sleep of the god—the pillow which, in certain cases, was regarded as so much impregnated with his divinity that it was made a *shintai*. The same thing happened not only with the metal mirrors which, originally simple offerings, were readily deified (e.g., that of the sun-goddess of Ise), but also—a much more curious thing at first sight—with simple articles of pottery, which were naturally offered to the gods as to the ancestors,¹ and which ended by being worshipped as 'goddesses.' We may conclude, therefore, that those objects of furniture, having, as it were, become fixtures on account of their purpose and their connexion with the dwelling-place, have gradually, by long contact with the deity dwelling there, assumed that permanent and precious character which leads to their deification.

ii. OFFERINGS CORRESPONDING TO SECONDARY NEEDS.—One of the most important of the secondary requirements is locomotion. Therefore, just as living horses, for which horses of baked earth were afterwards substituted, were buried in the tombs of the Mikados and princes,² so offerings were made to the gods of living horses, preferably white (the colour of the sun), which were left at liberty in the precincts of the temple; for these also there were afterwards substituted at first wooden effigies (in certain processions men represented the horses of the gods by mounting *koma-gata*, 'hobby-horses,' or by carrying attached to their chest a wooden horse's head), and then painted horses. The last phase of the evolution led to the construction of special buildings called *emadō*, 'horse-picture-galleries,' collections of *ex-votos* which may be seen in the precincts of some of the large temples. Lastly, the gods also have their carriage, the *mikoshi*, which, on the contrary, presents a sumptuous appearance; on religious feast-days the worshippers carry the *shintai* in this *mikoshi* on their shoulders.

A people essentially agricultural, as the Japanese seem to have been originally, whose Mikado himself occasionally set the example of ceremonially digging the earth, and among whom every year at Kasuga the young girls called *miko* ('august children') might be seen solemnly planting rice with their pure hands, was necessarily inclined to suppose that the gods devoted themselves to agriculture. And, as a matter of fact, the mythology, beginning with the great stories about the sun-goddess (the crimes committed by Susa-no-wo against her cultivations), shows that it was really one of the chief occupations of the deities on the Plain of the High Heavens. It was natural, therefore, that offerings of this kind should be made to those deities; and agricultural implements, reels for winding yarn, etc., figure in certain lists of offerings.

Another important requirement in a warlike country like primitive Japan was weapons for war. The mythology abounds in stories of marvellous swords—e.g., the famous Kusa-nagi-no-tachi ('the herb-quelling great sword') which Susa-no-wo found in the body of the monster of Koshi,³ which reappears later in the legend of Yamato-dake,⁴ and which is worshipped at Atsuta as one of the three insignia of the imperial power. The majority of those swords must originally have been offerings, which gradually became *shintai* and even gods—

³ Cf. the Roman *templum*.

e.g., the war-gods Take-mika-dzuchi and Futsunushi. In the 10th cent. offerings of wooden swords were already substituted for real weapons, and these have continued to the present day.¹ Other weapons, both offensive and defensive, were also offered—lances, bows and arrows, and shields.²

Lastly, even the need of entertainment, which was logically attributed to gods as to men, gave rise to appropriate offerings. Each important temple possessed a platform for the performance of sacred dances (*kagura*), the name of which is written with two Chinese characters meaning 'pleasure of the god.' Those pantomimes, whose mythical origin is found in the dance, before the cavern of the sun-goddess, of the goddess Uzume, the ancestor of the Sarume ('monkey-women'), the religious dancers of the court, were performed in the chief temples, to the accompaniment of flutes and castanets, by the *miko*, who thus represented the great episodes of the sacred story. The present writer was once present at the *kagura* in an old temple of Nara, and noticed to what an extent this dance of priestesses has, after all those centuries, scrupulously observed to this day the antique gestures and symbolical attitudes as we find them in the most ancient monuments of Japanese art. By a curious turn of events those primitive pantomimes, at first intended to charm the Shintō gods, later, after various developments, became the *nō*, or lyrical drama, generally composed by the bonzes or in any case under Buddhist inspiration, and thus greatly helped in the propaganda of the foreign religion. A fact which proves clearly that those artistic dances were at heart real offerings is that the rituals themselves, as the eclipse-legend shows, were, in the same way, regarded as charming the gods by the harmonious beauty of their language and the grandeur of their solemn declamation. Artistic pleasure, like literary pleasure, was regarded as a requirement of the gods which men must satisfy.

Besides these æsthetic enjoyments of a general kind, other more specified offerings might be made to the gods with the same intention of amusing them, as the texts clearly show; e.g., to keep away the deities who send plagues, the Japanese gave them 'as things to play with, beads.'³

7. Fate of the offerings.—The offerings, once made, had various fates. The food-offerings were usually consumed—as, e.g., after the emperor Jimmu's sacrifice. At the festival of firstfruits (*Nihhime*) the emperor tasted the new rice which had just been offered to the gods;⁴ the priests followed his example, and even the simple worshippers might do the same. So also at the festival of Kasuga⁵ the participants proceeded solemnly to eat the offerings in a dining-hall, while the servants of the imperial stables, who had had charge of the horses offered to the gods, were given a drink of the sacred *sake*. Even to-day pilgrims to the temples of Ise eat the rice of the offerings, which they buy from the priests. At the festival of the god of Suwa, mentioned before, while the heads of the seventy-five sacrificed deer are presented as offerings, the flesh is eaten by the priests, and the worshippers may also take a share of it, on condition that they obtain from the priests chopsticks which will allow them to do so without contamination. On the other hand, offerings of a valuable and durable kind, such as mirrors and swords, remained in the temple, where they were not placed on the altar, but were locked

in the treasury; there they remained permanently, as *shimpō*, 'divine treasures,' later on often becoming *shintai* or even gods. The same thing happened in the case of the sixty white, red, and green jewels of the 27th ritual.¹

Between those two extremes of ephemeral and permanent offerings there were offerings of a durable kind but not so precious—e.g., bells or pottery—which were presented and then taken away to be presented again, so that the same objects were always used, just as to-day at Buddhist funerals, when birds are set at liberty, the undertakers make arrangements to capture them again immediately after the ceremony in order to use them on the next occasion.

The *aga-mono*, expiatory offerings to which were magically attached the impurities from which the worshippers wanted to be cleansed, were removed and thrown into the river.²

8. Buddhist offerings.—As Buddhist offerings have no special characteristic in Japan, they require no treatment here. We mention them merely to point out, by way of contrast, that the only original religion of the Japanese, viz. the ancient official Shintō, knew nothing of burnt incense, lighted candles, flowers on the altar—in a word, the characteristic Buddhist offerings. As regards offerings of flowers, we may mention that, at certain Buddhist festivals which require lotus flowers, but which fall at a period of the year when the lotus (or, more correctly, the *Nelumbium*, which is the lotus of Japan) is not in bloom, the equally pure magnolia flowers are used.

LITERATURE.—This is cited throughout the article.

M. REVON.

SACRIFICE (Jewish).—The destruction of the Temple in Jerusalem wrought a profound change in the religious life of the Jews. The entire divine service had come to a standstill. The priests and Levites had lost their position and occupation, and to the Israelite the very centre of worship had been destroyed. The sacrifices, among other things, had ceased. But divine ordinances cannot be abrogated. They are merely temporarily suspended until the time comes when they can again be enacted. A time will come when a new Jerusalem and a new Temple will be built up again. This conviction lives deep down in the hearts of the Jews, who look forward to the realization of the divine prophecies and with that the restoration of the ancient worship. This was the hope of Ezekiel, who in the midst of the Babylonian exile not only foretold the return, but went so far as to draw the picture of the future Temple. In the Talmudic literature there is a treatise called *Middōth*, i.e. the measurements of the pre-Herodian Temple—as the present writer has shown elsewhere³—and not of the Herodian described by Josephus. The preservation of this detailed description of the Temple is due not to any antiquarian interest, but to the desire to keep alive for the future the architectural details of the last Temple. It is to serve as a guide for the reconstruction. In 4 *Ezra* and other apocalyptic writings, and especially in Revelation, we have the picture of the heavenly Jerusalem which will descend from on high at the consummation of the appointed time, and within it the heavenly Temple. Similar descriptions can be found in other eschatological writings, all testifying to the belief that the destruction of the Temple was only a temporary event. The service has been suspended for a while, to be taken up again at the proper time. The Jewish sages maintain the principle of the everlasting value of the ordinances of the Law,

though they do not go so far as the author of the book of *Jubiles*. According to the latter, the patriarchs already had kept them; nay, they were written on the tablets of heaven and kept by the angels, although, according to the legend,¹ Moses heard the angel recite the *sh'ma'* (Dt 6¹⁻¹⁰) and therefore he instituted it afterwards as part of the daily service. The fact that the Jews considered that the service in the Temple with the sacrifice was merely temporarily suspended, owing to the impossibility of carrying it out, is shown also by the compilation of many treatises in the Mishnâh forming the section *Koddashim*, i.e. things connected with the sanctuary, in which minute details are preserved as to the services, sacrifices, offerings, etc., in the Temple; and the belief in the re-establishment of the sacrifice is found repeatedly referred to in the Jewish prayers recited in the daily service and on festival occasions. Thus in the *'amidah*, which every observant Jew is expected to repeat three times daily, he prays:

'Mayest thou bring back the sacrifice to thy holy house, and the fire offerings as well as their prayers receive with favour.'

This is also the preamble in the *musaf 'amidah* on Sabbath, new moon, and festivals, etc., before the recital of the corresponding portion of the Bible (see below), when it is said:

'May it be thy will, O Lord our God, and the God of our fathers, that thou mayest bring us up with joy to our country, and there we will perform before thee all the obligatory sacrifices, the permanent ones according to their order and the additional ones according to the law.'

This formula varies but slightly and it is retained in every such prayer.²

This constant prayer for the re-establishment of sacrifice has been a bone of contention between the Reform Jews and the Conservative Jews. The former contend that they can no longer pray for the re-establishment of sacrifices. Aesthetical considerations of no real value are put forward to explain this position. But the vast majority of Jews have retained the ancient formula together with the undying hope of the revival of a national life in the land of their fathers according to divine promise. In this hope all the Jewish sects unite—the Rabbanites as well as the Karaites, and the Falashas no less than the Samaritans, who, however, pray in a different form for the removal of the *Fanutha* (the turning away) and the return of the *Rachutha* (the divine favour), and the restoration of the service on their holy Mt. Gerizim. It must be pointed out at the same time that the Jewish sages are alive to the great difficulties which will have to be overcome before the sacrifices can be renewed, for they acknowledge those difficulties to be insurmountable unless removed by superhuman intervention. The *kohanim* (priests) are all defiled by the touch of dead bodies, of which defilement they cannot now purify themselves in the absence of the ashes of the red heifer. They have also intermarried to such an extent that the purity of their descent has in many cases become doubtful. The prophet Elijah then will segregate the right from the wrong and will purify those to be set aside as fit for the service.³ Thus the practicability of restoring sacrifices is made to depend on the re-appearance of the prophet Elijah, whose coming before the great day is the last message of the last prophet (Mal 4⁵). It is relegated to a distant future, but the obligatory character of the sacrifices is not thereby affected. It was therefore necessary to establish temporary substitutes for the actual sacrifice. The sacrifices themselves varied in character. There were the early morning and afternoon sacrifices; there were additional

sacrifices at new moon and festivals. These were collective sacrifices brought in the name and by the means of the entire nation. There were, besides, individual sacrifices—sin-offerings, thank-offerings, etc. Some were of a propitiatory nature; others were expiatory sacrifices. It is necessary to bear in mind this multifarious character of the sacrifices in the Temple if a correct description is to be given of the manner in which the Jews kept up the ordinances of the sacrifices and perpetuated them without Temple and priests. They spiritualized the sacrifice. The prophets had paved the way for this spiritualization. They already hinted at acceptable substitutes for the animal sacrifice. It is the sacrifice of self that they preach—the offering of the heart and of the soul, the outpourings of the broken heart, of the meek mind, which are accepted of the Lord, 'the sacrifice of the lips instead of the calves' (Hos 14²), the meditations of the heart (Ps 19⁴).

Whatever interpretation of the origin and meaning of sacrifice be given—and the interpretations are many and contradictory—the primitive stage had already been passed when, in the religious evolution of Israel, sacrifices took their place. Sacrifice represented then a free-will offering to God of what is best in man—an act of exaltation by which man, purified through this voluntary act of self-abnegation, draws nearer to God. He has either atoned thereby for his sin or given public expression of his thankfulness for the inexhaustible mercy of God. He may also expiate in his death, though not as a vicarious atonement, the guilt of others. The sacrifice of life, of health, and of wealth now takes the place of the sacrifice in the Temple of oxen and rams, or, rather, the substitutes are prayer, self-chastisement, and almsgiving. Traces of the ancient form of animal sacrifice still survive, however, on rare occasions and among Jewish sects.

(1) Foremost among those new substitutes for sacrifice stands *prayer*—the sacrifice of the lips. Prayer has taken the place of the service altogether, but here we shall consider only that part of the prayer which is exclusively regarded as the substitute for the sacrifice. The prayers are ordained to take place at the time when sacrifices were brought in the Temple; but, whilst the patriarchs are credited with having established the evening, morning, and afternoon prayer,¹ these were later to take the place of the sacrifice. Daniel prayed three times (Dn 6¹⁰ 9).

The practices in the second Temple paved the way for the substitution of prayers for sacrifices. There were the daily sacrifices which were brought in the name of the whole nation, and for which the shekel contributed by every Jew was used. Now, the nation could not all be present on the occasion of the offering, and thus a rota of deputies was established which, by tradition, was carried back to the time of David. The country was divided into twenty-four sections;² and out of each of these sections representatives, consisting of priests, Levites, and Israelites living in that section, went up to Jerusalem and were present, or 'stood by,' on the occasion of the sacrifices (hence the name *ma'amad*, pl. *ma'amadôth*). Thus the whole nation was practically represented by such delegates throughout the year; but, while the delegation was standing by in Jerusalem, the priests, Levites, and Israelites left at home gathered in their assemblies (synagogues) and, as it were, united with their brethren in Jerusalem. On that occasion they recited portions of the first chapter of Genesis in addition to the general benedictions and prayers, such as the *sh'ma'*, and probably they also recited hymns, whilst their brethren

¹ *Gen. Rab.* 68.

² *Ta'untth*, iv. 2.

in Jerusalem did likewise. If it were not for the *ma'amadôth*, the world would not exist.¹ No doubt on that occasion, while the *ma'amadôth* were present at the sacrifice, the corresponding passages from the Law concerning the institution of this sacrifice were recited in the synagogues in the provinces. Thus the first step was taken to represent sacrifice by prayer and recitation. This was afterwards enlarged upon when the Temple was destroyed and the possibility of bringing sacrifices had come to an end.

It has already been observed that the revival of the sacrifice is earnestly prayed for. But this alone does not suffice. The chapter of the corresponding portion in the Bible in which the Law commands the bringing of the sacrifice was to be publicly recited. Here we have to divide it in accordance with the Jewish form of liturgy: there are (1) a private devotion, which, however, does not materially differ from the public, especially on week-days; (2) the public worship of week-days, in which no lessons of the Bible, or practically none, are recited; and (3) the Sabbath, new moon, and festivals, in which, in addition to the special prayer, lessons from the scroll of the Law are also recited. The substitution, therefore, of corresponding portions had to be adjusted to these varying forms of the Liturgy. On week-days reference is made to the 'perpetual sacrifice' morning and evening, and the few verses of the Bible containing this commandment are recited in the early part of the prayers and hymns called *berākhoth* or *z'mirôth*. On the special days (Sabbath, new moon, and festivals), when in the Temple an additional sacrifice was brought (*musaf*), an additional portion is added, and in the additional (*musaf*) *amidah* the same verses are again repeated. The introductory formula runs thus, and it contains practically the whole basis for the substitution of prayer for sacrifice according to Jewish tradition:

'Sovereign of the universe! thou didst command us to offer the daily sacrifice in its appointed time and that the priests should officiate in their service and the Levites at their stand and the Israelites by their delegates. But, at present, on account of our sins, the temple is laid waste, and the daily sacrifice hath ceased; for we have neither an officiating priest, nor a Levite at his stand, nor an Israelite as delegate. But thou hast said that the prayers of our lips shall be as the offering of bulls (Hos 14²). Therefore let it be thy will, O Lord our God, and the God of our fathers, that the prayers of our lips may be accounted, accepted, and esteemed before thee, as if we had offered the daily sacrifice at its appointed time, and had been represented by our delegation.'²

On the Day of Atonement the central portion of the *musaf* service contains a minute and elaborate description of the sacrifices offered in the course of the service performed by the high-priest on that day in the Temple in Jerusalem. Thus far concerning the daily prayer incumbent upon every Israelite, whether in public or in private devotion. In addition to those portions included in the prayer, and possibly of a higher antiquity, are the lessons read at the public service. These are read from the scrolls on Sabbaths, new moon, and festivals. On these occasions such sections of the Law are read as refer to specific festivals, such as Passover, Tabernacles, etc. They are read from one scroll independently of the weekly lesson on the Sabbath and the special lesson containing the institution of these festivals. On the new moon they form the only lesson, which is read from a single scroll brought out on that day. Of special significance in this connexion is the lesson read from the first scroll on the second day of the New Year. It is Gn 22, containing the story of the sacrifice of Isaac. This is embellished by a legend of the Rabbis in which it is stated that, for the sake of Abraham's compliance with the divine command of offering up Isaac, God would accept

hereafter sacrifices of animals as an atonement for the people's sin. When Abraham asked, 'What will happen if they will no longer be able to bring such sacrifices?' God replied, 'Let them recite it before me, and it will be for me like unto the sacrifice.'¹ This view, then, that prayers, and above all the recital of the portions dealing with sacrifices, are the proper substitute for sacrifice, is often repeated in passages in the Talmud—e.g., *Brāk. 15a* and *b*, 33a; *Suk. 45a*; *Ta'an. 26a-27b*; *Meg. 31a*; *Midr. Psalm*, ed. S. Buber, p. 54; *Yalk. to Ps 90*, ii. § 533 and i. § 77; *Midr. Rab. ch. 18* (end), ch. 30, § 3; *Psikta*, ed. Buber, fol. 102b; *Ruth Rab. to ch. 3*.²

'Behold the one who is asked to "offer up" prayers for the community is invited to do so by using the word "Kerab," which means both "draw near" and "offer up" a sacrifice, for prayers are like sacrifices.'² 'To prepare thyself for prayer is like building an altar for bringing a sacrifice.'³

The substitution of recital of portions of the Law for sacrifices seems to go back to a very ancient time—the time of the *ma'amadôth* before the destruction of the Temple. It is therefore not surprising to find the same practice among the Samaritans. In their prayers, as already remarked, they also invoke God's blessing and pray for the restoration of the ancient sacrifices, which are considered by them also as only temporarily suspended until the advent of the Taheb. They also have similar lessons, which they read on special days, on the eve of Sabbath, and on festivals; and they insert in their prayers corresponding portions of the Law describing either the institution or the sacrifice set aside for special occasions.⁴ Moreover, they also have the term 'addition,' which they, curiously enough, spell *mozef*, not *musaf*; and they form from it a verb which they write *yozef*, 'to add.' They also introduce into their prayers verses from the Bible applicable to the significance of the day, which they group together to form an anthology, *catef*, thus substituting the recital of verses and of whole sections of the Bible for the sacrifices no longer to be offered in their Temple, which has been destroyed. Unfortunately A. E. Cowley did not realize the importance either of these *catefs* or of the Biblical lessons, and has omitted them from his *Samaritan Liturgy*,⁵ and has thereby rendered reference to the peculiar form of the *catef* found in the rubric unintelligible. For their sacrifice of the Paschal lamb see below. The same principle is also followed by the Karaites, who in a way approximate to the practice of the Samaritans by accumulating Biblical verses of similar contents into collects in which the name of the festival forms, as it were, a kind of catch-word.

(2) *Study of the Law* in general is also considered an equivalent substitute for sacrifice, and the study of the chapters dealing with the various forms of sacrifice—peace-offerings, sin-offerings, thank-offerings—or the chapters containing the description of the sacrifice is considered of the highest merit. Studying the portion of thank offering is like bringing it.⁶ It is even put into the mouth of God that it is as acceptable to Him as the sacrifice of old in the Temple. The sin of Eli cannot be atoned by sacrifice, but only by the study of the Law.⁷ And this has been extended to the study or recital of those portions in Rabbinical literature which contain references to the sacrifices in the Temple, such as *Zebahim*, 5; then the description of the incense⁸ and the order of service arranged by Abbaye;⁹ also *Lev. Rab. ad Lv 11*; *Kolbo*, ch. ii.; *Siddur Rashi*, fol. 4.

(3) The same principle applies to the substitution of fasting for sacrifice: 'To fast is to bring a

sacrifice.¹ And joined with it is almsgiving. In each case this means sacrifice of substance, both spiritual and material.

Fasting can be either individual or general, for propitiatory purposes (to avert impending evil) or for an expiatory reason (to atone for sin committed and to avert the dreaded consequences). The real object, however, in all cases is not to obtain God's favour, as it were, by a bribe, but to give outward expression to the mortification caused by sin and backsliding, in contrition of heart, self-chastisement, self-abnegation, and meekness, and to appeal to God's mercy and forgiveness. The result expected from self-denial and charitable deeds was inner purification and approach to God, from whom man had departed by forsaking His ways or breaking His commands. The great prototype, of course, is the Day of Atonement, but during the Temple period it was accompanied also by sacrifice, and on that day (see above) the recital forms part of the service. Now only the fasting remains, and it is considered as an equivalent for the sacrifice on every other occasion. In the prayer accompanying the individual fast as well as in those used on public occasions of fasting the words used by Rabbi Simeon² find their place:

'Therefore, O Lord! with thy abundant mercy answer me at this time and hour and let the diminution of my fat and blood, which hath by this day's fast been diminished, be accounted and favourably accepted before thee as the fat of the sacrifice laid on thine altar; that it may atone for what I have sinned, trespassed and transgressed against thee, whether accidentally or by choice; through ignorance or presumption; knowingly or unknowingly.'³

The same sentiments run through all the propitiatory and expiatory prayers connected with fasting. The Talmud has many examples of men who fasted a number of days and continued to fast even for years in order to avert impending evil—e.g., Rabbi Šadoq, who fasted 40 years to avert the impending doom of Jerusalem,⁴ and Rabbi Hanina, who fasted to avert misfortune from an individual.⁵ A well-known fast is that of Adam, who fasted 130 years to expiate his sin.⁶ These men, as it were, sacrificed themselves for the benefit of others and hoped to win thereby the favour of God, just as if they had brought sacrifices to the altar.

In a way self-mortification is considered a substitute for sacrifice, inasmuch as man offers himself up entirely to the service of God. It is a minor form of martyrdom, not free from selfish motives. Judaism has not looked with favour upon asceticism, celibacy, and self-mortification. The institution of the Nazirite, however, is recognized by the Law, but the Nazirite was expected, on the conclusion of his period, to bring an offering, which, as is explained by the sages in the Talmud, was a kind of expiation for the sin of self-mortification. Fasting is described as almost equivalent to sin;⁷ it is almost like committing suicide.⁸ It is not the fasting that brings the desired result, but repentance and almsgiving;⁹ for fasting must lead to charity.¹⁰ But the institution, as such, was a kind of self-sacrifice. Both men and women were allowed to take the vow of abstinence. In the Rabbinical literature a whole treatise has been preserved (*Mishnāh Nazir*) in which all the details connected with the Nazirite, as observed during the Temple period, are minutely described. It is there¹¹ said among other things that the Nazirite can be only in Palestine, and that Queen Helena of Adiabene had observed the vows of a Nazirite for seven years, and, on coming to Jerusalem to bring her offerings, was told that she had to keep the vows for seven

years more, inasmuch as she could not take them outside of Palestine. But after the destruction of the Temple, when the cutting off of the hair and the other sacrifice brought at the conclusion of the period of the vow could no longer be observed, the practice of living as a Nazirite seems to have still persisted. A few men are known in Jewish history as Nazirites, and to one, Isaac Nazir, the origin of the later phase in the development of the Qabbālā is ascribed. He is the reputed first teacher of the new doctrine which was afterwards propagated by R. Abraham ben David. Otherwise very few examples are known.

The whole principle of celibacy and seclusion was unnatural to Judaism. Among the Samaritans there are also parallels to the practice of Naziriteship. In the Samaritan version of the Susanna legend¹ the two wicked old men who bring the false accusation against an innocent young woman are described as Nazirites, and the young woman herself, who was the daughter of a high-priest, was also a Nazirite; and in the present writer's Codex 1170 there has been preserved a very curious prayer, which, according to Samaritan tradition, was the one offered up by the Nazirite when taking the vow. The practice of Naziriteship seems to continue among the Falashas of Abyssinia. See also art. NAZIRITES.

(4) The highest form of sacrifice is for the glorification of the name of God, or for the expiation of sin. Although Judaism does not encourage self-sacrifice or even asceticism, yet the principle is laid down that a Jew should offer himself up as a sacrifice for his principles and convictions rather than commit the three cardinal sins—idolatry, immorality, and murder.² The sentence often appears, 'May my death be accepted as a sacrifice before the Lord, as an atonement for my sins.'³ The Rabbis say that death is a sin-offering; i.e., it atones for sin as a sin-offering. And it is only in the light of this conception that the remarkable law which is mentioned in Nu 35²⁵⁻²⁸ may be explained. It is there stated that one guilty of manslaughter who has found safety in the city of refuge must dwell there until the death of the high-priest, after which he is free to return to his own home unmolested. The connexion between the death of the high-priest and the freedom thereby accorded to the man guilty of murder can be explained if the death of the high-priest is regarded as an atonement for all the sins and sinners of his time. To this the statement in the Talmud, 'the death of the high-priest is an atonement,' seems to point.⁴ In fact it is said that the righteous man dies for the sin of his generation. He is, as it were, the victim and the sacrifice of atonement for the sins of his generation. One sage is reputed to have offered himself up as an atonement sacrifice for R. Hanina and his children.⁵ The death of the pious atones or purifies like the sprinkling of the ashes of the red heifer.⁶ Another saying is, 'May I be an atonement for my daughter Kuza!'⁷ When the son of R. Simeon ben Shefaḥ was falsely accused and condemned to death, he said, 'May my death not be an atonement for my sins if I am guilty!'⁸ Moses' grave was facing Beth-peor in order that by his death he might atone for the sins of the Israelites committed at that place.⁹ Moreover, the souls of the pious are, according to a saying in the Midrash, recorded also in the Jewish burial service,¹⁰ offered up as a sacrifice to God on the heavenly altar by

the archangel Michael, who is described as offering up sacrifices and prayers before that great altar in heaven.¹ The sinners respond from hell shortly before the advent of the Messiah and thus obtain their liberation.²

(5) Another substitute for sacrifice is *charity*, which, however, has not been considered to be an equivalent to sacrifice in the full sense of the word. The giving of alms, the support of the poor, the succour of the sick, and every assistance that is given to those who have succumbed to the trials of the world are meritorious acts in themselves, but are not to be regarded as equal to the sacrifices offered in the Temple. Nevertheless the giving of alms is regarded by the sages as almost equivalent to sacrifices. So we are told in the Talmud that he who gives alms to the scholar is like one who brings a sacrifice.³ Or, again, a man's table is like the altar of the Temple: on it he brings a sacrifice.⁴ The charity performed by the Gentiles is like a sacrifice brought by the Jews.⁵ The giving of charity is like the sacrifice of atonement,⁶ and in the *Chapters of R. Eliezer*⁷ it is said, 'More beloved is to me the service of loving-kindness than sacrifice.' Fasting and prayer, especially when they are of an expiatory character, are expected at the same time to be supplemented by liberal gifts to the poor—a kind of sacrifice of atonement for wrong done, and even for evil thoughts, which have mastered men's minds for a while (see above). In later times a symbolical meaning has been added to the eighteen pieces given to charity (for *n*, whose numerical value is 18, means also 'life'). The underlying idea is that of ransom of oneself, as in the five pieces of silver given to the *kōhēn* as a ransom for the first-born male child (Nu 18¹⁶).⁸ This is also a substitute for sacrifice, as is the other Biblical ordinance of the ransom of an animal unfit for sacrifice (Ex 13¹³).

(6) Another substitute for sacrifice may be mentioned here, although the author of the *Shūlḥān 'Arukḥ*, R. Joseph Karo,⁹ strongly condemns it and calls it a stupid practice. It is the practice of offering up a white cock or hen as a ransom (sacrifice) on the eve of the Day of Atonement. The bird is afterwards slaughtered according to the Law and is given away as a gift to the poor.¹⁰ Curiously enough, the present writer has learnt from the Samaritans that, whenever they kill an animal or a fowl during the ten penitential days—i.e. from the 1st to the 10th of Tishri, from New Year to the Day of Atonement—in addition to the usual blessing, they repeat the following three words: לכפר ולכפר, 'to atone, and to atone, he shall atone.'¹¹ These are evidently taken as sin-offerings preparatory to the Day of Atonement; on it, through fasting and prayer, the great atonement is made for obtaining God's forgiveness for the spiritual and moral sins committed during the year.

(7) It remains now to refer to practices of sacrifice outside of Jerusalem, probably going back to the time of the second Temple. It must remain an open question whether in the temple of Onias in Egypt real animal sacrifices were brought, especially sin-offerings. Though the results at which Flinders Petrie¹² has arrived could be fairly accepted, the finding of burnt animals' bones on the

spot identified by him with the ancient temple of Onias may still be explained in a different manner. It is well known that, in addition to the sacrifice brought into the Temple, there was the offering of the Paschal lamb initiated in Egypt and then continued in the desert long before the Temple existed. That being the case, the sacrifice of the Paschal lamb may also have been brought outside the Temple and after the destruction of the Temple. It may be, therefore, that the bones found in the Onias temple are the remains, not of the regular service, but of these Paschal sacrifices, which were believed to be independent of the Temple in Jerusalem and could be offered anywhere. The sacrifice of the Paschal lamb seems to have been a persistent independent feature in pre- and post-Biblical Judaism. Sacrifice seems to be referred to as part of the service in the temple of Yeb in Assuan, described in the Elephantine papyri. In the letters of the people addressed to Sanballat and to the high-priest in Jerusalem they complain of the cessation of various sacrifices. It will be noticed that in his reply the high-priest refers only to the incense- and meal-offerings, avoiding mention of the animal-sacrifice, which, from the point of view of the Temple in Jerusalem, could not well be sanctioned outside its precincts. The ostrakon published by Sayce¹ and commented upon by Daiches,² in which reference is made to preparation for the Passover, seems to refer to the preparation of the Paschal lamb, though the lamb is not mentioned, but the name 'Pascha' may refer to the lamb in addition to the flour for the cake. This is the same use of the word *pascha* or 'passover' for the lamb as in Mt 26⁷, Mk 14², Lk 22⁷.³ A certain Theodosius in Rome took the liberty of eating on the first night of Passover the young kid slaughtered and prepared in accordance with the prescription for the Paschal lamb, and the patriarch (R. Gamliel) tolerated it, as he wrote, out of personal consideration for this Theodosius. Better known than these facts is the continual sacrifice of the Paschal lamb by the Samaritans on Mt. Gerizim. It has often been described by outsiders, and even photographed.⁴

We may mention here also the continuation of sacrifice by the Falashas in Abyssinia, but it is doubtful whether they sacrifice animals or merely make incense- and meal-offerings like those referred to in the papyri of Assuan. They seem to offer them up on special occasions, especially at the new moon. In the same connexion reference must be made to the peculiar form of the ancient synagogue, now destroyed, and once possessed by the Chinese Jews in Kai-Fong-Fu, of which a tracing has been preserved. Although some of the books of the liturgy, taken from these Jews by the missionaries more than a century and a half ago and now lying at Lincoln's Inn, agree in the main with the other Jewish Prayer Books hitherto known, they show a strong Persian influence. They have evidently travelled *via* Persia to the interior of China, as also have their ancient scrolls and books of the Law. Still the structure of that synagogue resembles very closely the inner structure of the Temple in Jerusalem, and in the very centre of it stands what appears to be an altar. Whilst real animal sacrifices are not likely to have been brought there, still incense-offerings and perhaps meal-offerings may have been brought, in

³ A full description of the method of procedure and of the manner in which it is prepared and divided according to Samaritan law is found in Gaster, *Cod.* 872, fol. 129 ff., and there, as well as in some of the MS Prayer Books for the festival of Passover, a rough illustration is given of the vessels used and of the manner in which they are disposed (so in Gaster, *Cod.* 1120, fol. 55 f.).

accordance with the example of the Chinese worship. Unfortunately no detailed description of their mode of worship has been preserved, but from the Prayer Books just mentioned we may conclude that in general outline their worship was identical with that of the rest of the Jews.

Finally, reference must be made here to the letter which Joseph the king of the Khazars had sent to the Jewish vizier in Spain, Hisdai Aben Chiprut (middle of the 10th century).¹ In this letter he informs R. Hisdai that he has built in his capital a temple according to the model of that in Jerusalem, and among the vessels in that temple he mentions the table, the candlestick, and the altar. Whether he meant here the altar for the sacrifices or the golden altar for burning the incense remains obscure. In any case, the idea of bringing some sort of sacrifice could not have been absent from his mind. But, though there are these scattered reminiscences among sectarians and remote isolated communities, the only generally recognized substitutes for the sacrifices offered up in the Temple are the recital of the Biblical lessons and of the passages containing the institution of the sacrifices for daily services and for other occasional services such as Sabbaths, new moons, festivals, etc., accompanied by prayers, fasting, and charity.

LITERATURE.—The literature is given in the article. The subject has not been dealt with anywhere else.

M. GASTER.

SACRIFICE (Muhammadian).—1. Meaning of sacrifice among the Arabs.—As there are, properly speaking, no temples and no priesthood in Islām, so there is no sacrifice in the ordinary acceptation of the term. The sense of sin and the need for an atonement are even more strongly felt by the pious Muslim than by us, but they are not brought into connexion with the shedding of blood, whether of animals or of human beings. Thus in the Qur'ān the atonement (*kaffārah*, a Hebrew word) for the sin of deliberate perjury is not a sacrifice, but the feeding or clothing of ten poor folk, or the freeing of a Muslim slave, or, if these are beyond the culprit's means, then a fast of three days (v. 91). In v. 96, it is true, the penalty for killing game while in pilgrim garb is the slaying of some domestic animal of equal value (e.g., a sheep for an antelope, a pigeon for a partridge), which is to be brought as an offering (*hady*) to the Ka'bah, but even here the purpose is not to make propitiation for sin, but simply to prevent the delinquent from being a gainer by his breach of the law. And so it is the alternative penalty of feeding the poor or fasting that is called an atonement. The expiation of sin in Islām rests entirely on the repentance of the sinner and the forgiving and merciful nature of God, to which must be added, in the popular religion, the intercession of Muhammad. The fact that the worst sinner in order to be saved has merely to declare himself a Muslim cuts the ground from under the feet of any theory of an atoning sacrifice. To be a follower of the Prophet is to be forgiven; not to be such is the unpardoned crime.

The idea, again, which is said (perhaps in error) to have lain at the foundation of sacrifice among the Hebrews and other ancient peoples—that the Deity was an invisible guest at the sacrificial meal and that His share was the blood, the smoke, or the smell—would have been as repugnant to the Muslims as it is to common sense. The vicarious element in sacrifice also is excluded by the Muslims' strong sense of justice and of fate. With the idea, on the other hand, that the virtue of the pious might in effect be imputed to the wicked they

were not unfamiliar. Muhammad was asked by one of his wives: 'Can we perish as long as amongst us are the pious?' He replied: 'Yes, if wickedness be great.' The one devout Umayyad Khalifah 'Umar II. († A.H. 101, A.D. 720) also said: 'It used to be said: "God will not punish the many for the fault of the few," but if the wickedness be done openly, they deserve all to perish.'

2. Influence of climate.—Even if the pagan Arabs had held any of these theories of sacrifice, they would have been prevented from putting them into practice by the same cause which has led to the discontinuance of sacrifice among the Hebrews, namely, their poverty. Animal sacrifice could arise and continue only in a country rich in pasture, in which a sheep or even a camel could be easily spared; but in Arabia, if we leave out of account the south-west corner, the whole population outside the towns has always been in a chronic state of semi-starvation. So poor were the Arabs that up to the time of Muhammad they were in the habit of burying their female infants, nominally for fear lest they should, by capture or otherwise, bring dishonour upon the tribe to which they belonged, but in reality because they had not the means of supporting them. The ordinary food of the desert Arab consisted of dates and the milk of his camels when available, and, when his inveterate hospitality did lead him to the lavish slaughter of his beasts, every particle that could be eaten was consumed, if not by himself and his guests, by the destitute women and children who hung about his tent, so that not much was left for the dogs. The only occasion on which there is waste of animal food in Arabia is at the great slaughter of beasts in the valley of Minā at the annual pilgrimage, and that is from sheer inability to consume or carry it away.

3. Motives of sacrifice.—The motives which underlie the very faint shadow of sacrifice as it was practised by the people of Arabia, and through them by the Muhammadian nations to-day, are different from those which actuated the more happily situated northern Semites or the races of Europe.

(a) Perhaps the most radical of all was the instinctive belief of the Semitic peoples in the sacredness of blood. Hence every slaughter of an animal, by the shedding of its blood, is an act of religion. Accordingly the same word is used in the Semitic languages for 'to slaughter' and 'to sacrifice' (Heb. *zābah*), and the Muslim always pronounces the name of God as he strikes the animal. A second motive for sacrifice among the Arabs was the natural belief of man that he can get something on which he has set his heart by surrendering something which he already possesses, or which he values less. Hence sacrifice is very commonly the fulfilment of a vow. Muhammad's grandfather vowed that, if he became the father of ten sons, he would offer up one of them as a sacrifice; and, when his wish was realized, he expiated his vow by a sacrifice of camels instead. A third commonly occurring motive is the natural inclination of men, when they have done anything of which their conscience disapproves, or which is against the tribal ethics, to punish themselves by a self-inflicted penalty. This motive is called *jazā'*, 'compensation'; and an example of it is the case mentioned above of the person who kills game while on pilgrimage. Connected with this motive and complementary to it is the instinctive impulse of any one who has met with a piece of good fortune to do some act of kindness to those who have not had the same fortune. An instance of this is the sacrifice of a sheep after the birth of a child, referred to below and named *'aqiqah*. But in all these cases there is no real sacrifice in the

¹ Reprinted by J. Buxtorf, jun., in his ed. of the *Guzari*, Basel, 1660, and also in an Eng. tr., *Miscellany of Hebrew Literature*, London, 1872, p. 107.

ritualistic sense. The sacrifice is really simply a feast, in which, as a rule, the poor share. No portion of the victim is supposed to be consumed by the Deity, nor is there any religious mystery inherent in the rite. The beast is killed just as it might be killed in the hunting-field, except for the fact that the blood is not eaten, but the idea that the blood is the portion of the Deity would be entirely abhorrent to a Muslim.

(b) The great day of sacrifice in Islām is one of the days of the annual pilgrimage, the 10th of the twelfth month (Dhu'l-Hijjah). The motive in this case is not any of those mentioned above, but is purely historical and commemorative, as were, from one point of view, the feasts of ancient Israel. According to the prevalent belief, it was not Isaac but Ishmael that Abraham was commanded to offer up in sacrifice. The story given in the Qur'ān is as follows:

'And We [God] gave him [Abraham] good tidings of a gentle son. Then when he was old enough to work along with him, he said to him, "My son, I am seeing in sleep that I am to sacrifice [dhabah] thee: therefore consider what thou thinkest we should do." He said: "My father, do what thou art commanded: thou shalt find me, please God, one of the patient." So when they thus submitted themselves, and he had laid him with his forehead on the ground, We called to him, "Abraham! Thou hast believed the vision. Thus do We compensate those who do right. This is a clear trial," and We redeemed him with a mighty sacrifice [dhibh].'¹

It will be seen that the Qur'ān does not specify either Ishmael or Isaac, but the fact that it goes on to mention the latter is taken to mean that here the former is intended. The place of the intended sacrifice is commonly believed to have been the valley of Minā, a few hours' journey to the east of Mecca, and the ram which became the substitute is said to have come down from Mt. Thabir, which abuts on the valley. It is this event that is commemorated on the occasion of the annual pilgrimage. On the 8th of Dhu'l-Hijjah the pilgrims remove from Mecca to Minā, where they spend the night. Early on the 9th they go in haste to Mt. 'Arafāt, where they hear the sermon, returning the same evening to Muzdalifah between 'Arafāt and Minā; and, after a night spent in devotion, the morning of the 10th finds them back again at Minā. There they slay the victims which they have brought with them, and, their purpose thus accomplished, they shave their heads. What they cannot eat of the victims they either carry away or give to the poor. Even so, however, the waste of only too precious food every year is enormous. But the point to be noted for our present purpose is that the whole ceremony is purely commemorative. It is the keeping up of an old national custom. It is not the sacrifice that redeems the pious Muslim from his sins, but the visitation of the House of God in Mecca.

4. All taking of animal life sacrificial.—As there is no proper sacrificial ritual in Islām, so the words now employed in a semi-religious sense originally meant to slaughter in the ordinary everyday usage, or else they are words borrowed from other faiths, in which sacrifice was a truly religious act. Any ritual slaughtering that there might be in Islām is founded, not on any innovations introduced by Muhammad, but merely on the primitive human instinct which feels a natural repugnance to the shedding of blood. The Muhammadans generally hold the belief that the spirit escapes through the wound that is the cause of death. Thus a man who dies a natural death is said in Arabic to die 'the death of his nose'; i.e., his spirit goes out at his nostrils. It may have been a superstitious dread of the vengeance of this spirit that originated the custom of making every act of slaughtering an animal an act of religion, which

put, as it were, the responsibility upon God, by always invoking His name. This would be the case all the more among the Hebrews, since the animals killed among them for food were mostly animals of considerable size. We do not read in the OT of domestic fowls being used for food, but the Muslim kills a cock in just the same way as he kills a sheep, and with the same formality; i.e., he faces in the direction of Mecca and says, 'In the name of God,' as he cuts its throat.

5. Mode of slaughter.—Islām is a religion without mystery and therefore without sacraments. Consequently it is not possible to draw a distinction between sacrificing an animal and simply slaughtering it for food. There is no difference at this point between the religious and the secular. In the case of the Hebrews, although they use the same word to denote sacrificing and killing for food, it is possible to say when it is used in the one sense and when in the other. But it is a mistake to suppose that this difference exists in orthodox Islām. With the Hebrews, as with many other ancient nations, sacrifices were consumed in whole or in part upon the altar; but in Islām there is no altar. The Muslim slays his 'sacrifice' exactly as the Jew kills beasts for the market; the one act is as religious as the other. The legal mode of slaughter, whether merely for food, when it is called *dhakāt*, or for 'sacrifice,' when it is called *dhabh*, is, except in the case of camels, by cutting the throat. In *dhakāt* the knife must sever the windpipe and gullet, but the school of Mālik say the gullet and the veins of the neck; others say the two jugular veins, or one of the jugular veins. The same remarks apply to *dhabh*.² These rules are based upon those of the Jews.

6. Technical terms.—(a) *Nahr*.—The noun denotes the upper part of the chest where the windpipe begins, which is the spot where a camel is stabbed for slaughter. The infinitive *nahr* denotes the act of stabbing a camel in this place in order to kill it. In this respect it is distinguished from *dhabh*, which means slaughtering an animal by cutting its throat. The two are also different in that the former is a pure Arabic word, whereas the latter represents the Heb. *zebha*, 'slaughtering' or 'sacrificing.' Perhaps it is due to its pagan connotation that the former occurs once only in the Qur'ān (cviil. 2); 'We [God] have given the Kauthar: then pray to thy Lord and slaughter.' Kauthar is explained as the name of a river in Paradise, but this is the unknown legal manner. As all blood is sacred, so all slaughtering of beasts partakes of a semi-religious character; but the 10th of Dhu'l-Hijjah is named esp. *yawm an-nahr*, 'the day of slaughter.' On it the great pilgrimage culminates in the slaying of the victims (*hady*) at Minā near Mecca in imitation of the sacrifice of Ishmael there. On the same day all over the Muslim world sheep are killed in the principal towns. In Tangier the sheep is carried in great haste from the slaughtering-place at the top of the town through the principal street down to the great mosque. If it is still alive when it arrives there, it is considered a good omen for the coming year. On the same day sheep are killed in every household that can afford it, and the flesh is shared with the poor.

(b) *Hady*.—This word is properly the inf. of the verb *hadda*, 'to lead (or bring),' esp. to bring a gift or offering (*hadiyah*), consisting of a camel, cow, sheep, or goat, to the Ka'bah at Mecca for sacrifice or slaughter. It occurs in Qur'ān, ii. 196, v. 96, xlviii. 25; and in v. 2, 98 the garlands (*qat'ad*) hung upon the victim to mark it as sacred are also mentioned. *Hady* is used specifically of offering a sacrificial gift, but *hadiyah* is the general word for 'anything which is taken without any stipulation for service rendered.'² The rules for the *hady* and its practice of Muhammad and his followers are given in the oldest collection of *Muwatta'* of Mālik ibn Anas (f. A.H. 179,

Those who could afford to do so usually offered one head of large cattle (called a *badna*), a camel, a cow, or a bull, but 'Abdallah, son of Khalifah 'Umar I., usually sacrificed two *badna* at every visit to Mecca, and there was no limit to the number which might be offered. It was not thought right to ride the victim on the journey to Mecca, but Muhammad permitted this to be done. The Arab's humanity, however, did

¹ Muhammad 'Alī at-Tahānawī. *Kūb Kashshāf Isfīlāhāt al-Funūn*, i. 611.

² Jurjānī, *Ta'rifāt*, ed. G. Flügel, Leipzig, 1845, p. 277.

not always let him take advantage of the indulgence. Similarly, it was not thought proper to drink the milk of the she-camel destined for sacrifice, except under necessity. If the she-camel should calve on the journey, her calf might be carried, if necessary, upon the back of the dam, and it was sacrificed along with her. The victim was 'garlanded' and 'marked.' The garland did not consist of flowers, which were, of course, not to be found. In the times of 'ignorance' before Islām the pagan Arabs used bark from the trees of the sacred territory of Mecca. Thereafter any object served. 'Abdallah ibn 'Umar, mentioned above, used to hang a pair of worn-out sandals on it, facing the *qiblah* as he did so. The 'mark' was an incision made with a fleam or lancet on one side of the camel's hump, sufficient to draw blood. 'Abdallah used in addition to cover the sacrifice with fine, white Egyptian linen or other saddle-cloth (*jull*), which, when done with, he presented to the Ka'bah, or, if it should have already been 'clothed,' gave away in charity. According to this 'Abdallah also, the camel should be not less than five full years old, and other animals in their third year at least. Another of the early Muslims used to bid his son 'not to offer to God any beast which he would be ashamed to offer to his most honoured friend, for God is the noblest of the noble, and the worthiest of those for whom choice is made.' Should a camel break down on the road through fatigue, Muhammad ordered it to be slaughtered, its garland to be dipped in its blood, and its flesh to be eaten. If the offering was purely voluntary, it was then regarded as accomplished; otherwise—if, e.g., it was in fulfilment of a vow—the offerer must find another victim. If any one missed the pilgrimage, i.e. failed, whether through losing his way or through miscalculating the days, to be present at Minā on the day of sacrifice, 'Umar required him to offer another victim the next year. If he had not the wherewithal, he must fast three days during the pilgrimage, and seven on his return home.¹ This verse mentions the sacrifice of 'what is convenient' as an atonement for not duly performing the pilgrimage. The phrase is generally taken to mean a sheep or goat. The sacrifice which is a penalty for killing game during the pilgrimage or a similar offence must be offered in Mecca;² but, if it take the form of fasting or of alms, this may be accomplished in whatever place the penitent may choose. As originally signifying 'a gift,' these terms may be compared to the Hebrew *minḥah*.

(c) *Nusuk*, *nusk*, and *nasakah* are all used of a victim offered in sacrifice. In the Qur'ān the pilgrim who through sickness cannot shave his head (in token of having performed all the ceremonies and fulfilled his vow) must pay a ransom or forfeit by fasting or giving alms or sacrificing a sheep (*nusuk*).³ The other forms of the word do not occur in the Qur'ān. In later times the word came to mean asceticism, and already in the Qur'ān *nusuk* is used in the sense of worship generally,⁴ and *mansuk* means a religious ceremony, and *nasaka* to practise these ceremonies or rites.⁵ The root meaning of the word appears to be to wash or cleanse—e.g., a garment. *Nasikah* is synonymous with *dhahibah*. The terms are probably derived from the Heb. *nesekh*, a libation of oil often joined with the meal-offering (Nu 23:17 etc.).

(d) *Aqiqah*.—This is the hair which covers the head of a newborn infant, and which the Muslims shave off on the seventh day after birth. Herodotus⁶ mentions a similar custom in Egypt. The occasion is celebrated by the slaughter of a ram or a goat, the flesh of which is cooked and distributed to the poor. This victim is also named *aqiqah*. The practice is not mentioned in the Qur'ān, but Mālik ibn Anas states that Muhammad, being asked about it, replied that he did not like it; Mālik adds that he only meant that he did not like the name, not the thing, as the word means a beast having its throat slit right across, and so was considered ill-omened. It is related in a tradition that Fātimah weighed the *aqiqah* of each of Muhammad's grandsons, Hasan and Husain, and gave the weight in silver in alms; and this became a recognized custom. One of the early Muslims permitted the substitution of a bird for a sheep,⁷ but this was not approved, and the practice is one sheep for each child, whether a boy or a girl. Moreover, the sheep must be without blemish—not blind, emaciated, sick, or having a broken horn—nor may any of its flesh or its skin be sold. The blood also must not be allowed to touch the child.

(e) *Dahiya*.—The victim slaughtered on the morning (*duha*) of the 10th of Dhul-Hijjah is so named from the hour at which the sacrifice takes place. The word has various forms, in both singular and plural. The collective is *adhā*, from which the day is named *yawm al-adhā*, 'the day of the victim'; also *id al-adhā*, 'festival of the victims.' These words do not occur in the Qur'ān. The regulations laid down in the *Muwatta'*⁸ are identical with or supplementary to those for the sacrifice under its other names. Muhammad, asked what was to be avoided in the *dahiya*, replied: 'Four things: the lame whose limping is visible, the evidently blind, the evidently diseased, and what is so starved as to have no fat.' To these must be added that it be of the proper age (see above, (b)). Hence 'Abdallah ibn 'Umar sacrificed any victim that was of the right age and without blemish; and this is the principle approved by Mālik.

In the great pilgrimage no one may slay his sacrifice before the *imām*, or leader of the pilgrimage, has slain his; still less may he slay it at an earlier hour of the day. In either case Muhammad ordered the offender to sacrifice a fresh victim,

even if he could not find one that had attained the prescribed age. Muhammad on one occasion forbade the eating of the *dahiya* after three days. It was pointed out to him that the people were in the habit of melting the fat and preserving it in skins. He replied that he had said what he did only for the behoof of certain Arabs of the desert who had been driven by drought into the town; and he gave full permission to preserve and store the meat of the sacrifice. Opinions are divided as to whether it is allowable for a number of pilgrims to take shares in a sacrifice. On the one hand, it is related that at al-Hudaibiyah, when Muhammad was prevented from entering Mecca and sacrificed on the spot the victims which he had brought with him, seven of his followers went shares in each camel or each head of cattle. Hence the Shāfi'ites and Hanbalites hold that partnership in a sacrifice is legitimate. Mālik, on the other hand, maintains the preferable doctrine that, whilst people of the same family may sacrifice for the family, for those who are not so connected to contribute towards the purchase of the beast and then share in its flesh is a thing 'to be hated.' Sometimes a child still unborn was made a partner.

(f) *Qorbān*.—This is simply the Hebrew word taken over into Arabic. It occurs three times in the Qur'ān—iii. 179, where it is put into the mouth of the Jews; v. 30, in the story of Cain and Abel; and xvi. 27, where, however, it means 'a near associate,' from the verb which in Arabic, as in Hebrew, means 'to bring near' or 'to sacrifice.' No doubt it is borrowed from the Hebrew. Lane¹ mentions a tradition, 'Prayer is the offering of every pious man,' meaning that it is what brings him near to God.

7. Arab and Hebrew sacrifice compared.—In conclusion it may be of interest to note some of the points of contrast between Arab and Hebrew ideas about sacrifice. The most important is that the idea of an atonement scarcely, if at all, enters into Arab sacrifice. Even when the offerer is regarded as having forfeited his life, as in the case of the pilgrim who breaks his *ihrām*, he is ransomed not by the act of slaying a victim, but by the act of benevolence in distributing the portions to the poor. There is, again, no holocaust in Muhammadan sacrifice; the victims are slain to be eaten; only the blood is rejected, but it is so whether the slaughtering has any religious import or not. There is no libation, no meal-, wave-, or heave-offering in Islām; the sacrifice is always a beast or bird which is killed. With the Hebrews the beast sacrificed was a male; with the more open-handed Arabs it was often a female. With the Arabs the sacrifice was shared, not with the priests—an unknown class among them—but with the poor. With them also the only sacrifice of a communal character, if any can be considered such, is the annual sacrifice of the Great Feast. The rich man's offering with them is the camel, an animal held unclean by the Hebrews. Among the latter every sacrifice, and even every implement, was salted; on the other hand, preserving the flesh for future use was not allowed. Partnership in a sacrifice, except between members of a family, is (by the Mālikite school) forbidden in Islām. All these differences point to the fact that with the Hebrews sacrifice was a really ritualistic act of worship, whilst it was not so among the Muslims.

SACRIFICE (Semitic).—In this section we consider the subject of sacrifice among the following peoples—Egyptians, Babylonians, Assyrians, Aramæan and Arab tribes (ancient and modern), Hebrews, Phœnicians and Carthaginians, and Abyssinians. On the propriety of including (with reservations) the Egyptians in the foregoing list see the beginning of art. HUMAN SACRIFICE (Semitic).

1. Occasion of sacrifice.—One of the most satisfactory classifications of sacrifices available is that which divides them into (a) periodic, and (b) non-periodic or occasional. To the former belong sacrifices on feast-days recurrent at certain seasons or days of the year; to the latter belong sacrifices offered on particular occasions, as at the birth of a son, the foundation of a building, the initiation of some military or other enterprise, etc.

(a) Periodic sacrifices may be daily, monthly, or seasonal. In Egypt part of the daily temple services consisted in clothing and decorating a figure of the deity, and then setting before it an offering of food—bread, geese, beef, wine, and water. These, after standing a while before the god, were most probably appropriated by the priests (cf. the story of Bel and the Dragon). The dead were supposed to partake of this daily banquet.¹ At certain great feasts—e.g., the anniversaries of the birthday of the god, or of his mighty deeds—there were increased offerings, which the worshippers shared in a common feast.

In the fully developed sacrificial liturgy of the Hebrews we read of a variety of periodic sacrifices—the daily burnt-offering (Nu 28³); the weekly offering on the Sabbath, double in number of the daily offerings (28⁹); the monthly sacrifice, at the new moon (28¹¹); and certain annual sacrifices, as the Passover (full moon of first month), the day of the firstfruits, the beginning of the second half of the year (first day of seventh month), and the full moon of the seventh month (28¹⁶, 29⁴⁰).

In Arab heathendom the annual sacrifices of the month Rajab must be mentioned; this was perhaps the most important ceremonial event of the pre-Muhammadian religion.

Examples of periodic sacrifice might be multiplied from the other branches of the Semitic world, but these will suffice. It is obvious that they all depend on the motions or phenomena of the heavenly bodies (sun, moon, the planet Venus, etc.), or on the annual recurrence of seed-time and harvest, or on the increase of flocks. They are such as would naturally arise in the regular unbroken existence of a pastoral or an agricultural community.

(b) Non-periodic sacrifices are more of a personal nature. They take place on the occasions which break the monotony of the existence of such a community, or of individual members thereof. The birth and circumcision of a son; the foundation of a house; the beginning of a military or other enterprise, and its successful conclusion—all these are events celebrated by a sacrifice. Moreover, by sacrifice an individual seeks to obtain some desired boon from the gods—the health of a sick relative, purification from the sense or consequence of sin, and the like. A few examples may be cited in illustration.

(1) *Birth.*—Among the Arabs 'the child must be taken on a pilgrimage to the shrine to which the sheik of the tribe belongs. The minister of the shrine sacrifices for them near the threshold. The child is anointed on his forehead, or on his nose, with a mark of the blood of the victim.'² The Hebrews do not appear to have had a special sacrifice to celebrate a birth, but the first-born son had to be redeemed (Ex 13¹³ 34²⁰) with a money payment of five shekels.

(2) *Children.*—The modern Arabs offer sacrifices for a child (especially a son), if there is any fear that it may not live. It is also customary to offer sacrifices at circumcisions. In sacrificing for a child care must be taken (according to Curtiss)³ not to break one of the animal's bones, lest a similar injury be inflicted on the child.

(3) *Foundation of a building.*—A tablet given by Zimmern⁴ apparently records a sacrifice at a new house. In various Palestinian excavations traces of foundation-offerings of one

kind or another have been found.¹ Among the modern Arab a sheep is sacrificed when a new building is begun.

(4) *Inauguration of a king.*—In Egypt the king began his reign with a sacrifice to Min, the god of fertility, in the presence of the statues of his ancestors. 'A priest presents him with the royal sickle, with which he cuts a sheaf of corn; he then strews it before the white bull, symbolizing the offering of the first-fruits of his reign. He then offers incense before the statue of the god, while the priest recites from the mysterious books of the "dances of Min."'² Cf. the inauguration of Saul (1 S 10⁸).

(5) *Dedication or consecration of a building.*—Ashurnasirpal dedicated the temple of Ninib in Calah with prayer and offerings,³ as did Solomon the Temple of Jahweh at Jerusalem (1 K 8).

(6) *As a sin-offering.*—Curtiss⁴ quotes 'a devout Muslim, of good sense but unlettered,' as saying that 'sacrifice would cover sin.' He likewise quotes from Burton a statement that the victim at the Mecca pilgrimage is sacrificed 'as a confession that the offender deems himself worthy of death.' The sin-offering occupies a conspicuous place in Hebrew ritual (Lv 4²², etc.), as does the analogous purification-offering from various forms of uncleanness (Lv 14, 15, Nu 19). The Babylonians likewise had purification-sacrifices for a house after sickness.⁵

(7) *Sickness.*—In Babylon, according to a ritual tablet printed by Jastrow,⁶ a lamb was to be sacrificed near a sick man, the body of the animal being opened and its inwards torn out—possibly with the idea of tearing out the malady by sympathetic magic. Sacrifices at exorcism of demons and at the purification of a house may also be mentioned here.

(8) *Death and funeral ceremonies.*—Offerings of the mourners' own hair and blood to the dead are forbidden to the Hebrews (Lv 19²⁸), but were nevertheless practised (Jer 16⁷). W. R. Smith⁷ and Curtiss⁸ note similar customs among the Arabs. The latter cites a peasant informant as telling him that 'when a man comes to die he appoints some one as executor to sacrifice some animal. It is preferable for a man to offer the sacrifice during his life. . . . He rides the animal across the narrow way on the day of judgment.' Another informant told him that 'only the Arabs [i.e. the Bedawin] offer sacrifice for the dead';⁹ but Curtiss questions the accuracy of this statement. The sacrifice for the dead is not eaten in a feast, like other Arab sacrifices, but is given to the poor.¹⁰

(9) *Sacrifice of spoil captured in war.*—This, according to Diodorus Siculus,¹¹ was a custom of the Carthaginians; and it is indicated for the Hebrews by 1 S 14³⁴ 15¹⁵; cf. also David's laying up of Goliath's sword. A similar instance is cited from Arab heathendom by Wellhausen.¹²

The above must suffice as a selection of the occasions on which non-periodic sacrifices were offered among the Semitic tribes. A full list, with a properly marshalled series of illustrative examples, would fill a large volume. It may be said in short that there was hardly any possible event in the individual or communal life that was not marked by a sacrifice among one or more of the Semitic peoples.

2. The persons and materials involved.—The persons involved, in a complete sacrificial ritual, are four in number—either four individuals or four communities. These are (1) the person or persons offering the sacrifice; (2) the person or persons for whose benefit the sacrifice is offered; (3) the intermediary or priest, who receives the sacrifice from the person offering and disposes of it according to the rubrics governing the ritual; and (4) the person to whom the sacrifice is offered. On occasion these four may be reduced to three, (1) and (2) being identical, or even to two, (1), (2), and (3) being identical; but as a rule the interposition of a priest between the person offering and the recipient is considered desirable, as he by his ordination and consecration is supposed to be more familiar with the unseen world, and by his special knowledge is able to avoid ritual mistakes. Among the Hebrews the Passover sacrifice was the only one that could be offered without the mediation of a priest.

The person or persons offering the sacrifice may be any member of the tribe or any group of fellow-

tribesmen (a family, clan, gild, secret society, etc.). Foreigners are as a rule excluded from participation in the presentation of offerings (Lv 22²⁵); and the priest must be chosen by some special sign (e.g., heredity, as among the Hebrews) and set apart for his calling by ordination. The recipient of the sacrifice is as a rule a deity; but sacrifices, as we have just seen, may be offered to the dead, and may even be claimed as a mark of divinity by a king during his lifetime.¹

The materials involved (i.e. the object offered in sacrifice) can be grouped into a number of different classes. The object sacrificed is a kind of intermediary whereby the worshipper comes into contact with the divinity. Such contact as a rule is of this indirect kind; but there are cases when the worshipper offers a part or characteristic of himself, in which the contact is more direct—e.g., the numerous offerings of blood or of hair, and sacrifices of manhood or of female chastity.² More commonly, however, the offering consists of some object not a part of the offerer, though selected from his property; and in the vast majority of cases it is an animal. Vegetable offerings are also made, especially of the firstfruits of the field or of the trees; but mineral offerings are rare except as a simple *ex voto* donation or as a concomitant of animal or vegetable offerings (especially salt).

The animal kingdom is divided by every tribe into beasts which may, and beasts which may not, be sacrificed. According to the totemistic theory of the origin of sacrifice (see below), the totem-animals would in the beginning be the normal, if not the only admissible, victims; and W. R. Smith saw relics of totemism in the sacrifices of swine, dogs, and mice reproved by the second Isaiah.³ The sacrifice of the totem-animal had already in pre-historic times given place to the practice of sacrificing the animals normally used as food, especially of the cow and sheep kind. Besides these the Hebrews admitted sacrifice of goats, turtle-doves, and pigeons. Fish, though eaten, was not sacrificed, nor were wild beasts. The Arabs added to these permissible animals the camel⁴ and gazelle (as a miserly substitute for a sheep).⁵ The same animals—cow, sheep, goat, and fawn—as well as some kind of domestic bird (cock and hen?) are enumerated on the Marseilles and Carthaginian sacrificial tablets.⁶ The Babylonians added fish and cream⁷ to the list. Human sacrifice is discussed under its own heading and need not be referred to here.

The vegetable offerings were those of the ordinary harvest produce, and need not be specially enumerated. Dates and other fruits were offered in Babylon. The burning of aromatic gums (see art. INCENSE) calls for passing notice here; it is found in sacrificial worship among all the Semitic peoples⁸ except, apparently, the Arabs.⁹ Wine-libations and the use of oils (like the holy ointment of which the prescription will be found in Ex 30^{23a}) also belong to this category. These also are not found among the Arabs. Milk is the normal Arab drink-offering.¹⁰ There is some inconsistency in the Hebrew documents as to the use of leaven in the sacrifice. It is forbidden in Ex 23¹⁸ and Lv 2¹¹; the latter passage also excludes honey. On the

other hand, it is enjoined in Lv 7¹³ 23¹⁷, with which passages Am 4⁵ may be compared. Probably W. R. Smith is right in associating with the prohibition of leaven the precautions taken to prevent any of the meat of the sacrifice being left over; similar precautions are found in the Arab rites, and are evidently designed to prevent the sacred flesh from putrefying.

Among minerals we need refer only to salt (Lv 2¹³). David's libation of water (2 S 23¹⁶) is an exceptional and special case, not indicating any rule. The gifts of gold from which Aaron made the calf (Ex 32²) hardly come under the head of sacrificial material. The total or partial destruction of the object sacrificed distinguishes a sacrifice from an *ex voto*.

3. The purpose of sacrifice.—It may be taken that in all cases the purpose of sacrifice is to secure a benefit, but the benefit may be for the donor, for the recipient, or for a third party.

The majority of sacrifices are for the benefit of the donor (whether an individual or a community) or of some third party. Such are the primitive communal sacrifices, in which the god and his worshippers partake of a common meal. Here the meal preserves the fatherhood of the tribal deity from suffering eclipse owing to neglect or transgression on the part of the tribe, and thus keeps the deity on friendly relations with his children. The offerings of firstfruits belong to the same category: the bounty of the tribal god is acknowledged by the gift and by that form of gratitude manifested which has been cynically defined as 'a lively sense of favours to come.'

Such is, primarily, the purpose of the seasonal sacrifices. The deity is periodically fed by the gifts of his children, and thus is kept continually favourable towards them. But the non-periodic sacrifices are likewise meant to secure a favour of one kind or another. Special sacrifices, when the deity is for any reason supposed to be angry with his people, or cathartic or piacular sacrifices, designed to win for the offerer a deliverance from disease or from sin or its consequences, fall under the same category.

The only sacrifices in which the recipient is directly benefited, without a necessary reflexion of the benefit on the donor, are sacrifices made to the dead or offerings deposited in the tomb. As the latter not infrequently consist of human beings or animals put to death, to provide the dead with servants or assistants in the future life, these may fairly be included among sacrifices; as is well known, even inanimate objects are often broken, to liberate their spiritual essence; and excavation in Palestine and elsewhere has shown that this is the case in the Semitic world as well as elsewhere. Food offerings are also given, perhaps, as E. S. Hartland has ingeniously suggested,¹ that the shade may not be compelled by hunger to eat of the food in the other world, and so be obliged to remain there for ever, in accordance with an ancient and wide-spread belief. In Egypt offerings to the dead were often endowed, an attendant being paid to keep the tomb in order and supplied with relays of gifts. In special cases, from an early time, the endowment was granted by the king himself, and the prayer 'Let the king give an offering' begins almost every funerary inscription in Egypt.² The specific purpose of the various kinds of Semitic sacrifice can, however, be more conveniently considered in connexion with the ritual observed, to which we now turn.

4. The method of sacrifice.—(a) *The place*.—Sacrifice must be offered at an appointed holy place. The killing of a sacrificeable animal else-

where is a murder, to be expiated as such (Lv 17³⁻⁵). Even in patriarchal times, as a rule, sacrifice takes place on a spot hallowed by a theophany (Gn 28¹⁷); it is probably indeed a mere accident when specific mention of the theophany is omitted (43⁻⁷ 8²⁰). Moses cannot allow his followers to sacrifice to their Lord in Egypt; he must conduct them to a place 'three days' journey into the wilderness' for the purpose (Ex 3¹⁸). The 'camp' of the wandering Israelites, owing to the presence of the Ark, is *ipso facto* a holy place, and therefore anything that defiles, such as the burning of the sin-offering (29¹⁴), the bodies of the sacrilegious Nadab and Abihu (Lv 10⁴), a leper (13⁴⁶), the execution of a criminal (24¹⁴), must not profane the sacred precinct. The same ideas are to be traced among the Arab tribes.¹

(b) *The altar*.—This has already been described,² so that few words are necessary here. The necessity for the altar arose from two requirements—the need of something visible and tangible to which to apply a gift supposed to be made to a physically invisible and intangible deity, and the need of something to prevent the sacrilege of the holy blood falling on the level earth.³ For this purpose a heap of stones (such as, we may presume, the altar that Abraham built [Gn 13¹⁸]), a bank or mound of earth consecrated for the purpose (Ex 20²⁴), or a large stone (1 S 14³³) would serve. According to the Book of the Covenant, a stone altar was not to be profaned with the touch of new-fangled metal tools (Ex 20²⁵), though doubtless this rule was not universally observed—*e.g.*, by Ahaz (2 K 16¹⁰). An altar, however, is not absolutely necessary; Gideon (Jg 6²⁰) offers his sacrifice on a rock (which may, however, have been an altar-like mass or boss of rock). The altar of Elijah (1 K 18) was apparently a cairn of stones surrounded by a circle of twelve monoliths outside which was a trench; it is the most completely described 'high place' altar mentioned in Hebrew history.

Among the Arabs the sacred stone (*nusḥ*) served the purpose of an altar. It was, however, more than an altar; rather was it a representation of the divinity, sometimes indeed hewn into a form to represent him.⁴ A curious series of rock-cuttings found some years ago at Petra⁵ may perhaps be a late Aramæan or Nabatæan place of sacrifice, as has been supposed. But the rocks of Palestine are cut about in all sorts of ways, with quarries, wine-presses, tombs, etc.; and, unless evidence were found confirming the explanation of these Petra cuttings as a kind of sanctuary, it would be rash to build very much upon them. For Egyptian altars, and the few facts known about altars of the other Semitic peoples, reference may be made to the artt. ALTAR.

(c) *The ritual*.—This naturally varied according to the character of the sacrifice. In the primitive communal sacrifice the animal was slaughtered, usually by having its throat cut (with an antique form of knife),⁶ and the blood was allowed to fall over the altar-stones. This was the share of the deity, and its application to the sacred stone was equivalent to feeding the deity upon it. In the official Hebrew legislation sacrifice could be offered only by those of the house of Levi; but in the earlier history Jethro (Ex 18¹²) and Balaam (Nu 23¹⁴) offer sacrifices to Jahweh. The flesh of the animal was divided among the worshippers and eaten by them; thus they shared in the meal with their deity. Such a sacrifice is known in the Hebrew Scriptures as *nḥl* or *nḥl*, translated 'sacri-

fice' and 'peace-offering'¹ respectively in the RV. The etymology on which the latter translation is based is not absolutely certain.² The former word, like the modern Arabic ذبيح, includes the slaying

of animals for food, after such an action had ceased to have any special sacrificial significance. The occasions for such a sacrifice, besides the periodic feasts, were numerous—any time of rejoicing, such as the end of a successful war (1 S 11¹⁵), the cessation of a pestilence (2 S 24²⁵), and a family gathering (1 S 20⁶). A preliminary sanctification was obligatory on the worshippers, with lustrations, continence, and change of garments (Ex 19¹⁰⁻¹⁴). When the animal was slaughtered, the blood and the fat—the portion assigned to the divinity—were consumed on the altar, and the rest was divided between the priests and the worshippers. Hophni and Phinehas in their greed seized more than their share, before the portion meant for the deity had been set aside (1 S 21²⁻¹⁴). With the offering was unleavened bread. The flesh was boiled—Hophni and Phinehas offended the people's religious feelings by requiring it to be roasted. Similarly, Curtiss tells us,³ 'the ministers of some [modern Arab] shrines are inclined to frown upon the custom of preparing the sacrificial meal away from the shrine.'

On occasions when the joyful feast of the *nḥl* was inappropriate the proper sacrifice was the *nḥl*.⁴ In times of war, doubt, or difficulty the animal was slain beside the altar and there wholly consumed. The sacrificers did not in this case partake of it; the whole was, as it were, volatilized and placed at the service of the deity.

While in Hebrew and Arab theory the animal thus offered seems to have been regarded as a tribute, Babylonia preserves for us an older stage of the development which may well be totemistic in origin. Here the idea of tribute is secondary. The primary purpose of sacrifice, so far as the sacrificers are concerned, is divination, especially by markings upon the animal's liver (interpreted as modern charlatans interpret the markings on the human hand). This form of divination is referred to in Ezk 21²¹. The sacrificed animal seems to have been considered as having partaken of the divine nature, just as an animal whose flesh has been eaten by a man enters his organism and henceforth partakes of his nature; the various parts of its organism are therefore essentially the corresponding parts of the divinity, in tangible form; and on them are impressed signs of the divine foreknowledge. This is conspicuously the case of the liver, which is regarded as the seat of the soul.⁵

The treatment of offerings other than animal victims (cereals, meal, etc.) was presumably similar to that of animal victims. Under the Levitical code part was consumed by the altar-fire, and the other part was at the disposal of the priests (Lv 6¹⁴⁻¹⁶). Under the Levitical régime a sacred fire (perhaps kept burning perpetually from a flame supposed to have been miraculously kindled) was used for these ritual purposes. To use other fire was sacrilege (Lv 10). The Arabs, on the other hand, scarcely offered fire-sacrifices at all.

¹ A more general term for gift or offering is *nḥl*, which in the later books denotes more specifically offerings of cereals. The general term in the later books is *nḥl*. *nḥl* is a 'fire-offering.'

² See W. R. Smith², p. 237.

³ P. 171, n. 5.

⁴ The *nḥl* seems, properly speaking, to have originally meant the part of a sacrifice burnt. A 'whole burnt-offering,' in which the entire animal is burnt, was *nḥl* (Nowack, *Archæologie*, ii. 215).

⁵ See Jastrow, *Rel. Belief in Bab. and Assy.* p. 147 ff.; also his *Rel. Bab. und Assy.*, *passim*, esp. ii. 213 ff.

⁵ See, for references, *ERE* I. 851.

⁶ Wellhausen, p. 115.

'The altar,' says Wellhausen,¹ 'is not a hearth: no fire burns on it.' After mentioning a few doubtful exceptions, he adds: 'The normal Arab rite of animal sacrifice consists simply in smearing the blood on the sacred stone, or pouring it into the *ghabghab*' (the receptacle for this offering).

Among the Babylonians, however, fire was essential to sacrifice: by fire the offering was brought to the presence of the gods, and fire symbolized the intermediation between the worshipper and the divinity. Owing to this fact the fire-god *Girru-Nusku* (a conflation of two ancient fire- or solar-deities) was present at every sacrifice.²

For a discussion of some of the minutiae of Hebrew sacrificial ritual, such as the ceremony of 'waving' and 'heaving' the portions set aside for the priests, reference should be made to special works on Hebrew archaeology (such as that of Nowack or of Benzinger) or to the standard commentaries on the legislative parts of the Pentateuch. We must, however, note some peculiar rites which do not fall under the foregoing heads.

(a) The first of these is the rite of the *scapegoat* (Lv 16^{8, 10, 20}). In this very primitive rite, on the great Day of Atonement, two goats were brought to the sanctuary. One was slain, and the other, after confession of the people's sin had been made over it, was turned loose in the wilderness 'for Azazel' (AV 'for a scapegoat,' a translation based on an analysis of the name now deemed untenable). Whatever Azazel (*q.v.*) may have been—a question to which no certain answer can be given—the sacrifice evidently belongs to a well-known group of purificatory rites in which uncleanness is transferred to another man or animal. A precisely similar rite, with birds, was performed at the purification of a leper—one of two birds being sacrificed, the other, after being sprinkled with the blood, wherewith the leper also was sprinkled, being set free (Lv 14¹⁷; cf. also v. 21¹⁷). The whole subject has been studied by J. G. Frazer in *GB*³, pt. vi., *The Scapegoat*, London, 1913. See, further, art. *SCAPEGOAT* (Semitic).

(β) Another form of sacrifice involving the liberation of an animal is recorded from Arabia in which a camel, stallion, etc., being dedicated to some deity, is allowed to go free and can never again be used.³ The milk of such a dedicated animal could be used only by the poor and by guests.⁴

(γ) *Libations*.—David's water libation has already been mentioned as an exceptional case.

'The libation, which holds quite a secondary place in the more advanced Semitic rituals, and is generally a mere accessory to a fire offering, has great prominence among the Arabs, to whom sacrifices by fire were practically unknown, except in the case of human sacrifice.'⁵ Smith cites libations of blood and milk. He might have added coffee, of which among the modern Arabs libations are poured at feasts in honour of a being called *Shaikh Shādli*.⁶ A libation, presumably of wine and oil, was poured by Jacob on the stone at Bethel (Gn 35¹⁴); and elsewhere throughout the OT we find passages which indicate that among the Hebrews wine was the proper material for 'drink-offerings,' and a regular accompaniment of animal-sacrifice—e.g., Ex 29⁴⁰, Lv 23^{13, 18, 37}, Nu 15⁸, Dt 32²³. From these we learn that $\frac{1}{2}$ *hin* (about 3 pints) of wine was the proper drink-offering to accompany a lamb, $\frac{1}{2}$ *hin* (2 quarts) of wine a ram, and $\frac{1}{2}$ *hin* (3 quarts) of wine a bullock. Drink-offerings of blood are condemned in Ps 16⁴ as heathenish, but on the other hand a wine-offering to the deity *Meni* is referred to in Is 65¹¹. The actual ritual is nowhere described, but presumably the libation was poured over or beside the altar. The heathenish rites of the Israelite women, who worshipped the 'Queen

of Heaven' (*q.v.*) with 'cakes' ($\text{הֶבְלִי$, i.e. probably terra-cotta plaques stamped with the likeness of the divinity, such as have come to light in large numbers in Palestine), included libations as an essential element, though the material is not specified (Jer 19¹³ 32²⁹ 44^{17a}). The water poured annually into a cleft in the temple at Hierapolis¹ was probably not a libation, but a rain-making or fertilizing charm.

It is not quite correct to speak of libations as occupying 'quite a secondary place in the more advanced Semitic rituals.' Certainly in Mesopotamia they are abundantly referred to as an essential concomitant of the burnt-offering. The material is not often specified; a libation of some drink prepared from a cereal is mentioned in a tablet given by Jastrow.²

(δ) *Lectisternia*.—The table of shewbread was the Hebrew equivalent of the lectisternia, a table laden with food being set before the god. The name of this offering would perhaps be better and more intelligibly translated 'bread of the presence' (of Jahweh). The custom of laying up food before the god is wide-spread, and was no doubt adopted into the official Priestly Code from earlier pre-Pentateuchal rites. We have already seen illustrations from Egypt, and have referred to the tale of Bel and the Dragon. In the earlier rites the consumption of the food by the priests of the temple was probably secret, and arranged to keep up among the uninitiated the fiction that the god himself partook of the banquet. In the Hebrew rite, however, the food was openly the perquisite of the priests, and in the earlier times could even be given by them to laymen (1 S 21). The same or a similar rite was observed by heathenish Israelites; Is 65¹¹ speaks of people 'preparing a table for Gad,' doubtless a god.

(e) *The Passover*, though ostensibly a memorial feast commemorative of the Exodus, is probably one of the most primitive of the religious rites which Hebrew ritual preserved, belonging in fact, like the sheep-shearing festival of 1 S 25, to the time when the ancestors of the Hebrews were nomad shepherds. The special characteristics of the Passover are (1) that it took place in spring, at the time of the vernal equinox (Ex 13⁴, Dt 16¹); (2) that the victim was a lamb or a kid (Ex 12⁵), a male in its first year; (3) that, unlike the other sacrifices, this was a domestic celebration, the lamb being sacrificed by the head of the house, not at any special sanctuary, and not by any special religious functionary (Ex 12, though this is modified in the Deuteronomic legislation [16^{2, 6, 7}]); (4) that the entire lamb was to be roasted, not boiled as in other sacrifices (see above), and eaten by the household in haste (two households individually too small to dispose of a whole victim being allowed to combine), all properly initiated Israelites attached to the household being admitted, as well as any foreigners naturalized by the rite of circumcision, though all uncircumcised foreigners were excluded (Ex 12⁴³⁻⁵¹); (5) that, when the animal was slaughtered, the blood was smeared on the door-posts and lintels of the house. The feast was followed by a period of a week in which no leavened bread was to be used; but it seems to be a doubtful point whether this was an intrinsic part of the Passover ceremony or whether the proximity of the two ceremonies in the calendar is not merely accidental. The events said to be commemorated by the Passover were (i.) the last of the Egyptian plagues, when the first-born in the land of Egypt was smitten except in those houses on which the paschal blood was smeared; (ii.) the hasty departure of the people from the land. The original

² *Rel. Bab. und Assy.* i. 448.

celebration is, however, probably much older, and the connexion with the Exodus only secondary and ætiological. Wellhausen¹ and J. Müller² see in the sacrifice a survival of an ancient pastoral feast, when the firstfruits of the flock were sacrificed (as in the sacrifice of Abel [Gn 4th]). The 'sacrifice in the wilderness,' which was the ostensible motive of the Exodus, was, in fact, the Passover; and the king of Egypt, by preventing this, roused the wrath of Jahweh, who in punishment took to Himself the first-born of Egypt. The domestic nature of the rite certainly favours its origin among a simple and primitive pastoral organization; but the peculiar details of the rite—the rapid devouring of the whole animal and the smearing of the doorway with the blood—show that it is in its nature something more than a mere offering of *primitiæ*. With regard to the former, we are irresistibly reminded of the famous Arab camel-sacrifice described by Nilus, to which frequent reference is made by W. R. Smith³ and by the writers who follow him; and the analogy suggests that the haste with which the animal was to be eaten was primarily inspired by a similar cause—a ceremonial requirement that it should be disposed of before some (astronomical?) occurrence had taken place. The door-post rites indicate that the ceremony belonged to the numerous blood and threshold covenants (on which see the works of Trumbull). The sedulous avoidance of the chance putrefaction in any form, to which allusion has already been made, is specially to be noticed in the Passover rite.

(5) *The red heifer sacrifice*.—This singular rite is described in Nu 19. A red cow (note the sex, which is the opposite to that of most sacrificial victims) which was without blemish and had never been used in a yoke was to be taken 'without the camp'—i.e. outside the temple hill—by a subordinate priest (the high-priest could not risk the contamination of the rite). A second official slaughtered the animal, and the first priest dipped his finger seven times in the blood, sprinkling it 'towards the tabernacle.' A pyre having been erected, the body of the heifer was to be placed upon it and reduced wholly to ashes, sweet-smelling woods being thrown on the fire during the ceremony. A third official was to gather the ashes of the heifer and of the pyre together and deposit them 'without the camp' in a clean place, where they were to be preserved. The three officials involved in the rite were made unclean, i.e. tabu, by the ceremony till the evening, when by washing they recovered their normal condition. The ashes thus obtained and preserved were to be used in lustrations necessitated by the uncleanness involved by contact with a dead body or any part thereof (such as a bone), some of the ashes being placed in a vessel and having running water poured over them, which was then sprinkled with hyssop on the person or thing requiring to be cleansed. The rite, though the description of it is preserved in a comparatively late document, is probably in its origin of very great antiquity. The red colour of the cow, and the scarlet cloth burnt on the pyre with the aromatic woods, suggest the colour of blood; the aromatic woods are also probably connected with primitive ideas of the cathartic value of odours such as they produce.⁴

Analogous with this rite, but to be carefully distinguished from it, is the sacrifice of a heifer in Dt 21st as an expiation for an unexplained murder. Here the village nearest to the spot where the murdered body was discovered had to provide a

heifer (colour not specified) which, like the red heifer, had never been brought under a yoke. The village elders were to lead the animal to 'a rough valley' and there to break its neck, probably by precipitating it over a high rock. Over the body the elders were then to take an oath of compurgation.¹

5. *Origin of sacrifice among the Semites*.—It may be taken as a universal rule that no trustworthy account of the origin of sacrifice, or of specific sacrifices, is to be gleaned from those who themselves perform the ceremonies. In every case they give us ætiological myths of other than historic interest. Thus it is necessary in considering the development, and especially the origin, of sacrifice among any people to apply the comparative method and to draw our conclusions from a large number of related examples. In an article like the present it is not possible to give more than the conclusions, with references which will enable the reader to follow out for himself the premisses and arguments of the authors quoted.

E. B. Tylor² was the first to endeavour to give a scientific explanation of sacrifice. He regarded the rite as simply the offering of a gift or bribe to a divinity, precisely analogous to the gift or bribe that might be offered to an Oriental potentate, and for analogous reasons—to secure favour or to avert anger. As the gods recede from man, the gift becomes more and more an act of homage and self-abnegation. This theory, as Hubert and Mauss well say,³ describes rather the moral development of the rite than its actual machinery, and, while it doubtless contains an element of truth, is little more than a restatement, in definite scientific language, of the vague pre-scientific ætiological myths.

W. R. Smith⁴ showed that the problem was much more complicated, and involved a variety of elements. His work, though in certain minor details proved open to criticism, has stood as the foundation of all subsequent study of the subject. Beginning with totemism, which J. F. McLennan had (a short time previous to the first publication of this book) brought to the notice of anthropologists, he formulated a theory which may be thus briefly summarized. In the primitive nomadic life the solidarity and unity of the clan is an essential feature. Its members are bound by a tie of common blood with one another and with the god, their father. The domestic animals of the tribe to some extent share in this community, at least inasmuch as they are the tribal guests, and have the privilege of adoption conferred on human strangers by the mere fact of guesthood. When the god is angry, his favour can be restored by an act of communion between him and his worshippers; and the victim is the non-human member of the clan (i.e. the totem). When the nomad ceases from his wandering life and becomes an agriculturist, his relation with the god alters. The god is no longer a father, but a king or proprietor, from whose hand the worshipper receives his land as a tenant. The sacrifice is now not so much a communion as a tribute. The god is fed (both in the earlier and in the later theories) first by leaving portions of the flesh by the sacred stone; afterwards (as less materialistic ideas of the nature of deity develop) by pouring out the life-bearing blood on the earth as his portion, which, as it sinks and disappears, can more readily be supposed to be absorbed by the Deity than the solid flesh; and finally by burning the victim, which thus becomes volatilized and, as it were,

etherialized by the smoke. The deity is thus satisfied by the 'sweet savour' of the offering. The temper of a master is more doubtful than that of a father, so that the worshippers are uncertain whether he is satisfied. In the stress of calamity human victims are offered, and finally victims counted unclean and therefore exceptionally sacrosanct. W. R. Smith seems to have been the first to insist on the importance of distinguishing three types of sacrifice: the communion form, in which the god and his people were commensals; the piacular form, an expiation for sin—essentially substitutionary in character, the [totem] animal being slain as a substitute for the guilty tribesman; and the mystical form, in which the god himself, in bodily form, is supposed to be slain by his worshippers and ceremonially eaten by them.

A covenant-sacrifice is the most obvious illustration of the communion-nature of the rite. When two men (as Jacob and Laban) made a covenant, they held a common meal on an altar (Gn 31⁴⁶). When Abraham and the deity made a covenant, victims were divided, and God, typified by a torch, passed between them (Gn 15). When Moses made a covenant with God on behalf of the people, he poured half the blood of the victims on the altar and sprinkled the people with the other half (Ex 24⁴⁻⁵).

That offerings are regarded as literally the food of the gods is illustrated by numerous texts. In one of the Babylonian penitential hymns, as restored from a fragmentary tablet by Jastrow, the sinner confesses to having eaten and drunk unknowingly of the food and drink of his goddess, and also to having eaten what was unclean (*i.e.* tabu) to her; and Tabi-utul-Bel, king in Nippur, speaks of troubles having fallen upon him 'as though he had eaten of his god's food, and neglected to bring drink to his goddess.'¹ Another tablet speaks of offerings as 'the pure heavenly food.'²

Frazer³ founds his work on the foregoing conclusions, but in some points carries it farther. Especially with regard to the last-named point, he infers from the comparison of an enormous number of related rites from all parts of the world that the ceremonial god-slaying is intended to prevent the god from being overborne by old age.

These theories have not gone unchallenged. L. Marillier doubts the essential postulate on which they are based, that an animal-god is necessarily a totem-god; and Hubert and Mauss question the essential connexion between the communal meal at the god's table and the more complex form of sacrifice.⁴ M. J. Lagrange,⁵ following Smend,⁶ objects to Smith's theory, while doing full justice to the value of his masterly work, that totemism is assumed rather than proved for the Semitic tribes, and substitutes for his view of the origin of sacrifice among these people the theory that sacrifice is essentially an act, not of consecration, but of de-consecration. Starting from animism, whereby the savage sees a spirit in everything, he argues that, if a savage wished to make use of anything—say, an animal whose flesh he desired to eat—the presence of the spirit would make it tabu. By sacrifice the savage desecrates the desired object; by leaving a part of it (*e.g.*, the blood) as the share of the spirit he hopes to obtain the rest for himself. By offering the firstfruits of his flocks and his crops, and even of his own family, he earns the right to secure the remainder of the produce to his own use. The newly-planted tree (Lv 19²³) remains 'uncircumcised' (*i.e.* tabu) for three years;

its fruit for the fourth year is given to the deity; from the fifth year onwards it may be freely used. The sacrifice of the firstfruits was probably the beginning of animal-sacrifice. Lagrange holds that, while animals might have entered into totemistic relationship with a human clan, they could hardly be supposed to have similar relations to gods, and that to regard every immolation as a sacred act is not the same as to abstain from all immolation except when one is definitely intending to engage in an act of worship; moreover, that to admit the whole clan to a share in the feast does not mean that no slaughter can take place without the consent of the whole clan.

Curtiss, as a result of his researches in modern Palestine, was led to dissent from the theories of the origin of sacrifice usually associated with the name of W. R. Smith. According to his view, the essential point was not the gift or the eating of the sacrificial animal, but the effusion of its blood, the substitutionary idea being in his belief the prevalent and the original essence of the rite.¹ Thus, a sheep is slain at the foundation of a house because every new house requires a life; the life of the sheep redeems that of an occupant of the house. A sheep slain on behalf of a sick person, likewise, is a substitute whereby the life of the patient is redeemed. The blood is placed on the door-post and lintels of the shrine 'perhaps to remind the saint of the blood of the victim that has been slain.' The fallacy that the East is 'immovable,' however, vitiates some of these deductions. It is true that very primitive rites and beliefs survive among the modern Arabs; but they do not necessarily survive in their primitive form, or with primitive ideas attached to them. On the contrary, they have been modified profoundly by the leavening influence of Islām. Moreover, Curtiss takes no account of the bloodless sacrifices or those in which the effusion of blood is carefully avoided.²

LITERATURE.—i. GENERAL.—For brevity only the later works are named; references to older books will be found in the bibliographies in *HDB*, *EBI*, *EBR*¹, *s.v.* 'Sacrifice'; H. C. Trumbull, *The Blood Covenant*, London, 1887; W. R. Smith, *Lectures on the Religion of the Semites*, do. 1889, reprint of 2nd ed., 1907; L. Marillier, 'La Place du totémisme dans l'évolution religieuse,' *RHR* xxxvi. [1897] 208, and subsequent numbers; Trumbull, *The Threshold Covenant*, Edinburgh, 1892; P. vii. *SOUTHERN SEMITES (ABYSSINIANS)*.—No satisfactory literature; but, owing to their close connexion with the Yemenite Arabs, there was probably a close community of belief and religious practice between them. See L. J. Morié, *Hist. de l'Éthiopie*, Paris, 1904, ii.

R. A. S. MACALISTER.

SACRIFICE (Teutonic).—For our knowledge of the ancient Teuton religion we are almost entirely dependent on Icelandic sources, as in Iceland there was a great literary activity in the 12th and 13th centuries, when several prominent men collected whatever of ancient oral or written tradition had come down to their own time in poetry or prose. In other Teutonic countries we find only occasional references to the religious rites of heathen times, though a great many names occur in Scandinavia, Germany, and England signifying religious customs and reminding of ancient rites. Often such names as Frey, Thor, Odin, Baldr, and a few others are prefixed to mounds, hills, groves, springs, etc., indicating that those places formerly were dedicated to the divinities mentioned. In Sweden there is a great number of such places.¹ It is difficult, however, to decide whether a given rite or legend which is mentioned only in the Icelandic literature was really peculiar to that country alone or to the North generally, or whether it was once the common property of all Teutonic peoples.² In many cases we shall have to leave this matter undecided or be satisfied with probabilities. Yet it is well understood that long before those public religious festivals were instituted of which Snorra Sturlason, Saxo Grammaticus, Adam of Bremen, and others write there had been sacrifices offered by the Teuton tribes to their gods, and that long before priests were set apart among the northern Teutons sacrifices were made by the people themselves, either for the sake of the offerer alone or in a representative way for his family or tribe. Everybody felt himself in duty bound to some particular god or gods, and this duty was most religiously observed. As the gods were many and of several kinds, so must those services, sacrifices, and offerings have been. Minor things such as fruit, bread, fowl, prepared foods, trinkets, and even money were offered and brought to holy springs, bogs, lakes, and hills, where they were dedicated and turned over to the god of the place with such formalities as were considered proper. One of these demanded scrupulous cleanliness—a cleanliness which in certain cases required that the sacrificer should approach the god in a naked state.

For how many generations and to what extent these individual offerings were carried on it may be difficult to determine, but all indications agree that some gods were sacrificially worshipped in Sweden at a very remote period. Montelius holds that Frey was worshipped there for at least two thousand years before the Christian era.

With the advancing civilization arising from conditions of more settled habits and of larger tribal and political unifications, together, in some countries at least, with a more generally recognized order of sacred persons or priests, certain periods for public sacrificial festivals were decided upon and observed, at first by the vicinity mostly and then by the entire realm. Thus there were three yearly sacrificial festivals—in autumn, midwinter, and spring. These festivals assembled and unified the people and served to foster the idea of their mutual social union as of divine character. Participation in these sacrificial feasts and meals made peace between the rival races.⁴

Some of these feasts were in a special sense connected with the memory of the dead. This

⁴ *Yngl. Saga*, 21.

was the case with the midwinter festival—the greatest feast and family reunion of the Teutons—when the departed and disembodied spirits returned to their own, and, mingling with them, gave them cheer and encouragement, or proffered warnings of impending danger. At this season the gods themselves also showed special favours, helping in every way and keeping off the evil spirits, so that entire peace and goodwill might prevail. A general peace applying to the entire festival period was also declared by the king himself, so that no wrong could be done then. Under the shield of this peace the sacrifices with the attendant banquet were prepared, deliberations were held, sentence was passed, and commerce conducted, for which reason *thing*, the old name of these conventions, stands for sacrifice, banquet, diet, assize, and fair.¹ Upon the general celebrations of these great festivals at Upsala was founded the right of the Svear, or Swedes, to give a sovereign to the whole realm, for the Upsala king was the guardian of the holy altar.²

Frey, or Froe, was the northern god of fertility and peace. He was the patron god of Sweden and was worshipped as the god of plenty. According to Adam of Bremen, his worship was of the phallic order, and as such gave rise to very popular gatherings and religious feasts; as we have already seen, Montelius considers that the worship of Frey was current in Sweden at least two thousand years before Christ. Saxo has the following:

'Also Frey, the regent of the gods, took his abode not far from Upsala, where he exchanged for a ghastly and infamous sin-offering the old custom of prayer and sacrifice, which had been in use for so many ages and generations. For he paid to the gods abominable offerings by beginning to slaughter human victims.'³

The Frey-period is contemporary with that of Odin in Sweden, but there it begins much earlier. No doubt, human sacrifices occurred also during the régime of Frey at Upsala. At a later period we know that human victims were sacrificed to the name of that god. Ibn Fadhlân, the Arabian geographer, reports in 921 that he had been present at an immolation among Teuton varings on the Volga, when a young girl was sacrificed according to the funeral rite of Frey.⁴ Thus the same religious customs prevailed wherever the Teutons happened to live. It is also known that religious festivals similar to those at Upsala were held in other countries, but the Upsala ones became better known, being more fully described in Icelandic and northern literature. From most of these sources it is inferred that Odin established them. Indeed, it is said that, when taking possession of the land, he erected a temple there and sacrificed after the manner of the Asæ. To him people paid tribute, that he might be propitious to them and give them good harvest. Snorra Sturlason says:

'Odin made laws for his country, laws which formerly obtained among the Asir. At the beginning of winter sacrifices should be made for a good year, in the midwinter for good crop, and in the spring for victory in intended campaigns. Tribute was given to him "for every nose" the country over, in order that he should protect the people in times of war and grant to them a good year.'⁵

In the *Saga of Hakon the Good* we have the following full description of one of these religious festivals:

'It was an old custom that when there was to be sacrifice all the bonders should come to the spot where the temple stood, and bring with them all that they required while the festival of the sacrifice lasted. To this festival all the men brought ale with them. All kinds of cattle, as well as horses, were slaughtered, and all the blood that came from them was called *hlauf*, and

⁵ *Yngl. Saga*, 8.

the vessels in which it was collected were called *hlaut*-vessels. *Hlaut*-vessels were made, like sprinkling brushes, with which the whole of the altars and the temple walls, both outside and inside, were sprinkled. The people were also sprinkled with the blood, and the flesh was boiled into savoury meat for those present. The fire was in the middle of the floor of the temple, and over it hung the kettles. The full goblets were handed across the fire, and he who made the feast, and was chief, blessed all the full goblets, and the meat of the sacrifice. First Odin's goblet was emptied for victory and power to the king, and thereafter Njord's and Freyja's goblets for peace and a good season. Then it was the custom of many to empty the Bragi-goblet, and then the guests emptied the goblet, called the "remembrance-goblet," to the memory of departed friends.¹

After this description of the feast itself Snorra continues:

'Sigurd, the earl, was an open-handed man, who did what was very much celebrated, for he made a great sacrifice-festival at Hlader, of which he paid all the expenses. Kormak Ogmundson sings of it in his ballad of Sigurd:

"Of cup or platter need has none
The guests who seek the generous one,—
Sigurd the Generous, who can trace
His lineage from the giant race . . .
He loves the gods,—his liberal hand
Scatters his sword's gains o'er the land."²

Following chapters of this saga (17-19) are of special interest in regard to the Teutonic sacrifices, as they treat of the Frosta-thing, King Hakon's sacrifice, and the sacrifice at More.

Bloody sacrifices were always made by the priests, or the chiefs who acted as priests, usually at the beginning and the close of the great public festivals. All the people of the realm, or as many as could be present, were in close attendance at the rite and were blessed. Expiatory sacrifices were held once in every nine years at Upsala and at Lethra in Sealand, at which a great number of animals and human victims were offered.³ At the beginning of wars and other great undertakings, such as the election of kings and leaders for great battles, great and imposing sacrifices were made.

All animals were offered according to prescribed forms, which were well known to the people and because of which they all could understand and take part. If occasion required, as in times of famine and great danger from enemies, human sacrifices were made, the victims ranging from innocent children up to the king himself, who was offered because his was the most precious life in the whole land and therefore a most valuable gift to bring the gods for reconciliation. Among the Goths, the Saxons, the Langobards, and other Teutonic tribes it was also common to present prisoners of war as sacrifices to the god who had given the victory. Jordanes tells us that in some cases such prisoners were immolated by the Teutons. In later writers we read that such captives were hung to the branches of the trees in the sacred grove, and sometimes they were decapitated or slaughtered, 'not for vengeance but as a thank-offering.' To 'inscribe the bloody eagle' on the back of the conquered enemy was an inhuman mode of vengeance sometimes practised by the vikings, and may be considered as a sacrificial act, as it was done in the name and to the honour of the war-god.⁴

Several authors hold that it was not uncommon to sacrifice a thrall or some other person whose life could be taken without cause, when a great journey was to be undertaken or some decisive matter attended to. The offerer smeared his own body with the blood of the victim and then considered himself well protected. Other shocking cruelties were performed in the name of Teutonic religion, as when in a certain year of poor harvest it was agreed that there would never more be a good year until a boy from one of the foremost families had been sacrificed to Odin.⁴

Capital punishments of sacramental nature were of common occurrence. They were made in the first place as an expiation of sin and then as a thank-offering for the restored condition of favour with the divinity. Cowards and infamous people were sometimes sunk in some fen or bog—e.g., in the great pool of Upsala.¹ According to Odin's own command, traitors must be hanged.² In *Starkad's Saga* it is said that in times of dire wrath the hanging of the king would bring great reconciliation, if the victim was pierced through with a spear as a sacrifice to Odin. Common malefactors had their backs broken, just as Thor broke the neck of Greip and Gjalp. In old age men were sometimes thrust down from steep rocks, so as to bring them sooner to their god.³

Thus with its decline the heathen religion became more and more cruel and savage. Indeed, it is said in the appendix of the old law of Gothland that 'they then sacrificed to the heathen gods their sons and daughters and their cattle with meat and drink.' But this was in an age 'when men yet believed in groves and mounds, in holy places and palings.' It is probable that the unbelief as regards the old religion was a greater cause of the cruelties of the viking age than the belief itself. Adam of Bremen writes that about that time a Christian traveller had related that he had seen seventy-two dead bodies of immolated men and animals hanging in the grove of the temple at Upsala, which shone with gold and had the images of Odin, Thor, and Frey set up in the interior. In German countries the Teuton religion had ceased to exercise any power long before that time, while in other parts of Europe, as in the Baltic provinces, it may have had its devotees for yet a few generations.

SACRIFICE (Human).—See HUMAN SACRIFICE.

SACRILEGE.—See TABU, CRIMES AND PUNISHMENTS (Primitive and Savage).

SACRILEGE (Greek and Roman).—When the Greek term *λεπρωλία* and the Latin *sacrilegium* were used by lawyers of the classical periods, they implied, like the corresponding phrases in modern systems of law, the removal from sacred places of property dedicated to sacred uses. Sacrilege was a form of theft, distinguished from other forms only by the nature of the objects affected. But in the later forms of ancient law, and still more in popular usage, the idea of sacrilege was stretched far beyond these limits. There was a natural tendency to regard as cognate, and as deserving the same punishment, many other offences which could be viewed as outrages on the dignity of gods, or of beings raised above the ordinary human level, especially autocratic rulers and the spirits of the dead.

I. GREEK.—**1. Temples.**—In Athens the strict definition of the crime of sacrilege made it consist in the robbery of movable property dedicated to a divinity from his temple and not from the sacred precincts outside it (Syrianus, *ad Hermog.* iv. 497, ed. C. Walz, Stuttgart, 1833). A crime against the protecting gods of the State was a crime against the State itself, and hence in all periods the conceptions of sacrilege and treason lay very near together. One and the same Athenian statute punished both these iniquities (Xenophon, *Hellenica*, i. vii. 22). Ancient Greek writers treat both, along with murder, as the most heinous breaches of law (Plato, *Laws*, 854, and elsewhere; Antiphon, *de Herodis caede*, 10). In Athens the capital penalty was assigned to the sacrilegious, and it was accompanied by a confiscation of property and a prohibition against the burial of the offender in Attic ground. But execution was not a special mark of reprobation, since it was allotted to smaller crimes, when regarded as directed against the nation, the procedure being that called *γραφή*. Even the common thief could be so treated, and especially the stealer of clothes, the cutpurse, the burglar, and the kidnapper (Xen. *Memorabilia*, i. ii. 62). And in all these cases the amount of the property involved was immaterial (Isocrates, *c. Lochitem*, 6). Such was the theory of the Athenian law; in practice it was not always carried out with strict severity. Stealing from the precincts of a temple or appropriating money belonging to the temple was often dealt with as ordinary theft. Apparently there was a form of charge for 'appropriating sacred property' (*κλοπή ιερῶν χρημάτων*), which led to less stringent procedure than was assigned for sacrilege. In many directions we find extensions of the idea of *λεπρωλία*. Demosthenes (*c. Timocratem*, 120) qualifies as sacrilege the withholding of tithes due to a temple. In Greek inscriptions the endeavour to protect property given over to sacred uses is carried further. At Iasos an inscribed column set forth the rights of certain priests, and any one who made away with the pillar or even damaged the inscription was to be treated as *λεπρῦλος* (W. Dittenberger, *Sylloge Inscriptionum Græcarum*, Leipzig, 1893-1901, no. 602). At Teos in Asia Minor there was a benefaction for the education of boys and girls, and he who embezzled the funds was to suffer the penalties inflicted by the laws on the sacrilegious. The offender was also to be held accursed, like the offender against early Roman laws on whom the doom was pronounced, 'Sacer esto' (*ib.* no. 513). At Dyme in the Peloponnese stealing sacred

treasure and coining it entailed death (*ib.* no. 513). In the island of Syros offences against the festival of Demeter were sacrilegious (*ib.* no. 680).

There was in Athens a form of prosecution for *ἀσέβεια* ('impiety'), which to some extent overlapped that for *λεπρωλία*, but it included a much wider range of crimes against the dignity of beings and possessions under divine protection. Polybius (xxxvii. 1) describes this impiety as directed against gods, parents, and the dead. The mutilation of the *Hermæ* in Athens, which occurred about the time when the expedition against Sicily started in 415 B.C., is a famous example of this class of wrong, which included contempt for the gods of the city, violation of the mysteries of Eleusis, and similar errors. To injure sacred olives in Attica entailed banishment and confiscation.

2. Asylum.—A very important kind of impiety recognized all over Hellas, and specially characteristic of the Hellenic peoples as opposed to those of Italy and the barbaric West generally, was the violation of the right of asylum. To drag away suppliants who had committed themselves to the protection of an altar or the precincts of a temple was an enormity. In wars between Greeks a shrine was deemed inviolable (*ἀσύλον*) (Thucydides, iv. 97). In general persons who had been condemned by a regular court or had undergone deprivation of civic privilege (*ἀτιμία*) had no right to the protection of the god. The Spartans, however, held even these to be immune if they sought asylum (Polybius, iv. 35). There is a complaint in the *Ion* of Euripides that the inviolable sanctuary protects the unjust and the just alike (line 1315). The Hellenic theory that all sacred places should afford a refuge to suppliants was of course often rudely broken through in practice. For such impiety there was ordinarily no secular penalty. The divine being was left to avenge these wrongs, which he oftentimes did through human instruments. A curse would lie upon the offender and his progeny. Great families could be made to suffer politically for the sins of their ancestry.

Megacles, the head of the great Athenian family of the Alcmaeonidæ, in 612 B.C. treacherously slew Cylon, who had attempted to make himself despot in Athens, and his followers, when they had shielded themselves in the temple of Athene on the Acropolis, and had surrendered on a promise that their lives should be spared. The religious blight that lay on the house was repeatedly exploited for political purposes in the two centuries that followed. At the beginning of the Peloponnesian war Sparta demanded that the Alcmaeonidæ should be expelled from Attica. This was a blow aimed at Pericles, who was an Alcmaeonid on his mother's side. He parried the attack by calling attention to the impious stain (*αἷος*) that rested on Sparta for having torn away Helots from the very sacred sanctuary of Poseidon at Cape Tenarus. The Spartans themselves believed that the great earthquakes at Sparta in 464 B.C. came as a punishment inflicted by Poseidon himself, the 'earthshaking' god.

Sometimes it seems to have been thought that the divine vengeance might be escaped if the refugee were done to death without shedding of blood.

Thus the Spartan king Pausanias, who had commanded against the Persians, was walled in at the temple of Athene Chalkioikos, and perished of hunger.

Sometimes a suppliant was forced to surrender by the application of fire. On the other hand, there are not wanting remarkable examples of the protection afforded by the holy precincts.

In 445 B.C. another king of Sparta, Pleistoanax, fell under suspicion of having been in collusion with the enemy, and was condemned to pay a heavy fine. He took shelter in the sacred enclosure (*τέμενος*) which surrounded the temple of Zeus Lykaïos at Megalopolis, and there lived for nineteen years (Thuc. v. 16). His son Pausanias had a similar fate. Being convicted of treason, he fled to the shrine of Athene Alea at Tegea and lived out his life in her domain.

The right of sanctuary accorded in lands to which Hellenic culture extended was important to slaves, and was one of many influences which rendered slavery on the Eastern side of the ancient

world less grievous than on the Western. In Athens the temple of Theseus was a notable refuge, and in Laconia that of Poseidon at Cape Tænarus. The tricky slave who, after committing some misdeed, seated himself on an altar and jeered at his owner was a common figure in the later Greek comedy. The scene is to be found on a number of ancient works of art, and has been transferred by Plautus from Greek originals to his *Rudens* and *Mostellaria*. Sometimes the priest of a shrine would arbitrate between the slave and his master; of this we have an illustration in an inscription from the temple of Apollo Karneios at Andania in Messenia (Dittenberger, no. 653, line 81 ff.). Athenian law permitted a slave who had taken sanctuary owing to cruel treatment to demand that he should be sold to another master.

As time went on, this right of asylum, having been widely extended in barbarian regions which fell under Hellenic influence, naturally became less effective, and conceptions of the inviolability of sacred places became confused. In Attica, so far as the free citizens were concerned, the privilege of sanctuary seems to have died out, because a burgess who had been condemned in a court was held to have no right of access to sacred places. The Acropolis of Athens, which had sheltered Cylon, protected no conspirators in the later time. Among Greeks generally the degree of respect in which consecrated buildings and ground were held varied greatly. Sometimes the sanctity of a consecrated spot was recognized only by the inhabitants of the country in which it was situated. In other instances there was wider, and only in a few universal, recognition. In the case of fugitives from foreign countries extradition was to some extent practised. The evidence of coins and inscriptions, as well as literature, shows that a very great number of towns in Asia Minor claimed inviolability, not only for their temples with the precincts, but for a wider area and sometimes for the whole territory of the city. Naturally there was a great desire to obtain from dynasts and free communities a formal acquiescence in these claims. Alexander and his successors often responded to appeals in such matters. Sometimes ancient privilege was definitely enlarged. Mithridates increased the extent of the holy enclosure of Artemis at Ephesus. The Romans followed the earlier precedents. L. Scipio bestowed like favour on Magnesia after his victory there; and Sulla, Julius Cæsar, Mark Antony, Augustus, and other Romans took similar action in a number of cases. Inscriptions record extraordinary activity on the part of commonwealths desirous of obtaining admission of the sanctity of their temples and the land round them; e.g., we have a remarkable list of towns which confirmed the inviolability of the temple of Hecate at Stratonice (Dittenberger, *Orientalis Græcæ Inscr.*, Leipzig, 1903-05, no. 441). A record of places entitled to be regarded as inviolable seems to have been kept at Delphi (*ib.* no. 228). Often the compact had only a political value, and the title 'inviolable' (*ἀσυλος*) was a mere compliment. So—to take one example from many—the Ætolians contracted to treat as holy the temple of Athene Nikephoros at Pergamon, as a mark of respect for the king. Agreements of the sort frequently have reference to the establishment of games and festivals connected with temples. It was an attraction to visitors to know that the sanctity of the territory to which they were to travel was generally admitted.

Such compliments were often purely personal—i.e., the inviolability was conferred on individuals as a distinction. We have a very long series of inscriptions of this kind, many of them interesting. That great and wide-spread gild, the company of

Dionysiac artists, passed for inviolable throughout the Greek world.

The Greek right of asylum, as claimed by temples in Asia Minor, became a trouble to the Roman government. At the sanctuaries were wont to assemble throngs of insolvent debtors, criminals of all sorts, slaves, and every class of refugees. The injury to local administration came to be so serious that in the reign of Tiberius a great inquisition was held into the privileges which were asserted. As Tacitus drily remarked, a god would shield the scoundrelisms of mankind as though they belonged to his own ritual (*Ann.* iii. 60). The senate grew weary of the innumerable claims and authorized the consuls to deal with them, referring to the body only doubtful cases. The list of *asyla* was obviously cut down with severity. See art. ASYLUM.

3. Tombs.—There is little information concerning protection for the sanctity of tombs in the age of Greek independence. But the sepulchral monument was very commonly regarded as a kind of shrine. The 'tomb-breaker' (*τυμβόρυνχος*) was punished as impious by public indictment under Athenian law, and generally in the Greek States. By permission of authority pecuniary penalties for violation were also created, and sometimes set forth on tombs, recoverable in court by any common prosecutor. The crime of injuring sepulchres was sometimes brought under the head of sacrilege (*λεπορύχια*) and sometimes under that of impiety (*ἀσεβεία*). (See Mommsen, *Röm. Strafrecht*, p. 821, n. 2.)

II. ROMAN.—In some important respects sacrilege and impiety were treated differently on the Eastern and the Western sides of the ancient world.

1. Temples.—In the Roman law of the republican and early imperial times *sacrilegium* was defined as robbery of movable objects dedicated to a divinity in his own house (Cicero, *de Leg.* ii. 22). Theoretically this offence could be committed only against Roman civic gods, for each commonwealth would punish crimes committed against its special divinities. The extension of protection to non-Roman shrines by the Roman government was a matter of favour. But the public mind at Rome was early shocked by outrages upon temples committed by Romans in allied and even in hostile States.

Thus Fulvius Flaccus, who pillaged the temple of Juno at the Lacinian promontory soon after the Hannibalic war, and Pleminius, the violator of temples in S. Italy during the war, and Fulvius Nobilior, who plundered Ambracia a little later, were reprobated by opinion, and expiation was in such cases sometimes made by the government.

The robbery by Q. Servilius Cæpio and his accomplices in 104 B.C. of the gold deposited in the temple of Apollo in Tolosa was punished by a Roman court as an offence against the Roman treasury, into which booty taken from an enemy ought to be paid. But the public belief was that the god sent to a miserable death all who had stained their hands by the outrage (Aul. Gell. iii. ix. 7). In the late Republic the feeling of Roman officials about such matters had become gravely corrupted. But the popular estimate remained the same. In the strict interpretation of the Roman lawyers a man was not sacrilegious unless he stole from the holy place something which had been so dedicated as to become the actual property of the god. For full sanctity dedication by public authority was necessary. In doubtful cases the *pontifices* decided. Cicero indeed declared that what was entrusted to the god's keeping was in the same case (*de Leg.* ii. 22). This was a very important matter, since the temples served often the purpose of the modern banks, and the officials made money for the divinity by lending the capital deposited with

them. The question seems to have been in dispute until it was authoritatively decided by the emperor Severus that robbery of this kind was not sacrilege, but theft (*Digest*. xlviii. 13. 6. 5). In some respects the privileges of a temple depended on what was called the *lex templi*, which was laid down for the regulation of all matters connected with it. The law of the temple of Diana on the Aventine hill in Rome seems often to have served as a model. (See H. Dessau, *Inscriptiones Latinae*, Berlin, 1892-1906, nos. 112 and 4907.)

It seems clear that the law drew a distinction between dedicated objects and money belonging to a temple. Theft of this *pecunia sacra* was classed as *peculatus*, i.e. appropriation of moneys belonging to the State. There was a single statute (*lex Iulia*) dealing with the two offences of *peculatus* and *sacrilegium* (*Digest*. xlviii. 13). The distinction between sacred and national property was often not drawn (cf. *CIL* i. 185, 6: 'aut sacrum aut publicum').

Instances are not wanting of an appropriation of sacred treasures by the government in times of crisis. Thus, e.g., Sulla in 82 B.C. melted down the gold and silver possessions of the temples in order to provide pay for his soldiers (Val. Max. vii. vi. 4).

The Roman tradition was that in very early days the secular punishment of sacrilege was death. In the historic age it was pecuniary until a *lex Iulia* passed either by Cæsar or by Augustus added the penalty of exile. In the imperial period the personal suffering that might be inflicted was more severe. In the reign of the emperor Tiberius the form of exile called *deportatio* was introduced (Quintilian, III. x. 1). In accordance with the general custom which was established by the end of the 2nd cent. A.D., lighter chastisement was imposed on the rigidly defined class of the 'more honourable' (*honestiores*) than on the others, the 'more humble' (*humiliores*). Ulpian (early in the 3rd cent.) stated that in his time many had been condemned to the arena, to perish by the wild beasts, or to be burned alive or crucified (*Digest*. xlviii. 13. 4. 2). Theft from shrines privately consecrated was regarded as 'more than theft' (*furtum*) and less than sacrilege' (*ib.* xlviii. 13. 9. 1).

Corresponding to the form of prosecution for *δοσφεία* in Attic law, there was an indictment for injuring religion (*crimen læsæ religionis*) in Rome, and the line between this and sacrilege tended to be loosely drawn. The tendency was stimulated by the partial divinization of the living emperor; and this cause also helped to confuse the distinction between treason (*maiestas*) and sacrilege and the contempt of religion. Tacitus (*Ann.* iii. 24) blames Augustus for inflicting death or exile on the paramours of his daughter Iulia and her daughter Iulia. He qualified their fault 'by the serious title of injured religious usage (*læsarum religionum*) and treason (*violatæ maiestatis*). This is an early example of the elasticity of the criminal law in all matters that could be described by any stretch as affecting the sacred person of the emperor. Ulpian, early in the 3rd cent., described treason as *quasi sacrilegium*. His lawyer's conscience would hardly allow him to identify completely the two offences. But popular usage had already obliterated the distinction. Tertullian spoke of the Christians being charged with *sacrilegium* (*Apol.* 2). The *Acta* of the martyrdom of Symphorianus (A.D. 179) indicate him as guilty of *maiestatis sacrilegium*—a curious expression (T. Ruinart, *Acta primorum martyrum*, Paris, 1839, p. 129). The refusal to take an oath by the genius of the emperor was sufficient ground for the indictment (*Tert. Apol.* 32). The emperor Constans II.

treated coining as sacrilegious, and the definition was extended even to less serious crimes. A great variety of infringements of imperial edicts could be so treated. In this connexion it may be noted that even after the acceptance of Christianity the rulers and all that appertained to them retained in official language the quality of 'sacred' and 'divine.'

After the time of Constantine very many offences against Christianity and the orthodox beliefs and the property and privileges of the Church and clergy were regarded in the light of sacrilege. An imperial edict of the year 380 stamps as sacrilegious 'those who either by ignorance confuse religious law or by carelessness outrage it and scorn it' (*Cod. Justin.* ix. 29. 1). This appears to have been at first directed against bishops on the eastern side of the empire who were lukewarm in repressing heresy.

2. Tombs.—In the view of the Romans, which spread throughout the West, a tomb was a shrine dedicated to the spirit of the dead. Inscriptions not uncommonly present the two denotations as alternatives. The emperor Gordian, in the 3rd cent., treated the violation of a place of burial as *crimen læsæ religionis* (*Cod.* ix. 19. 1); and Julian, with some exaggeration, declared that the 'ancestors' of the Romans had looked upon the crime as *sacrilegium*. He assimilated the penalties of the two offences (*ib.* ix. 19. 4). In popular usage this view had long been adopted (*CIL* vi. 10120). For a long time, however, wrongs done to monuments and places of sepulture had been vindicated by pecuniary damages, which parties legally interested could recover by the aid of the *prætor urbanus*. Only gradually did *sepulchri violatio* come to be regarded as in the full sense a public crime. In innumerable extant inscriptions from tombs of the imperial age mention is made of particular sums of money which an offender may be compelled to pay. It appears that in Rome the authority of the *pontifices* was required to render the penalty effective, while, outside, permission was required from the municipal authorities. At first the fines, which might be sued for by any prosecutor, went in Rome into the coffers of the *pontifices* and Vestal Virgins, and elsewhere into the municipal treasuries. Condemnation in such a case, though not regarded as strictly criminal, carried with it the disabilities which were connoted by the term *infamia*. It seems probable that general statutes prescribed maxima which might be exacted. These maxima were not the same in all the quarters of the empire.

About the middle of the 2nd cent. A.D. the crime of desecrating tombs had evidently become very prevalent, and fresh means were sought of protecting them from attack. The custom was introduced of devoting part of the fines to the senatorial treasury (*ararium*) or the imperial exchequer (*fiscus*), which before long became the sole public treasury. Sometimes a share remained for the local municipal exchequer (Mommson, pp. 812-815, with notes). The destruction of tombs to provide material for new buildings became, in spite of these fines, increasingly common, and Christianity even stimulated the process. Criminal punishment, which in the age of Cæsar had been possible only where violence had been used (under the *lex Iulia de vi privata*), was extended to all instances of the offence, and the punishments became more and more severe. The methods of protection afforded to sepulchres by fines became common in Italy and all over the eastern side of the empire, in the Grecized lands of the East, but did not spread generally over the West.

3. Asylum.—The right of asylum attached to

temples, which was of immemorial antiquity among the Greeks, was not an indigenous Roman or Italic institution. It finds a place in the fable of the foundation of Rome by Romulus; but that is only an example of Greek imagination playing on the darkness of pre-historic times; and no Latin term could be discovered which was the equivalent of *δῶλον*. In the desire to support the ancient tale, scholars have ransacked the records of Roman religion to find a divinity whose shrine might conceivably have possessed the right of sanctuary, but in vain. When Dionysius of Halicarnassus (iv. 26) spoke of the temple of Diana on the Aventine as sacred and inviolable, he perhaps had a hazy recollection of its long connexion with the plebeian tribunes, whose persons were sacrosanct. Only when Julius Cæsar was deified a temple was founded which was possessed of the privilege of asylum (Dio Cass. xlvii. 19). As the persons of the emperors were in a way above human level, the custom grew of taking refuge at an imperial statue. It became a public nuisance and caused trouble to the senate (Tac. *Ann.* iii. 36, 60, iv. 67; Suet. *Tib.* 53). Soldiers in the camp sought protection from the imperial effigy in the camp shrine (Tac. *Ann.* xii. 17). Slaves who fled to the temples of the gods and the statues of the emperors had to be restrained. Often they were warned off by inscriptions. But Antoninus Pius laid down that, if it were found that their masters had treated them intolerably, they might claim, as they could under old Attic law, to be sold to other masters (Gaius, i. 53).

LITERATURE.—Information is to be found on these matters in works on Greek and Roman antiquities, of which the following may be mentioned: H. E. Meier and G. F. Schömann, *Der attische Process*, 2 vols., Berlin, 1883-87; C. F. Hermann, *Lehrbuch der griechischen Antiquitäten*, 3 vols., Heidelberg, 1841-52; Pauly-Wissowa, esp. s.vv. 'Asylon' and 'Hierosulias Graphē (ἱερουσίας γραφή)'; Daremberg-Saglio, s.vv. 'Asylum,' 'Hierosulias,' and 'Sacrilgium' (where references will be found to special monographs); T. Mommsen, *Römisches Strafrecht*, Leipzig, 1899 (which includes much information about later Greek usage).

SADDHARMA-PUNḌARĪKA.—See LOTUS OF THE TRUE LAW.

SADDUCEES.—As usually understood, 'Sadducees' is the name of a party which was engaged in controversy and conflict with the Pharisees down to the destruction of Jerusalem and the Temple in A.D. 70 and even later. Did this party stand for positions distinctively and genuinely religious? Did it represent the old conservative scribism, which had within it a large priestly element? Or was it primarily political in character? These questions have been raised by recent criticism, and it is necessary at the outset to face the issues opened up by them.

1. The Sadducees primarily an ecclesiastical party.—G. Hölscher, in an important monograph,¹ has argued that the Sadducees are to be regarded not as an organized party, with definite and positive beliefs, but as 'the lax, the scoffers who make merry over the strict religious practice of the pious, as the infidels and godless.' They represented a tendency which favoured Græco-Roman culture and enlightenment, and which was influential among the rich and high-class Jews, especially those who had relations with the Roman government. The attitude of the Sadducees towards religious questions was purely negative, being fundamentally determined by political and cultural considerations. They were not recruited, as is commonly supposed, from the priestly nobility of Jerusalem, but included the rich merchants, officials, and others. The Sadducees were thus not a religious party at all, but simply a body of

people loosely bound together by a common interest to maintain the existing régime. The name is explained as meaning 'Zadokites,'² and was given to them by their opponents, the Pharisees, who borrowed it from an earlier age, the period of Antiochus Epiphanes, when the descendants of Zadok, who then filled the high-priestly office, identified themselves with Hellenism in its most dangerous forms. It could thus, according to Hölscher, be used appropriately at a later time to brand with ignominy similar tendencies which would appear to the Pharisees to be godless and unpatriotic.

This theory seems to have been suggested by the later unhistorical use of the term 'Sadducee' as an equivalent of 'free-thinker' or 'Epicurean.' In the later Rabbinical literature 'Sadducee' is often used in this loose way. But in the earlier sources, Josephus and the N.T., Sadduceism appears to be combined with certain definite religious positions of a conservative kind. And this is, no doubt, historical.

It may be assumed, then, that the Sadducees represented the old priestly party of which the earlier Sopherim were largely composed; that they inherited the cautious and conservative orthodoxy of which the book of Ecclesiasticus is probably an excellent expression; and that the division between the two elements which became the opposed parties of Sadducees and Pharisees did not occur till the Maccabæan period.

2. Name and antecedent.—The best explanation of the name is that already assumed above and first proposed by A. Geiger, viz. that 'Sadducees' (Gr. *Σαδδουκαῖοι*) means 'Zadokites'; and the Heb. *צדקים* (*point* צדק) is an adjective meaning an adherent of the *צדק*.² The 'sons of Zadok' were the members of the priestly family who traced their descent back to Zadok, head of the priesthood in the days of David and Solomon (cf. 1 K 1³⁴ 2³⁵). They were singled out by Ezekiel (44¹⁰⁻²⁶) as worthy to be entrusted with supreme authority in the Temple; and in fact members of this family formed the Temple-hierarchy down to the time of Ben Sira, who, in the psalm preserved in the Hebrew text of Sir 51¹²—if it be genuine, as it almost certainly is—gives thanks to 'Him that chooseth the sons of Zadok to be priests.' At a later time the 'sons of Zadok' (i.e. the priestly aristocracy) succumbed to the seductive influence of Hellenism (especially in the time of the Seleucids). It is possible that at this period the name 'Sadducee' was coined by the 'pious' (the Hasidim) as a term of reproach for those who followed the degenerate priestly aristocracy, and that, when these ceased to hold the office of high-priest, which was usurped by the Hasmonæan princes, the party name was retained for the adherents of the old high-priestly families among the priests. On the other hand, it is not certain that the designation 'Zadokite' (*צדקים*) was actually given by opponents in the first place. It may well have been the title assumed by the conservative element in the priesthood who, after the disappearance of the old Zadokite high-priests, may have wished, under the altered conditions that grew up in the 2nd cent. B.C., to perpetuate the traditions of an earlier time. It is clear, as we shall see, that the Sadducean party did stand for an older religious tradition and practice; and the most reasonable hypothesis is that it consisted essentially of the priestly party which upheld conservative priestly traditions. The later high-priests were no doubt, as a rule, adherents of this party. It is unfortunate that we have no statement of the Sadducean position from

¹ I.e. *צדקים*.

² A philological objection has been urged on the ground of the double *ק* (8); but this may be explained as compensatory.

¹ *Der Sadduzäismus*, Leipzig, 1906.

themselves,¹ unless the 'Zadokite' work discovered and published by S. Schechter represents, as is possible, the views of a section of this party. The result is that their religious positions have been placed before us only by opponents. No doubt the Sadducees appeared to their Pharisaic opponents often to take up positions inimical to the 'truth.' It is easy to understand how, in the bitterness engendered by conflict, the very name of 'Sadducee' came to be identified, in Pharisaic circles, with 'infidel.' R. Leszynsky,² who accepts the connexion of the name 'Sadducees' with 'the sons of Zadok,' finds also a cardinal difference of principle between them and their Pharisaic opponents on the question of the Messianic hope. Whereas the latter held fast to the old popular expectation of a Davidic Messiah, the Sadducees, he contends, maintained that the kingship was vested in the priestly line. For them the Pentateuch was decisive on this point. True, the Pharisees could appeal to Gn 49¹⁰ ('The sceptre shall not depart from Judah, nor the ruler's staff from between his feet'); but other passages could be cited from the Tōrah which could be held to override the Messianic interpretation of this passage. Had not Aaron and his tribe been specially chosen by God, and had not God concluded an eternal covenant with Phinehas? But the strongest proof-text was found in Ex 19⁶ 'And ye shall be unto me a kingdom of priests, and a holy nation.' It might be inferred from this declaration that the priests were also destined to possess the kingdom, and not a family of the tribe of Judah. That a controversy was in fact focused on this text is a not improbable inference from the phenomena of the ancient versions, where particular pains seem to have been taken to exclude the possibility of such an interpretation as the assumed Sadducean one. Thus the Palestinian Targum renders the verse: 'And before Me you shall be crowned kings, and sanctified priests, and a holy people.'³ There was also the precedent of the priest-king Melchizedek (Gn 14^{18a}), to which the Hasmonæan priest-kings undoubtedly appealed when they assumed the title of 'priest of God most High,'⁴ and which was cited also by the writer of Ps 110⁴, which many scholars think was originally written in honour of Simon Maccabæus. The ascription of this Psalm to 'David' is doubtless due to Pharisaic influence. Leszynsky thinks that Pss 89 and 132 are Pharisaic protests against this Sadducean doctrine. It is easy to see how the assumption of the priestly and regal dignity in one person by the Maccabæan princes, who themselves belonged to one of the most distinguished priestly families, would appeal to those who held the view just referred to, while it would excite the bitter hostility of the Pharisees, as in fact it did. Doubtless it was due to this hostility that both John Hyrcanus and Alexander Jannæus found it expedient to recommend an arrangement of the succession which would separate the two offices.⁵

The name 'Melchizedek,' which may be interpreted to mean 'true king,' would also suggest a significant reference to 'Sadducee.' Its latter element 'zedek' is strikingly suggestive of 'Zadok,' and it almost inevitably brings to mind the idea that Melchizedek is really equivalent to 'Zadok-king,' or 'Sadducean-king.' For the history of the division between the two parties see art. PHARISEES, §§ 1, 3.

3. Doctrinal beliefs and principles.—The Rab-

binical literature contains many references to points of controversy between the Sadducees and Pharisees, which it will be impossible to enumerate fully and discuss here. It will suffice to point out and endeavour to estimate the significance of the fundamental points of difference.

When Josephus depicts the Sadducees as representing nobility, power, and wealth, and as engrossed in political affairs and interests,¹ all that this need mean is that the high-priest and his *entourage* were members of the Sadducean party. It need not mean that the ideals of this party were purely worldly and political. Nor because a high-priest was a Sadducee does it follow that he was necessarily destitute of religious convictions. The numerous points of controversy between the Pharisees and Sadducees all proceed from radical divergence of principles.²

The most important of these was the position taken up with regard to the written Law (the Pentateuch). Both parties assigned supremacy to the Law. But, whereas the Pharisees supplemented the written Law by the oral tradition, and placed this on an equality with the Mosaic Tōrah, the Sadducees refused to accept any ordinance as having Scriptural authority unless it was based directly upon the written Tōrah. They also claimed, as priests, on the authority of Dt 17^{8a}, the legal power to decree and revoke ordinances from time to time of a temporary character. This position has been well stated by J. Z. Lauterbach:³

'Considering themselves as interpreters of the Law, like their fathers, they could see no reason for departing from the rules and methods, or losing the privileges of their fathers. Like their fathers, they held that there was only one law of absolute authority, and this was the Law of Moses as contained in the Pentateuch, which the people of the time of Ezra had sworn to keep and obey. . . . The priestly group and their followers, who formed the Sadducean party, did not . . . differ at all from the former priestly teachers, their ancestors, the Soferim, in their attitude towards the Law. They accepted and followed, strictly, the simple, sound interpretations of the Soferim, based upon the plain sense of the words of the Law. They rightly assumed that, as a code of laws, the Torah is clear, distinct, and unambiguous in expression, that every commandment or law is stated in plain and simple words, easily understood by men for whom the laws and commandments are intended. . . . The Sadducees held that "the Torah speaks in human language," a principle which was retained long after even among the Pharisees by the representatives of the older Halakah, which has many points in common with the teachings of the Sadducees. . . . They would not devise ingenious methods to explain away a written law, or give it a new meaning not warranted by the plain sense of the words. They also held in reverence the unwritten laws and traditional customs and usages of which, as priests, they were in possession. They observed them in most cases in the same manner as their fathers had done.'

It is probably a mistake to say that they 'rejected' the prophetic and other Scriptures outside the Pentateuch. Their attitude towards these books is well expressed by a sentence quoted by C. Taylor in his edition of the *Pirqe Aḥbōth*, Excursus iii.:

'And therefore I say that the Prophets and Hagiographa are called words of Qabbalah [i.e. mere tradition], because they were received by διαδοχή [succession], . . . and by no means are they equal to the five books, which are all precepts and ordinances.'⁴

Whereas the Pharisees would harmonize an apparent contradiction between the Tōrah and the prophets by exegetical devices which might conform both to a part of the oral law, the Sadducees did not hesitate to reject outright doctrines and practices which could not be based primarily on the written Law.⁵ An interesting example may be cited to illustrate these points.

¹ Ant. xviii. i. 4.

² This is denied by M. H. Segal in 'Pharisees and Sadducees,' in *Exp.* 8th ser. vol. xiii. [1917] 81 ff. Segal maintains that the Sadducees had no religious principles, but were solely interested in securing political power. His arguments are unconvincing.

⁴ Jos. Ant. xvi. vi. 2.

⁵ Cf. Jos. Ant. xiii. xi. 1, xv. 5.

A certain Jacob of Kefar Nibburaya (A.D. 4th cent.) taught in Tyre certain practices which were regarded by R. Haggai as heterodox. The rabbi summoned the delinquent before him, and asked him to justify himself. Jacob quoted passages from the Law (Nu 11⁸ and Gn 17¹²). The rabbi declared that his teaching was wrong, and justified his view of its erroneousness by quoting a passage from the Hagiographa, viz. Ezr 10⁸. Jacob was consequently condemned to be flogged. 'What!' he exclaimed, 'will you have me flogged on the strength of mere Kabbalah?'¹

We have already seen that the Sadducees rejected the Messianic doctrine of the Pharisees, which looked for a Davidic Messiah, because they considered that the prophetic teaching on this subject was in conflict with that of the Tōrah. They further rejected the Pharisaic doctrine of the resurrection of the body, on the same ground.² It should be noted that both in the Talmudic and in the NT passages just cited the question in debate is not, 'Is there a resurrection or not?' but rather, 'How can the resurrection be proved from the Tōrah?' According to Ac 23⁸, the Sadducees also denied the existence of angels and spirits. This can hardly mean, however, a mere denial of the reality of such existences, for it is obvious that the Pentateuch contains many narratives which affirm the activity and appearance of angels. The statement may possibly mean that they did not accept the developed and elaborated angelology and demonology—in which angels and demons were graded and assigned special names and functions—that had grown up in the Persian period under Persian and Babylonian influence. In matters of binding rule and law (Halākhāh) the Sadducees were, as we should expect, apt to press the literal and plain meaning of the letter of the Tōrah. The most notorious example of this is their insistence on the literal interpretation of the law of retaliation: 'An eye for an eye, a tooth for a tooth' (Ex 21²⁴).³ Another instance is their famous controversy with the Pharisees over the method of reckoning Pentecost. They contended that the seven weeks from the offering of the 'omer' (first barley sheaf) to Pentecost should be counted as Lv 23¹⁶ directs, 'from the morrow after the Sabbath,' 'Sabbath' being interpreted as the Saturday which fell in Passover week, with the consequence that Pentecost would always fall on a Sunday, whereas the Pharisees reckoned from the day immediately following the Passover (reckoned as a 'Sabbath'). Here, as generally, the Sadducean rule undoubtedly conformed to ancient practice.⁴ It was naturally within the Temple precincts that Sadducean influence was strongest and most firmly entrenched. While the Pharisees were supreme outside the Temple, and even made their power felt within it for at least a century before A.D. 70—it must always be remembered that there were many Pharisaic priests—yet they did not secure absolute power in the Temple itself till about A.D. 50 to 60. Thus the Sadducees claimed that the high-priest's burnt-offering should be provided at his own expense, in accordance with Nu 28⁴ (where the singular is used), whereas the Pharisees insisted that the sacrifice was a national one, and should be provided out of the Temple treasury. Against the Pharisees they laid great stress on the high degree of purity of those who officiated at the preparation of the ashes of the red heifer,⁵ and they extended the power of contamination to indirect as well as to

direct contact.¹ On the other hand, they refused to accept the Pharisaic view that the scrolls of Holy Scripture 'defile the hands' like any holy vessel.² They also refused to countenance the ingenious method devised by the Pharisees for evading the strict Sabbath law, known as 'Erūb'. They opposed the popular festivity of the water-drawing, and its associated processions, which took place at the Feast of Tabernacles. In all these cases they were faithful to their fundamental principle—that what could not be proved by the letter of the written Tōrah was not to be made of binding obligation.

Reference has been made to the fact that the Sadducees, when they found it necessary to develop or innovate on the letter of the Law in order to meet the needs of the time, issued decrees or decisions on their own authority, as provided by the Law itself (Dt 17^{8a}). But these 'decrees' were never put on a level with the letter of the Law; and they could be modified or abrogated as circumstances dictated. The evidence for the existence of such a 'Book of Decrees' (or legal decisions) is contained in the *M'gillāth Ta'ānth*,³ iv., where under date of the 14th of Tammuz this 'book' (ספר נורא) is stated to have been finally abrogated (by the victory of the Pharisees over the Sadducees). The 'book' is explained by the glossator to mean the Sadducean code of laws, or rather, it is probable, a collection of case-law. Instances are given of the harsh interpretation of Biblical law on which the Sadducees proceeded, and the day when this code was finally abrogated is marked as a festival.

With the destruction of the Temple in A.D. 70 the power of the Sadducees, which had already been seriously impaired, still further declined. Though their influence was still apparent in various ways, and was later perpetuated, it would seem, by the Karaites, their organized force as a party vanished with the Temple and the cultus.

4. The vitality and influence of Sadduceeism.—That Sadduceeism stood for something more than mere negations is evident from the persistence with which it waged its age-long conflict with Pharisaism. It even impressed itself, to some extent, on the latter, and we can see its influence especially in the conservative element among the Pharisees represented by the school of Shammai.⁴ If, as is generally conceded, the book of Ben Sira represents the standpoint of the primitive Zaddukim, it is clear that Sadduceeism inherited a positive, though conservative, theology. The attitude of Ben Sira, in this connexion, to the books of the Bible outside the Law is interesting. He quotes freely from all parts of the Hebrew Scriptures to illustrate his themes, though he would, of course, not found any doctrine on a book outside the Tōrah, nor uphold such unless it could be proved from the Pentateuch.⁵ We must also be on our guard against identifying Sadduceeism as a whole with the small body of the Temple hierarchy. Doubtless the high-priest and his immediate circle were (up to quite the last years of the existence of the Temple) members of the Sadducean party. But the worldly and political character of this small section must not be imputed to the party as a whole. It must be remembered

¹ *Yad*, iv. 7.

² *Yad*, iv. 6.

³ The *M'gillāth Ta'ānth*, in its original form, is written in Aramaic, and was probably compiled within the first decade of the Christian era. It enumerates 35 eventful days which were to be kept as joyful festivals, and which were reminders of glorious events in the life of the nation.

⁴ After the destruction of the Temple the most consistent Shammaites was Eliezer b. Hyrkanos (end of 1st-beginning of 2nd cent.). B. Jose the Galilean (early 2nd cent.) maintained in his Halākhāh older conservative tradition.

⁵ 1 Mac may also be a Sadducean work, the companion book of 2 Mac being a Pharisaic counterblast.

¹ See *Qohēleth rabbāh*, vii. 23. The rabbi evidently felt the force of this appeal, for he immediately cited a further proof from the Law itself (Dt 7³), whereupon Jacob gracefully submitted.

² Cf. T.B. *Sanh.* 90b; Mk 12¹⁸.

³ Cf. T.B. *Bābhā Qamma*, 84a; Mt 5³⁸.

⁴ Another old view interpreted 'Sabbath' as = 'festival-week' in this passage (i.e. Nisan 15-21); its 'morrow' would then be Nisan 22; see the writer's *Intro. to The Book of Jubilees*, London, 1917, p. xviii.

⁵ *Parah.* iii. 7.

that the gulf between the aristocratic priests and the main body of the priests was almost as marked as that between the conflicting parties. Doubtless among the priests generally there were many pious Sadducees as well as Pharisees. Nor must the possibility be lost sight of that there may have been different circles or schools of Sadducees, just as there were among the Pharisees—a possibility which recent discussion and research have made increasingly probable.

The whole question of Sadduceism may be said to have entered on a new phase, owing to the remarkable discovery by Schechter of documents emanating from a Zadokite sect.¹ It is true that the exact value of this writing has not yet been finally settled, some scholars (e.g., A. Büchler) impugning its early character; but, on the whole, its importance and genuineness as an early production, written before the destruction of the Temple in A.D. 70, have been vindicated by critical discussion.² Not only Schechter, but Lévi, Leszynsky, Charles, G. Margoliouth, and Kohler believe the writing to be of early origin. Leszynsky, in his discussion of the Zadokite Fragments, has no difficulty in demonstrating its Sadducean affinities, which are found especially in the rejection of Pharisaic tradition and in the recognition of the written Tōrah as the only law-book. There are, however, two striking developments which, at first sight, are surprising in a Sadducean document. A system of exegesis is adopted which is remarkably like that of the Pharisees. But, as Leszynsky remarks, we were already aware that Pharisaic methods of interpreting Scripture had a vogue in the later period (1st Christian cent.) far beyond the boundaries of Pharisaism proper. Both Jesus and Paul, the enemies of Pharisaic tradition, were ready, on occasion, to adopt Pharisaic methods of exegesis. The second striking development is the recognition of the sacred character of the prophetic writings. But here, again, it is unnecessary to suppose that all sections of Sadducees refused to recognize the sacred character of all books outside the Pentateuch. It may be true that certain sects of Sadducees did so, agreeing in this respect with the Samaritans. The Zadokite Fragments reveal striking features, which point to a Sadducean origin. The glorification of the priesthood and the corresponding depreciation of the royal Davidic house, already apparent in Sirach (45 f.), are even more pronounced in this work.

'David is accused of ignorance of the Law (vil. 5). The title "king" (לֶמֶל) is replaced by that of "prince" (נָשִׂיא [vii. 4]). In ix. 7 the passage from Am 911, which promises the setting up of "the tabernacle of David that is fallen," is explained in such a way that all reference to David is got rid of; for "the king" is said to denote "the Congregation," and "the tabernacle of the king" to denote "the books of the Law."'³

This work has a Messianic expectation of its own. It looks forward to the advent of a Messiah 'from Aaron and from Israel.' In other words, it expects a priestly Messiah. From v.⁶ it also appears that the author believed in immortality.

We have here, then, the Messianic manifesto of a party or section of the Sadducees, which may have differed from the main body in its acceptance of a Messianic hope and a doctrine of immortality (not resurrection of the body). Kohler regards it as a manifesto setting forth the claims of the Messiah of the Dosithean sect (Samaritan). But

¹ Documents of Jewish Sectaries, vol. i., Fragments of a Zadokite Work, Cambridge, 1910.

² See esp. Israel Lévi in REJ lxi. [1911] 161-205; Leszynsky, *ib.* p. 142 ff.; Charles, 'The Fragments of a Zadokite Work,' in *Apocrypha and Pseudepigrapha of the Old Testament*, Oxford, 1913, ii. 785-834; K. Kohler, 'Dositheus, the Samaritan Heresiarch,' in AJTh xv. [1911] 404-435.

³ Charles, *Apoc. and Pseud. of OT*, ii. 796. It is significant that in T.B. Sanh. 100b 'the books of the Sadducees and the Book of Ben Sira' are classed together.

this is improbable.¹ According to pseudo-Tertullian,² Dositheus was the first to deny the Prophets, whereas the Fragments put them almost on an equality with the Law.

After our previous discussion we are prepared to discover, with Leszynsky, a Sadducean element in certain apocryphal and pseudepigraphical books. These are the *Book of Jubilees*, the *Testaments of the Twelve Patriarchs*, the *Book of Enoch* (with the exception of the similitudes), and the *Assumption of Moses*. It is also noteworthy that Jesus seems to have sided with the Sadducees against the Pharisees on certain points. He, it is true, upheld the resurrection doctrine of the Pharisees against the Sadducees. But He certainly agreed with the latter in their main contention, viz. the rejection of the Pharisaic traditional law.

It may be said that recent investigation and discussion have revealed Sadduceism in a new light, as an active, energetic movement, full of life, variety, and vital developments.

LITERATURE.—To the literature cited in the body of the art. and at the end of the art. PHARISEES add K. Kohler, art. 'Sadducees,' in JE; G. H. Box, in Exp, 8th ser., xv. [1918] 401 ff., xvi. [1918] 55 ff.; and A. Büchler, *Das grosse Synedrion in Jerusalem*, Vienna, 1902. Büchler's art. impugning the early character of the 'Zadokite Fragments' was published in JQR, new ser., iii. [1913] 420-485, and Schechter's rejoinder, *ib.* iv. [1914] 440-474. G. H. Box.

SĀDHS.—The Sādhis are a unitarian sect of N. India, founded in 1543 by Bīrbhān, of Bijēsar, near Nārnaul in the S.E. Panjāb. The sect may be looked upon as an offshoot of the Rāi Dāsīs (q.v.), Bīrbhān having claimed to be inspired by Udhō, or Uddhava, Dāsa, who was a pupil of Rāi Dāsa; but, like Kabīr, they have wandered rather far from the Vaiṣṇava teaching of Rāmānanda, Rāi Dāsa's master. Regarding the origin of the name, see art. SADHU. The Sādhis call upon God under the name Satnām, said to mean 'the True Name,' and among themselves employ Satnāmi as the name of the sect. The name Satnāmi (q.v.) is, however, also applied to at least two other sects.

The Sādhis are found in the United Provinces and in the Panjāb. Their principal seats are at Āgrā, Jaipur, Farrukhābād, and Mirzāpur in the former, and in the Districts of Delhi and Rohtak, close to Nārnaul, in the latter. Their number has not been accurately recorded, but probably amounts to between two and three thousand.

The following summary of the facts about this sect is given by Crooke:

'Adults are required to wear a white dress: and ornament and the use of rich apparel of every kind are prohibited. They never wear a cap, but use instead a turban of a peculiar shape. They are enjoined by their religion never to tell a lie and never to take an oath. They are in the same way prohibited from using any kind of intoxicant or any article which borders upon luxury. Wine, opium, gānja, bhāng, betel and tobacco are abominations to them. They have an intense respect for animal life, which extends to even the smallest insect, and the use of any kind of animal food is strictly denounced. They will salute no one but the Divine principle, which they term Sat or "The Truth"; and when they meet a European or any superior they salute merely by raising the hands to the level of the breast. They detest idolatry and all outward forms of religious belief. They are very reticent about their beliefs, and it is only with the greatest difficulty that it has been possible to obtain a copy, which is probably incomplete, of the book of religious songs (bāni) which embody the principles of their faith. All controversy or argument on religious matters with strangers to the sect is reprobated. Their religious books, known as pōthi, are written in Bhāshā, or ordinary Hindi, and are not the work of any single author, but contain a number of songs, many of which are taken from the writings of Nānak and Kabir. These books are read almost daily in their chapel or meeting-house, which is known as jumlaghar, or "house of assembly," or chauki, "station." The service takes place in the evening, when all members of the sect, male and female, attend. This is their only form of worship.'

The substance of these pōthīs is contained in a tract called *Ādi Upadēś*, or 'First Precepts,' which

¹ We should hardly expect such a manifesto to be written in Biblical Hebrew.

² *Adr. omnes Hæc*. i.

³ *Tribes and Castes*, iv. 245.

includes the twelve *hukms*, or commandments of the sect. Put summarily,¹ these are :

(1) There is only one God. Worship thou Him. (2) Be modest. Adhere to thine own creed. Mix not with those of other faith. (3) Lie not. Speak not evil of any. Employ the tongue only for the praise of God. Steal not. Look not at improper things. (4) Listen not to evil discourse, nor to music or singing except of hymns. (5) Covet not. God is the Giver of all. (6) Declare thyself a Sādh, but engage not in controversy. (7) Wear whitegarments, and no ornaments or sectarian distinctions. (8) Avoid intoxicants, perfumes, tobacco. Bow not down to idols or to men. (9) Kill not. Take not by force. (10) A man may have only one wife, and a woman only one husband. The woman to be obedient to the man, and to eat his leavings. (11) Wear not a mendicant's garb, nor beg for alms. (12) Be not superstitious as to days, times, seasons, or omens. Seek only the will of God.

Raī Dāsa was a contemporary of Kabīr (*q.v.*), and his fellow-disciple. The teaching of the latter was strongly unitarian, and at the same time borrowed freely from the Christian Scriptures. It is evident that the unitarian doctrines of the Sādhs were borrowed, with the traces of Christianity evident in the above, either from Kabīr or from his successor Nānak (*q.v.*). In other respects, such as cosmogony, and the belief in transmigration and in *mukti* (final release), the doctrines of the Sādhs do not differ from those of other Vaiṣṇava Hindus.

The Sādhs, under the name of Satnāmīs, appear to have been the heroes of the revolt of Hindu devotees against Aurangzib in 1672. The leaders were mendicant Satnāmīs, who were nicknamed by the people 'Mundiyās,' or 'Shavelings,' from their habit of shaving the body clear of all hair. Hāfi Hān, a contemporary, who gives the fullest account of this rising, describes them in the following terms :

'There were four or five thousand of these, who were householders in the *parganas* of Nārnaul and Mēwāt. These men dress like devotees, but they nevertheless carry on agriculture and trade, though their trade is on a small scale. In the way of their religion they have dignified themselves with the title of "Good name," this being the meaning of *Sat-nām*. They are not allowed to acquire wealth in any but a lawful calling. If any one attempts to wrong or oppress them by force, or by exercise of authority, they will not endure it. Many of them have weapons and arms.'²

This description, together with their connexion with Nārnaul, would be sufficient to identify them with the Sādhs, were it not for another and contradictory account given by Īśvara-dāsa Nāgara, the Hindu historian, also a contemporary :

'The Satnāmīs are extremely filthy and wicked. In their rules they make no distinction between Hindūs and Musalmāns, and eat pigs and other unclean animals. If a dog is served up before them, they do not show any disgust at it. In sin and immorality they see no blame.'³

This, however, is evidently written by a bigoted Hindu, and, in the light of Hāfi Hān's remarks, it may be considered as a false and libellous attack on a Hindu heresy which acknowledged no caste and refused to worship the customary Hindu deities.

Owing to oppression exercised by Aurangzib's revenue officials, and led by an old prophetess who promised them invulnerability against the emperor's weapons, they rose in arms. Most of the royal troops were at the time engaged in S. India, and for a space the revolters had considerable success, defeating small local bodies of soldiers. Magical powers were soon attributed to them, and discontented landholders of the neighbourhood adhered to their cause. The revolt had acquired most serious proportions, and the rebels had sacked Nārnaul and other towns and had approached Delhi, when Aurangzib sent against them a large force, protected by rival spells to counteract their

magic. There was a bloody and obstinate battle, in which several thousands of the Satnāmīs were slain and the rest put to flight. This terminated the revolt.

LITERATURE.—The principal authorities, on which the foregoing account has been based, are H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 352 ff., and W. Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, Calcutta, 1896, iv. 245 ff. Wilson gives some earlier authorities not quoted here. Crooke's account is especially full and valuable, and the reader is referred to it for further particulars. Cf. also *PANQ* i. [1883-84] 1033; *NINQ* i. [1891-92] 790, ii. [1892-93] 429; and D. C. J. Ibbetson, *Outlines of Panjab Ethnography*, Calcutta, 1883, § 521.

For the Satnāmī revolt see Sāki Mustā'idd Hān, in H. M. Elliot, *Hist. of India as told by its own Historians*, London, 1867-77, vii. 185 f., and Hāfi Hān, *ib.* p. 294 ff.; N. Manucci, *Storia do Mogor*, tr. W. Irvine, do. 1907, ii. 167 ff.; Jadunāth Sarkār, 'Satnamis and Sikhs: 17th Century,' in *The Modern Review*, xix. [Calcutta, 1916] 385. G. A. GRIERSON.

SADHAN-PANTHIS.—The Sadhan-panthis, a petty Vaiṣṇava sect of Benares, founded by Sadhan, a butcher, who is said to have lived there in the 17th cent., are really nothing more than a group of men of the despised butcher caste, who would not be received as members by any respectable Vaiṣṇava community, and therefore formed a sect for themselves. So far as is known, they have no distinctive tenets, professing to follow the ordinary Ramāwat doctrines (see art. RĀMĀ-NANDIS).

In order to lend respectability to their founder, they assert that, although he sold meat, he never slaughtered animals, but purchased it ready slain. For weighing his wares he had a marvellous *sālagrāma* stone, which became any weight that was for the time required, from the smallest to the greatest. This was given to him by a wandering ascetic, and he worshipped it so devoutly that Viṣṇu was propitiated, and conferred upon him all his desires. When on a pilgrimage, a Brāhmaṇa woman fell in love with him, and, misinterpreting his rejection of her advances, murdered her husband. When Sadhan still refused to have anything to do with her, she burnt herself on her husband's funeral pyre. Sadhan thereupon remarked, 'No one knows the ways of woman; she kills her husband and becomes a *satī*,' which has passed into a proverb, and has been adopted as the tag for a popular folk-tale current in many parts of India.¹

LITERATURE.—H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 181, where the sect is called 'Sadhanā Panthis'; M. A. Sherring, *Hindu Tribes and Castes in Benares*, Calcutta, Bombay, and London, 1872-81, i. 266.

SĀDHĀRANA BRĀHMA SAMĀJ.—When Keshab Chandra Sen married his daughter to the Mahārājā of Kuch Bihār in 1877, the majority of the members of his society, the Brāhma Samāj of India, rose in opposition and tried to depose him from the leadership.² Failing to do this, they left the Samāj, and, after consulting with the various Brāhma Samājes throughout the country, formed a new society, the Sādhārana Brāhma Samāj. The word *sādhārana* means 'general,' and corresponds to the broad, democratic character of the new society and its organization. The chief desire of the leaders was to continue the theistic teaching, social service, and philanthropy which had been Keshab's own programme when the Brāhma Samāj of India was founded; but they were also determined to have no autocratic leadership such as Keshab's rule had developed into.

The Sādhārana Samāj has had no outstanding leader, and its history is a story of quiet steady growth without any remarkable events. It is now the one solid and influential section of the Brāhma

¹ They are very diffuse, and contain much repetition. Full translations are given by Wilson, *Religious Sects of the Hindus*, p. 354 f., and Crooke, *ib.* 248 f.

² See art. BRĀHMA SAMĀJ, §§ 5-7.

movement; for the old and conservative Ādi Samāj has little vigour left, Keshab's New Dispensation Samāj is rendered impotent through divisions and quarrelling, and even the Prārthanā Samāj of Bombay shows little power to make progress. The Calcutta Samāj with its group of buildings in Cornwallis Street is by far the strongest of the Sādhāran societies, but there are many smaller bodies scattered over India. The governing organization is in Calcutta.

The work is carried on by a large general committee representative of all the local Samājes, and an executive committee. The actual workers are of three types—missionaries, unordained workers, and lay volunteers. There are eight ordained missionaries, and on them falls the heavy work of general supervision and of touring and preaching throughout India. The nine unordained workers are all grouped under the Sādhān Āśram, or Training Institute, in Calcutta, but there are branches in three other towns. In the Sevak Mandali, or Lay Workers' Union, there are fifty members.

Besides the ministerial work required in Calcutta and in the 47 affiliated Samājes, and the missionary propaganda, the most interesting feature of the work is the Brāhma Mission on the Khāsi Hills, where Brāhma unitarianism is being offered to uncultured hill-people, and various educational and philanthropic activities are carried on.

The propaganda of the Samāj seems to be most successful at present in the Telugu field and in Travancore.

The Samāj publishes a weekly in English called *The Indian Messenger* and a fortnightly in Bengali called *Tattvakaumudī*. East Bengal publishes a vernacular monthly called the *Sevaka*, while the *Brahmabādī* appears at Barisal, the *Brahmaprachāraka* in Lahore, and the *Dharmasādhani* in Coconada. The Samāj in Madras publishes an English weekly, *Humanity*.

There is some reason for asking whether the Samāj is not nearing a crisis in its history. For many years the progressives have been able to keep what may be called the Hinduizing party within the Samāj well in check, but there are signs that the latter section is rapidly growing in power. The change is traceable in large measure to the increasing vigour and boldness of the various movements within Hinduism for its full defence and re-organization; but it has also been considerably hastened by the teaching and influence of Rabindra Nath Tagore. So far as one can see, the reactionaries have not yet agreed on a definite policy, but their teaching and opinions would unquestionably tend to check aggressive theism in favour of the more general atmosphere of the higher Hinduism. If this party should gain the upper hand, the Samāj will clearly be in grave peril.

The following, taken from the Report for 1910, is the official statement of the principles of the Sādhāraṇa Samāj :

(1) There is only one God who is the Creator, Preserver and Saviour of this world. He is spirit; He is infinite in power, wisdom, love, justice and holiness; He is omnipresent, eternal and blissful.

(2) The human soul is immortal, and capable of infinite progress, and is responsible to God for its doings.

(3) God is to be worshipped in spirit and in truth. Divine worship is necessary for attaining true felicity and salvation.

(4) To love God and to carry out His will in all the concerns of life constitute true worship.

(5) Prayer and dependence on God and a constant realization of His presence are the means of attaining spiritual growth.

(6) No created object is to be worshipped as God, nor is any person or book to be considered as infallible and as the sole means of salvation; but truth is to be reverently accepted from all scriptures and from the teaching of all persons without distinction of creed or country.

(7) The Fatherhood of God and the Brotherhood of man and kindness to all living beings are the essence of true religion.

(8) God rewards virtue, and punishes sin. His punishments are remedial and not eternal.

(9) Cessation from sin accompanied by sincere repentance is the only atonement for it; and union with God in wisdom, goodness and holiness is true salvation.

LITERATURE.—Sivanath Sastri, *Hist. of the Brahmo Samaj*, Calcutta, 1911-12, ii. 119 ff., *Mission of the Brahmo Samaj*, do. 1910; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915, pp. 54 f., 70 ff. J. N. FARQUHAR.

SĀDHU.—*Sādhū* is a Sanskrit word literally meaning 'straight,' and hence 'pure,' 'holy.' In modern India it is commonly applied, as an equivalent to 'saintlike,' to any respected Hindu saint or devotee. In the Hindī language the final *u* is commonly dropped, and the resultant word *Sādh* (*q.v.*) is also used to connote a certain sect.

G. A. GRIERSON.

SĀGAR, SAUGOR.—This island, at the mouth of the Hugli, Bengal (lat. 21° 36' N.; long. 88° 2' E.), is famous for its annual bathing fair held in January. It lasts for three days and is attended by a multitude of pilgrims from all parts of India, who visit the place to wash away their sins. Before British rule was established in Bengal, it was believed that suicide in the Ganges was a means of obtaining immediate beatification.

At this place, according to W. Ward, 'it is accounted an . . . by a shark, or an . . . to be very doubtful . . . he is drowned.'

The British Government, for some years past, has sent a guard of sepoy to prevent persons from murdering themselves and their children at this junction of the Ganges with the sea, at the annual festivals held in this place.' The same writer adds that in 1805 he saw a Brāhman woman 'dripping with wet and shivering with cold, who had just been prevented from drowning herself, and during my continuance there I heard of several women who had been prevented from drowning their children.'

The island derives its name from Sagara, whose story is told in the *Viṣṇu Purāṇa*.²

He was of the solar race, king of Ayodhya. He performed the *Asvamedha* or horse-sacrifice; but, guarded though it was by his sixty thousand sons, the horse was carried off to *Pātālā*, the nether world. Sagara ordered his sons to recover it, and, digging their way down, they found *Kapila*, the sage, engaged in meditation. They accused him of the theft, and the enraged saint, looking upon them, reduced them to ashes by means of the sacred flame which issued from his body. *Ansumat* found their ashes, and begged *Kapila* to pardon them and restore them to heaven. He promised that the grandson of *Ansumat* should accomplish this by bringing down the river of heaven. When Sagara heard this, he completed his sacrifice, and called the chasm which his sons had dug *Sāgara*, the ocean. *Bhagiratha*, grandson of *Ansumat*, by the force of his austerities brought down the Ganges from heaven, and its waters cleansed the sons of Sagara, and their spirits became fitted for the death rites and for admission to heaven, or *Svarga*.

Sagara was possibly a historical personage, who warred with the *Sakas*, *Yavanas*, *Kambojas*, *Pāradas*, and *Pahlavas*, northern tribes who invaded India.³ At the temple of *Kapila* on the island pilgrims write their names on the walls, or hang a piece of earth or bark on a banyan-tree close by, with a promise of an offering if the boon prayed for be granted.⁴

SAINTS AND MARTYRS (Buddhist).—The popular notion of the saint, as a being of eminent holiness, and especially as one of the immediate disciples of the Master, holds a prominent place in early Buddhism. The term is used occasionally as a technical translation of *arhat* (*q.v.*), but this does not correspond exactly with the usual idea of the saints of history. These are rather the apostles of Buddhism (*anubuddha*, 'minor Buddhas') or 'Buddha-sons,' such as Ananda the favourite disciple, who did not win *arhat*-ship till after Buddha's death; Asita, the Simeon of Buddhism; the two chief disciples, Sāriputta and Moggallāna; or Anāthapiṇḍika and Visākhā, the great lay disciples.

1. Saints in the Buddha legend.—Starting from the historical nucleus of the Buddha and his first followers, the records of saints form an integral part of the Buddha legend. This account is a growth, and, though traces of combination, accretion, and systematization have been pointed out in it,¹ it has not yet been sufficiently analyzed to make it possible to treat it otherwise than as legend.

The legends in their earliest attainable form are doubtless the separate stories that occur in the various parts of the *Suttas*, but some which we should naturally expect to find there are omitted. In the *Majjhima*, no. 26, Buddha tells how he left his weeping parents, removed his hair and beard, put on the yellow robe, and went out to a homeless life; how, after following two teachers, he left them in disgust, went to Uruvelā, attained enlightenment, and was persuaded by Brahmā to preach the Doctrine; how he thought of first doing so to his former teachers, but, on being told by certain divinities that they were dead, went to his five former disciples, and preached to them. In this account nothing is said of his seeing the four omens that induced him to leave the world, of the flight from his palace with Chhanna, of the food given by Sujātā under the *bodhi*-tree, or of his first two lay converts.

Part of this occurs in the *Vinaya*,² but, besides showing variations of detail, it differs from the *Sutta* account in the addition of incidents to the story and a continuation of further legends. It is here that some of the chief legends of the saints occur. Beginning with the first events after the enlightenment, it inserts the story of the conversion of the two laymen, Tapussa and Bhallika, recounts the conversion of the five disciples, and continues with the stories of the conversion of Yasa, his parents, and his companions, and of the three Kassapas, the visit of King Bimbisāra, the conversion of the two chief disciples, Sāriputta and Moggallāna, of Upālī, and the admission of Buddha's son Rāhula to the order. The whole forms a quasi-historical sequence, and, apart from the extremely composite *Mahāparinibbāna Sutta*,³ an account of the last few months of Buddha's life, it is the nearest approach in the Scriptures to a connected Buddha legend. Several stories prominent in later accounts occur in the *Sutta Nipāta*—

Bimbisāra's visit to Buddha at the time of his renunciation, Māra's temptation (which is here represented as before the enlightenment), and the visit of the sage Asita, or Kāladevala, to the infant Buddha.

2. Development of the legends.—These *Sutta* accounts, with perhaps the *Vinaya* tales as a second stratum, form the basis of the legends of saints. The *Suttas* themselves, however, reveal different stages, and show evidence of systematization. In the *Mahāpadāna Sutta*¹ a list of the seven Buddhas is given. Not only has the historical Buddha a chief attendant, two chief disciples, a certain *bodhi*-tree, and so on, but all the Buddhas have the same. In the *Buddhavaṃsa*, also a canonical text, the list of Buddhas is increased to 25 (besides three whose history is not given), and to their common characteristics are added two chief female disciples, and four chief lay attendants, two men and two women. In the case of the historical Buddha, these disciples and attendants are among the foremost saints.

There is here the possibility that certain features in the story of Gautama Buddha are due to the adoption of legends originally relating to previous Buddhas, but nothing as to the historical existence of these can be affirmed. Fausbøll indeed made the extraordinary statement² that one of them (Kanakamuni; Pāli Koṇāgamana) was a real historical person, because a *stūpa* was erected to him, and Aśoka worshipped before it and restored it. But the legend of previous Buddhas was an established belief certainly before the time of Aśoka, and the *stūpa* to Kanakamuni merely illustrates the existence of this belief. The historicity of the person commemorated is quite another matter.

Further systematization is shown in the *Anguttara*, i. 24ff., where a list of 80 of the chief disciples is given, divided into the usual four classes of monks, nuns, laymen, and laywomen. Each has a special epithet descriptive of the feature in which he or she was eminent. But the most comprehensive list occurs in the *Thera- and Therīgāthā*. Most of these are said in the commentary to have won complete knowledge (*aññā*), or to have attained *arhat*-ship. There are 259 possible names of monks, and over 70 of nuns, many of whom are otherwise unknown, but both lists contain the prominent disciples of the *Suttas*. The history of each is given in Dhammapāla's commentary.³ Cf. artt. ANANDA, DEVADATTA, MOGGALLĀNA, SĀRIPUTTA.

3. Extra-canonical legends.—The chief later development of the Buddha legend is the *Nidāna-kathā*, the introduction to the *Jātaka*, the author of which in various places refers for his authorities to the *Vinaya* and *Suttas*, as well as to the 'commentary' (*Aṭṭhakathā*) and 'other commentaries.' The commentary mentioned is probably the *Mahā-aṭṭhakathā*, or Great Commentary, a work which Sinhalese tradition says was fixed at the first

Council, and introduced by Mahinda with the Scriptures into Ceylon.¹ Whatever its actual form and origin, it is no doubt mainly from this that the extra-canonical legends have come. Many are found in the existing commentaries on the *Jātaka* and *Dhammapada*.

4. Influence of Brāhman legends.—In the case of two saints Windisch derives features of their legends from Brāhman sources.² The *Mahāvastu*³ gives a description of Moggallāna's visit to the hells and heavens. Evidently, says Windisch, the account in the *Mahābhārata*⁴ of his pious ancestor Mudgala, or Maudgalya, who obtains the favour of going to heaven with his body, has been transferred to Moggallāna. But the question of transference is more complicated than this. The late account in the *Mahāvastu* goes back to earlier Pāli versions that do not mention Moggallāna. In *Jātaka* 541 a visit to the hells and heavens with their description is told of King Nimi, and in *Jātaka* 530 a similar description occurs which has several verses in common with the *Mahāvastu* account.⁵ That there has been a borrowing of legends is probable, but it is not possible to say that this borrowing is direct,⁶ and Moggallāna does not owe his individuality to Brāhmanism. Windisch grants that he is an historical character.

The other instance is Asita, or Kāladevala, the sage who visited the infant Gautama. In this case it is probable that Buddhism has adopted the name of a character well known in Brāhman legend. He is said in the commentary on *Sutta Nipāta* 679 to have been *purohita*, or family priest, to Suddhodana's father, but there is no trace of the Buddhist legend in Brāhmanism.

5. Saints in the Mahāyāna.—In the Mahāyāna schools the legendary basis is much the same, but further developed. Some entirely new saints in the line of patriarchs appear, such as Upagupta, who came from the bottom of the sea to prevent Māra from disturbing a sacrifice celebrated by Aśoka,⁷ and Asaṅga, who in the 5th cent. A.D. went up to the Tusita heaven and received the doctrine of the Void as a new revelation from Maitreya.⁸ But, though the disciples remain as interlocutors in the *Suttas*, their importance as a religious and devotional factor is overshadowed by the growth of *bodhisattva*-worship and of new Buddhas. See artt. BODHISATTVA, ĀDIBUDDHA, AMITĀYUS, ASAṅGA, AVALOKITEŚVARA, MAÑJUŚRĪ.

6. Saint-worship.—The worship of Buddhas and their apostles consists in the honour done to them, their relics, or other memorials. The worship confers merit, and consists in reverent salutation, adornment of the shrines with garlands and unguents, and a ceremonial procession round.⁹ The most general term for a memorial is *chetiya*, usually divided into bodily relics (*sāririka*), objects that have served the use of a Buddha (*paribhogika*), and shrines or memorials (*uddesika*).¹⁰ The *chetiya*s include sacred localities, trees, and commemorative buildings, cairns, or *stūpas*, which may also contain relics.

In the *Mahāparinibbāna Sutta*¹ the Buddha gives a list of four classes of persons who are worthy to have a *stūpa* erected to them—a Buddha, a *pratyekabuddha*, a disciple of the Master, and a universal king. This indicates Buddhist belief at the time of the composition of this *Sutta*, and the account of Fa-Hian² in the 5th cent. shows its full development. He found in India *stūpas* to the Buddha, previous Buddhas, and to such saints as Ananda, Śāriputta, Moggallāna, and Mahāpajāpati Gotamī. The development of the idea of the patron saint is also shown in the nuns making offerings at Ananda's shrine, because it was he who persuaded Buddha to admit nuns to the order. Similarly the patron saint of the novices was Rāhula.³

Pilgrimages to places memorable in the life of a Buddha are also recommended in the same *Sutta*,⁴ and Buddha prophesies:

"There will come believing monks and nuns, laymen and laywomen, and say, 'Here the Tathāgata was born,' 'Here the Tathāgata became supreme Buddha with highest supreme enlightenment,' 'Here the Tathāgata began to turn the highest Wheel of the Doctrine,' and 'Here the Tathāgata attained Nirvāṇa with the Nirvāṇa that leaves no element behind.' And all they who die while making pilgrimages to *chetiya*s shall, with the dissolution of the body after death, be born in the happy world of heaven."⁵

References to pre-Buddhist *chetiya*s are common in the Scriptures, and there is no doubt that *chetiya*-worship is merely a continuation of a general Hindu custom. It is referred to several times in the *Vinaya* as being an established practice.⁶ See art. CHAITYA.

7. Martyrs.—The martyrs of a religion usually arise from persecution, but it is unnecessary to discuss here the question of Buddhist persecutions, as none is recorded in the Scriptures, and the later accounts of Brāhman and Jain hostility have not given rise to a martyrology. Among the early saints extra-canonical records mention the murder of Moggallāna as due to the enmity of the Jains, who hired robbers to kill him, because he was able to go to heaven and find out how the disciples of Buddha went to heaven and those of the naked ascetics to hell.⁷

The real martyrology of Buddhism is the *Jātaka* commentary, which records the sufferings and repeated death of the *bodhisattva* and his disciples, especially in exhibiting the virtues of patience and self-sacrifice. In *Jātaka* 313 the *bodhisattva* as an ascetic preaches the Doctrine to the royal *harim*, and is tortured and cut to pieces by the king. In several the persecution is due to the jealousy of Devadatta, a motive which is already found in the Scriptures. The *bodhisattva* suffers for the sake of the *Dharma*, but, except in the case of the legends of Jains, it cannot be said that the persecution is due specially to anti-Buddhist hostility; nor is there any definite historical evidence for the supposed Brāhmanical persecutions, which were once supposed to have exterminated Buddhism in India.⁸

The Mahāyāna teaching degenerates into the most grotesque and gruesome tales of suffering (often self-inflicted) for the sake of the *Dharma*. They are imaginative developments, due to the idea of acquiring merit in repeated births for the

EDWARD J. THOMAS.

SAINTS AND MARTYRS (Chinese).—The word *seng*, which has been adopted in Chinese Christian literature as the translation of 'holy,' hardly suggests that relation to the divine which is connoted by the English word. It lays stress rather on the idea of perfect realization of human nature, and at least as much on the intellectual as on the moral side, whence it is also often translated 'sage.' Of those of the Confucian school who are reckoned as entitled to be called *seng jên*, 'holy men,' 'sages,' Confucius (*q.v.*) is the latest and most famous. The doctrine which he transmitted and taught is the 'holy teaching.'

The other teachings in China—Taoism and Buddhism—have also those in whom their ideal of human nature or conduct received embodiment.

E.g., the *Shên Sien Thung Kâm* gives 'a series of biographical sketches for the most part legendary and fabulous, of upwards of 800 saints, sages and divinities selected chiefly from the ranks of Taoism but some Buddhist characters are also admitted into the number.'¹

The Christian Church in China, as elsewhere, is proving itself to be the nursery of that type of character which is entitled in the Christian sense to be called 'holy.'²

It has been said that in the biographical records of the Chinese we find 'extraordinarily few instances of religious fanaticism, bigotry, and persecution; still fewer, if any, examples of men and women who have suffered for their faith, when mere verbal recantation would have saved them from a dreaded fate.'³ The supremacy of right even over life itself is, however, recognized: 'I desire life and I desire right; if I cannot keep both together, I will give up life and choose right';⁴ and in China there have never been lacking those who have been willing to lay down their lives for an idea to the truth and worth of which they thus witnessed; nor, as during the Boxer troubles, have there been lacking martyrs in the full Christian sense of that term.

P. J. MACLAGAN.

SAINTS AND MARTYRS (Christian).—I. Dogmatic teaching.—The Roman Church, together with the Oriental Churches, and notably the Orthodox Eastern Church in all its branches, considers the doctrine of the veneration of saints to be an integral part of Catholic tradition. Both by Greeks and by Latins this teaching is held to follow from the conception of the Church's unity. In the *Longer Orthodox Catechism* of Philaret,⁵ *e.g.*, we have the following questions and answers:

262. Q. Is there likewise unity between the Church on earth and the Church in heaven?

A. Doubtless there is, both by their common relation to one Head, our Lord Jesus Christ, and by mutual communion with one another.

263. Q. What means of communion has the Church on earth with the Church in heaven?

A. The prayer of faith and love. The faithful who belong to the Church militant upon earth, in offering their prayers to God, call at the same time to their aid the saints who belong to the Church in heaven; and these, standing on the highest steps of approach to God, by their prayers and intercessions purify, strengthen, and offer before God the prayers of the faithful living upon earth, and by the will of God work graciously and beneficently upon them, either by invisible virtue, or by distinct apparitions, and in divers other ways.⁶

The *Catechism* then goes on to declare that the rule of the Church upon earth to invoke in prayer the saints of the Church in heaven is grounded upon 'a holy tradition, the principle of which is to be seen also in holy Scripture,' and it appeals to 1 Ch 29¹⁸, where David cried out in prayer, 'O Lord, the God of Abraham, of Isaac, and of Israel, our fathers,' 'exactly,' we are told, 'as now the Orthodox Church calls upon Christ our true God, by the prayers of His most pure Mother and all His saints.' Scripture is further appealed to as supplying warrant for the mediatory prayer of the saints in heaven (Rev 8³), for the fact of beneficent apparitions of saints from heaven (Mt 27⁵²), and for the belief that the saints after their departure work miracles through certain earthly means (2 K 13²¹ and Ac 19¹²). Moreover, all these points of ecclesiastical tradition are illustrated and enforced by testimonies cited from the great Greek Fathers.

Not less clearly defined is the belief of the Roman Church formulated in a decree of the Council of Trent and summarized in these words of the Creed of Pope Pius IV.:

'In like manner I hold that the saints reigning with God are to be venerated and invoked, and that they offer prayers to God for us, and that their relics are to be venerated.'

Although no anathemas are attached to the canon drafted by the Council itself, the Fathers declared that those who deny the lawfulness of invoking the saints 'hold an impious opinion' (*impie sentire*); on the other hand, the affirmative portion of the canon is couched in studiously moderate language:

'The saints reigning with Christ offer their prayers to God on behalf of men, moreover it is good and useful to invoke them as suppliants and to have recourse to their prayers, support, and help, in order to obtain benefits from God through His Son, Jesus Christ our Lord, who is our only Redeemer and Saviour.'¹

The Council also goes on to say:

'The holy bodies of holy martyrs, and of others now living with Christ—which bodies were the living members of Christ and the temple of the Holy Ghost (1 Co 3¹⁶), and which are by Him to be raised unto eternal life, and to be glorified—are to be venerated by the faithful, through which bodies many benefits are bestowed by God on men.'²

Finally, we have this very careful statement of the Catholic teaching with reference to the use of images:

'Moreover, that the images of Christ, of the Virgin Mother of God, and of the other saints, are to be had and retained particularly in churches, and that due honour and veneration are to be given them; not that any divinity or virtue is believed to be in them, on account of which they are to be worshipped; or that anything is to be asked of them; or that trust is to be reposed in images, as was of old done by the Gentiles, who placed their hope in idols; but because the honour which is shown them is referred to the prototypes which those images represent; in such wise that by the images which we kiss, and before which we uncover the head, and prostrate ourselves, we adore Christ, and we venerate the saints, whose similitudes they bear; as, by the decrees of Councils, and especially of the second Synod of Nicaea, has been defined against the opponents of images.'³

Similar limitations are emphasized in the authoritative *Roman Catechism*, issued in accordance with the Tridentine decrees. It is there pointed out in detail that there is a wide difference between the prayers addressed to God and those addressed to the saints:

'We ask God to grant blessings, we ask the saints to be our advocates. To God we say: "Have mercy on us"; to the saints we commonly say: "Pray for us"; and it at times we ask the saints also to have mercy on us, it is in a different sense. We beg of them, as they are pitiful, to take compassion on us and to interpose in our behalf.'⁴

In the 22nd of the Thirty-nine Articles the Church of England, following the example set in the *Augsburg Confession* and other dogmatic pronouncements of the Reformers, condemns

'the Romish doctrine concerning Purgatory, Pardons, Worshiping and Adoration, as well of Images as of Reliques, and also invocation of Saints' as 'a fond thing vainly invented, and grounded upon no warranty of Scripture, but rather repugnant to the Word of God.'

It has been maintained by many, and notably in recent years by Bishop John Wordsworth of Salisbury, that the 'Romish doctrine' here rejected was the official teaching of the Church of Rome as formulated by the scholastic theologians and the Council of Trent. The admission, indeed, is made that the decree of the Council quoted above was passed only in Dec. 1563, some months after the Article in question had been accepted by both Houses of Convocation; but, on the other hand, as Wordsworth¹ contended, there are references both to purgatory and to the veneration of saints in the decree of the 22nd Session, passed on 17th Sept. 1562. In reply to this, Darwell Stone² and others have urged with reason that in the earlier Tridentine canon there is no proper reference to the invocation of saints or to relics, images, and pardons. Hence they consider themselves still free to hold that by the 'Romish doctrine' referred to was meant, not the official teaching of Roman authority, but the extravagances of an extreme section. Further, some evidence has been quoted to show that the phrase 'invocation of saints' was used to denote addresses to the saints similar in wording to the adoration which we render to God, and 'formal and absolute prayers tendered to saints, as distinguished from requests for the prayers of the saints.' According to this view, the Articles, both in connexion with the veneration of saints and in dealing with sundry other controverted points, were deliberately framed with a purpose of comprehension rather than exclusion. Consequently the Church of England, it is maintained, only condemned the extreme practices and ways of thought in which the saints, being called upon to grant favours which are in the power of God alone, had been given a prominence in devotion which was derogatory to the divine honour. Thus the question was left open whether the clergy might express approval of the practice of invoking the saints in the limited sense of seeking from them the help of their prayers.³ Undoubtedly many Anglican theologians of the 17th cent. seemed to adopt this view, and the extreme iconoclasm of men like Hooper and Latimer soon gave place to the academic speculations of the Caroline divines. Bishop W. Forbes of Edinburgh, whose *Considerationes modestæ . . . de . . . invocatione sanctorum* was published posthumously in 1658, approximated closely to the Roman and Orthodox position. In one chapter⁴ he defends the proposition that the simple invoking of or appealing to the angels and saints to pray to God with us and for us is not to be reprobated as either useless or unlawful. Still even the most advanced of the High Church party in England were hardly prepared to go as far as this. In 1716 proposals were made by the non-juring bishops, who called themselves 'the Catholic Remnant of the British Churches,' for a concordat with the Orthodox Eastern Churches. Among matters recognized as 'the five Points of present Disagreement' we find the two following heads:

'Though they [the Remnant] call the Mother of our Lord Blessed, and magnify the Grace of God which so highly exalted her, they were afraid of giving the glory of God to a creature, or to run to any extreme by unduly blessing or magnifying her. As to angels and saints, they were jealous of detracting in the least from the Mediation of Jesus Christ, and therefore could not use a direct Invocation to any of them, the Blessed Virgin herself not excepted.'

The four Oriental patriarchs, in reply, appeal to the distinction which had been recognized even in the West from the time of St. Augustine onwards, and which both the Roman and the Orthodox Church still emphasize.

'The Greeks,' say the patriarchs, 'know how to make a distinction in worship, and they give that of Latria to God only, and that of Dulia to the holy Apostles, martyrs and righteous and godly Fathers, honouring them as faithful servants and true friends of God. They worship our Lady, the Virgin Mother of God with Hyperdulia, not as God, but as the *θεοτόκος* and Mother of God; not with Latria—God forbid, that would be blasphemy; God alone they worship with Latria—but they make her their intercessor with Him for post-baptismal sin, and hope through her to receive remission from Him.'

The patriarchs then go on to make it clear that, upon this head and in the matter of the invocation of saints, their position is unalterable. Indeed the tone of their reply to the English bishops is not conciliatory:

'Set yourselves free from the heavy bondage and the captivity of prejudice, and submit yourselves to those true doctrines which have been received from the beginning and the traditions of the holy fathers and are not opposed to the Holy Scriptures.'

Of late years among a certain school of Russian theologians there has been a tendency, probably fostered by Anglican influences, to discover a distinction between the Orthodox and the Roman point of view as to the relations of the Church militant and the Church triumphant. 'The Easterns,' W. J. Birkbeck² insists, 'when they think of the Church, think more of it as a whole than is the custom in the West.' They are familiar with the conception of St. John Chrysostom,³ who speaks of the body of Christ as 'the faithful from all parts of the world, who are, have been, and shall be.' Mutual intercessions are, it is said, at once the expression and condition of that faith and love which constitute the organism of the Church. Birkbeck writes:

'One of the most solemn thoughts that I have met with in conversing with Russians is, that not only is each one of us assisted by the prayers of the Blessed Virgin and of all saints, but that the saints themselves, and even the glorious and ever-blessed Mother of God, were assisted by the prayers, foreknown to God, of every member of the Church that has lived, or ever will live upon earth.'

But this seems after all to differ very little from the conception of the communion of saints which will be found presented at large in the *Roman Catechism* and elaborated in such a work as that of J. P. Kirsch, *Die Lehre von der Gemeinschaft der Heiligen im christlichen Altertum*. On the other hand, a greater familiarity with the teaching and practice of the Eastern Churches seems to have done something towards modifying the intransigence of official Anglicanism in this matter of saint-worship. During the Church Congress held at Southampton in 1913 the bishop of London (A. F. Winnington Ingram), who not so long before had visited Russia, preached a sermon on the invocation of saints. After weighing the arguments for and against and rejecting any direct form of invocation, such as 'Saint Andrew, pray for us,' etc., he approved the practice of 'comprecation,' which has been defined as praying to God to receive benefit by means of the prayers of the saints.

'We recognize,' he said, 'the fellowship of the saints in our praise. . . . Why should we not have in the new supplement to the Prayer-Book some form of comprecation which shall recognize more fully their fellowship in prayer?'

2. History.—It is admitted without dispute that the veneration of saints had its starting-point in the veneration of the martyrs who suffered death for the Christian faith. The word 'martyr,' of course, means witness, but already in the NT we have indications of a tendency to use this term as a label, even if not yet exactly to limit it to those who sealed their testimony with their blood. 'Ye shall be my witnesses,' we read in Ac 1⁸ (cf.

¹ See A. H. Hore, *Eighteen Centuries of the Orthodox Greek Church*, London, 1899, pp. 597-605, who summarizes the documents published by G. Williams in his *Orthodox Church of the East in the 18th Century*.

⁴ Pt. ii. ch. 3.

Lk 21¹⁸, Jn 15²⁷, Mt 10¹⁸) and in Rev 17⁶ 'I saw the woman drunken with the blood of the saints, and with the blood of the martyrs (RVm witnesses) of Jesus.' The same document, for which, in the opinion of the present writer, no later date can be assigned than A.D. 96, describes 'underneath the altar the souls of them that had been slain for the word of God, and for the testimony (μαρτυρίαν) which they held. . . . And there was given them to each one a white robe,' etc. (Rev 6^{9, 11}). Similarly 'I saw thrones . . . and the souls of them that had been beheaded for the testimony of Jesus' (Rev 20⁴). We do not wish to pronounce too positively, but this looks very like a beginning of cultus, and the evidence becomes unmistakable in the account of the martyrdom of St. Polycarp in the middle of the 2nd century. The pagans and Jews of Smyrna wished the saint's body to be reduced to ashes, 'lest they [the Christians] should abandon the crucified one and begin to worship this man.' The Christians of Smyrna indignantly repudiate the insinuation that they could ever renounce 'the Christ who suffered for the salvation of the whole world,' and they continue:

'For Him, being the Son of God, we adore, but the martyrs, as disciples and imitators of the Lord, we cherish as they deserve for their matchless affection towards their King and teacher. . . . And so we afterwards took up his bones, which are more valuable than precious stones and finer than refined gold, and laid them in a suitable place, where the Lord will permit us to gather ourselves together, as we are able, in gladness and joy and to celebrate the birthday of his martyrdom (τὴν τοῦ μαρτυρίου αὐτοῦ ἡμέραν γενέθλιον) for the commemoration of those who have already fought in the contest and for the training and preparation of those that shall do so hereafter.'¹

These passages are important as bearing witness not only to the dignity of martyrdom and to the sense of joy and triumph associated with it, but also to the idea of a sacrifice over the martyr's remains, and of an annual commemoration in his honour to be maintained in future years. This 'birthday,' the γενέθλιος (ἡμέρα) or *natale*, was afterwards to become a very conspicuous feature in the calendars and martyrologies. No doubt paganism among both Greeks and Romans had long before been familiar with the yearly commemoration of the illustrious dead; but, while in the case of the emperors and other famous men it was literally their birthday that was kept in remembrance, the Christian martyr was honoured on the anniversary of his death. The dignity of the martyrs was emphasized in many other ways. Tertullian, Origen, Clement of Alexandria, and Cyprian proclaim it in glowing language.² Already in the *Pastor* of Hermas³ the martyrs are represented as wearing crowns; Hippolytus,⁴ Dionysius of Alexandria,⁵ and Tertullian⁶ describe them as fellow-judges with Christ, seated beside Him on thrones. The most laudatory epithets—e.g. μακάριος, σεμνός, θεῖος, *benedictus*, *beatus*, etc.—are applied to them. On the other hand, we find an intense desire for martyrdom, regarded as a privilege and a trust, manifested by such confessors of the faith as the apostolic Ignatius of Antioch, the nonagenarian Pothinus of Lyons, the boy Origen, the scholarly bishop Cyprian, the mothers of young children like Perpetua and Felicitas, the tender maiden Blandina, with many others of whom authentic records are preserved. Frequently the idea is made prominent that it is Christ Himself who is present and who suffers in the person of the martyr.⁷ As a natural consequence, the greatest veneration was shown to the martyrs by

the faithful during the period of their incarceration, and, as the letters of St. Cyprian in particular allow us to see, their standing in the Church was altogether exceptional—so much so that their mediation was accepted as decisive when it was exercised in favour of those who sought reconciliation after falling away from the faith. No doubt there were abuses. The Novatianist heresy¹ was an indirect result of a too rigoristic view of the discipline which ought to be followed in such cases. On the other hand, it became a commonplace among the writers of the 3rd cent. to hold that the giving of one's life for Christ, the baptism of blood, was the equivalent of sacramental baptism in its effect of completely remitting sin and rendering the sufferer worthy of immediate admission to the joys of paradise. The passages in Tertullian, Cyprian, and other writers of that age which bear witness to this belief are very numerous.² In the contemporary *Acts of the Scillitan Martyrs* (A.D. 180) Nartzalus cries out, when sentence is pronounced, 'Hodie martyres in caelis sumus. Deo gratias.' Further, the martyr's lot while he remained alive was in every way a privileged one. A reflected lustre shone upon his family and even upon the town in which he resided,³ and he himself, while awaiting in prison the hour of the supreme sacrifice, was an object of solicitude and veneration to all his fellow-Christians. The long passage which stands at the beginning of the 5th book of the *Apostolical Constitutions* probably reflects a much older tradition, and it is in any case very striking:

'If any Christian, on account of the name of Christ, and love and faith towards God, be condemned by the ungodly to the games, to the beasts, or to the mines, do ye not overlook him; but send to him from your labour and your very sweat for his sustenance, and for a bribe to the soldiers, that he may be eased and taken care of . . . for he that is condemned for the name of the Lord God is an holy martyr, a brother of the Lord, the son of the Most High, a receptacle of the Holy Spirit . . . by being vouchsafed the incorruptible crown, and the testimony of Christ's sufferings and the fellowship of His blood, to be made conformable to the death of Christ for the adoption of children.'

Lucian in his *de Morte Peregrini* satirizes the attentions lavished upon those who suffered for the Christian faith. Moreover, the confessors who, after bearing testimony in bonds, escaped the final ordeal were regarded as the *élite* of the faithful, and their steadfastness in the hour of trial became a sort of title to the episcopal office.⁴ In the primitive Church Order, which Schermann has conveniently labelled *ET* (*ecclesiastica traditio*), and which he would trace back to the inspiration of St. Clement of Rome, the martyr (*i.e.* one who has suffered torment for the name of Christ) is described as already possessing the dignity of the priesthood without ordination. Hands are to be laid upon him only when he is to be promoted to the episcopate.⁵ Despite the attitude of veneration to which these facts bear witness, we have no satisfactory evidence of any general practice of cultus before the middle of the 3rd century. The origins of this cultus are no doubt to be found in the funeral rites which the Christians, in accordance with the customs of the pagan society in which they lived, paid to their honoured dead. Even in the case of those who had suffered capital punishment, Roman practice usually conceded to the relatives of the deceased the free disposal of their remains. For the most part, therefore, the martyrs, like their fellow-believers, were buried with such observances as everyday usage prescribed, so far at any rate as these rites involved no direct recognition

of polytheism or pagan superstition. For the sacrifices to the gods was substituted the Eucharistic oblation; the banquets offered to the dead at the tomb were replaced by the Christian love-feast,¹ and the same intervals between the celebrations were observed—3rd day, 9th day, 30th day (which in later centuries became the 'month's mind'), and anniversary. It was no doubt from these elements that the cultus of the Christian martyr took its point of departure. All are agreed that, where the existence of a sepulchral chamber or mausoleum rendered it possible, the Eucharist was celebrated at the grave side, and at this not merely the family but the whole Christian community seems to have assisted. There has, however, been some difference of opinion regarding the manner in which these rites were carried out. F. Wieland,² in opposition to the traditional view, holds that 'the breaking of bread' was not originally conceived of as a sacrifice in any proper sense, and that even in the case of martyrs the tomb itself, in the pre-Constantinian period, was not treated as an altar. But the question is mainly one of the date of the development of this sacrificial conception. It certainly did establish itself before long, as J. Wilpert³ and others have shown. During the ages of persecution the faithful, anxious to live as inconspicuously as possible among their fellow-citizens, very probably emphasized unduly the feature of the funeral banquet, which was common to all, pagans and Christians alike. In the case of the pagans these banquets (*cenæ*) were meals offered to the *manes* of the departed; for the Christian community they were love-feasts which, on the one hand, provided charitably for the needs of the poor, and, on the other, veiled the true nature of the Eucharistic oblation, celebrated as a memorial of the Last Supper. In time the love-feasts led to abuses and were to a large extent suppressed, but the celebration of the liturgy still brought these little assemblies of the faithful together beside the graves of the honoured dead. It was inevitable that this solemn rite, though offered in the same forms at the tomb of the martyr and at that of the ordinary Christian, should in the former case soon assume a different colour in the eyes of the worshippers. Though the liturgy from the earliest times, as still in the East to-day, offered the sacrifice to God *for* (*ὑπέρ*) the holy apostles and the martyrs, as well as for all the faithful who have fallen asleep, the note of triumph soon came to prevail, whenever the Church paid honour to her champions.

The *Oratio Constantini* tells us how 'the martyr's death is followed by hymns and psalms and songs of praise to the all-seeing God, and a sacrifice is offered in memory of such men, a blameless, innocuous sacrifice.'⁴

Cyril of Jerusalem in the middle of the 4th cent. draws a clear distinction between the commemoration in the liturgy of 'patriarchs, prophets, apostles and martyrs, that by their prayers and mediation God may receive our petitions,' and, on the other hand, the appeal made in behalf of 'the holy fathers and bishops and all those who have fallen asleep,' whose souls, says Cyril, we are assured will be benefited by the offering of this most holy sacrifice.⁵ Half a century later we find both Chrysostom⁶ and Augustine explaining the commemoration of the martyrs in the liturgy in much the same sense. Their names are recited, says the latter, but they are not prayed for;⁷ and in another place he urges that, when the sacrifice of

the altar and alms are offered for all Christians departed, 'it is a sacrifice of thanksgiving for the perfect and a propitiation for those whose virtue is incomplete.'¹ At this date, the close of the 4th cent., we find all the great orators of the Church both in the East and in the West preaching panegyrics of the holy martyrs before vast audiences assembled to pay respect to these champions of the faith on their festivals, and at such reunions the celebration of the liturgy formed the central feature. It is true that, as St. Augustine and others expressly pointed out, the sacrifice was offered to God, and in no sense to the saint himself, but it was none the less a supreme recognition of the martyr's dignity and formed the germ from which the whole calendar of saints' days ultimately developed.

It is at this period also that we find the practice of the invocation of saints firmly established in every part of the Church. Prayers and appeals to the dead, as many inscriptions on pagan tombstones prove, were by no means unfamiliar to the heathen of Greece and Rome. But, as P. Dörfler² has recently pointed out, we find running through all these appeals a certain element of fear. The *manes* of the dead were asked to spare. They were conceived of as resenting neglect and as rewarding dutiful service. 'O *manes* parcite, ni parcatis, credite mi, nemo referet solemnia vobis' may be taken as a more or less typical example of the tone commonly prevalent. In Christian sepulchral inscriptions of the early centuries we also often find an appeal to the dead—even to those who were not martyrs—but the spirit is notably different. What the survivors ask of their dead is remembrance and sometimes prayer—e.g., 'Marine im et mentem . . . nos . . . habeto' or 'Pete pro parentes tuos.'³ Naturally enough, such an attitude towards the dead must have paved the way for the more formal invocation of those who had laid down their lives for Christ. Once it was generally admitted, as even pagans like Æschylus⁴ and Plato⁵ seemed ready to admit, that those who had passed into the next world might have knowledge of human needs and desires, it was inevitable that Christians who already made a practice of commending themselves to the prayers of the martyrs in prison should renew their appeal when the martyrs' triumph was completed by death. Hence, as early as the time of Hippolytus and Origen we find unmistakable traces of a belief in the power of the holy dead to intercede for those on earth.⁶ The rude inscriptions and *graffiti* in the Catacombs, which, however, it is unfortunately very hard to date, may be appealed to as supplying similar evidence from the 3rd cent. onwards—e.g., 'Domina Bassilia commandamus tibi Crescentinus et Micina filia nostra Crescen . . . que vixit men. x et dies . . .' (the title 'Domina' given to the martyr is an indication of early date); 'Sancte Laurenti suscepta habeto anim[am] eius'; 'Salva me Domne Crescentione meam luce.'⁷ As appears in many of these ungrammatical memorials, it is the martyr's protection that is asked, and often for quite young children. Hence it seems probable that the prevalent atmosphere of paganism exercised some vague influence upon Christian feeling, especially in the case of the ruder populace. The strongly marked desire to be buried near the martyrs is no doubt to be attributed to a similar hope of protection. It was a matter not so much of logic as of a deep and primitive instinct—the

same which in pagan times had led to the development of hero-worship.¹ Even for Christians the passage to another world was fearsome. It was felt that help might be looked for from those who had made the journey in triumph and whose acceptance with God was assured. Burial in proximity to the martyrs was itself a form of commendation, a tacit request for their intercession.

Be this as it may, the direct invocation of the holy dead had become by the latter half of the 4th cent a received practice among Christians in both East and West. St. Basil (†379), St. Gregory of Nazianzus (†390), St. Ambrose (†397), not to speak of St. Chrysostom, St. Jerome, and St. Augustine, all furnish evidence which shows that in their time the practice of praying to the martyrs was already firmly established. St. Gregory of Nazianzus, *e.g.*, not only tells the story of a girl who in the hour of danger called upon the Blessed Virgin for aid, but himself in his sermon on St. Cyprian unequivocally invokes the martyr.² St. Ambrose writes:

'Martyres obsecrandi . . . possunt pro peccatis rogare nostris, qui proprio sanguine, etiam si qua habuerunt peccata, laverunt . . . non erubescamus eos intercessores nostrae infirmitatis adhibere,' etc.³

In St. John Chrysostom evidence of what may be called active devotion to the martyrs meets us at every turn.⁴ But perhaps no better illustration can be found of the attitude of the devout laity than an incident from the newly recovered *Life of St. Melania the Younger*. Living in Rome in the year 403, she, owing to her self-imposed vigils on the eve of the feast of St. Lawrence, gave birth prematurely to a child and her life was in imminent danger. Thereupon her husband, rushing off to the shrine of St. Lawrence ('festinus perrexit ad S. martyrem'), prostrated himself before the tomb beneath the altar and with tears and lamentations begged God to spare the mother (ἵσθα πρὸς Κύριον περὶ τῆς ζωῆς αὐτῆς). Both the Greek and Latin redactions of the *Life* clearly show that, though the martyr's intercession was invoked, it was to God, the master of life and death, that the ultimate appeal was directed. Similarly Melania, just before her death at Jerusalem in 438, asked to be carried to the shrine of the martyrs. Then she called upon them as 'athletes of the Lord' and asked them to have pity upon her, their unworthy servant, who had always venerated their relics, adding:

'O ye, who have always free speech with God that loves mankind, be my intercessors (προσέβαστε) with Him that He may receive my soul in peace.'⁵

It is just this *παρηγορία*, attributed to the martyrs, that is put forward again and again in patristic writers as the motive for having recourse to their help.⁶

Undoubtedly one of the causes which contributed most powerfully to the rapid extension of the veneration of martyrs was the multiplication of shrines and saints' days, due to the Oriental practice of translating and dividing relics. It was beside the tomb of the martyr and upon his *dies natalis*, or anniversary, that his aid was primarily invoked. In the West the old Roman idea of the sacredness and inviolability of the tomb persisted for many hundred years. Even Gregory the Great, upon whom Harnack lays the blame of 'systematizing that resort to saints and relics which had already existed for a long time,' still firmly refused at the end of the 6th cent. to allow the resting-places of the great Christian heroes of Rome to be in any way disturbed. In a famous letter addressed to

the empress Constantina, he point-blank refused her request to allow the head of St. Paul or some other portion of his body to be transported to Constantinople.¹ It was not, he declared, the Roman custom to allow any but representative relics, the *brandea* or *sanctuaria*, *i.e.* cloths which had been lowered into the tombs, to be given to applicants, however illustrious. Nearly a century earlier, in 519, the legates of Pope Hormisdas had maintained the same attitude in regard to a request of the emperor Justinian. The Oriental custom, however, was different, and the Greeks were not content with the legal fiction of *brandea*. Thus, as early as 351-354 we have definite record of the translation to Daphne, a suburb of Antioch, of the body of the martyr St. Babylas, and this was followed by many other translations. Still more fraught with the possibilities of future abuse were the dismemberment of the bodies of martyrs and the division of objects connected with them. This aspect of the question of relics (*q.v.*) is only touched upon here to explain the multiplication of centres of cultus and also the multiplication of feasts, for the translation commonly entailed the observance of a perpetual anniversary. The miraculous effects attributed to these relics, wonders which were attested by St. Hilary, St. Ambrose, St. Augustine, and all the great Christian teachers of that age,² must undoubtedly have accounted for much in the abnormally rapid development of the cultus of the martyrs.

So far we have taken no account of any saints but those who within the knowledge of all men had given their lives for the faith. As early, however, as the time of St. Cyprian we find in that writer constant references to a class of *confessores*, and, though Lucius has asserted that Cyprian's use of the term is loose and confused, his consistency has of late been successfully vindicated. J. Ernst³ shows that in Cyprian's idea the martyrs *par excellence* are those who have actually laid down their lives for Christ, but that he also extends this term to all who have suffered grievous torment for the faith. On the other hand, the confessor is one who has borne testimony to his belief at some cost to himself—*e.g.*, by imprisonment or exile. All martyrs are therefore of necessity confessors; but, where the terms are contrasted, the confessor, as opposed to the martyr, is one who has not been put to the test of grievous bodily torment. Still Cyprian's language clearly suggests that, while the martyr's dignity is pre eminent, the confessor in many cases is worthy to stand beside him and must also be highly honoured. 'A man has suffered,' he urges rather rhetorically, 'all that he was willing to suffer.'⁴ This was in substance the principle in virtue of which a second category of saints gradually came to be recognized. In point of historical development, however, the process was greatly assisted by the practice of according a special commemoration in the liturgy to deceased bishops and of keeping locally a formal record of their anniversaries. Cyril of Jerusalem (*c.* 349), as pointed out above, indicates the classes of those no longer living for whom prayer is made in the liturgy. The first consists of 'patriarchs, prophets, apostles, martyrs'—and it is worth noting that St. Hilary⁵ names just these four groups in the same order; the second class is that of the 'holy fathers and bishops who have fallen asleep before.' Now this distinction is in noteworthy accord with

the data supplied by the famous *Chronography of Philocalus*¹ (A.D. 354). In this are preserved two separate documents of the Roman Church, one originally drafted in 332, which, under the heading 'Depositio episcoporum,' furnishes a record of the anniversaries of the bishops of Rome with their names and places of interment, the other, a separate list, headed 'Depositio martyrum,' giving similar information regarding the Roman martyrs. Be it noted in passing that even in 354 this Roman 'Depositio martyrum' had been augmented by two African anniversaries (those of St. Cyprian and of Perpetua with Felicitas) and also by another entry described as 'natale Petri de cathedra,' now known as the Feast of St. Peter's Chair. In these two short lists, thus gradually amplified and eventually blended into one, we may recognize the first rude outlines of the elaborate *calendaria* and *martyrologia* which came to play so prominent a part in the hagiographical developments of the Middle Ages. Other important Churches besides that of Rome kept similar lists of the anniversaries of their martyrs and of their bishops. In the 4th and even in the 5th cent. it appears that on account of the exalted dignity of the martyrs the two sets of records were still kept separate, and the traces of this distinction, as Delehaye has pointed out,² survived to a later period in the prayers of the *Leonine Sacramentary*. But before long the two lists, as might be expected, were fused into one document. From certain details in the Syriac *martyrologium* of 411 it has been inferred that this had already occurred at Antioch before that date. But the fusion is more conspicuous in the ancient calendar of Carthage, compiled apparently about 525. Here the commemorations of African martyrs and of a number of bishops of Carthage who were not martyrs stand side by side, together with other entries not of local origin. This process of equalizing confessors and martyrs seems to have begun soon after the restoration of peace to the Church. It was realized that holy ascetics like St. Anthony the hermit, or devoted bishops like St. Meletius of Antioch, not to speak of Chrysostom and Athanasius, suffered more in a lifetime of courageous endurance than if they had actually shed their blood for Christ. Further, a sort of middle term was found in the patriarchs and prophets of the OT, who, as pointed out above, were already grouped in the liturgy with the apostles and martyrs. The miracles attributed to some apostolic preachers like Gregory Thaumaturgus († 274), and the cult of relics, which, e.g., in the case of the hermit Hilarion, though he was no martyr, led to the translation of his remains almost immediately after his death, brought about rapid developments. Hence we may fairly consider such a panegyric as that of St. Gregory of Nyssa upon Ephraem Syrus, which was spoken seemingly upon his anniversary and which ends with a direct invocation, to be evidence that the cultus of confessors was already established. Still the recognition of a definite category of 'saints,' in such sort that the word *ἅγιος* or *sanctus* was no longer a descriptive epithet but the formal style of a class of specially venerated champions of the faith, cannot be said to have yet taken root. The monograph of Delehaye³ discusses in detail the development of the word *sanctus* and shows that even the epitaphs of Pope Damasus († 384) supply no example of the technical significance which finally attached to it.⁴ It is not until the next

century that the use of such a phrase as 'Sanctus Athanasius' can be taken by itself as any evidence of cultus.

When we go on to ask what elements entered into that conception of a 'saint' which gradually grew up in the early Church and has lasted until our own day, we have to distinguish between a genuine claim to sainthood and one which is to some extent only ostensible and illusory. The genuine claim rests upon local cultus initiated by the clergy and people who had personal knowledge of the saint's martyrdom or of his heroic virtue. His name and anniversary were entered in the local *martyrologium*. His feast was kept by a synaxis, at which a panegyric was delivered and the liturgy was celebrated. His *Acta* were collected and preserved, and, when possible, the tomb enclosing his remains was honoured by the erection over it of an altar and a church. There are cases—e.g., that of St. Polycarp—in which we have evidence of all these things. There are other instances in which they can be inferred with little risk of error; but at a later date, when the martyrologies were no longer local and had enlarged their scope, it must be admitted that many names were added to the roll of saints without adequate investigation and upon quite insufficient data. Delehaye has pointed out numerous examples of these 'literary canonizations,' as he has called them.¹ An old-world story familiar to modern readers as that of Faust was at one time attached to the name of a mythical St. Cyprian of Antioch; the gruesome tale of Œdipus seems responsible for the evolution of a St. Albanus and other imaginary personages; while the well-known legend of Buddha re-appears in Christian hagiography under the guise of the *Acta* of Saints Barlaam and Joasaph. In very few, however, of the more extreme cases can it be pretended that there was any real cultus of the supposed saint. On the other hand, there are a number of instances in which a perfectly legitimate cultus, contemporaneous with the saint's death, has afterwards become surcharged with all sorts of legendary excrescences, often preposterous in themselves, and quite inconsistent with the facts of history. The stories recounted in the apocryphal *Acta* of St. Thomas, or in those of his fellow-apostles, or of Thecla, St. Paul's reputed convert, do not constitute a valid disproof of their title to veneration. In the case of St. Procopius, again, who was undoubtedly an authentic martyr, the character of the saint was in time completely transformed. In reality Procopius was a studious ascetic; in legend he becomes a warrior-saint, the hero of incredible adventures.² A similar extravagance pervades all the *Lives* of St. George, the 'megalo-martyr,' although, according to Delehaye,³ we know no more that is authentic about him than the bare fact of his existence. The same process, of course, went on in secular history. For mediæval readers the personality of Alexander the Great or of Charlemagne became quite unrecognizable owing to the myths which by a sort of magnetic attraction attached themselves to all such famous names. Moreover, even where no doubt can be felt as to the existence and the holiness of the person venerated, it is not always possible to explain how the cultus first arose. Often enough its chief developments were associated with the discovery of relics of doubtful authenticity, or with the occurrence of cures believed to be miraculous. The information given by St. Augustine regarding the marvels wrought by the relics of St. Stephen at Uzalam throws an

² See Delehaye, *Les Légendes grecques des saints militaires*, pp. 77-80.

³ *Ib.* p. 70.

interesting light on the spread of popular devotion to the saints in quite early times.¹ It has been maintained,² on the ground of a passage of Optatus of Milevis which condemns the veneration of the relics of one who was a martyr but 'necdum vindicatus,'³ that some process of official inquiry and canonization (*vindicatio*) existed even at this early date; but such a conclusion, as O. Marucchi has shown,⁴ is not borne out by the facts adduced to support it. Although the attempt may sometimes have been made to preserve the 'proconsular acts,' i.e. the official record of the trial and condemnation of certain martyrs, very little material of this kind has come down to us, and even less seems to have been known (c. 380) to so devoted a student of their history as Pope Damasus.⁵ As a result, legend and historical fact have in many cases become hopelessly confused. Though the primitive local martyrologies were no doubt trustworthy as to the very simple data they enshrined, consisting probably of little more than the name, the day of the anniversary, and the place of burial, the case is quite otherwise when we come to the later compilations formed by the unskilful combination of lists and materials derived from many different churches.

The most famous among these is the document falsely ascribed to St. Jerome and known as the *Martyrologium Hieronymianum*. This was probably first compiled in Italy, and then revised and added to in Gaul at the end of the 6th century. Among the sources used we may recognize (1) a general martyrology probably written in Greek at Nicomedia and embracing the churches of the East, (2) the local martyrology of Rome, (3) a general martyrology of Africa, (4) a general martyrology of Italy, (5) some literary sources, including Eusebius. Unfortunately the text has reached us in a very corrupt state. From the nature of the case, the document consists of little else than lists of names arranged according to the days of each month, and these names have constantly been misplaced, miswritten, and confused.

The Venerable Bede seems to have been the originator of a new type of *martyrologium*, in which the number of entries was much reduced but brief historical details were added concerning the saints who were commemorated. It was only in 1908 that Bede's true text was isolated from subsequent accretions by the researches of H. Quentin.⁶ The importance of Bede's work lay especially in this, that he had several mediaeval imitators, the best known being Ado and Usuard, and that mainly from the work of the last-named the present quasi-official Roman martyrology, which is read in choir as part of the liturgical office, was compiled by Cardinal Baronius at the end of the 16th century. It need hardly be pointed out that, although the name suggests a roll of 'martyrs,' all these martyrologies without exception included many 'confessors.' The earliest document in which this fusion is found is possibly the fragment of a Thracian Gothic calendar in the Ulfilas codex.

We can touch but briefly upon the later developments of Christian hagiology. It seems probable that the more emotional manifestations of devotion to the Madonna and the saints are traceable ultimately to East Syrian influences. E. Lucius⁷ has rightly called attention to the extremely romantic spirit conspicuous in the writings of St. Ephraem and his school. From Syria this movement in some strange fashion made itself felt apparently in Spain, and by this channel was carried to Ireland, whence it spread to Britain and the Continent.⁸ Certain it is, in any case, that the

devotional atmosphere of such a writer as Cynewulf in the 8th cent. differs hardly at all from that of St. Bernard or Jacopone da Todi many hundred years later. But, however it came about, this attitude of mind and sense of personal relation to the saints exercised a wide influence upon many aspects of life. The system of patrons, shrines, pilgrimages, gilds, etc., reacted in a thousand ways upon art, literature, trade, and social economics generally. Despite many abuses and blunders, even the most rigid censor will find it difficult to maintain that the influence thus exercised was entirely evil. The origins of the practice of choosing saints for patrons may be traced back to the time of Dionysius of Alexandria († 265), who bears witness to the custom prevalent among Christians of giving to their children the names of Peter or Paul or John, and assigns motives for such a choice.¹ Chrysostom and especially Theodoret² furnish further evidence to the same effect. In the Middle Ages the selection of patrons was often determined by the most grotesque of reasons. St. Barbara, who was believed to secure for her clients the boon of receiving the sacraments before death, was invoked especially in thunderstorms, and became the patroness of all the more dangerous trades, notably miners, tilers, masons, and those who had to do with firearms. Similarly the association of St. Clare with sufferers from sore eyes, as also with glass-workers and laundresses, seems to have been dictated by no better reason than the fact that her name (Clara) suggested transparency and whiteness. Examples of this kind of extravagance were undoubtedly very numerous.

In Celtic lands confusion has been caused by native writers who frequently use the term *sanctus* of those consecrated to a religious life independently of personal holiness.

The title of the Celtic saint, says Willis-Bund,³ 'rested on the fact that he was either the member of a certain family or of a certain monastery,' and he goes on to declare that 'a Celtic saint was never the person whom a Celt invoked in prayer. . . . No churches were dedicated to him. . . . No shrine containing his relics was set apart for the adoration of the faithful.' Even if this statement be from any point of view correct, its general import is certainly misleading. The Celtic Church venerated apostles, martyrs, and ascetics exactly as the other Churches did. One of the earliest texts of the Litany of the Saints is that of the Stowe Missal,⁴ where it appears as part of the priest's ordinary preparation for Mass. The *Felire* of Oengus, the earliest of the four extant Irish martyrologies, and many similar Celtic documents are extravagant in their invocation of, and their expressions of veneration for, 'Christ's kingfolk' (*rigrad Christ*), i.e. the saints. The whole truth seems to be that in some Celtic countries the word 'saint' was used of all men dedicated to God—the celebrated communion hymn, '*Sancti venite, Christi corpus sumite*,' is plainly addressed to a community—and that in Wales certain clans or families were regarded as a sort of priestly caste of whom it was expected that they should furnish recruits for the ascetic life. No doubt abuses followed. It was clearly undesirable that a 'saint' should establish a claim in perpetuity to a particular church merely by proving his nearness of kin to the founder and by fasting for forty days on the site;⁵ but there is no reason to suppose that the Celts did not distinguish between this official sanctity and true holiness of life, and, though Druidical traditions may have familiarized the people with the idea of a hereditary priestly caste, there is little direct evidence, beyond the existence of the genealogies, to prove that the

system was acquiesced in without protest. There is no indication of any such element among the Culdees,¹ and in Ireland Whitley Stokes² denies that even the pagan Druids 'constituted a hierarchy or a separate caste.' Further, if certain patriotic Celts have professed to count their national saints by thousands, this does not show that the conditions in Wales or Ireland differed from the rest of the Christian world, but only that they have taken advantage of a simple ambiguity of language. In truth, terms of respect seem particularly liable to such misinterpretation. The phrase 'Your Holiness' (*Sanctitas vestra*) was everywhere of common occurrence in the Middle Ages, and was addressed to ordinary bishops. It is now part of the official style of the Roman pontiff, but of course does not imply that the pope is deserving of liturgical cultus. Similarly the word 'venerable' is used at the present day in three different senses. An Anglican, *e.g.*, may speak of 'the Venerable Archdeacon Wilberforce,' a Roman Catholic of 'the Venerable Father Southwell,' or an agnostic of 'the venerable author of the *Origin of Species*.' In the first case the word is a title of courtesy; in the second it designates one who has reached a particular stage in the process of canonization; in the third it expresses the writer's belief that Darwin was a scientist worthy of reverence.

The reproach has constantly been made against the veneration of saints, as it was practised in the Christian Church from the 4th cent. onwards, that it differed little either in its essence or in its manifestations from the pagan worship of gods and heroes.

Harnack, *e.g.*, while admitting the early date of this development, describes it as 'polytheism in the fullest sense of the word,' and declares elsewhere that 'the saints took the place of the local deities, their festivals were substituted for the old provincial services of the gods.'³

Many other writers have emphasized the same objection in various forms, from the scholarly and temperate treatise of E. Lucius, *Die Anfänge des Heiligenkults*, to such highly polemical works as *Les Saints, successeurs des Dieux* of 'P. Saintyves' or the *Orpheus* of Salomon Reinach. A number of monographs have also been written to deal with separate cases and to prove that this or that deity has passed into Christian hagiography under some more or less unfamiliar designation. Thus E. Maas and H. Usener have identified St. Pelagia with Aphrodite; Rendel Harris sees a replica of the Dioscuri in nearly all such pairs of saints as Gervase and Protase or Cosmas and Damian; A. von Gutschmidt maintains that St. George is no other than Mithras, and so forth. The matter can be touched on only very briefly here, but it seems worth while to lay stress on the following points:

(1) The object of cultus, in the beginning, as we have shown, was undoubtedly a historical personage, whose cruel death or ascetical life was well known to those who paid reverence to his memory and invoked his aid by prayer. It is incredible that, in the beginning of things at any rate, those who honoured the martyr for the very fact that he was willing to lay down his life rather than sacrifice to Jupiter or pay unlawful honour to the deified emperors should themselves have elevated him into an object of worship and a rival to the true God. The evidence of such a case as that of St. Melania, quoted above—and many others might be added—proves clearly that by all Christians of education and intelligence the saint was honoured only subordinately and relatively. He was in no

true sense worshipped. The charge of virtual polytheism was urged against the Christians by such antagonists as Julian the Apostate, Vigilantius, and Faustus. On their side the apologists—Jerome, Augustine, Theodoret, Maximus of Turin, and many more—invariably replied that *laetitia* was paid to God alone:

'Colimus martyres eo cultu dilectionis et societatis . . . Cultu, quae Graece *laetitia* dicitur, . . . nec colimus, nec colendum docemus, nisi unum Deum.'⁴

'We do not worship the saints . . . but we venerate them as men of God.'²

(2) The almost ineradicable tendency among the rude and uneducated to cling to their primitive customs led beyond doubt to a certain amount of compromise in matters which were not judged to be distinctively pagan. It was the advice of St. Gregory Thaumaturgus, of St. Augustine, and of St. Gregory the Great that an attempt should be made to Christianize their popular observances, if not absolutely evil in themselves, rather than to extirpate them. If a particular day had been kept as a holiday, let it be transformed into a Christian festival; if there had been resort to a particular site for superstitious purposes, let some worthier object of pilgrimage be substituted; if certain practices connected with funerals, weddings, or other ceremonial occasions had established themselves firmly in the hearts of the people, let them be given a Christian colouring or significance. Certainly there was much danger of grave abuses resulting from such condescensions, but also it may be doubted whether a too rigid attitude would not have frustrated the work of conversion altogether, if we take into account ingrained habits of the mass of the people. There is more force than some would be disposed to admit in a remark of F. C. Conybeare:

'Perhaps we ought to be grateful to the Catholic Church in Latin countries for having established cults so respectable as those of the Virgin and the saints, for it is certain that, in default of them, the Latin peasant would relapse into a fetishism as old as the hills around him. You can turn Spanish and Italian peasants into anticlericals, but you seldom turn them into Rationalists. They may give up Christianity, but they only believe all the more firmly in the evil eye and in all the debasing practices which attend the belief.'³

(3) While the ceremonial of Christianity and that of paganism include many identical elements—*e.g.*, the use of ablutions, lights, incense, prostrations, unctions, linen vestures, *ex votos*, etc.—it would be rash to conclude that in all cases, or even in any case, the Church was guilty of conscious imitation. In such external rites the range of choice is limited. Moreover, an act which has become familiar from its being frequently practised or witnessed soon seems to be a natural and spontaneous expression of inward feeling, and men lose the sense that it belongs distinctively to one cult rather than another. Even with regard to such a matter as incubation (*q.v.*) it must not be forgotten that the Christian vigils, which probably grew out of the primitive celebration of Easter Eve, familiarized men with the idea of spending the night in the church. On the other hand, as Delehaye points out,⁴ it would be foolish to deny the existence of this and other survivals of paganism in isolated cases.

Lastly, it may fairly be said that the attempted identification of saints with pagan heroes and deities has been much more commonly a matter of guesswork than of scientific method. The unsatisfactory character of the proofs adduced has often been pointed out in the reviews of such works appearing in the *Analecta Bollandiana*, a periodical specially devoted to hagiographical research and criticism. In any case it cannot be

H. THURSTON.

SAINTS AND MARTYRS (Indian).—The study of Indian hagiology is of exceptional difficulty; the number of personages worshipped or venerated is enormous, and a voluminous cycle of legend has been collected round them. The reason of this abundance of saints lies in the fact that Hindu and Muhammadan society is broken up into numerous groups. Thus there are tribal and caste saints, and the founders of sects and religious orders are usually credited with miraculous powers which lead to their veneration or worship. There is, again, no controlling organization, no prescribed system of canonization, such as that of the Roman curia; and any tribe, caste, order, or village is at liberty to confer the honour of sainthood on any worthy at its own discretion. It has been the rule in India from the earliest times that each village worships its own local gods—godlings of fertility, who promote the happiness of the community, and repel famine, pestilence, and other misfortunes which are believed to be caused by the action of foreign and necessarily hostile spirits. These deities, under Musalmān influence, are often superseded or absorbed by the local saint who performs the same functions as his predecessor.

i. Powers ascribed to living saints.—The worship or reverence paid to deceased worthies of this class depends on the popular reputation of the living saint. This has been well described by H. B. Edwardes from his experience of the N.W. Frontier:

'For him [the Bannūch] the whistle of the far-thrown bullet, or the nearer sheen of his enemy's shamsheer [shamshir, 'a sword'] has no terrors; blood was simply a red fluid, and to remove a neighbour's head at the shoulder as easy as cutting

cucumbers. But to be cursed in Arabic, or anything that sounded like it; to be told that the blessed Prophet had put a black mark against his soul, for not giving his best field to one of the Prophet's own posterity; to have the saliva of a disappointed saint left in anger on his door-post; or to behold a Hajee [Hājī], who had gone three times to Mecca, deliberately sit down and enchant his camels with the itch, and his sheep with the rot; these were things which made the dagger drop out of the hand of the awe-stricken savage, his knees to knock together, his liver to turn to water, and his parched tongue to be scarce able to articulate a full and complete concession of the blasphemous demand.'¹

From this point of view it is clearly advisable that each village, caste, or tribe should be provided with a saintly protector.

'The Atridi Pathāns of Tirāh had shame in the sight of their brethren, in that their territory was blessed with no holy shrine at which they might worship, and that they had to be beholden to the saints of their neighbours when they wished for divine aid. Smarting under a sense of incompleteness, they induced by generous offers a saint of the most notorious piety to take up his abode amongst them. They then made quite sure of his staying with them by cutting his throat, they buried him honourably, they built over his bones a splendid shrine at which they might worship him and implore his aid and intercession in their behalf, and thus they purged themselves of their reproach.'²

2. Buddhist, Jain, and Hindu saints.—The three great religions of India—Buddhism, Jainism, Hinduism—recognize to a less or greater extent the reverence or worship of saints.

(a) *Buddhist*.—In its orthodox form Buddhism does not admit saint-worship; but in its later developments, such as the Mahāyāna, we find it recognized. In the Indian cave-temples images of Buddha are associated with those of *bodhisattvas*, or saints who in the next birth become Buddhas. *Stūpas* were erected to contain not only the relics of Buddha, but also those of the *sthaviras* or *theras*, elders of the faith; images of Padmapāni and Mañjuśrī are specially associated with those of Buddha, and at Junnar there is an altar (*torana*) on which relics of Buddha or of Buddhist saints were placed.³ The saints of Lamaist or Tibetan Buddhism are both Indian and Tibetan, with a few from China and Mongolia. Of the Indian saints the chief are the leading disciples of Buddha, and the sixteen *sthavira*, or chief apostles or missionaries.⁴

(b) *Jain*.—In Jain hagiology 63 persons, including 24 *tirthankaras*, or perfected saints, are regarded as 'pre-eminently spiritual.' 'These are not all "saints," i.e. *sādhus*, but spiritually great souls.'⁵ In W. India each Jain temple contains an image of the *tirthankara* who was most popular with the person or persons who erected the temple; these images are placed in shrines fixed on raised seats, and are called *mūlāyaks*, or 'chief leaders.'⁶ Luard reports that in Central India Jains revere the *tirthankaras*, but do not worship them, regarding them as models and mediators, but not in themselves objects of worship; the *śrāvaks*, 'hearers,' at first are taught to worship them, but, as they rise in knowledge and religious standing, they cease to do so; *gurus* or *yatis* look on the *tirthankaras* as only examples to be followed.⁷

(c) *Hindu*.—The chief Hindu saint is Gorakhnāth.⁸ One account describes him as sitting round the earth with a train of nine *nāths*, 'lords,' and 84 *siddhs* (Skr. *siddha*, 'perfected,' 'versed in magical arts,' 'sanctified by penance and austerities'). These *siddhs* are, properly speaking, saints of exceptional purity of life who have attained to a semi-divine existence; but in the eyes of the vulgar

⁸ *ERB* vi. 323 ff.

they seem to be little more than demons who have gained their power from Gorakhnāth. In the hilly parts of the Panjāb, where they are especially revered, they are often worshipped in the form of stones and the like, the distinctive emblem of their votaries being a silver *siṅgī*, a cylindrical ornament worn on a thread round the neck.¹ The Ghirth tribe erect a small shrine or a pillar bearing a relief in stone of the feet of the *siddh*; he is worshipped every morning like the other house gods, or at least on Sunday. The Gaddī tribe offer a sack, a stick of rosewood, a crutch, sandals, and a thick cake of bread to him, regarding him as a wandering ascetic.²

Another class of Hindu saints is that of the *bhagats*, or sect leaders, of whom the most important are Kabir (*q.v.*) with his successors, Rāmānand, said to be the founder of the *bhagats*, and Nāmdeo, the cotton-printer, who has become the patron saint of the Chhimbas, or dyers of the Panjāb.³ The saint Gūgā or Guggā is of another type. He is also known as Zāhir Pīr, which is usually taken to mean 'the saint apparent'; but Harikishan Kaul⁴ says that the proper form of the word is Zahriā, 'poisonous,' because while in his cradle he sucked the head of a snake. He is regarded as an incarnation of Nāga Rāja, the snake-king, and there seems good reason to believe that he is a snake-godling turned into a saint.⁵

3. Saint-worship on the N.W. Frontier.—Saint-worship in its most primitive form appears among the savage Musalmān tribes of the N.W. Frontier.

'Nowhere are saints held in greater worship than in the Brāhūi country. A place without a shrine is a place to be avoided; a shrineless road is wearisome, unlucky, unsafe. Happily there are very few of either. For the typical shrines of the Brāhūi country are not the domed shrines one sees in Las Bela and the Kachhi and occasionally in Jhalawān, but rough piles of stones, strewn about almost at random, often surrounded by a low wall. They can be described from afar by the rags and tatters that flutter from the collection of poles stuck up over them. Though a shrine is often the actual grave of some saint, almost anything seems to serve as an excuse. One shrine may mark the spot where the saint disappeared below the earth; another the spot where he performed some miracle; another, more humble in origin, but none the less worshipful for that, the spot where he said his prayers. Hither come all who are in need, sickness, or any other adversity, to entreat the saint for the fulfilment of their desires, vowing to sacrifice this or that in return—the barren woman to pray for children, the sick to pray for health, the traveller for a safe return from his travels, the hunter for luck in the chase. Hard by most shrines of high reverence there are sacrificial altars, where the attendants preside at the sacrifice and receive a set portion of the flesh as their wage before it is distributed in alms. . . . Some shrines there are in which largish stones, polished and, to all seeming, chiselled with devoted care, occupy the place of honour in the niche towards which the worshippers direct their prayers. In a certain Chāgai shrine there stands a stone, about two feet high, with a flat base and a rounded, bullet-shaped head, too lifelike, it would seem, to be other than the conscious work of men's hands. It is hard to avoid the conclusion that in this far-off shrine the pious Musalmān is bowing his head all unwittingly before a *lingam*, an ancient relic of pre-Islamic times.'⁶ 'The belief of the Hindus in Muhammadan saints is nearly as great as that of the Muhammadans themselves. Pilgrimages are made by the Hindus to the shrines of the various Musalmān Pīrs, who are believed to have power to cure diseases, give children, . . . perform all kinds of miracles. One of the most favourite . . . Shāh Bilāwal on the Windhar river near . . . The Hindus have gone so far as to name the stream which passes the shrine of Shāh Bilāwal the Ganges, and the ashes of the dead are thrown into its water.'⁷

4. The orthodox Muhammadan saints.—The orthodox saints of Islām in India form a hetero-

geneous group. Among the titles applied to them are *pīr*, 'old,' 'reverend'; *wālī*, 'one who is very near';¹ *quṭb*, 'axis,' 'pivot,' the highest degree of sanctity among Muslim saints; *ghaus*, 'one to whom we can cry for help'; *buzurg*, 'high'; *zāhid*, 'abstinent,' 'ascetic'; *ābid*, 'a worshipper [of God]'; *sālik*, 'a traveller,' a Sūfi term; *faqīr*, 'one who is poor in the sight of God'; *shāikh*, *mīr*, *miyān*, 'chief,' 'master.'² See art. SAINTS AND MARTYRS (Muhammadan in India).

5. Martyrs.—The Arabic word for 'martyr' used in India is *shahīd*, 'one who is present as a witness,' the perfect martyr (*ash-shahīd al-kāmil*) being one who has been killed in a *jihād*, or religious war.³ The sites of battles with Hindus or other 'infidels' are known as 'treasuries of martyrs' (*ganj-i-shahīdān*). It is remarkable that many of these shrines are visited by Hindus, who have themselves adopted the cult, as among the Hindu and Sikh Jāts of the Panjāb, whose tribal shrine (*jaṭherā*) sometimes commemorates an ancestor who was a martyr, the spot being marked by a mound of earth or a masonry shrine, round which the bridegroom walks and bows his head at his wedding.⁴ Sūr Sadi, a Chibh Rājput, died by a violent death in the reign of Aurangzib, and is venerated as a martyr. The Muhammadan branch of the sept offer the scalp-locks of their children at his tomb, and, until this rite is performed, the child is not considered to be a true Chibh, and his mother is not allowed to eat meat.⁵

LITERATURE.—See the literature quoted in the article.

W. CROOKE.

SAINTS AND MARTYRS (Iranian).—I. Introductory.—The idea of 'saints' and 'sainthood' will of course differ greatly in various religious systems. Whilst all will involve blamelessness of character and life and, generally at least, beneficence to others, in some there will be also combined the ideas of asceticism, or intensity of devotion, and even absorption in the Divinity, often with the addition of extraordinary supernatural powers, such as the gifts of miracle-working and prophecy. The Indian religions afford many illustrations of these ideas. Perhaps a more general formula would be that of the most perfect conformity in life and conduct to the ideals and precepts of the particular faith to which the saint belongs and of which he is looked upon as a hero or model. The Zoroastrian idea of sainthood is simple and easily defined. At no era of its development has the idea of asceticism ever entered into the concept.⁶ As M. N. Dhalla writes, speaking of the Gāthīc theology:

'The Zoroastrian saint is more a saint in action than in thought. He is the one whose mission for the advancement of the world is to live in society and to minister to the wants and grievances of the less fortunate of mankind. He is not the recluse who assumes the tonsure, dons the ash-coloured robe, and besmears his face. The Zoroastrian saint does not sacrifice for the self-centred self, he sacrifices for others. The ascetic that selfishly seeks his own personal salvation, without contributing his mite to the general uplift of humanity and the regeneration of society, as well as the redemption of the universe, is not so much the beloved of Ormazd as is the active saint who lives in the world of joy and sorrow, without separating himself from the world of activity. . . . The true devotee of religion does not withdraw from the company of men in seeking the blessed company of Ormazd.'⁷

¹ 'Are not, verily, friends (*auliā*, pl. of *wālī*) of God they on whom is no fear?' (*Qur'ān*, x. 63).

⁷ *Ib.*, 1901, v. p. 47.

All this is practically true of the Mazdean religion throughout its history and in all its stages. It is the characteristic difference between Mazdeism and all forms of Hinduism, with its *yōgis*, *sannyāsīs*, or *faqīrs*. But, more than this, Dhalla's last sentence hints at the absence of another element, which has led J. H. Moulton, in his posthumous work, to say :

'One who loves and reveres Zarathushtra confesses with keen reluctance that saintship seems less easy to find in his community than in some religions which are far inferior in the apprehension of Truth. The reader will have realized ere this that with all its grandeur and purity Zoroastrianism as a whole has a certain coldness.'¹

In other words, there is lacking, as above remarked, the element of personal 'devotion' to the Deity, so conspicuous not only in India but also, e.g., in the Sūfīs of Persia. As Moulton puts it, 'Love is not the power that inspires the Gathas. The very word is practically absent from them.'²

The Avestan word that corresponds to our 'saint' is *ashavan* (*ašavan*, pl. *ašaono*), a derivative of the substantive *asha* (*aša*), whether used as an abstract term signifying 'righteousness,' 'holiness'—the Old Persian *arta*, so common as an element in proper names, corresponding etymologically with the Skr. *ṛta*, 'established order,' 'divine law,' 'truth,' 'right,' and the Latin *ritus*—or as the name of the archangel or genius *Asha*, the personification of these ideas, originally conceived as an attribute of Ahura Mazda 'within the hypostasis of deity.'³ *Ashavan* is strictly opposed to *dregvant*, the latter indicating a follower of Angra Mainyu, the spirit of evil, and his *daevas*, the former an adherent of Ahura Mazda, the supreme deity, and his 'good law.'⁴ In this sense, then, it may be used in general of all good Zoroastrians, like 'saints' in the NT. But it also indicates specially the chief and most illustrious members of the Faith, and of course, *kar' ēfošn*, Zarathushtra himself.⁵ Among those to whom the title of *ashavan* is specifically given in the Avesta we find such heroes of the Faith as Frashaostra, Jamāsp, Vishtāspa (the Prophet's royal patron), Hvōvi (the Prophet's wife).

2. Cult of the saints.—Under this heading must come the special homage paid to those enigmatical beings, the *fravashis* of the holy ones.⁶ Among the *Yashts* there is a very long 'litany of the saints,' the *Farvardin Yasht*,⁷ devoted to these personages—at least 336 in number—which Darmesteter likens to 'a Homer's catalogue.'⁸ The last 27 are the names of female saints, either married or 'holy maids,' headed by Zarathushtra's wife Hvōvi and his three daughters. The great bulk of the names in the catalogue are quite unknown; some are of mythical personages; a considerable number are of the Prophet's patrons and chief disciples, headed by his own name. Like the other *Yashts*, this 'litany' is of comparatively late date, so we are not surprised to find here and there certain miraculous powers attributed to some of the saints. But it is more interesting to note that it not only embraces 'the first man,' Gayo Meretan, and winds up with Saoshyant, the future Saviour, who is to come at the end of the world, but includes also a number of those personages called *paōiryo-kaēsha*, 'men of the Old Law,' who were believed to have worshipped Ahura Mazda and held his religion even before the coming of Zarathushtra, and who may be strictly compared to the Patriarchs of the OT before the Mosaic dispensation. To each name of the litany is attached the verb *yazamaide*, 'we worship (or venerate).'

⁷ Y't. xiii.

⁸ *SBE* xxiii. [1893] 179.

In the later Pahlavi, or so-called 'patristic,' literature the term *arta*, exactly corresponding to the Old Persian, as opposed to the Zend or Avestan form, is used as an epithet like our 'saint,' applied once at least to Zarathushtra (Zarathushtra) himself, and especially to Virāf, the Mazdean Dante, whose famous visit to hell and heaven is the subject matter of the *Artā-i Virāf Nāmak*,¹ which may be exactly translated 'the Book of Saint Virāf.'²

3. Martyrs.—Strictly speaking, a martyr is one who lays down his life in the cause of his religion or faith. There is a fairly unanimous tradition that the prophet Zarathushtra himself ended his life in this manner with 80 of his priests. The whole story is gone into with great wealth of detail and careful weighing of evidence by A. V. Williams Jackson in his life of the Prophet.³ Briefly summed up, it comes to this:

During the last twenty years of Zarathushtra's life there were waged 'holy wars' between the Iranian king Vishtāspa, the Prophet's convert—who has been styled the Constantine or the Ethelbert of his religion—and the Turanian Arjastasp, or Arjasp, the great enemy of the Faith. A dispute about tribute is said to have been the pretext of the Turanian invasions: 'the actual ground for difficulty, however, seems to have been the religious difference; for Vishtāspa's adoption of the new Faith really lies at the basis of the trouble.'⁴ The tradition is that it was during the second invasion, in all probability 583 B.C., that Zarathushtra with the other priests was massacred whilst at worship in the fire-temple (according to some P.P.) and 'the fire was quenched with their blood.' The G.A. report about the Prophet's death by lightning seems to be quite ungrounded.

The celebrated 'magophonia,' or slaughter of the Magi, under the Achæmenid monarch Darius (521 B.C.) can hardly be reckoned in this category of martyrdoms; for it is by no means certain that these 'Magi' were really Zoroastrians, whilst, on the other hand, the bloody execution was a political measure rather than a religious persecution. Alexander the Great, after his overthrow of the Persian monarchy, though he was always referred to in subsequent Mazdean literature as 'the accursed Alexander' (*gajastak Alaksagdar*) and credited with the wanton destruction by fire of the greater part of the original Avesta, adopted a policy of conciliation with the Persians, and no religious persecution or martyrdom marked his reign. But the Arab conquest (A.D. 641) brought with it violent persecution of the Mazdean religion and real martyrdom for the few unhappy adherents of the national Faith who refused to adopt the creed of Islām, or did not succeed in making their escape from Persia, like the small band of 'Pilgrim Fathers,' the forbears of the modern Parsis of India. The great majority of the people seem to have been thus forcibly 'converted' to Muhammadanism—it is said at the rate of 100,000 a day⁵—so that the number of those who laid down their lives instead of apostatizing must have been relatively small, and no record of them seems to have been kept.⁶

LITERATURE.—See the ordinary translations and commentaries of the Avesta, and the writings of Dhalla, Moulton, and Williams Jackson as quoted in the footnotes.

L. C. CASARTELLI.

SAINTS AND MARTYRS (Japanese).—The true national religion of Japan, i.e. Shintō, knows neither saints nor martyrs. The absence of martyrs is easily explained. A martyr, in the proper sense of the word, is a man who suffers torture and even death to testify to the truth of his religious faith. Now, at the dawn of Japanese history we find Shintō firmly established as an official religion, its

origin lost in legend; later, when Buddhism was introduced, its triumphal progress, largely due to the eclecticism of the Japanese, entailed no persecution of the partisans of the ancient worship. If we take the word 'martyr' in the broader sense of a man who suffers death for any noble cause—for the defence of a particular idea or of a political opinion—we find innumerable examples in the history of a heroic people like the Japanese, even in modern times; but these are not martyrs in the normal sense, the sense in which we speak of Christian martyrs.

As regards saints, their non-appearance in Shintō is simply due to their confusion with the gods. An expression which appears continually in Japanese literature is 'the *kami* and the *hotoke*,' 'the gods [of Shintō] and the saints [of Buddhism],' meaning the whole spiritual world of the two religions. Whilst Buddhism has practically no gods, but simply saints, Shintō has, properly speaking, no saints, but only gods. It does not, like Buddhism, reserve its admiration exclusively for men who, by their wisdom and intelligence, usually through several successive existences, have finally reached the perfection of Buddhas. Nor has it, like Christianity, a special category for the souls of the faithful who, sustained by divine grace, have died in the observance of certain religious virtues, have earned fame by miracles, and been assigned a place in paradise by their living adorers. In Shintō those who would be called saints by Buddhists or Christians are enrolled directly in the ranks of the deities, with the same rights as nature-powers or ancestors famed for achievements, services, useful discoveries, or other merits equally unconnected with sanctity. This conception appears very natural when we remember the extremely vague and relative character of the Japanese *kami*. See art. HEROES AND HEROGODS (Japanese). MICHEL REVON.

SAINTS AND MARTYRS (Jewish).—Judaism has its martyrs and its martyrologies, its saints and its specialized teachings on saintliness; but the position held by these in the Synagogue and its liturgy is far less prominent than that held in the Christian Church by the parallel literature. The Jew understood the word 'saint' (*kādōsh*, *hāsīd*, or *tsāddik*) in quite a different sense. He was never made an object of religious worship, whether in life or in death; and the Christian idea of the canonization of saints on account of their eminently pious and pure lives is quite foreign to Jewish theology, which has nothing analogous to the *Acta Martyrum* and the *Acta Sanctorum* of the older Church. Whilst the Christian Church celebrated the anniversaries of the deaths of its saints by the intensely mystic formulæ connected with the sacrifice of the Mass, the Synagogue looked upon the heroes of the faith as Jews who had fulfilled the Law with heart, soul, and might, and who, if the necessity arose, would have undergone torture and death rather than infringe its commands. Many of these saints certainly did lay down their lives for the Law, but their claim to sainthood is based not upon the fact of their martyrdom but upon the exemplary Jewish life which they led. Nevertheless, the Synagogue perpetuated the memory of these martyred saints in a prayer commencing 'Ab Hā-rāhāmim' ('Father of Mercies'), which was, and still is at this day, recited in all places of worship on the last days of festivals, on the Day of Atonement, and on the Sabbaths preceding the feast of Pentecost and the 9th of Ab (the anniversary of the destruction of Jerusalem).

But there was another way—one partaking rather of a religio-secular character—in which the

memories of saints and martyrs were kept from fading. The custom arose among the Jews of mediæval Europe of compiling necrologies. MS lists which, originally known as *Sēfer Hā-Zikrōnōth* (i.e. 'Book of Records'), afterwards became generally known as 'Memor-Books' (Germ. *Memorbuch*) were made of the names of martyrs and of the localities in which they met their fate. These 'Memor-Books' were possessed by many a mediæval synagogue, and the contents were read out to the congregation during service on holy days and on the Day of Atonement. The 'Memor-Books' bore some resemblance to the necrologies, calendars, and martyrologies of the Roman Catholic Church—but only in form; in matter they are essentially and characteristically Jewish. The object of the compilation seems to have been not so much that of inciting to prayer on behalf of the dead—a practice by no means over-prominent in Jewish worship—as that of preserving for future generations the inner history of local communities. The names recorded in these lists—the earliest extant specimen being the *Memor Book of Nuremberg*, begun in 1296 by a scribe, Isaac ben Samuel of Meiningen, and presented to the community of Nuremberg at the dedication of one of its synagogues in 1296—are principally, though by no means entirely, those of Jews distinguished for their great Talmudic learning or for their admirable qualities as philanthropists or communal workers. The entire book, in which numerous entries were made after 1296, was edited by S. Salfeld¹ in 1896-98, and contains, besides poems (in Hebrew) and prayers for the heroes who sleep their last sleep, an elaborate martyrology which is introduced by a summary of the persecutions suffered by the Jews of France and Germany from 1096 (the year of the First Crusade) till 1298, the names of the martyrs between 1096 and 1349, and a list of towns and villages in which abundant martyrdoms took place at the time of the Black Death (1348-49). It is of this blood-stained period of Jewish history, stretching down to the 17th cent., that Graetz says:

'The persecutions and massacres of the Jews increased with frightful rapidity and intensity, and only alternated with inhuman decrees issued both by the Church and by the State, the aim and purport of all of which were to humiliate the Jews, to mark them with conspicuous brands, and to drive them to suicide. . . . It mattered little to the Jews whether they lived under proper government or under anarchy, for they suffered under the one no less than under the other.'²

The mediæval Jewish communities which suffered the greatest numbers of martyrdoms were those of Worms (1096 and 1349), Cologne (1096), Mayence (1096 and 1349), Blois (1171), Nuremberg (1298), Troyes (1288), Navarre (1328), Augsburg (1349), and Erfurt (1349). According to Zunz,³ the communities of Cologne, Worms, Mayence, and a few other cities in the Rhine district observed fast-days in memory of the saints and martyrs who perished 'for the Sanctification of the Name' during the First Crusade (1096).

Mention must here be made of one exceptionally striking martyrology to be found in the Midrashic literature and known as the *מדרש עשרה הרוגי בבל* ('the Midrash of the Ten Martyrs') or *מדרש אלה* ('the Midrash beginning with the words, "These do I remember"'). There are four extant versions of this, each differing from the others in various points of detail.⁴ The work is a product of the Gaonic period of Rabbinic literature and is a curious embellishment of the narratives given in many passages of the Babylonian Talmud and the

early Palestinian Midrashim¹ of how ten great and saintly teachers of the Law suffered martyrdom in the reign of Hadrian for having, in defiance of an imperial edict, founded schools for the study of the *Tōrah*. The ten martyrdoms are represented as having taken place on one and the same day, which is contrary to the Talmudic view. This was most probably done with the intention of heightening the effect on the reader. These ten martyrs were all of them 'saints' in the real Jewish sense of that term—men of exceptional learning in the Law and of spotless conduct, whose single-minded, self-sacrificing zeal in the cause of the propagation of the *Tōrah* among the masses showed itself in a readiness to accept torture and death rather than a life in which the Law of God had no place. The most famous of the ten is 'Aqiba ben Joseph (A.D. 50–130), whose last moments are invested by the Rabbinic recorders with an ultra-heroic fortitude.

Amidst his excruciating agonies he recited the *Shema* with a peaceful smile on his face. Asked by the executioner whether he was not a sorcerer, seeing that he appeared to feel no pain, 'Aqiba replied: 'I am no sorcerer, but am overcome with joy at the thought that the opportunity has at last been given me of carrying out the Deuteronomic precept, "And thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy might." He expired with the word 'One' (i.e. confession of the Divine Unity) on his lips.

The deaths of several of the remaining nine martyrs are ornamented with highly-coloured details which are purely legendary. It has ever been, and still is to-day, the custom of the Synagogue to recite the martyrdom of these ten sainted Rabbis in a special *selihah* (i.e. prayer for forgiveness) on the Day of Atonement. The *selihah* is a poem based on the above-mentioned 'Midrash of the Ten Martyrs.' Another poetic form of it appears in the *Kinah*, commencing with the words 'Cedars of Lebanon,' recited in all orthodox synagogues on the 9th of Ab.

It remains now to state more explicitly what, in the Jewish view, constitutes the quality of saintliness and the title to the dignity of sainthood. As has already been said, one need not have undergone martyrdom in order to be regarded as a saint; and the fact that many among the latter order became martyrs is but one of the accidents of history. M. H. Luzzatto has aptly characterized the Jewish standpoint thus:

'Whosoever loveth God the Creator with a true love will not think that he has acquitted himself of this duty of love by merely following out the religious rules which are practised by Jews generally. He will rather resemble the loving son who carries out the father's wish to an extent far beyond what the father expects of him—and all for the purpose of causing him additional pleasure.'²

In other words, saintliness is a higher stage of religious loyalty transcending all idea of law or rule. The Talmud expresses it thus:

'Sanctify thyself even in that which is permitted to thee.'³

Such is the saintliness which in the Talmud and all the Jewish mediæval theology is termed *hāsīduth*. The doer of it (i.e. the *hāsīd*) does not wait for a distinct commandment. His service of God is prompted and sustained by his own inner instincts untrammelled by any instruction from without. One possession, however, is indispensable to him—learning. The saint must be a man of learning; and only a man of learning can be a saint.⁴ The Mishnah speaks ironically of the 'illiterate saint,' stigmatizing him as belonging to those undesirable 'who turn the universe into a chaos';⁵ and the Talmud describes such an 'illiterate saint' as 'one who would see a woman drown without giving her a helping hand because of the rule forbidding a man to look upon a woman.'⁶

Besides the saints mentioned in the early part of this article as having undergone martyrdom, the following who were not martyrs stand out prominently: Hillel the Elder (30 B.C.–A.D. 10), who at his death was eulogized as 'the saint, the meek, the disciple of Ezra';¹ R. Hūna and R. Hīsda (4th cent. A.D.), whose prayers for rain were very efficacious;² Mar Zūtra (4th cent. A.D.), who, when finding it necessary to rebuke a disciple and put him under the ban (*hērem*), would first exercise these inflictions on himself and then on the disciple.³ The typical Jewish saint of the Middle Ages is R. Judah ben Samuel Hā Hāsīd of Regensburg († 1217), who wrote, in Hebrew, a famous ethical work (*Sēfer Hāsīdim*) which contains various original and quaint maxims relating to this order. The mediæval *hāsīd* was usually saint and mystic combined. Superior holiness, independence of 'law,' and a partial withdrawal from things earthly brought about a state of communion with the divine which is the prime incentive to the mystic life.

LITERATURE.—In addition to the literature already alluded to see A. Neubauer, 'Le Memorbuch de Mayence,' in *REJ* iv. (1887) 1ff.; H. Graetz, *Gesch. der Juden*, Leipzig, 1860–78, iv. 161ff.; S. Schechter, *Some Aspects of Rabbinic Theology*, London, 1909, pp. 199–218; *JE*, s.vv. 'Martyrology,' 'Martyrs, the Ten,' 'Saint and Saintliness.' J. ABELSON.

SAINTS AND MARTYRS (Muhammadan).

—1. Relation of the two terms.—The saints of Islām are commonly regarded as martyrs, but the latter term is of wider application than the word 'saint.' Those who die in the 'holy war' (*jihād*) are martyrs, but not necessarily saints.

2. General prevalence of the veneration of saints.—Every neighbourhood in the Muslim world has its patron saint and in addition recognizes the claims of saints elsewhere. There are also saints who belong to the universal community of believers rather than to the special shrines where they are honoured. To this class belong the Prophet, the first three *khalīfahs*, 'Alī, his two sons, the Khidr, the greatest of the OT worthies, and possibly some others.

3. Names.—The common Arabic term for a saint is *walī*; for a martyr it is *shahīd*. The former implies more precisely one who is near, a friend (i.e. of God); it is usually applied to living saints, but is very generally employed of the dead. The term is also used regularly in a secondary sense for the tombs of the saints. *Shahīd* is, primarily, one who gives testimony as an eye-witness, then one who seals his testimony with his blood (commonly employed in the plural *shuhadā* of those who are killed fighting the battles of Islām). The living saint, particularly, is spoken of as the *shaiḥ*, in the same honorific way as we make use of 'elder,' though with more intensive meaning. *Zahīd* has a special reference to the ascetic self-denial of the eminently pious. *Sā'ih* has in view rather the hermit saint who retires from the common life to dwell in the desert. The *Ṣūfī* is a member of the mystical movement called in Islām *Ṣūfism* (q.v.). The *Ṣūfī* may be a saint, but the term does not necessarily declare that he is.

4. Attitude of Islām towards saint-worship.—(a) *Sunnīs*.—Since the days of al-Ghazālī (12th cent. A.D.) the Sunnite branch of Islām (excepting the Hanbalite school) has given its approval to the cult of the saints. The orthodox teachers claim that what is accorded the saint is not worship. Nor is there any thought of the saint having power in himself to answer prayer. The Qur'ān and the Sunnah recognize intercession on the part of those favoured by Allāh, and the orthodox Sunnīs say that there is no cult of saints beyond the permissible seeking of their help as mediators

¹ See, e.g., T.B. 'Abdōh Zārāh, 17b, 18a; Ber. 61b; Sanh. 14a; Lam. Rabbāh, ii. 2.

³ T.B. *Mō'ed Kāṭān*, 17a.

with God. The more intelligent may approach Allāh in this orthodox way, but the vast majority of unthinking Muslims regard the *walī* as being a proper object of worship and in himself the source of blessing. The Bedawin and the Kabyle tribes of N. Africa, with the *fellahin* of Egypt and Syria, may employ phrases which seem to imply an orthodox attitude, but in reality the saint is a far more real God to them than Allāh is. If the orthodox teachers of the Sunnis were not compelled to accept the facts of the situation, they would see that the general practice of Islām as to the saints was a violation of the Qur'an and the Sunnah. It imperils the unique deity of Allāh and leads directly to *shirk*, the 'association' of other objects with Him in worship. It sets aside the authority of the Prophet in adopting a basis of religion which is in conflict with the primary sources sanctioned by him.

(b) *Shī'ahs*.—The Shī'ahs are enthusiastic worshippers of the saints, and their writers especially have been responsible for the production of martyrologies and other literature relating to them. Persia has been the home of Muslim mysticism. It is the native soil of the Sūfī movement, and within Sūfism there is provided a prescribed discipline for saintship. The whole Shī'ah movement is one which gathers round the idea of a 'Holy Family,' and most of all about the sufferings of the 'People of the House,' as the family of 'Alī and the Prophet's daughter Fatima were styled. In the 'People of the House' (*Ahlu 'l-Bait*) there has been found a conspicuous invitation calling their followers to saintship, and in the spiritual atmosphere charged with emotion excited by their pains and sacrifices there has been a powerful stimulus to imitation. The Sūfis have gone beyond loyalty to recognized authority as understood by the Shī'ah. Their ideal is a life in which law and authority have no place and the notion of obedience is excluded. For this reason the orthodox Shī'ahs are jealously suspicious of the professors of saintship among the Sūfis. The saints of the Shī'ah provinces have very often based their claims upon alleged descent from the holy *imāms*: they are *sayyids*, nobility. They are in parts so numerous that their number has become a subject of innocent jesting. The Persians, as well as the Berbers of N. Africa, are more favourable to women saints than are the Arabs.

(c) *Hanbalites*.—The Hanbalites find no room for the cult of the saints. They hold that it is contrary to the Qur'an and the Sunnah. To this the other Sunnites, who are favourable to the cult, answer that it is supported by the Consensus of Islām through hundreds of years. The Hanbalites do not deny the authority of the Consensus (*Ijmā'*), but claim that *Ijmā'*, properly understood, embraces only the agreed opinion of the first age of Islām. The Consensus of the Companions of the Prophet condemns the offering of worship to any but Allāh, and this, added to the voice of the other great authorities, Qur'an and Tradition, is deemed to be decisive against the practice. The Hanbalite school has made its influence felt at different times. 'Umār II., at a date earlier than the foundation of the school, had refused to face the grave of the Prophet towards Mecca, lest it should become a shrine where prayer would be offered to the Prophet along with Allāh. Ibn Taimiyya, a Hanbalite, in the 14th cent. A.D. wrote against the veneration of the *walīs*, including the cult of the Prophet's tomb at Medina. The latter had become part of the prescriptions for the *hajj* and had come under Hanbalite censure as *bid'a*, 'innovation.' Earnestly as Ibn Taimiyya set himself to oppose the popular favour shown to the saints, he accomplished little and brought persecution upon him-

self. He died in prison in A.D. 1328, and by a certain irony of fate came to be regarded as a saint by those who accepted his views. The Hanbalites kept alive his principles until, at the end of the 18th cent., the iconoclastic Wāhhābī crusade again sought to make them effective by the destruction of tombs and shrines throughout Arabia and the adjacent lands. Not even the most venerable shrines, such as the tombs of the Prophet and the earliest *khalīfahs* at Medina, and the shrines of the great martyrs of the Shī'ahs—'Alī, Husain, and the *imām* Ridā—were spared. The Wāhhābī desolation was brought to an end when Muhammad 'Alī's forces finally overcame the Wāhhābī army in 1818. Since that time the Wāhhābīs have been indeed represented by the Wāhhābī State in central Arabia, by groups of extreme Hanbalites in the eastern part of Arabia, and by a few sectaries in India; but the attempt to check saint-worship has been a failure, nor will it ever succeed as long as Islām continues to be what it has been for 900 years past.

5. The conception of saintship in Islām.—The saint is one who is near to God, a 'friend of God.' In Islām, as in less advanced religions, this has no necessary ethical implication. It does imply the indwelling and inspiration of 'divinity.' The saint has a supernatural quality by reason of which he (or she) is held to be above criticism and by some is thought to be invulnerable against attack on either body or soul. It is this quality that explains the superhuman knowledge and power of the saint and makes him the source of either miraculous blessing or terrible and mysterious curses.

This 'light of the saint' is said by the orthodox to come to him as a gift of God through the mediation of the Prophet. The miracles (*karamāt*) are a grace from Allāh with which He honours His servant. The orthodox will not allow that the saint is by nature more than human nature commonly suggests. What is beyond that is endowment. In the thought of the Muslim peasantry and the Bedawin of the desert there is only one conception, namely, that the saint is of a divine nature and can by reason of his inherent capacity do acts that lie properly within the power of God and know things knowable only to a god. It has been truly said that, in spite of their profession of Islām, the ignorant populations in many Muslim lands have but slight spiritual relations in religious thought and feeling with any god other than the *walī*. Allāh is at most a name, without power to stir interest in those who use it, and without effect in moulding their purposes.

In the case of each individual saint there was a time when he began to be esteemed a saint. Those about him took note of certain characteristic features. He was a man whose thought was filled with God, who lived in God, and whose acts were moved by God. He was judged to be a man who had renounced desire and had become completely passive, a vessel for divine inspiration, a receptacle for a deposit of divine qualities and influences. To the soul thus prepared there come such thoughts and impulses as are proper to a life secluded, shut off from the avenues of ordinary human experience, and shut in to a purely self-occupied experience which is saturated by a ruling religious motive. The impression made by a man of such a mode of life would be infallibly that of a man 'possessed' by divine influences. Such a mysterious human being easily fancied himself the recipient of divine communications or one appointed to undertake marvels. His proofs were subjective and were not easily disputed by others. Many of the saints have been eccentrics, defectives, or idiots (not insane). Such persons have

been thought to be saints because they, too, have become emptied receptacles which Allāh was to fill and use. Their pure souls have been taken up to heaven, and what has remained of them was esteemed a most meet and fitting vessel of inspiration. As long as this class of persons was typical of what a saint should be, the lesser peculiarities, begotten of mere habitual introspection and negation of self, procured a reputation for sanctity in proportion to their extravagance.

While many who have achieved saintship did not renounce the world and separate themselves from their fellow-men, the surest path to saintship was found in poverty and a contempt of the world. Thus it comes about that the typical garb of the saint is that of the beggar and his habit of life is that which answers to his garb. Poverty and sanctity are so far synonymous that the most effective counterfeit of the saint is the *faqir*, or beggar—a term which still serves to indicate the saint, but is also all too commonly made to denote beggars who, being such and nothing more, would pass for saints.

The contempt for the world led a fair proportion of the saints to a hermit life in the desert or, in the case of the Sūfis, to a cloister life under the direction of a *murshid*, or spiritual director, often in a *zāwiyah*, or community house. Scorn of the world also finds expression in another way. The saint spurns the esteem of men, deeming it a temptation to a divided devotion, and provokes with careful deliberation their ill-will. In this way he is the more inevitably set apart unto God. With this traditional attitude, it is easy to understand that in the early days of the khalifate the 'saints' were in many cases opposed to the government of their time and were found allied with seditious movements and conspiracies. For one or other party in a quarrel to obtain the support of some powerful *shaiikh* was sure to bring many to that side. The saints as a matter of course were generally of the revolutionary party; but they were not always so. The illustrious martyr, the *imām* Ridā, was bought at a great price to support the policy of the *khalifah* al-Mamun, and many of the most influential of the *shaiikhs* of Morocco in the 16th cent. A.D. were supporters of the reigning rulers. The earliest of the Safawid kings of Persia in the 16th cent. were themselves saints and enjoyed the spontaneous support of the *shaiikhs* of their time. In fact, the saints of the modern period of history have been loyal to the powers that be and have been held in esteem by them.

One of the cherished evidences of saintship is the inspired dream or the ecstatic vision in which the Prophet, one of the *imāms*, or one of the greater saints appears to one who is thus shown to be in the favour of heaven. The nature of the communication granted is not as important as the vision itself.

There is no disapproval of the warlike character in a saint. It has always been to the glory of the Prophet that he was a man of war; and, among his successors, the holy martyrs 'Alī and Ḥusain acquired an added lustre of saintliness from the fact that they were men of proved martial quality. In the hagiologies the warlike deeds of the saints find a large place. There is found also allusion to carrying a saint's dead body into battle to ensure victory.

According to the accepted view, the *walis* form an invisible order with ascending dignities and ranks. At the head is the leading saint of the age, who bears the title *qutb* (literally 'pole,' 'axis'). Under him are deputies, commonly reckoned to be three in number, and in Egypt designated by the respective names, *nakīb*, *nagīb*, and *badil*. He has his favourite abodes on earth, one of which is the

roof of the Ka'bah in Mecca and another the Bab-az-Zuwallah (or Bab al-Mutawalli) in Cairo. It is his custom to appear in some familiar disguise among men, and to reveal his presence at times by the performance of some mysterious and uncanny act which, despite unpromising appearances, often turns out to be really beneficent in its purpose. Among the saints of Morocco two or three are said to have attained the rank of *qutb*, but there is reason to suppose that this refers rather to the perfect stage of the Sūfi *tarīqah*, or discipline.

The pains and death of the *walis*, especially of such as had been the victims of persecution, were deemed to have a merit not needed on their own account by beings of such sanctity. Such merit therefore is supposed to be available for those who seek the intercession and help of the saint. It is both prudent and pious to entrust one's soul to such an one as the *walī*, whether for this life or for the life to come. It is from this kind of motive that Muslims in all parts of Islām desire that their bodies should rest under the shadow of some *walī* (here used in the secondary sense of the tomb of a *walī*). The presence of the tomb of Ḥusain at Kerbela, that of 'Alī at Nejef, and that of the *imām* Ridā at Meshed have caused the bodies of thousands of persons to be brought to these places for burial, sometimes from a great distance. In Syria¹ the *walis* (tombs of the saints) stand frequently in the midst of a number of humbler graves which have gathered about them as time has passed. The dead rest in peace under the protection of the *walī*.

While it would be admitted to have occurred only in very rare cases, the teaching of Islām is that the gifts of a saint may be withdrawn by Allāh for mortal sin or for infidelity.

6. Origins of the cult of saints.—It is in the essential nature of Islām that it should call for a renunciation of the world and a committal of oneself to God. Consistently, therefore, the Prophet himself, on entering upon his preaching mission, gave up secular ambitions (*dunya*) and urged his hearers to do the same. In contrast to the motive of later saintship, Muhammad's motive in demanding renunciation of the world was not to meet the requirements of a profession, but to glorify Allāh and save men's souls. The term which came to be applied to such an ascetic withdrawal from the world as Muhammad at first contemplated is *zuhd*. It implies an ideal which the opportunities and temptations of power soon thrust out of his thought, and as long as his followers were occupied with the lust and sweets of military conquest it remained neglected. There are traditions dealing with the Prophet's Medinan period which echo even positive disapproval of the ascetic life. Shortly after Muhammad's death the pious life seemed to have found its best type in men diligent in religious duties while at the same time efficiently pursuing the aims of their earthly vocation. It was inevitable that a religious revolution like Islām, in its period of reconstruction following the early conquests, should revert to its original ideal. The ascetic life claimed many followers and in the early days of the Umayyad *khalifahs* they were described by a special name, '*ubbād*' (= 'religious' in the French sense of the word). This term implies a life with two distinctive aspects: (1) exclusive occupation with God (*tawakkul*); (2) worship in prayer, recitation of the Qur'ān, and meditation (*dhikr*).

About the close of the 1st cent. of the Hegira men began to write about the marks and rules of the saintly life, and devotees began to be regarded as divinely inspired. There was furnished a motive to turn true saintliness into a professional

¹ Cf. art. SAINTS AND MARTYRS (Syrian).

calling. For this the suggestion was conveniently at hand in the presence of Christian monks and hermits within the Muslim domain. Abstinence, poverty, and reproach became the badge of sanctity, and the rough woollen garb (*ṣūf*) of the beggar and criminal was chosen to advertise saintship as a vocation. The Ṣūfī movement took its start from this unorganized pursuit of what was now conventionally recognized as a holy life. Ṣūfism originated in Persia, but before it took its rise the profession of the saint was already as widespread as Islām itself.

It has been intimated that the earlier saints of Islām were men engaged in the public affairs of their time. With the growing ascendancy of the Turks in the eastern khalifate, the devotees were gradually eliminated from positions of influence, but meanwhile the Ṣūfī life had become more popular, and the number of those who adopted it gradually increased. The movement was carried into Africa and Syria, and wherever it went it produced its own type of saints—a type which exaggerated the features of the earlier devotees and intensified the interest in the mystic aspects of religion. The later saints of Islām have probably all felt the influence of the Ṣūfī spirit and practice, though even among the Shī'ahs the extreme type of Ṣūfī is condemned; in Egypt they are under the supervision of the Shaikh al-Bakrī. The Safawid dynasty had its origin in a line of Ṣūfī saints, and in its early days (1502 onwards) there were fairly good relations between official Shī'ism and Ṣūfism.

7. *Cult of the saints.*—The living saint is resorted to for the purpose of securing his advice or his decision in a legal dispute, to obtain his opinion as to the success of private or public undertakings, to ask his intercession on behalf of the sick, or to seek the gift of a child, especially a son. His active help may be requested and given for various purposes, inasmuch as nothing is too difficult for his miraculous powers. The removal of some blight or plague from field or flock, the healing of human ailments, the confounding of enemies, are all within the province and gift of the *shaikh*. Those whom he serves are only too glad to provide for him the means of living. His interposition is beneficent to those who ask it with honest purpose, but to those who oppose him or act dishonestly his supernatural power works in awful and mysterious punishment. The supernatural element in the saint is an extremely jealous and resentful power, very like the divinities of primitive monolatrous communities. There is a natural awe before one on whom has descended the 'light of inspiration'; in his immediate vicinity marvels happen; men do not presume to treat him familiarly; only the profane would venture to dispute his purposes, and only the recklessly wicked would dare to inflict persecution upon him. Physical contact with a saint, whether with or without his knowledge, may draw from him a supernatural effluence for healing or blessing, and objects that have been in close relation to his person may operate for good or harm without his being present.

The dead saint is in the nearer presence of God, and, according to a principle found widely in primitive religions, is more fully charged with supernatural influence than he was during his lifetime. He is now a *walī* in a more potent sense, one in whom the divine is more intimately at home and more readily active. Many more persons now resort to him, and much greater pains are taken to gain access to him and to do him honour. Men assume towards him the same worshipful attitude as they assume towards God, and freely think of him as one who can secure to them all the blessings for which men usually ask God. For the unreflecting worshipper the approach to the saint

seeks no Higher Being beyond him, and rests fully satisfied in his sufficiency. The cultivation of the *walī* is a truly religious practice which often takes the place of the worship of Allāh. The phrases of orthodoxy and the Qur'ān are echoed in the liturgy of the saints, but they are used by ignorant and humble worshippers as magical formulas to predispose the saint favourably. Nevertheless, Muslim authority has taken the *walī* cult under its protection, and one may say that the real power of Islām over its lower classes lies in its promotion of saint-worship on the one hand and in the emotional atmosphere created by Ṣūfism on the other. It is to the credit of al-Ghazālī that he found a way to retain these more vital forms of religious life as elements of Islām wherewith to counteract the effects of its unappealing dogmatism and institutionalism.

The local centre of the saint's influence after his death is his tomb. From that centre a tutelary benefit extends over the neighbouring community, of which he is the patron spirit. Beyond that his magical influence may reach as far as a prosaic peasant imagination may deem it strong enough to go, possibly to a radius of fifteen miles from the tomb. But the virtue of a *walī* may be carried to any distance by his relics. The most cherished of these is his ragged robe, which falls to the successor nominated by himself. It is especially infected by the supernatural quality of its one-time owner.

One leaves one's prayer with a saint at his shrine together with a vow to be fulfilled when the answer is received. Meanwhile the act of petition truly performed has been an act of faith in a power believed to be divine, and the petitioner goes away comforted by the reaction of his own faith—a blessing of no little moment. Occasionally prayers are written and left in faith at the grave of the saint.

8. *Tombs of the saints: walls.*—These are of common occurrence in all parts of the Muhammadan world. Every little village has its *walī*. As a rule they are placed in a conspicuous position and are readily recognized by the domed roof of the building containing the grave. The dome (*kubbah*) is whitewashed, care being taken in every well-regulated community that some individual or family shall assume responsibility to give it a new coat when needed.

In poor and out-of-the-way places the tomb, sometimes called *kubbah* as well as *walī*, may be only a rude, frail structure of sticks, perhaps open above to the sky. In some cases a natural cave has been chosen as the shrine because of ancient religious or demonic associations. Sometimes the location of *walīs* has been determined by a lingering tradition from an earlier pagan or Jewish sanctuary. Again there are cases where, in the lack of a historical saint, the name of the place itself becomes the text for a saint's legend, which then becomes attached to the spot and makes out of it a *walī*, or saint's tomb. In settled communities the *walī* comprises a plot of ground, the front part of which constitutes a court, possibly 20 ft. square, and generally surrounded by a wall. Beyond this is the tomb proper (*kubbah*), which is often a low building 15 to 20 ft. square. Within the *kubbah* is the grave, which may be a somewhat elaborate structure, or again may be only a plain cenotaph. There may be grated windows, a grating overhead, and a grated door. The doorposts, the lintel, and the threshold or door-step play an important part in the blood ritual of the saint's cult. The grave is covered with a cloth, sometimes green, sometimes white.

Within the *kubbah* are found offerings of many kinds which have been left with the saint, though edible offerings, where they are left at the shrine,

are perquisites of the *shaikh*, or ministrant. In some of the *walīs* there have been found great numbers of jars and other pieces of pottery, many of which have been broken in honour of the saint. Attached to the gratings of the *kubbah* or placed upon the grave are articles of apparel or rags torn from them. Those who thus leave in contact with the *walī* articles which have been associated closely with their persons are supposed to be under his care and to share in the blessing of his efficacious influence. The neighbouring tree or grove of the saint is his property and a part of the shrine. To the tree of the *walī* rags and articles of clothing are likewise attached, and with a similar motive.

In the court of the *walī* there is sometimes found a spring forming a pool or fountain. It may be a mineral spring, possibly a hot spring, in which case it is connected with the healing powers of the *shaikh*, and to drink or bathe, as the case may be, will cure disease, remove sterility, or restore the mentally deranged, provided the good offices of the saint can be secured.

The area of the *walī* affords asylum from blood revenge and places animals or other property which may in any way come within the sacred limits under the protection of the saint; the animal or article becomes his property for the time being. In various parts of Syria farming implements are found lying about the tomb of a *walī*; there is no likelihood of their ever being disturbed or appropriated, as the curse of the saint is thought to rest upon the violator of his tomb. In spite of this feeling that the saint will fully guard his own rights, there is also a lively jealousy on the part of the saint's worshippers in certain cases, and intrusion upon the sanctity of a shrine may be violently punished by them. This E. H. Palmer¹ proved on the occasion of his visit to the famous tomb of Nebī Harin, in the Sinaitic peninsula. The Benē-Ma'azeh, who are the special followers of the saint, angrily resented the visit which they supposed he had made to the shrine, and serious trouble was narrowly averted.

The *shaikh*, or ministrant, as a rule lives in the neighbouring village or town. The office generally descends in a given family, and in some cases not merely one member is set aside as *shaikh*, but the several males of the family are designated to act. The function of the *shaikh* is to direct worshippers as to their duties, to supervise the offering of votive sacrifices, and to receive the portion of the saint, which is quarter of a sheep or goat, together with the hide, or a relatively smaller share if the victim be a larger animal, such as a cow or camel. The *shaikh* may be called upon to furnish what is lacking to a sacrificial meal, if the number of participants be too large for the offerer's portion of his sacrifice. The offerer may ask or buy from the ministrant the additional provision which he requires.

The sacrificial victim is regularly a male animal at least six months old. It is slaughtered by the offerer, usually at the door-step of the *kubbah*. It is thrown upon its left side and made to face towards Mecca, and is killed in this position. The blood is applied to the door-posts of the tomb and sometimes to the lintel. In a number of instances the victim is slaughtered upon the roof of the *kubbah* in such a position that its blood flows down over the lintel of the door-opening. Very often, instead of the blood being smeared, the hand of the offerer is dipped in the sacrificial blood and imprinted upon the door-posts. In the case of a child who has been the subject of a vow the blood is applied to the forehead and the tip of the nose or to the latter only.

Where the offerer is too poor to afford anything

more, it is permissible to bring to the saint a fowl. In the case of inability to bring the victim, or to have present at the shrine those who should take part in the feast, permission may be given to conduct the ceremonies at home and bring the price of the *shaikh's* part to the *walī*.

Most of the offerings are votive in character. A visit is made to the saint's tomb with the object of obtaining his help in order to secure some desired end. The petition is presented with due observance of the required ritual, and with it a vow is made contingent upon the fulfilment of the petition. When the prayer has been fulfilled, the vow is due. It may be a vow calling for an offering made once for all, or it may call for a yearly offering. If the vow be not paid, the saint is supposed to visit dire temporal misfortune on the recreant worshipper; notwithstanding this, unpaid vows are regularly collected in some places by a person appointed for the purpose.

The feast which is enjoyed by the worshipper and his friends is not a commensal feast in which the divinity makes one with other guests at the table, nor is there any notion of the victim being itself sacred or divine. The view is that the *walī*, out of what has become his property by the gift of the offerer, spreads a feast for his guests and they, as they share the feast, rejoice before him. The victim is made ready, not by roasting, but by boiling.

The occasional worship represented by the visits of those who have vows to make and petitions to present, or who wish to pay a vow, contains also an element of honorific worship. The motive is not wholly self-centred. The ritual expresses reverence and adoration such as belong to religious worship, and the desire is to celebrate the greatness of the saint and give him his meed of respect. The recitation of the Qur'ān, the repetition of the formulas, the feast, are for the saint in the sense of being for his advantage. They are to him in the sense of being a tribute of worship. The offering of the blood has a special motive; in many instances it is a *keffārah*, which may be understood to be a means of removing sin; in other more numerous instances it is a *fedū*, which may be taken to imply a propitiatory offering or a ransom.

The individual or family visits to the *walī* are properly described by the term *ziyārah*, though less frequently the term *hajj* is employed. The latter term in strictness belongs to the Meccan pilgrimage. The *ziyārah* is more especially applied to the annual pilgrimage which is observed in connexion with the greater number of shrines. These annual pilgrimages are occasions when the whole community, men, women, and children, takes part, and, in the case of some famous saints, people from far and near also participate. This is to be observed at the annual feast of Nebī Mūsā, east of the Dead Sea. There are reported to have been as many as 15,000 present at the annual celebration of this *walī*. The great days at Meshed, Nejeff, and Kerbela are occasions for the whole Shi'ah world. At some of the shrines Jews and Christians are present to do honour to one who has often had a longer record of respect with them than among the Muslims. The participation on the part of non-Muslims is confined for the most part to saints who were Jewish or Christian before they were Muslim. At very many *walīs* the intermingling of outsiders and Muhammadans is not allowed. As Palmer¹ described the annual *ziyārah* at Nebī Sāleh, it included a procession round the *kubbah*, a visit to the grave, the sacrifices, and the common festival meal. Outside of these prescribed obligations, the time was occupied by merry-making and apparently love-making, by games

¹ *The Desert of the Exodus*, New York, 1872, p. 364 ff.

¹ *Op. cit.* p. 218 f.

and contests of various kinds. The annual feast of the saint is regularly fixed on the traditional day of his birth, the *maulid* of the *walī*.

Other feasts are held at many shrines. In some cases the month day of the saint is kept.

Such saints as al-Khidr, the Qutb, 'Alī, Ḥusain, and Hasan, and even St. George (Mar Jirjis, *mar* = *walī* in Syria), are deemed ubiquitous, though they have their local shrines and local community of worshippers. The same may be said of some of the Shī'ah *imāms*, especially 'the Hidden *imām*.'

The Metāwileh and the Nuṣairiyah of Syria have an exaggerated reverence for saints. The latter should not be regarded, however, as Muslims. The Ismā'īliyah, wherever they are found, have developed extreme views likewise.

9. Efficacy of the cult.—It is firmly believed that miraculous answers are granted to the petitions presented to the saints, and it may be allowed that instances of child-bearing have followed such prayers. For these the most satisfactory explanation is that mental suggestion has been powerful enough to effect a desired physiological change. It is the belief of the *walī*-worshippers that, in cases of barrenness, conception, if it occurs, is to be attributed to the saint. It is said that this belief leads the *shāikhs* in charge of some shrines to actual cohabitation with women who come seeking the gift of a child from the saint. It has not been shown that this occurs often.

The relics of the saint are often preserved in connexion with the tomb and have in themselves efficacy for blessing. The merits of the saint have atoning value with God and constitute a ground of confidence in the efficacy of his intercession. To the merits of the *walī* the devotions of those who worship at his grave add increase continually. But, as intimated above, for most of those who come the idea of the saint as a mediator is not uppermost. He is looked upon by them as in himself an original source of help and blessing.

The effect of the *walī*-cult has been to foster superstition and belief in magic among the ignorant classes of Islām. It has, nevertheless, served to bind more firmly to the Muslim faith those who are its votaries. For centuries the orthodox leaders of Islām have endorsed the cult and allowed it to develop as it would. They have supported it with contributions and recognized continually and officially the gifts of private individuals for the maintenance of the local and national shrines of the saints.

WALTER M. PATTON.

SAINTS AND MARTYRS (Muhammadan in India).—The hagiology of Muslim India is as abundant and diversified as that of any other part of the Muhammadan world, and in many respects this rich development is probably due to the Hindu influences with which Islām in that country has been surrounded. As in all hagiographic literature, we find not only that historical personages have been canonized, but that legends have grown up around names for which there is no authentic record, and the cult of local saints can often be shown to be the survival of an earlier faith which has passed on into Islām under another guise.

1. Chishtī saints.—Among the saints of whom there are ample historical records there are certain outstanding figures whose influence upon the religious history of Muslim India has been considerable, especially those belonging to religious orders, such as the Chishtī, the Suhrawardī, the Qādiri, the Shattārī, and the Naqshbandī. Each of these religious orders originated outside India, but enjoyed a considerable vogue in that country; the first was introduced by Khwājah Mu'in al-Dīn Chishtī, a native of Sistān, who migrated to India and reached Dihlī in the year (1193) in which the troops of Muhammad Ghōrī captured that city; later he settled in Ajmēr, where he attracted to himself a large number of disciples; he died at Ajmēr in 1236, and his tomb still attracts thousands of pilgrims. In the same year died another saint of the Chishtī order, Khwājah Qutb al-Dīn Bakhtiyār Kākī, who was born in Farghāna and spent a wandering life visiting holy men in Baghdād and other places; when he came to India, Iltutmish wished to make him *shāikh al-Islām*, but the saint refused this high office; he spent the last years of his life in intimate friendship with Mu'in al-Dīn Chishtī, whom he predeceased by a few months; he was buried at Dihlī near the great minaret, the Qutb Minār, which is called after his name. Among his disciples was Shaikh Farīd al-Dīn Shakarganj, who died in 1265 and was buried at Pakpattan, midway between Multān and Lahore, where his shrine is visited by a large number of devotees and is still in charge of one of the descendants of the saint. He had two famous disciples, each of whom has given his name to a separate branch of the Chishtī order, his nephew Shaikh 'Alī Šābir († 1291), and Nizām al-Dīn Awliyā, who was recognized by Farīd al-Dīn as his *khalīfah* ('successor') when he was only twenty years of age; he established a *khānqāh* (convent of dervishes) in the neighbourhood of Dihlī and exercised a great influence over the court and the men of letters who were attracted to the capital; he died in 1325 and his grave has been a place of pilgrimage ever since. One of his disciples, Sayyid Burhān al-Dīn, is one of the most famous saints of the Deccan, and is buried in Rawzah (in the Haidarābād State), where also is the tomb of his equally famous successor, Zain al-Dīn Dā'ūd († 1370). Nizām al-Dīn's spiritual successor was Nāsir al-Dīn Mahmūd († 1356), known as Chirāgh-i-Dihlī ('the lamp of Dihlī'), whose tomb is also visited by many of the faithful. One of his disciples, Muhammad Gīsūdārāz (i.e. 'with long curls'), migrated to the Deccan, where he and his descendants enjoyed the liberal patronage of the Bahmanī Sultans, and a magnificent tomb was erected in Gulbarga over his remains when he died in 1422; for persons who are unable to undertake the journey to Arabia a pilgrimage to his tomb is said to be attended with the same benefit as performing the pilgrimage to Mecca. The renown of these saints gave a great impulse to the spread of the Chishtī order, which in succeeding centuries produced a large number of saints, among whom two are of special importance—Shaikh Salīm Chishtī († 1572), in whose house the emperor Jahāngīr was born, an event which prompted his father, Akbar, to build the wonderful city of Fatehpūr-Sikrī in the vicinity of the saint's hermitage; and Khwājah Nūr Muhammad, known as Qibla-i-'Ālam († 1791), whose influence led to a wide extension of the Chishtī order in the Panjāb and Sindh.

2. Suhrawardī saints.—The Suhrawardī order was introduced into India by disciples of the founder of the order, Shihāb al-Dīn Suhrawardī, who taught in Baghdād; one of these, Shaikh Jalāl al-Dīn Tabrizī († 1244), made his way to Bengal, where a

shrine, to which is attached a rich endowment, was erected in his honour; another, Bahā al-Dīn Zakariyā († 1266), settled in Multān, in the neighbourhood of which he had been born, and his tomb, which he is said to have built during his lifetime, is one of the few great monuments of Indian architecture of this period. One of his disciples, Jalāl al-Dīn Surkhpōsh († 1291), a Sayyid from Bukhārā, settled in Uchh (in the present Bahāwalpūr State) and was the progenitor of a long line of saints, and his descendants still guard the shrine of their great ancestor; but his fame is outshone by that of his grandson and successor, Sayyid Jalāl, known as Makhdūm-i-Jahāniyān ('served by all mankind'), who is said to have made the pilgrimage to Mecca 36 times and to have performed innumerable miracles. One of his grandsons, Burhān al-Dīn († 1453), known as Qutb-i-'Ālam ('the pole-star of the world'), settled in Gujarāt, as did his son, Muḥammad Shāh 'Ālam († 1475), who played an important part in the political and religious life of his time.

3. Qādiri saints.—The Qādiri order has had a considerable extension in India, as in most other parts of the Muslim world; though the founder, Abd al-Qādir al-Jilānī ([*q.v.*] † 1166), never visited India, shrines erected in his honour are common, in some of which relics of him are venerated; *e.g.*, his tooth-brush is said to have taken root in Ludhiāna and to have grown into a tree, near which an annual fair is held, which is attended by 40,000 to 50,000 persons. The festival of his death is widely celebrated in India on the eleventh day of the month Rabi' II., with reading of the Qur'ān, offering of prayers, and the reciting of the 99 names of the saint;¹ at times of plague or cholera processions are held in his honour, and childless parents vow to dedicate to him any son or daughter that may be born to them through his intercession. The Qādiri order was introduced into India by Sayyid Muḥammad, known as Bandagi Muḥammad Ghawth, a native of Aleppo, who migrated to India and settled in Uchh in 1482, and died there 35 years later; many of his descendants were also saints and workers of miracles, and his tomb at Uchh is still kept up by members of his family, who preserve there some precious relics, such as a footprint of the Prophet, a turban of 'Abd al-Qādir al-Jilānī, etc. Among the numerous saints of the Qādiri order mention may be made of Shaikh Mir Muḥammad, known as Miyaṇ Mir, who died at Lahore in 1635—he was the spiritual preceptor of Prince Dārā Shikōh, and his tomb is still held in reverence—and of Tāj al-Dīn († 1698), one of the descendants of 'Abd al-Qādir al-Jilānī, whose tomb is at Aurangābād.

4. Shaṭṭārī saints.—The Shaṭṭārī order has also produced a number of saints—*e.g.*, Muḥammad Ghawth, who counted the emperor Humāyūn among his disciples; when he died in 1562, Akbar built a magnificent tomb in his honour at Gwalior; one of his disciples, Wajih al-Dīn Gujarāṭī, a man of great learning and considerable literary activity († 1539), is buried at Aḥmadābād. Another saint of the same order, Shāh Pir († 1632), is buried at Meerut in a mausoleum erected by Nūr Jahān, wife of the emperor Jahāngir.

5. Naqshbandī saints.—The Naqshbandī order did not attain such a vogue in India as the others mentioned above; it was introduced there by Shaikh Aḥmad al-Fārūqī, who died at Sirhind in 1625, and there are several other shrines of saints of this order in India, notably that of Shāh Musāfir († 1698) at Aurangābād.

It is not possible here to enumerate all the religious orders of Muslim India, or the hundreds

of saints that have arisen within them or outside. Of those already mentioned there is some historical record, but in many instances it is difficult to disentangle historical fact from a mass of superincumbent legend.

6. Missionaries and miracle-workers.—Many of the Muhammadan saints played an important part in the promulgation of Islām in India; *e.g.*, Mu'in al-Dīn Chishtī is said to have received a call to preach Islām to the unbelievers in India while on a pilgrimage to Medina, when the Prophet appeared to him in a dream and bade him spread the faith in that country; he is said to have converted 700 persons in Dihli on his way to Ajmēr, and when he settled in the latter city the number of his converts increased rapidly. Makhdūm-i-Jahāniyān is said to have converted several of the tribes in the Panjāb, and both Bahā al-Dīn Zakariyā and Farid al-Dīn Shakarganj were successful in their missionary work in this part of India. Sayyid Nathar Shāh († 1039) was the pioneer of Islām in S. India, and his tomb in Trichinopoly is still a place of pilgrimage; a later saint, Shāh al-Ḥamīd, who died in Nagore, carried out successful missionary tours in this part of India and finally settled in Nagore, where he is buried. A number of saints are famous for the conversions which they effected in the Deccan; among them is Muḥammad Gīsūdārāz, mentioned above. The success of their propaganda is often attributed to miraculous powers.

E.g., Jalāl al-Dīn Tabrizi is said to have converted a Hindu milkman to Islām merely by a look. Ḥasan Kabir al-Dīn, one of the saints of Uchh, is said to have had a like miraculous power, and it is told of him that once when he was sick he called in a Hindu physician, who refused to come, fearing that the saint might convert him by a mere glance, but sent word that he would examine his urine; and, as soon as he looked at it, he at once accepted Islām. Imām Shāh of Pirāna, who worked in Gujarāt in the latter half of the 15th cent., converted a large body of Hindu cultivators by bringing about a fall of rain after two seasons of scarcity; on another occasion, meeting a band of Hindu pilgrims passing through Pirāna on their way to Benares, he offered to take them there; they agreed and in a moment were in the holy city, where they bathed in the Ganges and paid their vows; they then awoke to find themselves still in Pirāna and adopted the faith of the saint who could perform such a miracle. A similar story is told of Ḥasan Kabir al-Dīn, who saw a number of Hindu pilgrims passing through Uchh on their way to the Ganges; he offered to show them both of the holy rivers, the Ganges and the Jamna, flowing at that very spot, if they would renounce their false religion; certain definite marks of identification were agreed upon whereby the rivers might be recognized, and next morning they saw the Ganges and the Jamna flowing parallel to one another, and having all the marks of identification that had been asked for; whereupon all the pilgrims embraced Islām.

7. Ascetic practices.—Several of the saints referred to above spent many years in wandering, making frequent pilgrimages to Mecca, or visiting contemporary saints and the tombs of departed saints. Miyaṇ Ḥatīm of Sambhal († 1562) spent ten years roaming about, bareheaded and barefooted, in the waste country about Sambhal and Amroha, never sleeping on a bed. Muḥammad Ghawth († 1562) spent twelve years among the hills north of the Ganges, practising severe austerities, feeding on the leaves of trees, and sleeping in caves. Al-Badā'oni gives interesting details of the ascetic practices of the saints who were his contemporaries. Of Shaikh Burhān († 1563) he writes:

'For nearly fifty years (before his death) he had abstained from fleshmeat and from most other articles of food and drink, contenting himself with a little milk and some sweetmeats; and at the end of his life he abstained also from drinking water, so that to outward appearance he was an incorporated spiritual form, supernaturally illuminated. He had a very small and dark cell in which he constantly sat, engaged in reciting God's praises and in meditation and contemplation.'¹

Al-Badā'oni describes also the state of ecstasy or religious trance which was a frequent experience in the religious life of these saints. Of Miyaṇ Ḥatīm he says:

'He was a man who took a keen pleasure in contemplating

¹ For an account of this festival see Jaffur Shurreel, *Qanoon-e-Islām*, ch. xviii.

¹ *Muntakhabu-t-tawārīkh*, tr. T. W. Haig, iii. 10.

God and whom the singing of God's praises threw into an ecstasy of delight, and ever, as he spoke and smiled, the name of God was on his tongue. In his last years the intoxication of joy which he experienced in his love of God so overpowered him that to listen but for a short space to the chanting of God's praises placed him beside himself.¹

The saints belonging to the various religious orders spent much of their time in the devotions peculiar to the order (the so-called *dhikr*), which consisted of continued repetitions of the name of God, of the creed, etc., and in instructing their disciples in the due performance of these devotions and in the practice of meditation. These religious exercises were sometimes (especially among the members of the Chishtī and Suhrawardī orders) accompanied by religious songs and dances, and many anecdotes are recorded of the intense religious fervour excited on such occasions. Of Shaikh Badr al-Dīn (a contemporary of Farid al-Dīn Shakarganj) it was said:

'In his old age when he was unable to move, the sound of a hymn would excite him to ecstasy and he would dance like a youth. When asked how it was that the Shaikh could dance notwithstanding his decrepitude he replied: "Where is the Shaikh? It is Love that dances."²

8. Unorthodox saints.—A clear distinction is drawn in India between (a) the above-mentioned religious orders, which are *ba-shar'*, i.e. in accordance with the ordinances of the Muslim law—the adherents of which, and the devotees of the saints belonging to them, are for the most part orthodox Muhammadans and comprise persons of culture and education—and (b) the *be-shar'* orders, the members of which often do not submit their lives to the customary rules of the religious law of Islam; the devotees of their saints are mostly to be found among the uneducated sections of the Muhammadan population and among those Hindus who worship Muhammadan saints. It is seldom possible to find any historical foundation for the legends of these saints, which are filled with wild and fantastic stories; it is, e.g., doubtful whether there was ever such a person as Shāh Mādār, whose shrine is at Makanpūr, about 40 miles from Cawnpore; according to the legend, he was a converted Jew, born at Aleppo in the middle of the 11th cent.; he made his way to India and expelled a demon named Makan Deo from the spot where he himself is now venerated; he is believed to be still alive within his tomb. His devotees are said to be secure against snakes and scorpions and to have power to cure those who have suffered injury from them. The *faqirs* who are termed Mādārī, after the name of their patron saint, are wandering mendicants or jugglers and do not observe the ordinary Muslim prayers, and are consequently regarded with disfavour by the orthodox. His cult has a wide extension in Muhammadan India and a large number of pilgrims visit his tomb.³ There is equal uncertainty as to the historicity of Sakhi Sarwar, a famous worker of miracles, who has been variously assigned to the 12th or 13th cent.; after many wanderings he settled down in Nigāha, at the edge of the Sulaimān mountains, where his shrine is visited by a large number of pilgrims, Hindu and Sikh as well as Muhammadan; but other shrines of this saint are found elsewhere and almost every village in the Central Panjāb contains one.⁴ Among the *be-shar'* orders are reckoned the followers of Mūsā Suhāg, who lived at the close of the 15th cent.; his prayers for rain are said to have delivered the country from a threatened famine; he dressed in women's clothes as a symbol that he was devoted

to God as a wife to her husband, and the members of his order still dress like women and are celibate. Near his tomb at Ahmadābād is a tree the branches of which are covered with glass bangles, thrown by persons who pay their vows to the saint; if the bangles stay in the tree, they believe that their petition will be granted. Among the ignorant Muhammadans there is a quintet of saints who enjoy an extensive popularity; these are the Pāñch Pīr, 'five saints,' who are worshipped by illiterate persons throughout the greater part of Muslim India, as well as by large numbers of Hindus. They are fully treated in art. PANCH-PIRIYĀ. One of the saints who is often reckoned among the Pāñch Pīr is Khwājah Khizr, a saint who is known all over the Muhammadan world and is commonly identified with the nameless companion of Moses in the Qur'ān;¹ he is worshipped in India as the protector of travellers and especially of seamen and boatmen and of all whose occupation is connected with water in any form; e.g., a goat is sacrificed to him when a new well is sunk, and in Bengal his annual festival is celebrated by setting afloat on a river at sunset little rafts of plantain stems or small paper boats, carrying a light.

Veneration is also commonly paid to giant saints, the so-called *naugaza*, or saints nine yards high, whose tombs are of this length; often no knowledge is claimed of the name of the saint, or he may be described merely as a *shahīd* ('martyr'); in some cases an impossible attempt is made to identify the *naugaza* with one of the Companions of the Prophet; e.g., such an antiquity is claimed for the giant saint, Muhammad Ibrāhīm, whose tomb is at Jalna, in the Haidarābād State. The *naugaza* at Firōzpūr, in the Panjāb, is identified with Ja'far al-Šādiq, sixth *imām*, who died at Medina in 765.

9. Famous shrines.—The worship of saints is severely reprobated by many Muhammadans, notably by the Wahhābīs; and those of the educated classes who do resort to their shrines maintain that the saints are only asked to intercede with God; but there is no doubt that among the lower classes prayers are directly addressed to the saint and the desired result is believed to lie within his power. Devotees may resort to the shrines of the saints on any occasion of need; but there are certain saints who are especially prayed to for particular temporal blessings. A large number are believed to grant the petitions of childless women, and others effect the cure of special diseases; e.g., lepers resort to the tomb of Shāh Sufaid, in the Jhelum District, or that of Dāūd Jahāniyān, in Muzaffargarh; Mūrān Nau Bahār, a disciple of Farid al-Dīn Shakarganj, cures hysterical fits; a cock should be offered at the tomb of Shaikh Saddū, in Amroha, for the cure of mental ailments. Nizām al-Dīn († 1705), whose tomb is at Lahore, is famous for curing warts; dust from the shrine of Pīr Bukhārī in Quetta is a specific for venereal diseases; in the Hazāra country persons suffering from neuralgia make a pilgrimage to a shrine at Jatti Pind, those troubled with coughs to the shrine of 'Abdūl Wahhāb Ghāzi at Qāziān. The litigant appeals to Shāh Minū († 1478), in Lucknow, for help in legal difficulties, or to Mansūr Pīr, at Gaya. In Lahore the oilmen frequent the tomb of Hassū Tēli, the blacksmiths that of Shaikh Mūsā, the dyers that of 'Alī Rangrēz. In Bengal Pīr Badar of Chittagong is the guardian saint of sailors, while the boatmen on the Chināb and the Indus invoke Bahā al-Dīn Zakariyā as their patron saint in times of difficulty. Owners of barren cows pay vows at the tomb of Khākī Shāhā or of Mūsā Nawāb in the Bahāwalpūr Territory. Shēr Shāh of Multān is the protector of persecuted lovers. To Shāh Daula

⁴ H. G. Raverty, 'Account of a Visit to the Shrine of Sakhi Sarwar,' *JASB* xxiv. (1855) 239 ff.; M. Macauliffe, 'The Fair at Sakhi Sarwar,' *Calcutta Review*, ix. (1875) 78 ff.

of Gujrāt in the Panjāb parents dedicate microcephalic children. Students make offerings of sugar at the tombs of Shāh Latīf Qādirī or of Amīr Ḥasan Sanjarī († 1337) in the Aurangābād District (Haidarābād State), in the hope of improving their memories. The shrine of Shāh Daula used to be frequented every Friday by dancing-girls, and they also look upon Tānsen, the famous musician of Akbar, as their patron saint. The worship of Shaikh Saddū is in Bengal almost entirely confined to Muhammadan prostitutes, but there are several other saints for whom they have a predilection. Persons possessed by spirits are cured at the shrine of Mirān Sayyid 'Alī in N. Gujarāt, and several other saints are invoked by persons so afflicted.

There are some shrines into which women are not admitted, such as that of Jātī Abdāl (Abdāl the chaste ascetic), a servant of Prince Dārā Shikōh, in the Multān District; some, on the other hand, are especially frequented by women—*e.g.*, the grave of Sultān Ahmad Qattāl, who was born at Uch in 1542 and, after many years of wandering, during which he visited the holy cities of Islām, settled down in Jalālpūr (in the District of Multān), where he died in 1631; a large fair is held near his tomb every Friday in the month of Chet (March–April), during which evil spirits are exorcized from women who are believed to be troubled by *jinn*s; the tomb of Zain al-Dīn Biyābānī († 1503), at Fūkrābād (Haidarābād State), is also especially frequented by women.

There are also a certain number of shrines of women saints, particularly in Baluchistān; *e.g.*, that of Bibi Nāhzan (near Kalāt), who sank into the earth together with her maid when they were persecuted by some infidels, is visited by persons who have been bitten by mad dogs, and those who pay a fixed contribution to the shrine secure immunity from cholera; persons bitten by mad dogs also resort to the tomb of Bibi Nāzo, a Sayyid lady of Mastung; in the Loralai District a virgin saint, named Haro Ana, guards the Wanēchīs (a section of the Tarīn Afghāns) from the incursions of their enemies; in the neighbouring Marri country (at the southern end of the Sulaimān Range) there are also the shrines of several female saints. In the Panjāb, in the District of Multān, is the tomb of a woman named Māi Sapūran, who has given her name to the village where she lies buried; she was a disciple of a saint named 'Abdul Ḥakīm, who died in 1732; she was able to spread her prayer-carpet on the waters of the river Ravi and kneel for prayer upon it, and could cure the bites of mad dogs. At Firōzpur, in the same province, an annual fair is held in honour of a woman saint, named Māi Amīrān Sāhiba.

10. Offerings and festivals.—To win the favour of some saints, certain specific offerings have to be presented. To Sālār Masūd at Bahraich a long embroidered flag is offered. Khājūria Pir, whose tomb is at Ambala, must be given a white cock in full plumage and a plateful of sugar and cardamoms, to effect a cure of the palsy. Bahā al-Dīn, a Bukhārī Sayyid, a boy-saint who died at the age of five, is propitiated by the gift of a clay horse, and these toy horses are stacked up round his tomb in thousands. Childless women offer toy cradles at the shrine of Quṭb Nikka, in Baluchistān. Small horses made of cotton cloth, stuffed with sawdust, are hung up in the tomb of Shāh 'Alam († 1475), near Ahmadābād. But the usual offerings are of sweetmeats or some kind of food, and a goat or a fowl on special occasions.

The annual festival held in commemoration of a Muslim saint in India is called 'urs (*i.e.* 'nuptials,' as signifying the union of the saint with God) and usually takes place on the date of his death. The

day before the 'urs is in some parts of the country called the *sandal*, because pots containing sandal-wood paste are carried in procession through the streets and deposited at the shrine for the use of the votaries. The festivities sometimes last for several days and are attended by a large concourse of persons; at Ajmēr, *e.g.*, the celebration of the 'urs of Mu'in al-Dīn Chishtī is continued for six days, and in some years as many as 25,000 persons, from all parts of India, have taken part in it; in the courtyard of the shrine are two enormous copper boilers fitted into solid masonry, the larger one capable of holding 5400 lbs. of rice, the other about half as much; these are filled with a mixture of rice, milk, honey, etc., and the contents, when thoroughly cooked, are distributed among the pilgrims. From 50,000 to 60,000 persons are said to attend the 'urs of Farid al-Dīn Shakarganj, who is reported to have declared that whosoever should pass through his shrine on the anniversary of his death would gain a place in paradise; the silver entrance-door through which the pilgrims struggle is known as the Gate of Paradise. The annual festival of 'Alā al-Dīn Šābir, at Pirān Kaliar (in the Sahāranpūr District), is attended by 40,000 pilgrims, while as many as 100,000 flock to the tomb of Sālār Masūd at Bahraich.

Some of the tombs of Muslim saints in India are stately, magnificent buildings and are counted among the finest monuments of Muhammadan architecture in the country, having been erected by emperors, sultans, or wealthy devotees. Some shrines also receive gifts from Hindus; *e.g.*, a railing of solid silver was given to the shrine of Mirān Sayyid 'Alī in N. Gujarāt by a Gaikwar of Baroda. Many of these tombs, on the other hand, are plain, unpretentious buildings, or may even have nothing to distinguish them from the graves of ordinary men.

Besides the tomb of a saint there is often a subsidiary memorial of him to mark the place where he kept a *chillā*, or fast of 40 days, and invocations are offered to him here also. In the Deccan there are about 360 *chillās* sacred to the memory of Dāwal Shāh Walī, the son of one of the nobles of Maḥmūd Bigarāl (1459–1511), who travelled about extensively on proselytizing missions.

11. Upkeep.—Several of the greater shrines of Muhammadan saints have large endowments or have attached to them landed property, from which a considerable income is derived. If the original saint was a historical personage, this religious endowment is generally in the hands of one of his descendants, who is styled the *sajjāda-nishīn* (lit. 'sitting on the prayer-carpet'); the office is generally hereditary, or in default of issue descends to a successor nominated by the childless *sajjāda-nishīn*; he has a number of *murīds* (disciples or followers), some of whom live at a distance, and an agent of the *sajjāda-nishīn* goes round among them at intervals to collect contributions. Other shrines depend merely on casual contributions. At the shrine of Sakhi Sarwar the pilgrims enter into a regular contract with the spirit of the saint, and written promises of future payment are inscribed on the walls, on condition of the fulfilment of certain petitions.

12. Outstanding examples of saint-worship.—In no part of India has the worship of saints attained so rich a development as in the Pathān country in the north-west and among the Brahūis in Baluchistān. Almost every village has its patron saint, who is credited with the possession of miraculous powers of healing or protection: some are said to have produced the spring from which the village obtains its water; others are canonized ancestors. In the Brahūi country a place without a shrine is held to be a place that should

be avoided, and the Pathāns carry their reverence for shrines to such an extent that in Bhangikhel (in the Mianwali District, Panjāb) a Sayyid is said to have been murdered and buried, in order to supply the deficiency of a sacred tomb in the neighbourhood.¹

A similar story is told of the Afridī Pathāns of Tīrah, who had shame in the sight of their brethren, in that their territory was blessed with no holy shrine at which they might worship, and that they had to be beholden to the saints of their neighbours when they wished for divine aid. Smarting under a sense of incompleteness, they induced by generous offers a saint of the most notorious piety to take up his abode amongst them. They then made quite sure of his staying with them by cutting his throat, they buried him honourably, they built over his bones a splendid shrine at which they might worship him and implore his aid and intercession in their behalf, and thus they purged themselves of their reproach.²

13. Muslim saints and Hindu cults.—In many instances there is no doubt that the shrine of a Muslim saint marks the site of some local cult which was practised on the spot long before the introduction of Islām. Such a survival has frequently occurred in the Buddhist shrines in the Gandhāra country (in the north-west of India) and to an enormous extent in the case of Hindu sacred places in Kashmir; e.g., the tomb of Bāmadīn Shāhib, which is a popular place of pilgrimage for Muhammadans in Kashmir, has been identified with an ancient Hindu temple built by Bhīma Shāhi, the last Hindu king of Kabul († 1026); the saint is now said to have been a Hindu ascetic, who bore the name of Bhīma Sādhi before his conversion to Islām; a pious Hindu monarch is thus transformed into a Muhammadan saint, and a legend formed to bring the local cult into harmony with the new faith.³ In like manner many Muhammadan shrines in Kashmir mark the site of a *tīrtha*, or place of pilgrimage, in the Hindu period. In India proper the origin of the local cult is often more difficult to ascertain, but it is significant that the tomb of Sālār Mas'ūd is said to occupy the site of a former temple of the sun, and the mosque of Shaikh Saddū, at Amroha, was also originally a temple. The Pānch Pīr are undoubtedly reminiscent of the Pāṇḍavas, the five hero brothers of the *Mahābhārata*, and it is significant that the shrine of Sakhi Sarwar (in the Dera Ghāzi Khān District) contains, besides the tombs of the saint and his wife, a shrine dedicated to Bābā Nānak and a temple to Viṣṇu, and that Hindus believe that Shāh Mādār is an incarnation of Lakṣmana, the brother of the god Rāma. The influence of Hinduism on a Muhammadan religious order is strikingly exemplified in the case of the shrine of Sādiq Nihang, in the Jhang District (Panjāb); the *faqīrs* in charge of the shrine keep up a number of Hindu practices; e.g., the superior of the order remains celibate⁴ and a disciple succeeds him, in contrast to the usual practice at a Muhammadan shrine, where the succession passes from father to son; a fire is kept alight day and night, and once a year a large loaf of bread is cooked at this fire and distributed to all present. These are Hindu customs, but there is no doubt about the Muslim orthodoxy of the superior and the other *faqīrs*. In a similar manner there is little doubt that Bābā Ratan, whose shrine is at Bhatinda in the Patiala State, is a Hindu Yōgi who has been adopted into the Muhammadan calendar of saints.⁵

The process of canonization continues to the present day, and new saints are from time to time

¹ *Census of India, 1911*, vol. xiv., Punjab, Calcutta, 1913, pt. i. p. 172.

³ Kalhapa, *Rājataranginī*, tr. M. A. Stein, London, 1900, i. 240.

⁴ The *sajjāda-nishīn* of the tomb of Shauq Ilāhi, in the Bahāwalpur State, is also always celibate.

⁵ *Journal of the Panjab Historical Society*, Calcutta, 1913, vol. ii. no. 2.

included in the calendar; e.g., at Mōtīhāri in Bengal a *pīr*, named Fatukī Sā'in, who died between 1860 and 1870, is worshipped as possessed of miraculous power and is invoked by litigants.

14. Martyrs' graves.—The term *shahīd* ('martyr') is given a wide interpretation in Muslim India; primarily it commonly means one who has died while fighting in defence of the faith, but nineteen other ways of attaining the glory of martyrdom are enumerated—e.g., dying in the act of reciting the Qur'an or while praying; being murdered by robbers or struck by lightning; being drowned, or killed by falling into a dry well, etc.¹ In the case of many of the graves that are pointed out as being graves of *shahīds* there is no record or even tradition as to how the martyr met his fate; but in others he is said to have died in battle with the Hindus. The most famous of these is Sālār Mas'ūd, the nephew of Sultān Maḥmūd of Ghaznī, who is believed to have performed prodigies of valour in his conflicts with the Hindus and to have been slain by them in battle in 1033 and buried at Bahraich in Oudh, where his *shādī* ('wedding') is annually celebrated in the month of Jeth (May-June); he is commonly known as Ghāzi Miyān, and his festival is celebrated throughout India.

In S. India a famous martyr is Sayyid Ibrāhīm Shahīd, who put himself at the head of an invading force and waged war against the Pandyan kingdom; after a brief period of success he was put to death by the heir to the Pandyan throne, towards the close of the 12th cent.; he is buried at Erradi and is revered as a saint. To the same period belongs a martyr named Sayyid Nī'mat Ullāh Shahīd, whose tomb is at Hānsī, a town in the Hisār District of the Panjāb; he is said to have been present at the battle of Thanesar in 1192, when Muhammad Ghōrī laid the foundation of the subjugation of N. India by his defeat of the Rājput army; the festival held at his tomb is called 'the feast of lances.' A mound with a mosque about three miles from the same town, Hānsī, is styled Shahīd Ganj, because 150,000 Muhammadans are said to have perished there. Many of the *naugaza*, or saints nine yards long, mentioned above are stated to have been *shahīds*.

A *shahīd* who was not slain in battle with the infidels is Shādnā Shahīd, who was killed by his own mother; she had brought an accusation of unchastity against Bahā al-Dīn Zakariyā, and her infant son, who was then only ten months old, gave miraculous evidence on behalf of the saint, like the child in the cradle who exculpated Joseph when he was accused by Potiphar's wife;² Bahā al-Dīn restored the child to life, and he became the faithful attendant of the saint until he died a natural death, and a shrine was erected over his grave near the Dihli gate of the city of Multān. A famous *shahīd* of Bengal, Shāh Ismā'il Ghāzī, is said to have come from Mecca to fight against the infidels in India, and, after performing great feats of valour in Bengal, was put to death in 1474 by order of the Muhammadan sultan, who listened to the slanders of one of his Hindu officers who falsely accused Ismā'il of plotting to set up an independent kingdom. There are four shrines erected to his honour in Rangpur, one over his body and another over his head, and they are famous resorts for pilgrims and enjoy a considerable revenue. Pīr Bālāwal Shāh, who is said to have been a contemporary of the emperor Akbar and is buried at Firōzpur (Panjāb), became a *shahīd* by being put to death by a man who had been robbed; he mistook the saint for a thief, as the actual thieves had put some of their plunder as a pious offering under the saint's pillow while he was asleep.

Among the *shahīds* is reckoned Alā al-Dīn, a

¹ Shurreef, *Qanoon-e-Islam*, ch. xii. fn.

² *Qur'ān*, xii. 24.

grandson of the great saint of the Deccan, Burhān al-Dīn († 1331); he is said, when returning from a pilgrimage to the tombs of the saints of Gulbarga, to have met a Hindu goddess, whom he destroyed; a band of demons then made their appearance, and in fighting with them he suffered martyrdom.

A number of martyrs are commemorated at Karnāl in the eastern Panjāb; the legend is that a Brāhman girl was abducted by a rājā, and a saint named Asthān Sayyid Mahmūd led a large force of Muhammadans and rescued the maiden, but not before 500 of his followers had lost their lives. Each one of them was honoured as a *shahīd*, and small tombs were erected over them, at which lamps are kindled every Thursday; but the number of shrines is now considerably in excess of the 500, as every remarkable object in the neighbourhood (such as a milestone, etc.) has been turned into one. Similarly, the tombs of three brothers, known collectively as Jetha-Bhutta (after the names of two of them), are venerated as the graves of martyrs and receive a grant from the Bahāwalpūr Government; they are said to have been appealed to by a woman who had been robbed, and in their attempt to recover her property from the robbers they were killed and thus attained the glory of martyrdom. Lāl Sohanra, one of the disciples of Bahā al-Dīn Zakariyā, also became a *shahīd*, when helping some persons against a gang of robbers in Sindh.

LITERATURE.—For the original Persian sources see *ET*, s.v. 'India,' § 5. Among such works as have been translated into English may be mentioned Abū'l-Fazl, *Ā'in-i-Akbari*, tr. H. S. Jarrett, Calcutta, 1873-94, iii. 349-375; al-Badā'uni, *Muntahabatu-t-tawārikh*, tr. T. W. Haig, do. 1893, iii.; Jaffur Shurreef, *Qanoon-e-Islam, or the Customs of the Mussulmans of India*, tr. G. A. Herklot, London, 1832, Madras, 1863, reprinted 1895; R. C. Temple, *The Legends of the Panjab*, Bombay, 1884-1901. The official publications of the Government of India—e.g., those of the Ethnological Survey, Census Reports, and Gazetteers—contain a mass of information; but otherwise the subject has received little attention from European writers; some account of Muslim saints is to be found in J. H. Garcin de Tassy, *Mémoire sur les particularités de la religion musulmane dans l'Inde*, Paris, 1874, pp. 380-403; H. A. Rose, *A Glossary of the Tribes and Castes of the Punjab*, Lahore, 1911 ff., i. 529 ff.; A. J. O'Brien, 'The Mohammedan Saints of the Indus Valley,' *JAI* xli. [1911] 509-520. T. W. ARNOLD.

SAINTS AND MARTYRS (Semitic and Egyptian).—The word 'saint,' as we apply it to individuals among the Babylonians and Egyptians, must necessarily have a connotation different from that which it bears in Christianity. It could not indicate sanctity of an ethical quality; rather it denotes the heroes, tales of whose lives and deeds embodied the qualities which men then regarded as desirable. These heroes might be real men, half-legendary individuals, or wholly mythical; so long as their memories were cherished as examples of desirable forms of life, attained by the possession of crude sanctity or qualities that linked them with the gods, they occupied the place filled in the Christian religion by saints.

I. BABYLONIAN.—The earliest heroes of this type in Babylonia were half-mythical kings. A tablet in the University Museum in Philadelphia contains a list of these.¹ They were the following:

'Galumum, who ruled 900 (?) years,
Zugagib, 840 (?) years,
Aripi (or Ademe), 720 years,
Etana, the shepherd, who ascended to heaven, 635 years,
Pūlkam, 350 years,
Enmenunna, 611 years,
Melan-Kish, 900 years,
Barsalunna, 1200 years,
Meszamu, . . . years,
Meskingashir, 825 years,
Enmeirgan, 420 years,

Lugalbanda, the shepherd, 1200 years,
Dumuzi, 100 years,
Gilgamesh, 126 years.

Dumuzi, of this list, is a god. Etana and Gilgamesh were heroes about whose names legends and myths were collected. They will be treated more fully below. Each of these beings, whether real or mythical, was believed to possess a quality that enabled him to live and rule for hundreds of years. The early Babylonians yearned for long life.² Probably they did not clearly distinguish in thought between 'holiness' and 'divinity.' Power to live and rule as long as these kings are said to have done constituted them at least saints, as we believe the Babylonians conceived the equivalent of sainthood.

As time passed, the unique quality of these or similar monarchs so impressed the imagination of the Babylonians that the length of their reigns was greatly extended. Berossos, a Babylonian priest who died about 260 B.C., compiled a list of kings who lived and reigned before the Flood, attributing to them much longer reigns. His list is as follows:

'Alorus, who reigned 36,000 years
Alaparos, 10,800 years,
Amélon, 46,800 years,
Ammonon, 43,200 years,
Megalaros, 64,800 years,
Daonos, or Daos, 36,000 years,
Evedorachos, 64,800 years,
Amempsinos, 36,000 years,
Otiartes, 28,800 years,
Xisouthros, 64,800 years.'

Poebel thinks that these kings are different from those mentioned above;³ the present writer believes that most of them are corruptions of the list first mentioned.⁴ In either case they were believed by Babylonians to have possessed in such a degree that quality which among them corresponded to saintliness that they were permitted to survive to these extraordinary ages. Long life was not the only way in which the Babylonians thought that saintliness manifested itself.

1. Mythical saints.—About the names of certain individuals, partly contained within the first of the above lists and partly outside of it, legends and myths gathered, attracted by the heroic quality believed to reside in the individual.

(1) *Etana*, who is said in the tablet of long-lived kings to have been a shepherd and to have gone to heaven, is the hero of various tales. These are woven into a story, which seems to have existed in various recensions, and of which large fragments, though not all, have been recovered. The outline of the story is as follows:⁵

The Igigi, or spirits of heaven, were hostile to a certain city that seems to have been deserted by its patron deity or deities. Confusion and anarchy existed; productivity ceased on earth: the gods were deaf to appeals or were powerless to intervene. The Anunaki, or spirits of earth, held a council, and Enlil and Ishtar were chosen to come to its rescue. A king, who is designated a shepherd, and so may have been Etana, was put in power by Ishtar. An eagle and a serpent allied themselves to carry on the work of destruction, and defied Shamash, the god of justice and order. They went with their young into the mountain to seek food. Each found some and shared it with the young, but the eagle could not resist the temptation to consume the young of the serpent. The serpent thereupon appealed to Shamash, who advised him to conceal himself in the carcass of a wild bull and, when the eagle swooped down upon it, to seize him and tear him in pieces. The ruse succeeded. The serpent tore the wings and feathers of the eagle and left him to die in a hole in the mountains. The eagle then appealed to Shamash, promising eternal obedience for his aid. At the same time Etana appealed to Shamash to show him the plant of birth to bring fertility to his sheep. This plant grew in the very hollow in the mountains into which the eagle had been cast. Shamash told Etana of this, and one of the young of the eagle guided him to the spot. The eagle

¹ The tablet is published by A. Poebel, *Publications of the Babylonian Section of the Museum of the University of Pennsylvania*, Philadelphia, 1914, vol. v. *Historical and Grammatical Texts*, no. 2; it is translated by him, *ib.* vol. iv. *Historical Texts*, p. 78 f.; also by G. A. Barton, *Archæology and the Bible*, Philadelphia, 1916, p. 264 f.

² See art. *OLD AGE* (Semitic).

³ *ib.* 85 f.

⁴ Cf. Barton, *Archæology and the Bible*, p. 270 f., and *JBL* xxxiv. [1915] 6 f.

⁵ Cf. Jastrow's reconstruction in *JAOS* xxx. [1910] 123 f., which is in the main followed here.

appealed to Etana to release him and promised to fly with him to the dwelling of the gods. We are not told (owing to a break in the text) whether Etana obtained the plant of birth, but on the back of the eagle he flew upward to the gate of Anu, Enlil, and Ea, i.e. to the ecliptic. A break in the text deprives us of what occurred there. From there, at the instance of the eagle, they started to fly to the place where Ishtar dwelt. After flying for six hours, they began a precipitous descent, whether through failure of the eagle's strength or through Ishtar's displeasure is not clear. For six hours they fell through space to the ground. The close of the story is missing, but it is clear that the purpose of the flight failed. Etana had striven for immortality, as other heroes did, but had failed.

(2) *Gilgamesh* is the hero of a well-known epic¹ in twelve tablets or cantos. The composite story represents the powers and limitations of a saintly hero, according to a crude idea of saintliness. He could do mighty deeds, rule, oppress, build, fight enemies, kill extraordinary bulls, voyage to the isles of the blessed, but was powerless in the face of the mystery of death. That dark mystery baffled all, even Gilgamesh.

(3) *Engidu*² (*Enki-du*) has been described in treating of Gilgamesh.³ He represents the wild uncivilized man of the steppe. He consorted with animals, was clothed with hair, ate grass with gazelles, drank at the streams with cattle, his heart was pleased with the living things in the streams. From this life he was enticed to the city by a *hierodoulos*. She cast aside her garments, exposed her charms, let him glut his passion, and led him in her thrall to civilization. For a time he was half satisfied, but his restless heart ultimately took him back to the animals and the steppe. His friendship with Gilgamesh continued; he joined with him in raiding Humbaba and in fighting the bull, but death ended his career.

Engidu, the heroic wild man, was believed to be created by a goddess. His marvellous powers were said to be due to sanctity of the rude sort believed in by early men. His story has been thought to embody in myth the civilizing influence of woman and family life.

(4) *Adapa* was another Babylonian hero about whom saintly myths collected.⁴ He represented to the Babylonians something of the same story as that concerning Adam in Gn 3. Like Adam he obtained knowledge; like Adam too he missed immortality through the jealousy of a god.

(5) *Utnapishtim* (called in Sumerian *Ziugiddu*, and in later time *Atrakhasis*) was the Babylonian hero of the Deluge. From the different versions of the Deluge now extant we know that the legend concerning him was of gradual growth.⁵ In its final form the story runs that Utnapishtim, warned by the god Ea of a coming deluge, built a ship and collected in it all that he had as well as all forms of life. The flood came, drowned all others in the lands, while he and his ship survived. The ship grounded on Mt. Nizir, as the water subsided, Utnapishtim built an altar, and offered sacrifice to the hungry gods. Bel then made Utnapishtim and his wife immortal. In its later form the story has become an episode in the Gilgamesh epic. A hero who could achieve such things fulfilled the Babylonian ideals of a saint.

(6) *Ishum*, a man of the city Dûr-ilu, was another hero about whom legends of familiarity with deity have clustered. The fragmentary text⁶ which tells us of him opens with an account of how the god Urra was inflicting various plagues upon

Babylonia. Ishum boldly complained to the god, saying:

'The Babylonians are as birds
And thou hast become their catcher,
With the net thou subduest, catchest, destroyest them.'

In a long address Ishum recounted the sufferings of Babylon, of Nippur, and of Dûr-ilu; he accused Urra of destroying the righteous and the wicked alike. In reply Urra said to Ishum in part:

'The Sea-land the Sea-land,
Mesopotamia Mesopotamia,
The Assyrians the Assyrian,
The Elamites the Elamite,
The Kassites the Kassite,
The Kuthaans the Kuthaan,
The Lulubites the Lulubite,
One land another, one house another, one man another,
Brother shall not spare brother; they shall kill one another,
And thereupon the Accadian shall raise himself up;
They are all struck down, together thrown to the ground.'

The text then goes on to relate how Ishum fulfilled the destiny thus pointed out to him and overran these lands.

(7) *Takku* (read by Langdon *Tagtug*) was a Babylonian hero, whose nature is not yet fully determined. It is possible that he was a deified king, but, in the opinion of the present writer, probably an agricultural deity.¹ Whatever his origin, he was regarded as a sort of representative or patron of humanity. Enki (Ea) revealed to him the secrets of agriculture, in order that he might be able to take advantage of the irrigating waters that Enki had created. This made the goddess Ninkharsag, the spouse of Enlil of Nippur, jealous of him, and in the name of Enki she uttered a curse against him denying him immortality. Enlil thereupon placated her by promising that her name along with Enlil's should be invoked at Nippur. After this, apparently to compensate Takku for the loss of immortality (some lines are broken from the text at this point), the medicinal properties of several herbs were revealed to Takku.² In another text, containing an account of the creation,³ Takku appears as the creator of land and water, to whom many shrines were dedicated. He appears to have been a Babylonian saint, but, in the judgment of the present writer, a purely mythological one.

(8) *Enmeduranki* was the name of another hero, believed in later generations to have been a king of Agadé or Sippar. He was revered as the discoverer of the art of forecasting events by pouring oil on water.⁴

(9) *Tabu-utul-Bêl*,⁵ or *Laluralim*,⁶ was another hero, who has been designated a Babylonian Job. He is said to have been a king of Nippur, and a meticulously righteous man, who omitted no known religious or ethical duty. Like Job, he was overtaken with a torturing sickness, which called forth from him a sorrowful lament. At last he found a magician who drove away the sickness and relieved him of his affliction. The tale of his sufferings and deliverance was calculated to make the Babylonians believe that magic was more potent than righteousness.

2. Historical saints. — In addition to these mythical or semi-mythical saints, a number of Babylonian kings must be placed among the heroes who in the estimation of their countrymen attained a similar distinction.

¹ See *AJTh* xxi. [1917] 596 ff.

² For an account of this poem see *ERE* vi. 643*; for translations of the epic cf. P. Jensen in *KB* vi. [1900] 116 ff., and A. Ungnad's *Das Gilgamesch-Epos*.

³ Our knowledge of Engidu is derived from the Gilgamesh epic.

⁴ *Id.* p. 644*.

⁵ For the different accounts cf. Barton, *Archæology and the Bible*, pt. ii. chs. vi. vii.

⁶ Cf. O. Weber, *Literatur der Babylonier und Assyrier*, p. 104 ff., and, for the text, Jensen in *KB* vi. 56 ff., and Ungnad in H. Gressmann, *Afforlental. Texte und Bilder zum AT*, Tübingen, 1909, p. 71 ff.

² Stephen Langdon's interpretation is quite different, but Jastrow's and J. D. Prince's agree closely with that of the present writer. For full references to the literature see *AJTh* xxi. 576.

⁵ For the poem cf. Barton, *Archæology and the Bible*, Philadelphia, 1917, p. 592 ff.

⁶ Cf. H. C. Rawlinson, *WAI* v. 44, 17 b.

(1) *Sargon of Agadé*, who about 2800 B.C. founded the dynasty of Agadé and Kish, was the first of these. So great was his success as a military leader and ruler that a legend of his birth was treasured down to the time of Ashurbanipal (668-626 B.C.).¹ According to this legend, Sargon was begotten by an unknown father and brought forth in secret. His mother, apparently ashamed of him, placed him in a basket of reeds lined with bitumen and set him afloat on the Euphrates. The water carried him to Akki, the irrigator, who adopted him and reared him as his son. The goddess Ishtar became his patron and made him ruler of the people.

Sargon practised liver-divination, and, if he did not introduce it into Babylonia, he made it so popular that it was ever afterwards practised. In the time of Urkagina, thirty years before Sargon, the favourite method of divination at Lagash had been by means of oil on water. The markings on livers consulted by Sargon before each great undertaking were recorded and became the basis of the science of liver-divination in subsequent centuries.² If one could obtain the same omen as the mighty Sargon had beheld before accomplishing some successful deed, one felt sure of success.

(2) *Rimush*, who was perhaps Sargon's immediate successor, was during his lifetime regarded as a god. What the cause was that led his subjects to accord him this honour we do not know, but it was, no doubt, the possession of qualities that passed among them for saintliness.

(3) *Naram-Sin*, of the same dynasty, whose reign of 44 years began about 2700 B.C., was also regarded as a god while he lived.³ We know that he was a successful warrior and a great builder, but why he more than many others should have been accorded this honour we do not know.

(4) *Sharugalisharri* was Naram-Sin's successor. His name is once preceded by the determinative for deity in one of his own inscriptions.⁴ He probably inherited the honour from his predecessor.

(5) *Gudea*, the great Patesi of Lagash about 2500 B.C., was also deified. He appears as a god in certain proper names, such as *Gin-Gudea* and *Lù-Gudea*. Probably this occurred in his lifetime, though the names in question come from the dynasty of Ur.

(6) *Dungi*, of the dynasty of Ur, who ruled 2429-2371 B.C., was the next king, so far as we know, to be deified during his lifetime. While he was still living, men in his service bore such names as:

Lù-Dun-gi, 'man of the god Dungi'; *Dun-gi-hè-gàl*, 'the god Dungi makes abundance'; *Dun-gi-ra-kalam-ma*, 'for the god Dungi is the land'; *Dun-gi-kalam-ma-ji-li-bi*, 'the god Dungi—the land is his delight'; *Dun-gi-a-uru*, 'the god Dungi is the reward of the slave'; *Dun-gi-ki-bar-sag*, 'with the god Dungi is great favour'; *Ka-Dun-gi-ib-ta-e*, 'the word of the god Dungi has gone forth'; *Dun-gi* is the counsellor of *ti* 'the mother of the god Dungi'; *nam-ti*, 'the god Dungi is the'; *Dannar*, 'the twin of the god Dungi is the god Nannar.'⁵

A hymn,⁷ apparently addressed to him while he lived, contained the most fulsome praise. Some of its lines are:

'Wise ruler, hero, come!
Give rest to the land!

A faithful hero, a sun-god, who art just,
At the head with sceptre thou standest.
O exalted lion, the fat of life thou eatest.
O ox, mighty wild ox, O ram great to bless,
Thy word breaks the mountain—holy and just.

Enlil,
The faithful lady, Ninlil,
Whom he loves in his heart,
O my king, are like thee.

O mountain of fate, the firm bow of Nannar
For the land thou carriest
To fight in gladness.

Enlil below thou art!

(7) *Bur-Sin*, *Gimil-Sin*, and *Ibi-Sin*, three successors of Dungi, were also accounted divine. Their names are regularly written preceded by determinatives for deity. A fragmentary hymn¹ addressed to Ibi-Sin, apparently while he lived, contains the following:

'Food and drink abundantly thou . . .
For the people as protector thou . . .
My king, known of Nannar, exalted one of Enlil,
Ibi-Sin, in exalted power thou art alone!'

The names of other kings are at times found preceded by the determinative for deity—e.g., *Ur-Ninib*, *Irraimiti*, *Zanbia*, *Ishbiurra*, *Idin-Dagan*, *Ishmi-Dagan*, *Libit-Ishtar*, *Itirpisha*, *Damigilu-shu*, *Ibiq-Adad*, *Nur-Adad*, *Warad-Sin*, *Rim-Sin*, and *Hamurabi*.² All these were deified for the same reason.

It may be said that the Babylonian conception of saintliness was the successful exercise of the will to power. Often it was believed to be exhibited in the form of political power, but often, too, in unusual deeds of other kinds.

Only one possible trace in Babylonian lore of anything that could be called martyrdom is known to the present writer. That is the myth preserved by Berossos³ that Oannes cut off his own head and mingled his blood with the dust to create man. As Oannes is but another name for the god Ea, this cannot be called martyrdom as the term is ordinarily understood.

II. *EGYPTIAN*. — The Egyptian conception of sainthood was of the same semi-primitive, heroic character as that in Babylonia, though it manifested itself in some respects in a different way. In Babylonia some kings were considered divine; in Egypt all kings were so considered. The cause that led to this is shrouded in the mystery that conceals all things pre-historic, but it was probably the primitive way of recognizing that one who could gain control over his fellows possessed rare ability. Such ability was regarded as an especial attribute of divinity. Some Egyptian kings, such as Mena, Khufu, and Thothmes III., possessed unusual ability. The divinity of many of the kings was, however, purely traditional.

More illuminating than the saintship of Egyptian kings is the study of the type of heroes about whose names Egyptian traditions clustered. These reveal at once the likeness and the difference between the Babylonian and the Egyptian conceptions. The likeness consists in the heroic quality that passed among both peoples as saintliness, the difference in the fact that intellectual power attracted the Egyptians quite as much as brute force, and apparently to a somewhat greater degree than it did the Babylonians. This will become evident as we glance at some of the Egyptian heroes and note their qualities.

(1) *Imhotep* was a vizier of King Zoser of the IIIrd dynasty. He was famed for his priestly wisdom, his knowledge of magic, his reputation for making wise proverbs, his knowledge of medicine, and his ability as an architect. So great

⁶ Barton, *Haverford Library Collection*, pt. i. pl. 12, no. 52, line 9.

⁷ Barton, *Miscellaneous Babylonian Inscriptions*, no. 3.

was his reputation that he became the patron spirit of later scribes, who regularly poured out to him a libation from their water-jar before beginning their work. Centuries later people sang his proverbs, and twenty-five hundred years later he had become a god of medicine. The Greeks called him Imouthes, and regarded him as the equivalent of their own Asklepios. A temple was erected to him near the Serapeum at Memphis, and numerous statues of him have been found.¹

(2) *Other magicians* were also revered, and tales concerning them circulated in later centuries.² One of these, *Ubaaner*, lived under Khufu of the IVth dynasty, the builder of the Great Pyramid. He is said to have made a wax crocodile, which, when thrown into the water, became a living crocodile and devoured a lover of Ubaaner's wife. Another was *Tchatchamānkh*, who flourished in the time of Seneferu, who reigned between Zoser and Khufu. When a bracelet was lost in a lake, he is said to have made the water in one half of it stand upon that of the other half, so that the bracelet could be seen upon the dry bottom. Still another, *Teta*, is said to have lived in the reign of Khufu and was believed to have power to restore life to dead animals. A fourth magician, *Ruttetet*, is said to have foretold to King Khufu the birth of three sons of the god Rē who should overthrow the IVth dynasty—a prophecy that was believed to have been fulfilled by the establishment of the Vth dynasty.

(3) *Ptahhotep* was an Egyptian sage who is said to have lived during the Vth dynasty, about 2600 B.C. To him later ages attributed a body of 'precepts' that are certainly as old as 2000 B.C. and perhaps older.³ These 'precepts' are designed to guide Egyptians to the way of happily and successfully living in the social ensemble. They form an ethical code of a remarkably high order. If Ptahhotep was their author, he is worthy of being compared to Confucius.

(4) *Ipuwer* was another Egyptian sage who lived before 2000 B.C. and whose name later centuries revered for his wisdom. Certain 'admonitions,' said to have been uttered in the presence of the king, are attributed to him.⁴ In these 'admonitions' the imperfections of the social order of the time are arraigned, and it is predicted that an ideal king will arise and establish justice.

(5) *Hunanep*, the 'eloquent peasant,' was a 'saint' of a different character.⁵ Whether he was a real person or only a character in a story may perhaps be open to question. When one considers the concreteness of ancient thinking and writing, the probability is that he was a real character who lived in the feudal age before 2000 B.C. He is the hero of the story of *The Eloquent Peasant*, whose pleading for the rights of the poor so delighted a local governor that he purposely referred his case to the king, so that the king might have the pleasure of listening to one so eloquent. The speeches of Hunanep embody social ideals that were long cherished in Egypt.

(6) *Bata* was an Egyptian hero of a somewhat different sort, since he was apparently in part a real character, though his story has attracted to itself a number of mythical elements. He is the righteous younger brother in the Egyptian *Tale of Two Brothers*, who, like Joseph, was faithful,

underwent temptation without yielding, was falsely accused, but, unlike Joseph, escaped punishment.⁷ How he went to the Lebanon and became a tree, became an animal and returned to Egypt, became a shrub planted by his brother's door, etc., are mythical elements, derived perhaps from some form of the Osiris myth. The integrity of Bata himself is a close approach to saintliness in its later sense. Whether it was this or the mythical elements that made the tale popular with the Egyptians it is difficult now to tell.

These heroic figures, whose memory and writings were treasured by the Egyptians, indicate that the people of Egypt revered the social virtues. Had we only the Babylonian heroic stories as evidence, we should say that the Babylonians fell behind the Egyptians in this respect. The code of Hammurabi is proof, however, that such an inference would be wrong. Social qualities were as strongly developed among them as among the Egyptians, though the evidence for it is not found in the tales concerning their heroes.

III. *JEWISH*.—See art. SAINTS AND MARTYRS (Jewish).

IV. *ABYSSINIAN*.—With the exception of a few inscriptions, all our sources of information concerning Abyssinia relate to the Christian period of its history. The country was Christianized in the 4th cent. from Egypt, so that the Abyssinian Church is an offshoot of the Coptic Church. In the Abyssinian liturgy prayers are offered for the patriarch of Alexandria as archpope.¹ Abyssinian Christianity has, therefore, a general Christian inheritance, a specific Egyptian inheritance, and a native element. The native element is partly from pre-Christian Abyssinian heathenism, on which Christianity was grafted, and partly a development within the Abyssinian Church itself. Abyssinian saints are accordingly derived from all these sources.

1. Catholic saints, or saints recognized by the Church Catholic, are numerous in Abyssinia. There is, of course, the Virgin Mary, Stephen the protomartyr,² Zacharias the priest, John the Baptist, Matthew, Mark, Luke, and John, Peter, Andrew, James and John, Philip, Bartholomew, Thomas, Matthew, Thaddeus, Nathaniel, James the son of Alphaeus, and Matthias; also James the brother of Jesus, Paul, Timothy, Silas, Barnabas, Titus, Philemon, Clement. In addition to these, the 72 disciples of Lk 10, the 500 companions of 1 Co 15⁶, and the 318 Orthodox are also counted as saints, the merits of whom are invoked in the liturgy.⁴ In the thought of the people some of these are more important than others. The Virgin Mary naturally holds an important place. Next to her is St. John, to whom many places are sacred. On his festival firstfruits are offered, and people bathe—a rare thing in Abyssinia.⁵ On his day also a sheep is led around people who are supposed to be possessed of the devil.⁶ St. Stephen is also fairly popular. There are several churches called after him.

The archangels Michael, Gabriel, Raphael, and Suriel are also made saints. Michael and Gabriel are among the most popular. Abraham, Isaac, Jacob, and Jonah are counted saints, as are the four living creatures, the four-and-twenty elders, and the 144,000 of the book of Revelation. St. George, conqueror of the dragon, has also a place.⁷

A St. Ewostatewos, who is called the Just,¹ is probably no other than St. Eustathius, bishop of Antioch (A.D. 324-331), a determined foe of the Arians.

2. Saints of Egyptian origin include St. Athanasius and St. Cyril, who are also recognized by the Church Catholic. Less clear is the identity of SS. Mercury, Basilides, Claudius, Mennas, Manādelēvos, Philotheus, Mermehnām, Kirkōs, Victor, Abli, and Esderos; but they are of Egyptian or Roman origin.² Maximus and Demetrius are called 'our holy Roman fathers.'³ Antony, Besōi, John Kamā, Pachomius, Barsūmās, Sinōdā, Besnedā, and Būlā are saints of the Coptic Church,⁴ and were introduced from Egypt. All these were imported into Abyssinia and naturalized there.

3. Native Abyssinian saints were of three classes. (a) There were native heathen deities, worshipped on hill-tops, that were taken over and christened as Christian saints. Five of the most important churches in Abyssinia had apparently been heathen shrines, and to this day the heathen idea of sanctuary attaches to them. Such are the churches at Axum, Adowa, Waldeba, Gundi-gundi, Debra-Damot, and Debra-Abai.⁵ A number of the most sacred churches are situated on hill-tops and surrounded by groves. Doubtless they are ancient Semitic high-places. Two on isolated peaks near Axum contain the shrines of saints. One is that of Abbalicanos, said to have been the confessor of Queen Candace, the other that of a certain Abbapantalian who is supposed to have been so holy that the place is one 'of great devotion amongst them.'⁶ Three others near Axum are said to be the residences or burial-places of saints and are regarded as very holy. One, the Hallelujah Monastery, is on a high hill surrounded by trees. It is said to have been given its name because a holy man who dwelt there when the monastery was first built claimed that at night he heard the angels in heaven singing 'Hallelujah.' Another was named for Abbagarima, who, it was said, left his kingdom in Greece and spent his life near Axum doing penance, and who is believed still to work miracles. The third, also on a hill, is named for St. John,⁷ a very favourite saint in Abyssinia. A fountain, believed to have healing properties, near the plain of Gobe is also named for St. John. It is, no doubt, an old Semitic sacred spring.⁸ Another sacred cave, the sanctity of which doubtless dates from heathen times, contained in the 16th cent. a church named Imbra Christus. Here, it was believed, a holy king named Abraham was buried. There are numerous St. Johns, just as in Europe there are different Virgin Marys at different shrines, and at least some of these are heathen deities baptized with Christian names. Abuna Aragawy, the saint of the celebrated monastery of Debra-Damot, is said to have been a missionary sent to the country by Athanasius. He gained access to the inaccessible height on which the monastery stands by clinging to the tail of a boa-constrictor, which pulled him up.⁹ The caves about are full of snakes, and the boa that helped

the saint up the hill is believed by some to be still alive there. The place was, no doubt, the site of ancient serpent-worship before the introduction of Christianity.

(b) Other native Abyssinian saints have developed out of their dead kings. Just as many a Muslim *walī* is inhabited by a dead *shaiikh*, so a number of Abyssinian shrines are believed to be the resting-places of departed monarchs. St. Theodore, the patron saint of Rohabaita, is believed to be a great worker of miracles.¹ Perhaps he is very old; but, if so, he is now confused with King Theodore I., who reigned 1409-12, and who is believed to have been a great worker of miracles. It is expected that another king will arise in his name, restore the Holy Sepulchre to the Cross, and make Ethiopia the first of the nations.² Other saintly kings were Lalibela and Abraham.³

(c) Less exalted holy men have, as elsewhere, developed into saints. Alvares tells of an *ichee*, or monk, who was very holy, was thought to work miracles, and at whose tomb a monastery was built.⁴ One of the most noteworthy of this class of saints is Takla Hāymānōt,⁵ who was the patron saint of King Menelik.⁶ His life and actions are believed to have been an exact copy of those of Christ, even to the fact that his father was a carpenter named Joseph and his mother was named Mary.⁷ Gabro Menfos Kuddos ('slave of the Holy Spirit') is believed to have been a saint from his birth.⁸ On his festival day everybody eats vetch-peas which have been made to sprout by soaking them in water for three days. Portions of these peas are sent as presents to friends and neighbours.⁹

Abyssinian saints are numberless.¹⁰ Those named are but examples of the different classes. Saints are held in the highest reverence, often being preferred to the Deity Himself. One who would not hesitate to invoke the name of God in witness to a falsehood cannot be persuaded so to invoke the name of his patron saint. Beggars who vainly ask alms for the sake of God obtain them if they ask for the sake of the Virgin Mary or Takla Hāymānōt.¹¹

It is a common custom to vow to one's patron saint the sacrifice of a bullock or sheep on his festival day, in order to secure his favour and protection for the rest of the year. Each family has its patron saint, who is handed down from father to son. On the festival day of this saint each family according to its means entertains its friends with some sort of merry-making. The saints most popular as patrons are St. Michael, the Virgin Mary, St. John the Baptist, Takla Hāymānōt, and Gabro Menfos Kuddos.¹²

Numerous stories, mostly of a trivial and childish character, are told of Abyssinian saints.

An example of these is the story told above of Abuna Aragawy and the boa-constrictor. Of Gabro Menfos Kuddos it is said that as soon as he was born he stood up. When three days old he bowed thrice, saying in a distinct voice: 'Glory be to the Father and to the Son and to the Holy Ghost.' He never tasted his mother's milk; through his whole life he never tasted food or drink. Once, when praying on a mountain, he fell over a precipice 200 ft. high. Two angels immediately spread their wings to support him, but he declined their assistance, and, trusting in God, was unhurt. Another time, while ascending a mountain, he was worn out with fatigue, and the Holy Spirit came and helped him up. After a very long life God sent Azazel, the angel of death, to take him, but he refused to die, saying that, as he had neither eaten nor drunk all his life, he could not die. Then all the saints in paradise came, one by one, to try to persuade him to leave the world and go to paradise. The first to come was St. John the Baptist, who said to him: 'I have

¹ Cf. Guidi, pp. 89, 40, 48.

² This is clear from a comparison of the Abyssinian prayer of Intercession (Brightman, p. 230; Mercer, p. 369) with the similar prayer in the Coptic liturgy (Brightman, p. 169).

³ Brightman, p. 230; cf. p. 169.

⁴ Most of their names are corruptions of Coptic names; cf. Brightman, p. 230, and Mercer, p. 369 f., with Brightman, p. 169. Some, such as Sinōdā, who do not appear in the Coptic liturgy, are known from Ethiopic translations of Coptic works to have been introduced into Abyssinia from Egypt; cf. ZDMG lxxvii. [1913] 187 ff.

gone the way of all flesh, notwithstanding all my privations and sufferings.' To this Gabro replied: 'Yes; but you could not fast even forty days, but fed on locusts and wild honey.' Thus he replied to all the saints, and even at last to the Virgin and to our Saviour. Nevertheless his life was at last taken from him, since the decrees of the Almighty must be obeyed. Then the elements fell to disputing as to what should be done with his body. The earth refused to receive it, since he had never partaken of her produce; the water refused, because he had never drunk a drop of it; fire had equally strong objections. So the saint was restored to life and taken up alive to heaven. Notwithstanding this, his tomb is shown at Zukwala in Shoa.¹ It is told of other saints that they plucked out their eyes and cast them before vultures, and that they rode on lions.²

Lives of saints, filled with such stories, are written in large numbers and circulated throughout Abyssinia.

Martyrs play no large part in Abyssinian thought. The intercessory prayer of their liturgy intercedes for Stephen the proto-martyr, for 'all the martyrs,' for the 'holy abba Nob, virgin and singular martyr, Eleazar . . . and all the martyrs,' for 'holy abba Moses,' and for the 49 martyrs.³ Although the abba Nob does not appear in the liturgy of the Coptic Jacobites,⁴ it is probable that he too is an Egyptian martyr. Martyrdom appears to have formed no important part of the experience of Abyssinian Christians, and their attention to it is accordingly not great. It is an exotic in their midst.

GEORGE A. BARTON.

SAINTS AND MARTYRS (Syrian).—

I. Introduction.—Although to the superficial observer the religions of the modern inhabitants of Palestine and Syria may be classified with apparent exactitude under a number of well-recognized divisions—Christianity, Judaism, Muhammadanism, Druse, etc.—and these religions again may be divided into a great variety of sects, each, with fanatic devotion, holding to very definite and characteristic doctrines and ritual, yet such a classification by no means covers the whole ground. When the peoples of these lands are more closely studied—particularly the *fellahin*, or villagers, and the *bedu*, or nomads—it will be found that under the outward profession of adherence to orthodox creeds lies a substratum of more primitive belief, common, in varying degrees, to all the religions, and reaching far deeper into the heart of things than all the outward forms. This is broadly true of Christian and Jew, of orthodox (Sunnite) Muslim and Metāwileh (Shī'ite), of Druse and Nāsirīyah. This primitive faith includes an animistic belief in *jinn* and *ghul*, a common faith in various spirit agencies as causing misfortune, illness, and

death, a profound dread of the 'evil eye' which leads to the almost universal use of charms, similar customs with regard to vows and their fulfilment, a belief in the efficacy of sacrificial rites, and a universal respect paid to dead saints and heroes. For the great majority of the native inhabitants of the land, in all but the largest towns, these items of belief have for long ages made up substantially their real religion; and even the average town-dwellers, though making more intelligent and sincere profession of their nominal faith, have a fundamental regard for those more primitive beliefs, as is constantly demonstrated by their reversion to them in times of moral stress. The importance of these beliefs to the proper understanding of all the higher developments of Semitic religion is unquestionable. The cult of saints and heroes, though, on the one hand, inextricably mixed with the other primitive beliefs enumerated above and, on the other hand, shading off into the orthodox professions, presents many features of great interest and importance.

2. The shrines.—It may be said that a certain degree of superstitious reverence is given to all tombs, and still more to all cemeteries, as they are viewed as places charged with potential spiritual forces. Some special historical association or some supposed manifestation of supernatural influence is usually necessary to call out the devotion of the inhabitants of an extended area to any special site. The shrines which to-day enjoy an acknowledged reputation may be classified very roughly into three groups: (a) the village *makām*, (b) the *walī*, and (c) the universally visited shrines, such as Nabī Mūsa, Nabī Rūbīn, etc., at which annual festivals are held.

(a) *The makām*.¹—In practically every village in the land may be found a *makām* (lit. a 'place of standing') dedicated to some dead worthy and sometimes covering his actual grave. This is looked upon as the shrine of the guardian-spirit of the neighbourhood. It is usually a small square building surmounted by a whitewashed cupola (hence the not infrequent name of such a shrine, *kubbah*, 'dome'); it is commonly shaded by one or more trees—e.g., oak, terebinth, carob, or *sidr*—which themselves partake of the sacredness of the shrine. Sometimes the building may cover a cenotaph only; sometimes there may be nothing but a bare floor with a few straw mats, but almost always there is a *mihrab* pointing the pious Muslim to Mecca. In other cases the building itself has long ago perished, and is now represented by the mere foundations of four walls or by an irregular pile of stones, shaded, it may be, by a sacred tree. With the *bedu* in particular the shrine is commonly a tomb often little better than an ordinary grave. But, whether conspicuous or not, the spot is 'holy' and under the protection of a spirit, or *walī*, usually called *shaiikh* or *nabī* (lit. 'prophet'), less commonly *saidna* ('our lord') or *hājī* ('pilgrim'). In the case of a building no one dare enter without using some such expression as *Dastūr ya mubārak*, 'By your leave, O blessed one!' Goods left under the protection of the spirit of the shrine are never touched. Such spots, whether actual buildings or even lonely graves, are commonly seen surrounded by bundles of wood, ploughs, and other instruments of husbandry, left to the care of the *walī* till the owner comes to claim them, while sometimes less valuable things—e.g., old rusty knives, worthless coins, etc.—are left as offerings. The stones of the shrine and even the twigs from the neighbouring trees are sacred and must on no account be taken for use, though a fragment may be removed as a charm. Many stories are told of the mis-

¹ This Arab word appears to be the exact equivalent of the Heb. מקום of Dt 12².

⁴ Brightman, p. 169.

fortunes befalling the impious who removed wood or stone for his own use.

(b) *The wali*.—In addition to the *maḵām* a more sacred class of shrine is found on the tops of many hills or hidden within isolated sacred groves. Through the length and breadth of Palestine the tops of lofty hills are crowned with these buildings, sometimes with conspicuous, whitewashed cupolas, sometimes marked only from a distance by a great tree, and sometimes, through neglect, reduced to four ruined walls—but always revered. Such a place is popularly known as a *walī*¹ (lit. 'protector'), a name applied strictly to the saint himself; sometimes the name *kubbah*, 'dome,' is given if such a structure crowns the building; and occasionally we find the name *mazār*, 'place of visitation,' a term which might be applied to most of these shrines, for to any one of them pilgrimages may be made, and sometimes a man, particularly one from a distant land, will make a round of all the best known *walīs* in succession. Many of these shrines have annual feast-days, when they are specially visited by the pious. They are all dedicated to some more or less powerful saint. There is no sharp line of division between the village *maḵām* and the more potent *walī*, but the latter is a spot specially honoured by some supposed powerful manifestation of supernatural influence—e.g., some strange occurrence at the time of burial, the bearers being dragged apparently against their will away from the proposed place of burial to an unexpected spot, where alone the body of the *walī* consents to be interred; an answered prayer or a portentous dream; or an exhibition of vengeful power upon one who slighted the place. The influence of *walīs* is, however, usually friendly in contrast to the malevolent freaks of the *jinn*. Any tomb or any village *maḵām* may become worthy to rank as a *walī*, if credited with active supernatural powers to an unusual degree. These lonely shrines are usually under the guardianship of the neighbouring village *shaiḵh* or of a special 'holy man' or dervish, who lives on the offerings of the faithful and often becomes credited with much of the influence of the *walī* himself. Although the tops of hills are favourite sites, they are by no means the only ones. All along the deep cleft of the Jordan Valley there are such buildings, many of them not improbably the tombs of Arab warriors who perished in the conquest of Palestine during the first enthusiastic outburst of Islām.

(c) *The greater shrines*.—In the front rank of importance are a few shrines, venerated all over the land, which are each visited at a special annual feast (*maulid*) by thousands of people. In the case of some of them the duties of guardianship belong to certain families and are hereditary; considerable property has become attached to such resorts, and the hereditary guardians, besides keeping the buildings in repair, use part of these endowments for their own support, and with part provide contributions in food (sheep, rice, butter, etc.) to the annual festivities.

3. The cult of the *walī*.—The spiritual personalities inhabiting all these varieties of shrines are conceived of as very active and powerful. Their influence extends a varying distance from the neighbourhood of the 'holy' place—in the case of the village *maḵām* probably not farther than the boundaries of the village property, but very much wider in the case of the most important *walīs*. To offend a *walī* would appear to be more dreaded than to offend God Himself. Certainly a vow made at a shrine in the name of the *walī* is more binding than one made in the name of God or on the sacred

books. Many a man has perjured his oath made under the latter circumstance, trusting, as some of them have openly said, to the mercy of the All-Compassionate; but he dare not offend the *walī*, whose vengeance knows no compassion and is sure. Hence all over the land these places are used for the public taking of oaths. Of these the following are common.

(a) *The oath of purgation or innocence*.—The accusing parties take the accused to the shrine, and, if he takes solemn oath in the name of the *walī* that he has not committed the crime of which he is accused, he is acknowledged to be innocent. Any one wishing to bind a *fellah* or a *bedawī* by a serious oath can assure himself by insisting on his swearing at a *maḵām* of repute. Rather than perjure himself at such awful risk, many a man has quietly made restitution of stolen goods. To the *walī* Shaikh Aḥmad at Felujah, near Gaza, the people come from all parts of the country to take an oath of purgation, after which they receive a certificate from the attendant of the shrine sealed by the village *mukhtār*. The possession of such a document is considered sure evidence of innocence.

(b) *The vow of the incense (nidhr al bakhūr)* is also a common vow at a *walī*. The person making such a vow visits the *maḵām*, kisses it, recites the *fathaḥ*,¹ and then utters some such prayer as the following:

'I make a vow in order that the sick one should recover (or the absent one return in safety). I present thee with this incense, oh my Lord! Oh my Lord, accept this vow for God the highest.'

He then places a small piece of metal or a sherd of pottery before the *maḵām* and burns some incense in it. He also very commonly lights a small pottery hand-lamp, and, before leaving, he again kisses the sacred spot. Around all important shrines will be found fragments of pottery or metal marked by the burning incense and sometimes lamps also.

(c) *The vow of the veil*.—A similar vow is the *nidhr al istar*, 'vow of the veil (or covering),' which may be made instead of the former or in association with it. A person wishing to make a solemn vow brings a piece of green calico or linen about a yard and a half long, which he affixes to the pillar at the head of the tomb with the same ceremony and with words similar to those quoted above, except that he says, 'I bring thee this veil,' etc.

(d) *The vow of pilgrimage*.—A more ceremonious vow is made by richer people on special occasions—e.g., in petitioning for the restoration to health of a beloved one or for the birth of a son. This is the *nidhr az ziyārah*, 'vow of pilgrimage.' The details vary in different localities. In parts of Galilee the custom is as follows:

The man and his nearer relatives and friends, men, women, and children, dressed in their best, make a solemn procession to the shrine. In front walks the head of the family, accompanied by the men; then (when a son is to be petitioned for) there is often a young man or boy on horseback, who is named the *aris*, 'bridegroom'; behind him come the maidens walking two or three together; and in the rear the married women. Such a *ziyārah*, or pilgrimage, may last two or (if the distance is considerable) three days. On arriving at the shrine, the man kisses the tomb, recites the *fathaḥ*, and makes his vow somewhat as follows: 'Oh my lord, I have a vow to make and have come to visit thee. If God gives us a son, I will bring thee a beast for sacrifice and a sack of rice.' After he has again kissed the spot, a feast is held. On the second day they celebrate what is called a *fantasiyah* (i.e. dancing and games) at the spot. On the last day the man who has vowed lays at the foot of the tomb, in the presence of the *aris*, a small money-offering, which is kept by the caretaker, if there be such, or is given to the poor, if there is no regular custodian. It is not always necessary to make this ceremonial visit when making the vow; the man may simply look towards the distant shrine and raise a *mashhad*² (a pile of small stones) to witness his oath. But, when the prayer has been granted, a pilgrimage

¹ Much less commonly *wāliyah* (female *walī*) is used, the traditions connecting the shrine with a woman.

¹ The opening verses of the Qur'ān.

² The *margemah*, 'heap of stones,' of Pr 26⁵ (RV).

must be made with banners and beating of the tom-tom (*tub*) ; the devoted sheep and other food are eaten by the whole party, parts of the banquet being reserved for the caretaker.

(c) *Various offerings.*—The *bedu* of Moab, before going on a warlike expedition, sacrifice sheep at a tomb or *walī* to bring success. If there is sickness among the flocks, they may be driven to the *walī* for cure, or one of the flock may be sacrificed. A sick person may sometimes sleep at a sacred tomb to obtain healing, and on such occasions the saint himself, usually as a venerable man, appears in a vision or a dream and brings health and encouragement. In attending these places for prayer or vows, sometimes the worshippers sprinkle on their faces and necks some of the dust from the neighbourhood, and sometimes they carry away a portion of this or of the surrounding herbage as a charm ; the earth from Mecca is sold in this way all over Syria. Among the *bedu* of Moab the first milk taken in the spring, the first butter made, the earliest wheat or lentils, and the first-born of the flock are presented to the *walī*, and are there either given to the guardian of the shrine or to the poor in the name of the *walī* or, in the case of milk or butter, simply poured out on the ground. When an animal is sacrificed at such a spot, some of the blood is poured on the tomb, and, if there is a building, some is commonly sprinkled on the lintel and sideposts of the door. In the case of tombs attended by a class of people slightly more educated, it is common to find written petitions to the dead saint thrust into the tomb or into parts of the building connected with it. This is specially noticeable in connexion with the well-known Mosque of the Patriarchs at Hebron. Many of the more important shrines have annual feasts connected with them attended by multitudes, some of which are referred to below.

4. The personalities honoured at the shrines.—These are various. Some are connected with Biblical traditions, some with the history of Islām, but a considerable number are known to be of no great antiquity. A few of the tombs are those of persons who were known in life by many still living. As will be seen, greatness or goodness in this life is by no means necessary to make a man a much-respected *walī* after death.

Among the shrines in the front rank of importance, which have each an annual feast (*maulid*) attended by thousands of people, are Nabi Mūsa, the tomb of Moses, according to Muslim tradition, in the Jordan Valley between Jerusalem and the Dead Sea ; Nabi Rūbīn, identified in tradition with the son of Jacob, south of Jaffa ; and Nabi Sālih, in the peninsula of Sinai, in memory of an unknown pious man. The annual festival of Nabi Mūsa is held for a week at Easter,¹ that of Nabi Rūbīn for ten days in September, and that of Nabi Sālih for three days in June. Thousands of Muslim pilgrims from all over the country attend these gatherings ; at Nabi Rūbīn Christians as well as Muslims assemble. Another shrine of Nabi Sālih near Ramleh also attracts many Muslim pilgrims in the spring.

The building called Nabi Daūd, the reputed tomb of King David, and the shrine of al-Khudr (Elijah) on Mt. Carmel are held in equal veneration by Muslims, Christians, and Jews. The former is specially visited by Muslim women and also by the Yemen Jews annually at their New Year. The annual feast of the latter is attended by members of all these religions. Nabi Sha'ib, the reputed tomb of the father of Jethro, near Hattin, and Nabi Safa, near Rashīyah, are both held in the highest honour by the Druses.

It is impossible to enumerate more than a small percentage of the hundreds of shrines which are

held in reverence. The traditional tomb of Aaron on Mt. Hor, that of Joseph at Nāblus (venerated equally by Muslims, Samaritans, Jews, and Christians), the tombs of Abraham, Isaac, and Jacob and their wives at Hebron, and the tomb of Rachel on the road to Bethlehem (specially honoured by the Jews) are some of the best known ; but there are few notable early OT characters whose memory is not preserved in this way, and some have several sanctuaries.

The saints, however, are by no means limited to Bible characters ; some are historical personages whose true history has in many cases been long lost in myth. Thus the tomb of the *imām* 'Alī ibn 'Ala Ta'lib, the son-in-law of Muhammad, and that of Bellah ibn Rubāb—both at Jericho—are now supposed by many to be those of Joshua and his servant. A revered shrine is the *maḳām* of Saidna 'Alī ibn 'Alam, north of Jaffa, the tomb of a warrior who bravely defended Arsūf against the Christians in Crusading times.

A number of shrines are dedicated to the 'forty martyrs,' but who these individuals were it is impossible to ascertain. In Hebron a ruin is shown called Deir al-Arba'in, said to be dedicated to the forty witnesses of the transaction whereby Abraham acquired his property in Hebron.¹ At Safed there is a mosque called Jamā' al-Arba'in. On Mt. Carmel there is a splendid grove of ever green oaks known as Shajaret al-Arba'in, 'the trees of the forty,' or, as the Christians say, 'of the forty martyrs.' Under these trees there is a *mīhrāb* and there appear to be traces of an ancient altar. The *fellaḥīn* of the district believe that the spirits of the saints hold an annual festival here, but the date of the anniversary is secret. To take the smallest branch, even of the dead twigs, from this sacred grove is sure to bring disaster upon the aggressor. At Ramleh also the white mosque is dedicated to the Arba' in Ghazāwi, 'forty victors,' and there are several other such places.

Many of the shrines are dedicated to *shaiḫs*, *nabīs*, etc., whose names are obviously apocryphal—e.g., the *walī* of Shaikh Nabī Billān, near Nāblus, is certainly so called from *billān*, a common shrub which from its quantity gives its name to the mountain and neighbouring valley. It is common, too, to put Nabī before the name of a village or town when naming the adjoining *maḳām*. Some of the names are very curious. At Safed the most sacred *maḳām*, at which judicial oaths are regularly made, is that of Shaikh Abu Kamīs, lit. 'the old man of the shirt,' a name given to the tomb because it is that of a dervish who was peculiar in having that garment only. On Carmel the Qabr al-Majdūbi, 'the tomb of the idiot,' is revered ; and farther south we find the 'tomb of the madman.' In Moab there is a Wali Khanzīr, i.e. 'the *walī* of the pig,' which by local tradition actually covers the head of a wild boar. Yet it is much respected.²

It is by no means necessary that the man buried at the tomb should have lived very long ; indeed some *walīs* belong to people who have died within living memory. Nor need he have been in any way a pious follower of religion or morals. The revered tomb of Abu Ghōsh between Jerusalem and Jaffa covers the remains of a cut-throat bandit who plundered the whole district in the middle of last century. Near Safed there is a shrine on the eastern extremity of Jabal Kana'an dedicated to Shaikh Hadīd, a man who was well known to many of the present residents of Safed. When the

¹ The tale is told in J. E. Hanauer, *Folk-lore of the Holy Land*, p. 301.

² See also the story of 'Ayr in Hanauer, *Tales Told in Palestine*, p. 165 f.

¹ Beginning on the Friday before the Greek Good Friday.

old man died and his body was being carried to burial, the bearers professed that they were dragged by supernatural influence beyond the ordinary cemetery (a common indication of the sanctity of a dead person) and over two miles of rough stony ground until the corpse came to rest at this lone spot overlooking the Jordan Valley. Although so modern a *wali*, the *shaikh's* tomb is much revered, as is shown by the following recent incident.

A few years ago some Jews were anxious to buy the part of the mountain on which this shrine stands—a proposal much resented by the more fanatic Muslims. At this juncture one of the *shaikhs* of Safed declared that Shaikh Hadid had appeared to him in a dream and had told him that he was against this proposed transaction and had recorded his wishes on a paper which would be found sticking in a certain part of his tomb. The ignorant people, unsuspecting of any fraud, went to the spot and found there a paper bearing many threats in Arabic of the evils which would fall on the town if its inhabitants allowed so impious a sale. Needless to say, this stopped all further negotiations.

The saints of many of these shrines are little more than names, and nothing is really known of them; yet their influence is great. When the saint is credited with having belonged to one of the four orders¹ of dervishes, the colours of the different orders are frequently tied to some part of the tomb.

Common as are these shrines and sacred groves in Palestine, they are even more plentiful and influential in the Lebanon mountains; and Palgrave and other travellers witness that similar holy places occur in the deserts of Arabia.²

5. Christian and Jewish shrines.—Christian and Jewish tombs and shrines have a similar cult. By far the greater proportion of the peasantry of Palestine are Muslims—of various sects—but among the Christian *fellahin* in a similar state of culture practically the same ideas prevail as regards saints and heroes. In many of the towns and villages the Christians have a more intelligent view of their religion, and their customs merge into adoration of the ordinary Christian saints;³ but, among the more ignorant, considerable numbers pay reverence to exactly the same shrines as the Muslims and follow identical customs. Famous *walis* are visited by parties of Christians for the payment of vows. One example, among many known instances, must suffice here: there is a ruined *wali* overhung by an old *sidr*-tree on the northern shore of the Lake of Galilee near Tell 'Oraimah called Shaikh 'Ali as-Sayyād which is considered by the neighbouring *bedu* a very powerful *wali*; till quite recently a number of Christians at Ramah used to come annually and sacrifice a sheep and hold a day's feast at this *wali*.

The Christians hold an annual festival at the reputed cave of Elijah at the foot of Mt. Carmel; it is a Muslim shrine, guarded by hereditary Muslim custodians, but it is also held in high repute by Jews and Christians. At the Convent of Elijah on Mt. Carmel an annual feast is held on 20th July, which is attended by thousands of Christians as well as by Muslims, Jews, and Druses. Many sheep are sacrificed on such occasions.

Among the Oriental Jews the cult of sacred tombs and the worship of saints—under the name of rabbis—are very prominent. The sacredness of three of the four 'Holy Cities' of the Jews depends almost entirely upon the tombs in their neighbourhood. Thus Hebron contains the tombs of the Patriarchs; Tiberias is the site of the reputed tombs of Maimonides, Rabbi Meir Baal Nes, and

Rabbi 'Aqiba. Rabbi Meir is one in whose name an oath is more binding than one by God or any of the Patriarchs; his tomb is credited with wonder-working powers, and every spring a great festival is held there in his honour, to which hundreds of Jewish pilgrims come from all parts of the Orient. The celebration is similar to the older feast held at the tomb of Rabbi Simeon ben Yohai near Safed. Near this town are many tombs to which great virtues are ascribed—e.g., the tomb of Benāt Ya'qūb, belonging to the Muslims, and the tomb of Hoshea ben Ba'ari, which are visited in times of drought as spots favourable to prayers for rain. For similar reasons the tomb of Khune Amagdol, near Far'am, a village near Safed, is a place of pilgrimage; this rabbi is said to have slept for seventy years, and, according to the Talmud, he was in his lifetime a successful intercessor for rain. At Merōn, a village to the west of Safed, are the reputed tombs of several great rabbis. Those of Hillel and his disciples and of Rabbi Shammai are shown, but the most important is the tomb of Rabbi Simeon ben Yohai, the reputed author of the *Zōhar*. Over this tomb and that of his son, Eleazar, is erected a large synagogue with adjoining courtyard and lodgings somewhat similar in appearance to the buildings at Nabi Mūsa. The whitewashed domes make it conspicuous from afar, and the customs connected with it are quite comparable with those associated with Nabi Mūsa. Here in May—on the 33rd of 'Omar¹ and succeeding day—an extraordinary festival is held which seems to preserve many elements of paganism.

Jews assemble from all parts of the country—indeed, even from distant lands. On the afternoon of the first day the *Tōrah* is carried in grand procession from Safed. After sunset the place becomes packed with people, who gradually work themselves up into frenzied excitement, dancing wildly in the courtyard, chanting in Hebrew, throwing about lighted matches and fireworks, and eating and drinking. At length, when darkness has fully gathered, a series of bonfires are lit, made of garments saturated in olive oil. For the privilege of lighting the first fire, which is kindled in memory of Rabbi Simeon ben Yohai himself, a heavy price is paid, and until recent years costly garments and jewellery were cast into the blaze. The other fires are kindled successively in honour of Rabbi Eleazar and two other worthies. While the fires are blazing, the Jews, with linked hands, dance frantically round the flames, shouting and singing, while those of a quieter disposition engage in muttered devotions. On this occasion many vows are fulfilled; thus fathers who have made a vow to do so dance for hours, each with a little child of his own perched upon his shoulder; others buy the holy oil for the bonfires before ignition, paying a considerable sum for a small quantity, considering it endowed with supernatural virtues. On the second day of the feast little boys are brought to the neighbouring tomb of Yuhannan ha-sandalar to have the first beginnings of their side-locks (*peyūt*) trimmed in his honour.

A very similar gathering, though considerably quieter, is held twice a year in the spring at the reputed tomb (wrongly, as a Latin inscription found there proves) of Shaddek Shim'on (Simeon the Just) in the upper part of the Valley of Jehoshaphat, north-east of Jerusalem. On the 50th day after the Passover, and also for some days before the feast of Tabernacles, the Jews pour out of the city to the neighbourhood of this tomb. The majority make little more than a picnic, but the pious burn candles and recite psalms within the cave-tomb itself.²

6. Al-Khudr.—Besides the saints with local shrines there are two personages who belong to a category by themselves. The first of these is al-Khudr, 'the green (or ever-living) one,' confused by Muslims and Jews with Elijah or with Phinehas, the son of Aaron (Ex 6²⁵, Nu 25⁷ 31⁶, Jos 22¹³ etc.), and by Christians with St. George. The shrines of this saint are not tombs, because he did not die; for this reason indeed his influence is looked upon

¹ This is traditionally the day of his death, yet the feast is called 'Hillul' ('wedding') of Simeon ben Yohai.

² For a fuller account of the Jewish places of pilgrimage in Palestine see *JE*, s.v. 'Pilgrimage'; and cf. art. ΠΕΡΙΟΡΙΣΜΟΣ (Hebrew and Jewish).

¹ The distinguishing colours of the four orders are as follows: Sultān 'Abd al-Kādir, white; Sayyād 'Abd al-Bedāwi, red; Itāfā, green and red; Dusuki, white with a red stripe at the edge. The colours of all four orders are found on some tombs.

² Opposition to these shrines is one of the great tenets of the Wahhabis of Arabia.

³ See art. SAINTS AND MARTYRS (Christian).

as peculiarly potent. The village of al-Khudr, between Bethlehem and Hebron, is a small Muslim village in the midst of which is the Convent of St. George, where Muslims and Christians pay their vows and bring their sick friends, lunatics in particular, for healing. When attending the place to pay a vow, the *fellahin* (usually Muslims) are permitted to sacrifice animals in the courtyard of the convent, and they hand over to the priest a share of the meat. The church is full of the offerings of those who have vowed in time of need, and the very chain to which the unfortunate lunatics are fixed is credited with miraculous powers. A somewhat similar institution to this is Mar Jirius on the Nicophorea, near the Jaffa Gate, Jerusalem; and there are three other churches dedicated to this saint in the city. Before pictures of Mar Jirius (St. George) the native Christians make vows and burn incense, and they have many tales of how al-Khudr, or St. George, appeared on a white horse to help one who called upon him in difficulty or danger. Of the many shrines to al-Khudr all over the land the most famous, besides those mentioned, are the Church of St. George at Lydda, where by tradition St. George was buried; the ruined church of Mar Jirius at Tayyibah, north of Jerusalem, about which a curious folk-lore tale is told;¹ the great Convent of Elijah on Mt. Carmel; the above-mentioned cave of Elijah at the foot of Carmel; and the synagogue dedicated to Elijah at Jobar, near Damascus. The last by tradition marks the spot where Elijah anointed Elisha to be a prophet, and at the back of the building is an underground chamber where by tradition Elijah was fed by the ravens. In this chamber, as in the cave at the foot of Carmel, sick folk, especially lunatics, are shut up in order to obtain health and healing.

This identification of Elijah and St. George under the name of al-Khudr is very curious, and it is suggestive, too, that the feast of St. George, held, according to the Arabic calendar, on 26th April, is called 'the feast of the spring,' which makes everything green — al-Khudr from some aspects appears to be a deity of the spring and of vegetation, but his identification with Elijah and St. George is inexplicable.

7. Shaikh ash-Shadhilly.—Another mysterious personage is Shaikh ash-Shadhilly, the supposed inventor of coffee, to whom libations of coffee are made whenever that beverage is drunk in public assembly, and in whose name coffee is sometimes poured out before the feet of a bride as she leaves her parents' home. Oaths are made in his name; he is a true *wali*.

8. The bearing of the cult of saint- and hero-worship upon other Semitic religious customs.—When the essence of the cult of *wali*-worship is examined, it will be found that among the majority of the ignorant the saint is looked upon as the one from whom the favour is actually asked; he is the being who is obeyed and dreaded; vows to him must be kept because his activity is great and his power of vengeance is sure. He is a much more active force, whether as guardian or as persecutor, than a far-off, unchanging God or even a personal devil. It is hardly necessary to say that all this is quite contrary to the orthodox religions, emphatically so as regards Islām; the better-educated religious leaders know and confess this, though they have practically to bow to it.

It is the same contest as has been going on in these lands for millenniums. Josiah fought against these local shrines (2 K 23¹²⁻¹³) just as any reforming Muslim would have to do to-day. In Arabia the very spots which once were idol-shrines are now *walis* with very similar cult, and this may

be said of many of the more important shrines in Palestine and Syria.

The whole cult merges into many kindred ideas. On the one hand, it is difficult to draw a hard and fast line between this worship at tombs of *walis* and *shaikhs* and the whole cult of worship of the dead, feasting at tombs, etc.; and, on the other hand, the visits to these shrines are identical with what the orthodox Muslim does when he makes the *hajj* to Mecca — which was a pre-Islāmic heathen shrine — or the orthodox Oriental Christian when he makes the annual pilgrimage to the Holy Sepulchre and other 'holy' places.

Another closely allied subject is the cult of sacred stones, caves, springs, and trees, all looked upon by the *fellahin* as inhabited by some supernatural being and likewise as objects of special reverence and worship. Many of these are quite unconnected with any historical or mythological personage. The people burn incense at these spots and make their vows in the same way as at the tomb. Some such spots are credited with healing virtues; others are believed to be beneficial for sterility. The belief in the incarnation of the deity in certain historical or living personages, which is found in the Druse, Nāsirīyyah, and Bābīte faiths, though closely connected with the present subject, is one which is dealt with elsewhere.¹

SAINTS, LATTER-DAY.—The Church of Jesus Christ of Latter-Day Saints, commonly called Mormons, an American sect, claims to number over 300,000 adherents, whose capital is Salt Lake City, Utah.

I. DOCTRINES AND ORGANIZATION.—1. The creed.—According to the present official handbook, the religion of the Latter-Day Saints consists of doctrines, commandments, ordinances, and rites revealed from God to the present age. The first principle is faith in God and in Jesus Christ; the next is repentance from all sin; then follows baptism for the remission of sin, as a preparation for the gift of the Holy Ghost, bestowed by the laying on of hands. Obedience to these principles is necessary for membership in the Church of Jesus Christ of Latter-Day Saints. Faith in God is the beginning of religion, and confers spiritual gifts such as healings, miracles, tongues, the interpretation of tongues, discernment, visions, dreams, prophecy, and revelation. Authority to administer in the name of the Deity must of necessity come from God. This involves revelation. There having been no communication with heaven for hundreds of years, the world was without divine authority to administer gospel ordinances until Joseph Smith came. By John the Baptist he was ordained to the lesser or Aaronic priesthood, and by Peter, James, and John to the higher or Melchizedek priesthood, receiving the holy apostleship and the keys of the kingdom with power to seal on earth so that it might be sealed in heaven. The religion of the Latter-Day Saints is progressive. It cannot be defined in a written creed. It is added to by the revelations of God as the capacities of the Saints enlarge and the needs of the Church increase. Every member of the Church is entitled

¹ See Hanauer, *Folk-lore of the Holy Land*, p. 52 ff.

² See artt. SECTS (Christian), (Muslim), BĀR LĀND.

to the blessings of divine communion and revelation for his or her own comfort and guidance. Revelations for the whole Church are given only through its President, who is its earthly head and holds the keys of the kingdom. Among the later revelations to the Church are the doctrines of baptism for the dead and of celestial marriage. As there was no authority among men to administer the ordinances of the gospel from the days of the early apostles, or shortly after, to the time of the restoration of the priesthood to Joseph Smith the Prophet, all the baptisms during the intervening period were void. The friends of the dead, however, are permitted to take their names and be baptized in their stead, the ceremony being duly witnessed and recorded on earth and accepted and ratified in heaven. Other ordinances may also be admitted by proxy, the living on behalf of the dead.¹

In the above declaration three principles are of significance: (a) continued revelation and primitive 'gifts,' (b) baptism for the dead, and (c) 'celestial' marriage or authorized polygamy. Of these principles the first was obviously borrowed from the Restorationists, a local sect, contemporary with the founding of Mormonism. The second was a retro-active application of the Roman Catholic doctrine of Purgatory. The third was more than a logical variation upon the doctrines of other religious bodies.

(a) *Continued revelation and primitive 'gifts.'*—The first principle is set forth by the chief Mormon theologian, Parley P. Pratt, as follows:

'Theology is the science of communication, or of correspondence between God, angels, spirits, and men, by means of visions, dreams, interpretations, conversations, inspirations, or the spirit of prophecy and revelation; it is the science by which worlds are organized, sustained and directed and the elements controlled; it is the science of knowledge, and the key and power thereof, by which the heavens are opened, and lawful access is obtained to the treasures of wisdom and intelligence—inexhaustible, infinite, embracing the past, the present, and the future; it is the science of life, endless and eternal, by which the living are changed or translated, and the dead raised; it is the science of faith, reformation, and remission of sins, whereby a fallen race of mortals may be justified, cleansed, and restored to the communion and fellowship of that Holy Spirit which is the light of the world, and of every intelligence therein; it is the science of spiritual gifts by which the blind see, the deaf hear, the lame walk, the sick are healed, and demons are expelled from the human system.'²

(b) *Baptism for the dead.*—The second principle means that some living believer shall be baptized as proxy for some one of the dead. This doctrine, whereby 'the hearts of the children are turned to the fathers,' is thus expounded by J. E. Talmage:

'The redemption of the dead will be effected in strict accordance with the law of God, which is written in justice and framed in mercy. It is alike impossible for any spirit, in the flesh or disembodied, to obtain even the promise of eternal glory, except on condition of obedience to the laws and ordinances of the gospel. And, as baptism is essential to the salvation of the living, it is likewise indispensable to the redemption of the dead. . . . The necessity of vicarious work is here shown—the living laboring in behalf of the dead; the children doing for their progenitors what is beyond the power of the latter to do for themselves.'³

(c) *Celestial marriage.*—The practice of 'spiritual wifehood' started early in the Latter-Day Church. The doctrine was an afterthought promulgated in defence of what was plain polygamy. In the last year of the life of Joseph Smith, jr., founder of Mormonism, there came the notorious *Revelation on the Eternity of the Marriage Covenant, including Plurality of Wives. Given through Joseph, the Secr., in Nauvoo, Hancock County, Illinois, July 12th, 1843.* The salient parts of this revelation are as follows:

'Verily, thus saith the Lord unto you, my servant Joseph, that inasmuch as you have inquired of my hand, to know and

understand wherein I, the Lord, justified my servants Abraham, Isaac and Jacob; as also Moses, David and Solomon, my servants, as touching the principle and doctrine of their having many wives and concubines:

Behold! and lo, I am the Lord thy God, and will answer thee as touching this matter:

Therefore, prepare thy heart to receive and obey the instructions which I am about to give unto you; for all those who have this law revealed unto them must obey the same:

For behold! I reveal unto you a new and an everlasting covenant; and if ye abide not that covenant, then are ye damned; for no one can reject this covenant, and be permitted to enter into my glory;

For all who will have a blessing at my hands, shall abide the law which was appointed for that blessing, and the conditions thereof, as were instituted from before the foundation of the world:

And as pertaining to the new and everlasting covenant, it was instituted for the fullness of my glory; and he that receiveth a fullness thereof, must and shall abide the law, or he shall be damned, saith the Lord God.

And verily I say unto you, that the conditions of this law are these:—All covenants, contracts, bonds, obligations, oaths, vows, performances, connections, associations, or expectations that are not made, and entered into, and sealed, by the Holy Spirit of promise, of him who is anointed, both as well for time and for all eternity, and that too most holy, by revelation and commandment through the medium of mine anointed, whom I have appointed on the earth to hold this power (and I have appointed unto my servant Joseph to hold this power in the last days, and there is never but one on the earth at a time, on whom this power and the keys of this Priesthood are conferred), are of no efficacy, virtue or force, in and after the resurrection from the dead; for all contracts that are not made unto this end, have an end when men are dead. . . .

As pertaining to the law of the Priesthood: If any man espouse a virgin, and desire to espouse another, and the first give her consent; and if he espouse the second, and they are virgins, and have vowed to no other man, then is he justified; he cannot commit adultery, for they are given unto him; for he cannot commit adultery with that that belongeth unto him and to no one else;

And if he have ten virgins given unto him by this law, he cannot commit adultery, for they belong to him, and they are given unto him, therefore is he justified.'¹

Although this document was not officially promulgated until 1852, when Smith was dead and his followers were safe in Salt Lake Valley, its authenticity is provable from its similarity in style to the other sacred books of the Mormons. As to this series, there was a kind of gross philosophic basis to the doctrine of 'celestial' marriage. This doctrine is perhaps remotely attributable to the notions of an obscure sect, the German Pietists of Pennsylvania, followers of Tauler and other mediæval mystics. Dwelling in the same State in which the early writings of Joseph Smith were excoagitated, they likewise taught a doctrine of the 'spiritual' union of the male and female. It may be paradoxical to assert that Mormonism was made in Germany, yet Conrad Beissel, head of the Ephrata community, initiated in the doctrine of the heavenly *Sophia*, may have been the fount and origin of the esoteric teachings of the Latter-Day Saints. Then, too, Sidney Rigdon, or that 'German peddler' who at one time influenced Smith, may easily have served as the vehicle of transmission for these perverted notions of a cosmic dualism. Be that as it may, precisely what the Prophet himself taught on the 'mysteries of the kingdom' is unknowable, since part of his testimony in Rigdon's trial was declared unprintable. Nevertheless, the system of Mormon metaphysics, justifying plurality of wives, is to be gathered from the writings of the two Pratts.

According to Orson Pratt, called 'the Gauge of Philosophy,' 'celestial marriage opens the way for all women who wish to marry to fill the measure of their creation. . . . It shows how the innumerable creations of God (i.e. this world and other planets) may be peopled with intelligences. . . . Woman without man and man without woman cannot be saved. The larger a progeny a man has, the greater will be the fullness of his eternal glory.'²

Such was the first promulgation and vindication of the doctrine of 'spiritual wifehood' in the early

² *Treatise on the Regeneration and Eternal Duration of Matter*, 1810.

days of the Church. The present official handbook contains this account of the matter :

'Celestial marriage is marriage unto all eternity. According to the revelation on this subject all the marriages entered into without divine authority are dissolved by death. Celestial marriage is entered into by those who have obeyed the gospel and become the sons and daughters of God by adoption. The woman is given to the man and they become one flesh. That which is thus sealed on earth is sealed in heaven, and is as valid as though performed in person by the Deity. If a wife thus sealed to her husband should precede him in death, it would be his privilege to wed another. The second wife, or third, if the second should die, would be sealed to him in the same manner as the first. They would all be his equally. In the resurrection he would have three wives, with their children, belonging to him in the everlasting covenant. The revelation on celestial marriage declares that if given to man in the everlasting covenant in the way appointed to God, he is not under condemnation, but is justified in receiving more wives than one. They are sealed to him and become his, and he cannot commit adultery with them because they are his and his alone. None of them are concubines or mistresses, or mere ministers of lust. Celestial marriage in its fullness is ordained of God. It is an establishment of religion. It is ecclesiastical in its nature and government. It is, therefore, outside the domain of constitutional law. Being within the pale of the Church, its free exercise cannot of right be prohibited.'

2. Organization.—The Mormon hierarchy is complicated. Joseph Smith and Oliver Cowdery were the first two elders and apostles in the Church. Smith, who bore the title of 'Prophet, Seer, and Revelator,' stood at the head of the Melchizedek priesthood, of which three presiding high-priests, chosen by the body, form a quorum of the Presidency of the Church. The President of the Church and his two counsellors form the First Presidency, and the three together represent the Trinity. The Twelve Apostles form a quorum equal in authority and power to the three Presidents previously mentioned. The Twelve are a travelling presiding High Council, under the direction of the Presidency of the Church, to build up the Church and regulate its affairs in all nations. The Seventies are also called to preach the gospel and form a quorum equal in authority to that of the Twelve. The Seventy Elders have seven presidents to preside over them, chosen out of the number of the Seventy. In addition to these the officers of the Melchizedek priesthood are high-priests and elders. The officers of the Aaronic or lesser priesthood are priests, teachers, and deacons. There are twenty-one 'Stakes of Zion' in Utah. Over each stake there is a presidency consisting of a president and two counsellors, who are high-priests. This presidency bears the same relation to the stake that the First Presidency bears to the whole Church. A high council in each stake, consisting of twelve members, who are also high-priests, acts for the stake as the travelling presiding High Council acts for the Church in all the world. It is the province of the high-priests to preside, while the special calling of the Seventy is to travel and preach the gospel and build up the Church.

The Mormon system of proselytizing is simple. Twice each year, at the annual and semi-annual conferences held in Salt Lake City, a number of the faithful elders of the Church are selected by the authorities and 'called' by the assembled Saints to visit the home or the foreign field. They travel at their own charges. Each mission is presided over by some elder selected by the general authorities of the Church, and the minor divisions of branches and conferences have their proper officers. The Utah missionaries remain in their fields of labour from two to four years and until released by competent authority to return home. Mormon missionaries have gone to Canada, Mexico, the Antilles, Brazil, Peru, Great Britain, Germany, Switzerland, France, Italy, Denmark, Sweden, Norway, Iceland, Finland, S. Africa, India, the East Indies, China, Australia, New Zealand, the Society Islands, and the Hawaiian Islands. The Church has an organization known as the Perpetual

Emigration Fund Company, which makes advances of money to assist the faithful to Utah and adjoining districts.

II. HISTORY.—1. The founder of Mormonism. —The growth of the Church of Latter-Day Saints in both beliefs and structure is most clearly portrayed in the history of its founder.

Joseph Smith was born at Sharon, Windsor County, Vermont, in Dec. 1805. There are three views concerning his personality—the orthodox, the popular, and the critical. The first makes him 'God's vicegerent, a prophet of Jehovah, a seer and a martyr: Every Mormon, if true to his faith, believed as freely in his holy character as they did that God existed.'¹ The second view makes him a visionary, a fanatic, an impostor, and a libertine. The third view is a compromise; taking both the accounts of early Church narrators and the contemporary adverse descriptions, it attempts to explain the conviction of his followers that their leader was the medium of supernatural communication, and the belief of his neighbours and contemporaries that his character was marked by abnormal peculiarities. The naturalistic explanation further depends upon a study of heredity and environment. According to suppressed sources, particularly the *Biographical Sketches* of the Prophet's mother, his paternal grandfather, Asael Smith, was a man of distorted views on religion, while his maternal grandfather, Solomon Mack, an infirm beggar, was highly credulous, believing, like Joseph's mother, in cures by faith and in dreams as warnings from heaven. The career of the father, Joseph Smith, was that of a wanderer; failing as a farmer, a store-keeper, and a root-digger in Vermont and New Hampshire, he assumed a land claim in Ontario County, New York, in 1815. Like his son, he believed in witchcraft and demon-possession. In his autobiography Smith declared that these were the reports of evil-disposed and designing persons. At the least they disclose three traits inherited by the youthful seer—his illiteracy, his restlessness, and his credulity. Furthermore, the ancestral characteristics may be interpreted from a pathological standpoint, for there was much to be transmitted in the way of erratic tendencies. On the maternal side Joseph's grandfather was subject to 'falling fits,' consequent upon a severe wound to his head. This was received about a year before the birth of the Prophet's mother, Lucy Mack, who was in turn liable to mental hallucinations, such as hearing supernal voices and seeing luminous faces. On the paternal side Joseph's grandfather, Asael, nicknamed, for a bodily deformity, 'Crook-necked Smith,' is spoken of,² at the age of eighty-six, as 'just recovering from a severe fit,' and of a 'weak mind.' Granting that these were merely the symptoms of senility and not transmissible qualities, Asael's son was nevertheless the victim of decided neural instability, being at times 'much excited upon the subject of religion.'³ If to this aberrant history of his progenitors be added the fact that 'fits' have reappeared in the fifth generation, some grave neuropathic disturbance, such as epilepsy, is to be surmised as the most likely cause of the Prophet's abnormalities. In particular, his phantasms may be considered as the epileptic reduplications not only of the 'lights' seen by his 'imagining but agitated' maternal grandfather, but also of the 'visions' of his own father, the last of which was 'received' in 1819. His own peculiar psychic experiences the Latter-Day seer was wont to liken to those of St. Paul; they may be more appropriately compared to those of Muhammad, whose

¹ *Times and Seasons*, v. 856.

² Lucy Smith, *Biographical Sketches*, p. 154 f.

³ *Times and Seasons*, v. 173.

career as prophet-statesman is to be similarly interpreted by means of the formulæ of modern psychology.¹

The 'conversion' of Joseph Smith took place near Palmyra, New York, in 1820—in a region infested by fanatic sects and at a period marked by excessive revivalism. Of this affair Smith in his maturity gave the following account:

'Some time in the second year after our removal to Manchester, there was in the place where we lived an unusual excitement on the subject of religion. . . . I was at this time in my fifteenth year. . . . During this time of great excitement, my mind was called up to serious reflection and great uneasiness; but though my feelings were deep and often pungent, still I kept myself aloof from all those parties, though I attended their several meetings as often as occasion would permit. . . .

It was on the morning of a beautiful clear day, early in the spring of eighteen hundred and twenty. It was the first time in my life that I had made such an attempt, for amidst all my anxieties I had never as yet made the attempt to pray vocally.

After I had retired into the place where I had previously designed to go, having looked around me and finding myself alone, I kneeled down and began to offer up the desires of my heart to God. I had scarcely done so, when immediately I was seized upon by some power which entirely overcame me, and had such astonishing influence over me as to bind my tongue so that I could not speak. Thick darkness gathered around me, and it seemed to me for a time as if I were doomed to sudden destruction. But, exerting all my powers to call upon God to deliver me out of the power of this enemy which had seized upon me, and at the very moment when I was ready to sink into despair and abandon myself to destruction, not to an imaginary ruin, but to the power of some actual being from the unseen world, who had such a marvellous power as I had never before felt in any being, just at this moment of great alarm, I saw a pillar of light exactly over my head, above the brightness of the Sun, which descended gradually until it fell upon me. It no sooner appeared than I found myself delivered from the enemy which held me bound. When the light rested upon me, I saw two personages whose brightness and glory defy all description, standing above me in the air. One of them spake unto me. . . . When I came to myself again I found myself lying on my back, looking up into heaven.'²

The second of the 'visions of Joseph' took place on 21st Sept. 1823, when the heavenly messenger disclosed the hiding-place of the gold plates upon which the *Book of Mormon* was asserted to be engraved. There was a series of seven visions in all, extending over as many years, and variously characterized by epileptic symptoms, such as dazzling colour sensations, dizziness, coma, vacuity, and bodily bruises. This explanation of the 'visits of the angels' to their leader is, of course, repudiated by the orthodox Saints, as is the report that the Prophet's wife asserted that she never believed in what her husband called his apparitions or revelations, as she thought him labouring under a diseased mind. Nevertheless, psychological method goes far to explain not only Smith's visions but his more pretentious activities in 'translating' the *Book of Mormon*. Connected with his abnormal trances is the so-called 'transcription of the gold plates.' Having dug for fabled treasures among Indian mounds on the western frontier, Joseph Smith found a 'peek-stone,' which became the later 'Urim and Thummim' whereby 'Joseph the Seer translated the reformed Egyptian of the plates of Nephi.' Recent inspection of the original 'transcription,' with its crude superscription 'Caractors,' and its partial back-handed autographs, shows it to be nothing but the automatic scrawl of the self-hypnotized crystal-gazer. And Smith's peculiar method of giving 'revelations' bears out this hypothesis of a subconscious activity. Hidden behind a blanket and throwing himself into a condition of reverie by gazing into his 'interpreters,' he dictated to his scribes communications of supposed supernatural origin. Of these writings the first was the *Book of Mormon*, begun in Sept. 1827, at Manchester, New York, continued at Harmony, Pennsylvania, and finished at Fayette, New York, in June 1829. The original MS has disappeared; there remains only a duplicate made

by Smith's principal scribe, the schoolmaster Oliver Cowdery. This Cowdery copy is of value as containing the author's preface with its original erasures and its misspellings, solecisms, and improprieties. The first edition also presents this illuminating title page:

'The *Book of Mormon*, an Account written by the Hand of Mormon, upon plates taken from the plates of Nephi. Wherefore it is an abridgment of the record of the people of Nephi; and also of the Lamanites, who are a remnant of the House of Israel; and also to Jew and Gentile; written by way of commandment, and also by the spirit of Prophecy and of Revelation. Written, and sealed up, and hid up unto the Lord, that they might not be destroyed; to come forth by the gift and power of God unto the interpretation thereof; sealed by the hand of Moroni, and hid up unto the Lord, to come forth in due time by the way of Gentile; the interpretation thereof by the gift of God. An abridgment taken from the Book of Ether. Also, which is a Record of the people of Jared; which were scattered at the time the Lord confounded the language of the people when they were building a tower to get to Heaven; which is to show unto the remnant of the House of Israel how great things the Lord hath done for their fathers; and that they may know the covenants of the Lord, that they are not cast off forever; and also to the convincing of the Jew and Gentile that Jesus is the Christ, the Eternal God, manifesting Himself unto all nations. And now if there be fault, it be the mistake of men; wherefore condemn not the things of God, that ye may be found spotless at the judgment-seat of Christ. By Joseph Smith, junior, Author and Proprietor, Palmyra, printed by E. B. Grandin, for the author, 1830.'

The fifteen books of this 'Sacred History of Ancient America from the Earliest Ages after the Flood to the Beginning of the Fifth Century of the Christian Era' Smith himself thus summarized:

'We are informed by these records that America, in ancient times, has been inhabited by two distinct races of people. The first were called Jaredites, and came directly from the Tower of Babel. The second race came directly from the city of Jerusalem, about six hundred years before Christ. They were principally Israelites, of the descendants of Joseph. The Jaredites were destroyed, about the time that the Israelites came from Jerusalem, who succeeded them in the inhabitation of the country. The principal nation of the second race fell in battle towards the close of the fourth century. The remnant are the Indians, who now inhabit this country. This book also tells us that our Saviour made His appearance upon this continent after His resurrection; that He planted the gospel here in all its fulness and richness, and power, and blessing; that they had apostles, prophets, pastors, teachers, evangelists; the same order, the same priesthood, the same ordinances, gifts, powers, and blessing, as was enjoyed on the Eastern continent; that the people were cut off in consequence of their transgressions; that the last of their prophets who existed among them was commanded to write an abridgment of their prophecies, history, etc., and to hide it up in the earth, and that it should come forth and be united with the Bible, for the accomplishment of the purposes of God in the last days.'¹

As a product of abnormal mentality, this 'account of the aborigines of America' has been recently described as made up of fantastic explorations of the imagination, assumptions of narrative, incidents, and style apparently foreign to the subject's normal intelligence, the invention of fictitious names, persons, places, and things—incidents and details which may be traced to the authentic experiences of the subject, but experiences which may have been subconsciously realized, and are certainly recorded while in an abnormal state of dissociation.² Here again is furnished a mediating position between the orthodox view, which holds the *Book of Mormon* to be the authentic Word of God, vouchsafed through verbal inspiration, and the hostile view, which considers it a rank imposture—a blending of petty information, gross anachronisms, and the muddled superstitions of the rural mind. Rather does the critical view hold that the work contains some details of historic interest, since there appear in it, in Scriptural paraphrase, references to the agitations of the day against Romanism, Deism, and Freemasonry, besides references to Swedenborgianism with its three heavens, and to the 'Washingtonian' movement for total abstinence. The current theory that the Indians were the lost ten tribes of Israel

is also embodied. But, while the Nephites in their actions were the modern Redmen in disguise, in their mental habits they more closely resembled the local sectarians. Thus the speech of Nephi contains quotations from the *Westminster Confession of Faith*, and the speech of Lehi the heretical tenets charged against the Presbytery of Geneva, New York, in whose bounds Joseph himself lived. The book is also interspersed with the catch-words of the Methodist camp-meeting exhorter, its last section, in fact, being a palpable imitation of a Methodist book of discipline.

Such higher criticism of the most sacred book of the Latter-Day Saints is apparently unacceptable to their apologists; yet it might be of service to them, since it goes far to render untenable the chief contention against the authenticity of the work. This is, in a word, that the ideas in the book were not within the mental horizon of a youth who described himself as 'a rough stone, desiring the learning of heaven alone.'¹ But this ignores the more popular sources of information open to Smith. His Calvinism need not have been derived even from the *New England Primer*, nor his arguments on Deism from Thomas Paine's *Age of Reason*, since the backwoods pulpit and tavern gossip supplied the notions in question. Hence, if the internal evidence makes the *Book of Mormon* indigenous, the external evidence is equally against the supposition of a foreign authorship as presented in the ordinary Spaulding-Rigdon theory. This is, briefly, that a romance of pre-historic America, written in Ohio in 1812 by a Congregational minister, Solomon Spaulding, was the 'source, root, and inspiration' by which Smith's associate, Sidney Rigdon, concocted the scheme of a Golden Bible. The recovery in 1885 of the purported original of Spaulding's 'Manuscript Story' has been to the Saints conclusive proof of its non-connexion with the *Book of Mormon*, for there is no real resemblance between the two. The theory is further invalidated by the fact that it is impossible to show how, when, or through whom Smith could have obtained one of the two copies of the Spaulding MS.

The founder of Mormonism entered upon the second phase in his career, that of 'Prophet, Seer, and Revelator,' with the publication of the next instrument in the Mormon canon, the *Book of Commandments*. This, like its enlargement, the *Book of Doctrine and Covenants*, contains 'revelations to Joseph Smith, Junior, for the building up of the kingdom of God in the last days.' These oracular utterances range from an interpretation of the Ancient of Days to predictions of the Second Advent. Their reception as authentic vaticinations among Smith's first adherents is to be explained by the credulity of his audience and the religious primitiveness of the times. The local relish for the predictive and oracular is manifest by the success of other founders of occult sects in those parts. Jemima Wilkinson prophesied at Crooked Lake; at Rochester William Miller predicted the end of the world; and the Fox sisters started spiritualism only ten miles from Smith's home. Moreover, the return of apostolic gifts was hoped for by the local Quakers, Primitive Baptists, and Restorationists. Upon this prepared soil the Latter-Day Prophet now assumed the additional rôle of exorcist.

When Newel Knight, an early convert, was 'attacked by the power of Satan, and after he had thus suffered for a time,' narrates Smith,² 'I succeeded in getting hold of him by the hand, when almost immediately he spoke to me, and with very great earnestness required of me that I should cast the devil out of him. . . . I rebuked the devil and commanded him in the

name of Jesus Christ to depart from him.' And so 'at the first conference of the Church,' continues Knight,³ 'many prophesied, others had the heavens opened to their view, which tended to confirm our faith in Joseph Smith being the instrument in the hands of God, to restore the priesthood again to man on earth, and to set up the Kingdom of God.'

As in the case of the 'Three Witnesses' to the *Book of Mormon*, Smith here appears to have exerted a partially hypnotic influence over his followers. As by mental suggestion he had induced a veritable hallucination in which his closest disciples thought they saw the 'gold plates,' so now he exerted this influence upon a wider circle of adherents, and induced in them an absolute confidence in his powers as exorcist and faith-healer. In these new activities it has been claimed that the Mormon leader achieved his successes by borrowing the principles and methods of kindred pseudo-scientific cults which swept over the country. But it was too early in the century for him to be acquainted either with the French animal magnetism or with its American variety, the so-called electro-biology.

Hence it is more logical to suppose that his knowledge of hypnotic possibilities was inadvertently discovered, and that his attempts to bring about ecstatic trances, speaking with tongues, and healing by prayer were connected with belief in the restoration of apostolic gifts, such as was promulgated by the two Campbells in Scotland and in America. But, although the practice of hypnotic suggestion was empirical, it was none the less successful. It is true that during the revival meetings of the Mormons in Ohio the trances and prostrations led to uncontrollable spasms and convulsions, yet subsequently the Prophet brought about some actual cures. While Smith, with his accustomed opportunism, attributed his failures to the creeping in of false spirits, and his successes to the restoration of the priesthood again to man on earth, both are rather to be attributed to the unstable neurotic condition of the young body of believers. On the one hand, the people looked on the Kirtland frenzy as a 'sign,' and were loath to abandon such strange 'handling by the spirits'; on the other hand, their mental suggestibility was highly conducive to 'divine' healing and to 'miraculous' cures. And so the casting out of devils led to the casting out of diseases. As in the case of the Irvingites and of the Oneida Community of Perfectionists, veritable therapeutic results were obtained in the sphere of non-organic troubles. Laying on of hands did not cure cholera, nor prayer brain-fever, but psychic suggestion alleviated a case of rheumatism, and a sort of collective hypnosis toned up the systems of the fever-ridden Saints on the banks of the Mississippi.

That Joseph Smith in all his activities as 'Prophet, Seer, and Revelator,' occultist, exorcist, and faith-healer, was the real master of Mormonism is borne out by a number of accounts of him in the height of his power. The view that, along with his impressive manner in making the healing suggestion, there was 'an expression peculiar to himself, which the eye was never weary of beholding,'⁴ is obviously due to the false perspective of emotional excitement. Yet the descriptions of non-Mormon eye-witnesses imply that there was something remarkably forceful in the man. One of these described him as maintaining a grave demeanour;⁵ another as of indomitable perseverance, strange and striking views, and great influence over enemies and followers alike;⁶ a third as a man of commanding appearance leaving an

impression of rugged power. To the last portrait, however, its author, Josiah Quincy, added the qualification that, while Smith gave the impression of kingly power, his talk was garnished with forcible vulgarisms; and, while he had a statesman-like prevision in advocating the buying of slaves, eleven years before Emerson advocated that scheme, yet with it all he betrayed unexampled absurdities in showing off his museum containing Egyptian mummies and the autograph of Moses.

'The man mingled Utopian fallacies with his shrewd suggestions. He talked as from a strong mind utterly unenlightened by the teachings of history.'¹

While the success of Mormonism is chiefly attributable to the personality of its founder, there was another leader among the Latter-Day Saints who had much to do in shaping both the character of the movement and the character of the man. In striking contrast to Joseph Smith, the illiterate son of an ignorant father, was Sidney Rigdon, an ex-Baptist preacher, who was in actuality something of a Biblical scholar and in reputation held to be learned in history and literature. In comparing the two men, a friend of both said that Rigdon did not possess the native intellect of Smith and lacked his determined will.² But we may add that what Rigdon lacked in strength of character he made up in breadth of ideas. For one thing, he was acquainted with some of the socialistic notions of that day. While an adherent of Alexander Campbell, who had attacked Robert Owen in a notorious debate in Cincinnati, Rigdon had indirectly obtained from the father of English socialism those communistic notions which he utilized in his branch of the Disciples' Church in Ohio. This collectivist community, made up of a score of families, Smith took over upon his arrival at Kirtland. But, in thus borrowing through Rigdon what were remotely the ideas of Fourier, Smith, of course, gave credit neither to their foreign originator nor to their native intermediary. In a characteristic passage he said that, because Rigdon's church at Kirtland 'had all things in common, the idea arose that this was the case with the Church of Jesus Christ.' He added that the plan of 'common stock' which had existed in what was called 'the family . . . was readily abandoned for the more perfect law of the Lord.' To this explanation was added a special revelation of Feb. 1831:

'Behold, thou shalt consecrate all thy properties which thou hast to impart unto me with a covenant and a deed which cannot be broken . . . And it shall come to pass, that the bishop of my church, after that he has received the properties of my church, that it cannot be taken from the church, he shall appoint every man a steward over his own property, or that which he has received, inasmuch as is sufficient for himself and family; and the residue shall be kept to administer to him who has not, that every man may receive accordingly as he stands in need; and the residue shall be kept in my storehouse, to administer to the poor and needy, as shall be appointed by the elders of the church and the bishop; and for the purpose of purchasing lands, and the building up of the New Jerusalem, which is hereafter to be revealed.'³

With the advent of Rigdon, Smith's activities took a turn more comprehensible but less successful than were his occult performances. The eloquent ex-Campbellite minister was at first received as a messenger 'sent to prepare the way'; in a dozen years he was thrown off by the prophet as 'a millstone on his back.' Smith had hitherto confined himself to vague predictions of a good time coming. But, when definite financial schemes were added to millennial promises, the bubble burst. The story of the Smith-Rigdon business enterprises is a story of continued misfortune. It includes the failure of a general store at Hiram, of the paper City of Zion at Kirtland, of the church sawmill, of the church tannery, and of a \$40,000 temple, upon which was left a debt of

nearly half its value. But before the crash in the Kirtland Safety Society Anti-Banking Company, for the altering of whose notes Secretary Rigdon and Treasurer Smith were forced to flee to Missouri, the Prophet had put a typical religious veneer upon his utopian projects. In 1833 he 'dedicated to the Lord' the printing-office of the *Latter-Day Saints' Messenger and Advocate*. In 1834 he organized the First High Council of the Church of Christ, with himself, Rigdon, and Williams as the first Presidency. In 1835 he chose the Twelve Apostles, among whom were Brigham Young, 'the Lion of the Lord,' Parley Pratt, 'the Archer of Paradise,' and Lyman Wight, 'the Wild Ram of the Mountains.' In 1836 Smith instituted the several quorums, or executive bodies of the Church—first the Presidency, then the Twelve, and the Seventy, also the counsellors of Kirtland and Zion. In 1837 he set apart apostles Kimball and Hyde to go on a mission to Great Britain, the first foreign mission of the Church. This mission appealed strongly to English weaver, Welsh farmer, and Scotch miner, by holding out the promise to each convert of owning his own farm in the land of Missouri, where 'the Lord had been raining down manna in profusion.'

While the outward success of Mormonism abroad is not to be attributed so much to the imaginative Smith as to practical emissaries like Brigham Young, the internal dissensions at home are to be laid at the former's door. In 1832, as a prophet of woe urging the Saints to sell all that they had and flee from the wrath to come, Smith brought the mob upon himself and Rigdon, and the two were tarred and feathered by 'a banditti of black-legs, religious bigots, and cut-throats.' In the great apostasy of 1836 the Church lost some of its pillars. The Three Witnesses to the *Book of Mormon* were soon cut off. In the bull of excommunication David Whitmer, the anti-polygamist, was compared to Balaam's ass; Martin Harris was called a negro with a white skin; while 'all the dissenters,' said the Prophet, 'are so far beneath my contempt, that to notice any of them would be too great a sacrifice for a gentleman to make.'¹ Again, when the town of Independence, Missouri, was declared the new City of Zion, the converts poured in from the Middle Atlantic States and Canada with such rapidity that the non-Mormons were somewhat alarmed. And the ill-advised printing of the *Book of Commandments*, with its revelations to the Saints calling Missouri 'the land of your inheritance, which is now the land of your enemies,' led to acts of hostility from the citizens of Jackson County. The burning of barns and the shooting into Mormon houses at night were followed by demands for the removal of the Mormons from the county within a reasonable time, and for the prohibition of future Mormon settlement therein.

The history of the events which led up to the 'martyrdom'² of Joseph Smith is a tangled tale in which both sides are implicated. Border ruffians were doubtless responsible for the speedy destruction of the Church printing-office, and for the tarring and feathering of Bishop Partridge, yet the Saints themselves were not without fault. Their agreement to depart within eight months was written, as they alleged, 'supposing that before the time arrived the mob would see their error and stop the violence.' Such reasoning may justly be ascribed to the Mormon leader's mental duplicity, which led to further untoward results. While, until 1838, the town of Far West was materially prosperous and on good terms with

its neighbours, upon the Prophet's arrival there arose dissensions within and without. The Presidency was deposed on a charge of misappropriating trust funds, and Oliver Cowdery was expelled for counterfeiting. With the later defection of the Twelve, and of Orson Hyde, one of the original apostles, there came the establishing of an organization named the Danite Band, and known popularly as 'the Avenging Angels.' Bound to secrecy by blood oaths, obeying every behest of the Church against property and life, this Western variety of Thugs owed its origin to Smith's revelation of 6th Aug. 1833:

'Thine enemy is in thine hands, and if thou reward him according to his works thou art justified; if he has sought thy life, and thy life is endangered by him, thine enemy is in thine hands and thou art justified.'

For the agitations of those days Smith was not entirely responsible. While it was upon his suggestion that the organization of the 'Fur Company' let loose foraging bands over the country, yet the beginning of civil strife in Missouri dates from Rigdon's 'salt sermon,' a Fourth of July oration of 1838, in which there was officially predicted a war of extermination between Saints and Gentiles. Then followed the killing of the Danite leader, 'Fear Not' Patten, the defeat of the Missouri Captain Bogart, and the retaliation upon the Mormons in the infamous Hawn's Mill massacre. On 27th Oct. the governor issued orders that the Mormons must be treated as enemies, and must be exterminated or driven from the State, and there ensued a determined campaign against them. The final terms of surrender, offered at Far West by General Lucas, included the payment of debts and the expulsion from the State of all the Latter-Day Saints except the leaders, who were subject to prosecution. In the trial of Joseph and Hyrum Smith, Rigdon, and others, at Liberty, testimony was given that the members of the Danite Band considered themselves as much bound to obey the heads of the Church as to obey God, and that Smith advised his followers to spoil the Gentiles. Smith was confined in Liberty gaol until April 1839, but in vain.

The Mormon leader now employed politics to alleviate persecution, but with what proved to be fatal results. Mass meetings were called in the Eastern cities to express sympathy with the Mormons as oppressed by the enemies of the freedom of religious opinion. Moreover, through the promise of obtaining the votes of the Saints, the Illinois legislature granted charters for the new Mormon capital, the city of Nauvoo, and for the Nauvoo Legion, a militia organization which the Prophet held up as an instrument to 'warn the lawless not to be precipitate in any interference in our affairs.'¹ As the military head of a theocratic Church, 'General' Smith's high ambitions now seem to have turned his head. Confounding State and Church, and relying upon the implicit devotion of his followers, he not only defied the local authorities, but made preposterous claims upon the Federal Government. Indicted as the instigator of the plot to assassinate Governor Boggs of Missouri, whom he had called 'knave, butcher, and murderer,' he was released by his own municipal court. Inflated by his power in controlling the votes of the faithful, and exasperated both by the civil suits against himself and by the property losses sustained by his adherents, he called on President Van Buren, with a claim on the public treasury amounting to \$1,383,044. 55½. Having failed to obtain redress from Congress, Smith penned a letter of inquiry to the opposition, and asked the Whig candidate: 'What will be your rule of action relative to us as a people,

should fortune favor your ascension to the chief magistracy?' Henry Clay's answer being non-committal, Smith called him a black-leg, and became a candidate for the Presidency himself.

The irritating effects of the Prophet's public activities were now increased by the discovery of his equally illicit private practices. That he was in some degree involved in polygamy is probable from a variety of evidence. The introduction of spiritual wifeism was indeed fathered upon the older men like Rigdon, Hurlbut, and Bennett, yet as early as 1833 the Prophet began to 'unfold the mysteries of the kingdom,' and within a decade the Saints in the city of Nauvoo expressed the wish to have the privilege of enjoying their 'peculiarities' unmolested. Besides various revelations concerning this and that 'handmaid,' and concerning care in guarding against 'evils which may arise from accounts given of women,' outward proof of the teaching of the plurality of wives is found in the supersession of the monogamous *Book of Commandments* by the polygamous *Book of Doctrine and Covenants*, and of its practice in such virulent persecutions as caused the expulsion of 15,000 Saints from Missouri.

Discussion now arose within the Mormon community itself. Three of the more intelligent men—R. D. Foster and William and Wilson Law—published a journal called the *Expositor*. This advocated 'disobedience to political revelations' and sought to 'explode the vicious principles of Joseph Smith.' Of this journal there was but one number. This condemned not only the plurality of wives but also the Church appropriation of property without accounting and the preaching of the doctrine of plural gods. Smith's order for the destruction of the *Expositor* press under the plea of martial law increased the excitement among non-Mormons to such an extent that on 22nd June the Prophet and a small number of followers started to flee to the Rocky Mountains. Governor Ford now promised to protect Smith, and the latter surrendered himself to the authorities. Charged with treason in levying war against the State, Smith and his brother Hyrum were shut up in Carthage gaol. Through the governor's bad judgment in appointing as guard the Carthage Grays, who were the confessed enemies of the Smiths, and through evident collusion with a band of disguised assailants, the Prophet and his brother were assassinated on 27th June 1844.

2. The Schismatics and Brigham Young.—The rival claimants to the prophetic successorship were J. J. Strang, Smith's own son, and Brigham Young. The 'Strangites' disappeared when their leader was killed in 1856 because of his practice of polygamy. The 'Young Josephites,' however, founded in 1852 the Re-organized Church of Jesus Christ of Latter-Day Saints, which still exists under the presidency of Joseph Smith, 3rd. It claims to be the continuation of the original Church of Latter-Day Saints, and has been recognized as such by the courts. It maintains that the doctrines of plurality and community of wives are heresies. The headquarters of the Church is at Lamoni, Iowa. It has a publishing-house, and issues two weekly papers (*Zion's Hope*, for Sunday schools, and the *Saints' Herald*, a general religious weekly and the official organ), a monthly magazine (*Autumn Leaves*) for young people, and books and tracts. It maintains Graceland College and a home for the aged poor. There is another establishment at Independence, Mo., with a printing-press, whence are issued *Zion's Ensign*, a weekly paper, books, and tracts. The Church has about 45,000 members.

Of the three claimants Brigham Young was the logical successor of the Prophet. He had joined

¹ *Ol. Revised Laws of the Nauvoo Legion*, Nauvoo, 1844.

the Latter-Day Saints in 1832, had been sent as missionary to tour Canada, had returned to Ohio with a band of adherents, and in 1834 went with the 'Army of Zion' to Missouri as one of the 'Captains of Tens.' Appointed one of the original quorum of Twelve, Young helped Smith to flee to Missouri in 1838. For these services Young was left President of the Twelve upon Smith's assassination.

3. The Mormon Hegira. — Smith's brutal murder did not soften the hearts of the enemies of the Mormons. In 1845 they repealed the Nauvoo charter, and Young made plans to go far west. A small group of Saints was sent ahead to spy out good locations in California and Oregon. Through an accidental meeting with some trappers, the Great Salt Lake Valley was chosen as a final resting-place. Then began the remarkable flight of the Mormon tribe. Under Young's leadership their organization was most effective. This was given in the form of a revelation :

'The Word and Will of the Lord, given through President Brigham Young, at the Winter Quarters of the Camp of Israel, Omaha Nation, West Bank of Missouri River, near Council Bluffs, January 14, 1847.

The word and will of the Lord concerning the Camp of Israel in their journeyings to the West; let all the people of the Church of Jesus Christ of Latter-Day Saints, and those who journey with them, be organized into companies, with a covenant and promise to keep all the commandments and statutes of the Lord our God; let the companies be organized with captains of hundreds, captains of fifties, and captains of tens, with a president and his two counselors at their head, under the direction of the Twelve Apostles; and this shall be our covenant, that we will walk in all the ordinances of the Lord; let each company provide themselves with all the teams, wagons, provisions, clothing, and other necessities for the journey that they can; when the companies are organized, let them go to with their might, to prepare for those who are to tarry; let each company with their captains and presidents decide how many can go next spring; then choose out a sufficient number of able-bodied and expert men, to take teams, seeds, and farming utensils, to go as pioneers to prepare for putting in spring crops; let each company bear an equal proportion, according to the dividend of their property, in taking the poor, the widows, the fatherless, and the families of those who have gone into the army, that the cries of the widow and the fatherless come not up into the ears of the Lord against this people; let each company prepare houses; and fields for raising grain, for those who are to remain behind this season, and this is the will of the Lord concerning his people; let every man use all his influence and property to remove this people to the place where the Lord shall locate a State of Zion.¹

The versatility of the American pioneer was displayed in the establishment of way-stations, with various repair-shops and with a flour-mill built by Young himself. The largest company, which started from Elk Horn River on 4th July, included 1553 persons, with 566 wagons. By 1848 all the Mormons had crossed the plains, except a few left on the Missouri as forwarding agents for emigrants from the Eastern States and Europe.

4. The settlement in Salt Lake. — Despite the poor crops and great sufferings of the first winter in Utah, glowing accounts of the new Zion were sent abroad. The English immigration included men of varied professions and trades, for Young proposed to start cotton-mills and woollen- and glass-factories. Since there were no manufactured goods to be obtained nearer than 1000 miles, the Mormon leader sought to create a self-sustaining State, but the accounts of 1852 showed a deficit, in spite of an attempt to retrench expenses by giving less help to immigrants coming across the Great Plains. But the economic salvation of the Mormon State arose less from the financial ability of the leaders than from the money spent in Utah by the Forty-Niners hastening to the California gold-fields, and from the building of the Pacific Railroad. Young's dictatorship over the new State of Deseret was based on both personal and religious grounds. His people knew him as 'hard-working' Brigham Young; they also believed that

his word was the word of God. His power being further increased by the issue of paper money and the tithing system, there now arose a veritable despotism with such means of espionage as the School of the Prophets and Church Confessors (to visit the families of the Saints).

By 1856 great discontent arose, but the disaffected were weeded out in the so-called 'Reformation.' Young now instigated the murder of William R. Parrish, who attempted to apostatize, organized 400 'Wolf Hunters' to prevent such rare escapes out of the valley as that of Frederick Loba and his wife, and instituted blood atonement, as exemplified in the throat-cutting of Rosmos Anderson, who wished to marry his step-daughter, contrary to the wishes of the ward bishop.

Such were the means used for keeping Zion pure within. From without the irruption of the Gentiles was prevented by such cases of frightfulness as the murder of the Alkin party in 1857 by 'Brigham's Destroying Angel,' Bill Hickman, and the Mountain Meadows massacre of a party of Gentiles from Arkansas and Missouri who were passing through Utah on their way to S. California. For this the Mormon Bishop Lee was executed by the Federal Government twenty years later.¹

5. Relations to the Federal Government. — The Mormons who sought to found a State within a State were long neglected by the authorities at Washington. This was due in large measure to the approach of the Civil War and the ignorance of officialdom as to the practices and principles of the Latter-Day Saints. Thus, when Young flouted a federal judge and threatened vengeance for infringement upon his personal rights because of the appointment of another governor, President Buchanan declared that there was no longer any government in Utah but Brigham Young. Moreover, General Scott's expedition to punish the leaders charged with adultery was rendered ineffective by President Buchanan's pardon, while President Lincoln had his hands so tied by the war between North and South that he was unable to back up Colonel Connor's plans to keep Young in subjection. It took another generation before the heads of the Church unwillingly exchanged polygamy for statehood.

6. Anti-polygamy legislation. — Federal legislation against plural marriage began with the Morrill bill of 1860, which was ineffective, as the severest penalty was that for bigamy. The Cullom bill of 1869 was opposed by the Mormon delegate to Congress, who claimed that the United States constitution guaranteed essential principles of religious faith, and that pluralism was one of these principles, so far as the Saints were concerned. The root of the matter was not reached until 1879, when President Hayes declared that polygamy could be suppressed only by taking away the political power of the sect. This eventuated in the Edmunds bill of 1882, which disfranchised polygamists and forbade their holding federal offices. Within two years 1200 persons were deprived of their right to vote, and within eight years 468 persons were convicted of polygamy or unlawful cohabitation. In 1890 the courts declared the ecclesiastical property confiscated because the Mormon Church was an organized rebellion. Hereupon Young's successor, President Wilford Woodruff, advised his followers to 'refrain from contracting any marriage forbidden by the law of the land.'

In 1893 the federal authorities declared an amnesty for all offenders who could prove that they had not broken the law since 1890. The un-

¹ Doctrine and Covenants, sect. 136.

¹ *Cl. Mormonism Unveiled; or the Life and Confessions of John D. Lee*, St. Louis, 1892.

seating of Congressman Roberts, six years later, led to the official declaration from the Latter-Day Saints that they 'form not a rival power as against the Union, but an apostolic ministry to it, and their political gospel is State rights and self-government.' Since obtaining statehood in 1896, the Mormons have been more circumspect in their conduct, the State constitution of Utah expressly forbidding polygamy. Anti-Mormons, however, still claim that it is even yet practised in the remote rural districts, and that plural wives, old and new, are clandestinely supported by the wealthy Church leaders. Charges have also been recently made that the practices of the parents have been imitated by the younger generation.¹ The defence of the doctrine of plural marriage, in theory at least, is still attempted.

'The truth of the matter,' says one of the most recent apologists, 'is that the Mormon estimate of this institution makes it an actual means of grace, an eminent instrument for the salvation of souls. Just as they hold most strenuously to the doctrine of salvation of the dead by means of proxy baptism, just so, with the belief in pre-existence, as already explained, they consider it an act of eminent piety to provide for the birth of a human soul under the fullness of Gospel influences. That the birth of as many souls as possible under such conditions will hasten the redemption of humanity, and of the world, is an evident corollary to the high importance attached to life on earth in the teachings of the Mormon system. In this aspect of the matter, it is easy to see how that parenthood could be made to assume the aspect of a high virtue, involving that a person who had brought many souls into life was entitled to honor, as an instrument in God's hands in the grand work of populating the world with a race, whose leading attribute is the possession of the Divine Spirit. Because, however, the child-bearing capacity of the average woman is limited, it is evident that the only available means by which a worthy man could multiply his offspring would be by taking to himself a plurality of wives.'²

LITERATURE.—The four chief collections of *Mormoniana* in America are: the Church Archives at Salt Lake City; Government publications at Washington; the Berrian Collection, New York Public Library, rich in first editions and rare publications of the early Church; and the collection of the State Historical Society of Wisconsin, at Madison, which includes the unique private collection of A. T. Schroeder, late of Salt Lake City.

i. **MORMON PERIODICALS.**—*Deseret News*, Salt Lake City, 1852-57; *Elders' Journal*, Kirtland, Ohio, and Far West, Missouri, 1837-39; *Evening and Morning Star*, Independence, Missouri, and Kirtland, Ohio, 1832-34; *Journal of Discourses* (by Brigham Young and the Church leaders), Liverpool, 1854-86; *Latter-Day Saints' Messenger and Advocate*, Kirtland, Ohio, 1834-37; *Latter-Day Saints' Millennial Star*, Liverpool, 1840 ff.; *The Times and Seasons*, Nauvoo, Illinois, 1839-45, vol. iii. ed. Joseph Smith; early files suppressed by Brigham Young.

ii. **PRO-MORMON WORKS.**—H. H. Bancroft, *Hist. of the Pacific States*, vol. xxi., 'Utah, 1840-1886,' San Francisco, 1889; *Handbook of Reference to the Hist., Chronology, Religion and Country of the Latter-Day Saints*, Salt Lake City, 1884; B. H. Roberts, *Defence of the Faith and the Saints*, do. 1907; Joseph Smith, Jr., *A Book of Commandments for the Government of the Church of Christ*, Zion, Jackson County, Missouri, 1833 (exceedingly rare); *Salt Lake City Tribune*, reprint, 1884; *Book of Mormon*, Palmyra, New York, 1830, 2nd ed. (equally rare), Kirtland, Ohio, 1835; *The Pearl of Great Price* (selections from the writings of Smith), Liverpool, 1851, and Salt Lake City, 1891; Lucy Smith, *Biographical Sketches of Joseph Smith and his Progenitors for many Generations*, Liverpool, 1853, and Plano, Illinois, 1880 (by the mother of the prophet, suppressed by Brigham Young); Joseph Smith (3rd) and Heman C. Smith, *A Hist. of the Church of Jesus Christ of Latter-Day Saints*, Lamoni, Iowa, 1901 (from the standpoint of the Reorganized Church); Charles Thompson, *Evidences in Proof of the 'Book of Mormon'*, Batavia, New York, 1841 (suppressed by Brigham Young); E. W. Tullidge, *Hist. of Salt Lake City*, Salt Lake City, 1888 (the work of a reformer, but censored by the Church); R. C. Webb, *The Real Mormonism*, New York, 1916 (the ablest modern apologetic); David Whitmer, *An Address to All Believers in Christ*, Richmond, Missouri, 1857 (written by a primitive non-polygamous Mormon).

iii. **ANTI-MORMON WORKS.**—B. G. Ferris, *Utah and the Mormons*, New York, 1854; J. W. Gunnison, *The Mormons*, Philadelphia, 1856 (description of early life in Utah by an army officer); E. D. Howe, *Mormonism Unveiled*, Painesville, Ohio, 1834 (the earliest first-hand information against Smith; very rare); John Hyde, Jr., *Mormonism: its Leaders and Designs*, New York, 1857 (the confessions of an apostate); T. B. H. Stenhouse, *The Rocky Mountain Saints*, London, 1870 (a vivid portrayal by an able ex-Mormon); Pomeroy Tucker, *Origin, Rise and Progress of Mormonism*, New York, 1867 (the exposé of a fellow-townsmen of Smith).

iv. **CRITICAL WORKS.**—W. A. Linn, *The Story of the Mormons*, New York, 1902 (the most complete and exhaustive history of Mormonism); I. Woodbridge Riley, *The Founder of Mormonism: a Psychological Study of Joseph Smith, Jr.*, New York, 1902, London, 1903 (with bibliography); *Utah Commission* (Government Reports under the Edmunds Law, Washington); Eduard Meyer, *Ursprung und Gesch. der Mormonen, mit Exkursen über die Anfänge des Islams und des Christentums*, Halle, 1912.

I. WOODBRIDGE RILEY.

ST. THOMAS'S MOUNT.—St. Thomas's Mount, a town in the Chingleput District of Madras, lat. 13° N., long. 80° 12' E., is known to the natives as Parangimalai, 'hill of the Franks.' The connexion of St. Thomas with this place has been much disputed. G. M. Rae writes:

'The view which seems on the whole most consistent with all the facts of the case is, that the local or South Indian tradition concerning St. Thomas is an example of that curious phenomenon commonly described under the name of the migration of traditions. Not St. Thomas, but only the tradition, migrated to Southern India. . . . We shall find proof that St. Thomas is described as giving his services to the cause of Gospel propagation in a locality far removed from Southern India, and that he lived and laboured, died and was buried, in that remote locality [Caramene, or Caramana, the modern Kermán in E. Persia; but, if not at Calama, the town mentioned by Nearchus, on the seaboard of Gedrosia], so that not only is no opportunity left for a visit to Southern India, but the probability of it is excluded.'¹

On the summit of the hill stands the curious old Portuguese Church of the Expectation of the Blessed Virgin. At this place, in A.D. 1547, while the foundations of a chapel or hermitage were being dug, there was found a slab of dark granite, one face of which was decorated with a cross in bas-relief of the Greek type, with floriated ornament at all the ends. At the top of the upright shaft is figured a bird like a dove, with its wings expanded, supposed to represent the Holy Spirit. On the slab is an inscription which was interpreted by an unscrupulous Brahman to set forth the story of the Incarnation and of the spread of Christianity through the world by the agency of the twelve apostles—how one of the apostles came to Mailāpur (Tamil Mayillāpur, 'peacock city'), a place about three miles S.S.W. of the city of Madras, with a pilgrim's staff in his hands, and how St. Thomas died by the hands of a Brahman, and his blood formed a cross.² A similar cross found at Cottayam in N. Travancore is attributed by A. C. Burnell³ to the 7th or 8th cent. A.D., and the inscription may be interpreted to mean: 'In punishment by the cross (was) the suffering of this one; He who is the true Christ, and God above, and Guide ever pure.'

According to Rae, the Cottayam inscription 'sets forth a view of the person of Christ characteristic of Indian Nestorianism; for in no other theological literature, so far as I am aware, will the notion be found which this inscription seems intended to convey. The first or shorter part speaks of the suffering Saviour, "who," continues the second part, "is the true Messiah, and God above and Holy Ghost." Nothing can be inferred from the order in which the persons of the Trinity are here named, being the same as in the Apostolic benediction; but the second clause of the inscription seems intended to give expression to a doctrinal belief entertained in olden time among the Syrian Christians in Southern India, and often quoted from those books of theirs which were condemned as heretical by the Synod of Diamper (1699 A.D.). The doctrine was to the effect that in the Christ each of the persons of the Trinity was incarnate. . . . The doctrine is peculiar—the Godhead, not the Logos only, being incarnate. It seems intelligible on Nestorian premises, but its genesis historically is probably impossible to trace.'⁴

Rae goes on to show that the symbol of the peacock, said to be connected with St. Thomas, is probably of S. Indian origin.

SAIVISM.—In orthodox Hinduism the religious instructor (*guru*) bestows consecration (*dikṣa*) on his disciple by informing him of the name of the deity to be worshipped. The name of the deity is given to the disciple in the root-formula (*mūla-mantra*).

'If the *mūla-mantra* contains the name of Vāsudeva or Nārāyaṇa, he is a Vaiṣṇava, if it contains the name of Śiva he is a Śaiva, if the name of the *mūla-mantra* is Durgā, Kālī, Tārā, or Tripura-Sundarī he is a Śakta. The initiated Hindu may be personally free from sectarian narrowness, still he must be classed as a sectary.'¹

In Śaiva temples and in Śaiva households the deity Śiva is honoured and worshipped as Śiva-Rudra, 'the auspicious Rudra.' In early Vedic times the deity Rudra was a personification, in vague and uncertain anthropomorphic form, of the destructive powers of nature, of the storms, of the lightning and forest-fires.² In *Rigveda*, I. cxiv. 8, Rudra was invoked so that he might become auspicious and benign :

'Do not out of thy anger injure our children and descendants, our people, our cattle, our houses, and do not kill our men. We invoke thee always with offerings.'

In the *Sata-Rudriya* the deity Rudra is invoked by the one hundred names by which he is still invoked by all devout worshippers of Śiva-Rudra. He is invoked³ as a hunter of the mountains (*giriśa*), and as lying on a mountain. He is blue-necked and of red countenance like a thunder-cloud edged with the red gleam of the lightning. He has braided hair (*kadarpin*) and wears a hide (*kṛtīn vasānah*). He is invoked as lord of the forest and of burglars, the cheat and the swindler, as the dweller with Yama, the god of the dead, yet as a physician bearing healing herbs. He is the bearer of a drum, the wearer of the triple thread, the lord of cattle (*paśunām-pati*), dread and destructive like a fierce wild beast. He is prayed to so that he may become auspicious, and be Śaṅkara, or beneficent, be Sambhu, or benign, and he is lauded as Śiva, or auspicious.⁴ The name Śiva becomes the distinctive term for Rudra in the later *Vājasaneyi Samhita* and in the *Atharvaveda* and *Āitarāṇya* and *Saṅkhyāyana Brāhmaṇas*. For all Śaivas the deity Śiva-Rudra is the one great god, the Mahādeva and Mahēśvara and the ruler, Īśāna. In the non-sectarian *Svētāsvatara Upaniṣad* the deity Rudra-Śiva is declared to be known through love and faith (*bhāva*), so that it has been said :

This *Upaniṣad* stands at the door of the Bhakti school and on Vāsudeva-when Bhakti

The *Upaniṣad* lauds Rudra-Śiva as a deity to be worshipped by all Aryans who were acquainted with Vedic ritual and Vedic traditions. It is permeated with Vedantic and Sāṅkhya teachings and inculcates a mystic knowledge of the divine through meditation and Yōgic practices. The *Sata-Rudriya* rendered homage to many Rudras as *gṛha-patis*, or leaders or lords of tribes and hosts. It paid homage to the worshippers of the Rudras, to the non-Vedic potters, carpenters, smiths, cart-makers, and to the Nīṣādas, or forest tribes. It paid homage to Rudra as Bhava, the eternal and the creator, as Śarva, the destroyer or arrow-wielder. In the *Satapatha Brāhmaṇa*⁵ Agni is declared to be the gentle name of Rudra whom the Eastern people call Śarva and the Bāhikas Bhava

and Paśunām-pati, lord of cattle. All these names, except Agni, are said to be ungentle.¹ In the *Atharvaveda*² Rudra is besought to free his worshippers from unlucky omens :

'May shrieking female demons with dishevelled hair go far from us.'

In the *Atharvaveda* also the gods are said to have made Mahādeva the deliverer from the upper region, Rudra from the lower, Ugra from the southern, Bhava from the eastern, and Īśāna from all intermediate regions. It also describes Bhava and Śarva as *bhūta-patis*, 'lords of *bhūtas* (evil spirits)'; and the inclusion of such deities of outlying folk of feverish tracts under the name of Śiva-Rudra or Agni is indicated by invoking Rudra in the words :

'Reverence be to him whose consumption, whose cough, whose bolt assails some one like the neighing of a stallion.'³

In the *Bhāgavata Purāṇa*,⁴ which follows the epic tradition,⁵ the story is told of how Dakṣa gave his daughter Umā in marriage to Śiva, how Śiva neglected to bow down in respect before the Vedic rites, and how he was thereupon cursed by Dakṣa. Śiva is described in the story as an impure and proud demolisher of rites, as roaming about in cemeteries attended by hosts of ghosts and spirits, as like a madman, naked, with dishevelled hair, as laughing and weeping, as smeared with ashes from funeral pyres, as wearing a garland of dead men's skulls, pretending to be Śiva ('auspicious') but being in reality Aśiva ('inauspicious'), as insane and the lord of *bhūtas*. Śiva was cursed by Dakṣa as being the lowest of the gods, as Bhava, as unworthy of receiving any homage or offering along with the Vedic deities Indra and Viṣṇu. The Purāṇic account illustrates the mode of transition from a period of religion based on Vedic traditions and Brāhmanic supremacy to a period when it became necessary to recognize the worship of the demoniacal gods and deified heroes by the outlying non-Aryan Nīṣādas and Dravidians, who were not allowed to study the Vedas or to perform the Vedic rites. The local shrines, with their associated worship of deified heroes and their appeasing of ghosts and evil-working spirits of the dead by human and blood sacrifices and magic spells, were scattered throughout the villages of India, where the aboriginal primitive ritual was ministered by local sorcerers and priests. As these local shrines became more renowned, they grew in wealth and importance, and became endowed by local chieftains and landowners. The shrines became temples wherein the aboriginal deities were raised to new honour and rank as manifestations or servants of Śiva and Viṣṇu, or of their *śaktis* (female consorts). From the beginning of the 5th cent. of our era, when Brāhmanism was passing into Hinduism,⁶ all the gods and deified heroes of India were given Purāṇic legends until 'myriads of gods connected one way or another with the Vedic and Epic deities appear and vanish in the kaleidoscopic panorama of the Hindu pantheon.'

Under Brāhmanic guidance the deities of the villagers become Śiva ('auspicious'), and their goddesses become identified with Kālī or Bhavānī, the wife, or female energy, of Śiva. Under Brāhmanic guidance human sacrifices are gradually abandoned, and in most southern temples blood sacrifices are displaced by offerings of incense and flowers. The rites once lay in the hands of the aboriginal village priests.

'But the transition to Hinduism took place when they were celebrated under Brāhmanic auspices. As in all districts and

⁷ Note received from M. Srinivasa Aiyangar.

sects of India, the really important point was not the character of the god, the doctrine, or the ceremony, but the admission that the right to worship, teach and officiate resided in the Brāhman.¹

In some well-known temples in S. India the ancient blood rites and drunken orgies are permitted to be revived yearly as a compromise with the aboriginal worshippers, whose primitive shrines were annexed by Brāhman priests acting under the protection of local chieftains, who in return for their patronage and countenance obtained rank as Kṣatriyas with spurious pedigrees. Dubois² mentions cases where out-caste pariahs still act as priests in Hindu temples, and others in which the village out-castes have the prior right to enter the sanctuary of the temple and make offerings to the gods, and the Brāhman do not begin till they have ended. The *Sthala Māhātmya* (local record) of the now ruined temple at Sri Sailam (the Holy Mount) describes its dedication to Mallikārjuna, and how in the 4th cent. B.C. the daughter of the Maurya Chandra Gupta was so full of love for the deity that she presented jasmine flowers (*mallikā*) daily at the shrine.

It is also recorded that the Buddhist Nāgārjuna 'summoned Bhikshus or devotees to reside in it and stored it with all the Buddhist canonical books and their commentaries.'³

Brāhmanism gained the temple on the decay of Buddhism and dedicated it to the worship of Śiva and his *śakti*, Mādhavi or Brahma-rambhā. It is, however, the only temple in the south where all castes and creeds, both men and women, can join in the worship. In the 14th cent. there were evidently human sacrifices, for an inscription of that period records:

'Hosts of Koṅgu heroes highly excited under religious fervour cut off their heads and tongues as offerings and obtained a brilliant body of blessed limbs. The next moment they shine with three eyes, five faces and five tongues and become the eight embodied Śiva.'⁴

The annual festival now held to the god and goddess lasts from February to the end of May, at which period the Brāhman head of the Pushpagiri Maṭha at Cudapah officiates. At other times a Śaiva mendicant attends to the temple and deity, while the jungle Chenchus do service. Here the transition is clear from the worship of a primitive forest deity by human sacrifices to the settling of Buddhists, who in turn were ousted by Brāhman, who brought the aboriginal deity into Hinduism under the form of Śiva. At the Śaiva temple at Tiruvottiyūr inscriptions of the 13th cent. record that a ritual was then in vogue in the temple which included animal sacrifices and their surrounding saturnalia of horrors, and at the present day animal sacrifices are made yearly to the goddess and intoxicating drink is offered to her.

'Orgiastic rites are observed and the terrible and all swallowing spirit is believed to be appeased.'⁵

At Tiruvottiyūr, as at the temple at Melkote in Mysore, the aboriginal object of worship was an ant-hill, abode of the cobra or *nāga*-snake. The prevailing animism of the village folk of S. India has always incited them to worship objects which they imagine to be the abode of some personal agency or power.

It is reported that in 1804 two little boys watching cattle in the fields of a village near Elore imagined that they heard a noise of trumpets resounding from an ant-hill. The news spread, and the place became a place of pilgrimage. 'Every Sunday as many as 5000 people, men and women, assembled before the ant-hill, and might be seen prostrate on their faces, rapt in adoration.'⁶

With few exceptions all the village deities of S. India are goddesses, wandering spirits of the dead, goddesses of famine, plague, and pestilence, all of whom are appeased by sacrifices and offerings of sheep, goats, fowls, buffaloes, and pigs.

The explanation of the fact that these evil spirits are goddesses is 'in all probability simply that the feminine characteristics of the Dravidians are such as to make their ghosts more feared than those of men.'¹

These local goddesses are often considered to be wives of Śiva.

'A favourite method of attaching a Dravidian goddess to the Hindu pantheon is by a marriage with Śiva or some one of his incarnations.'²

The fact that Śaktism, or the worship of cosmic power personified as a female, has not developed into a special cult in Tamil-land, as it did in Bengal, has been held to militate against the theory that the worship of tribal goddesses was based on a matriarchal state of society.³

Instances are numerous where the deities worshipped are merely images representing local saints or recent heroes.

Many Śaiva temples of S. India are now being renovated by Nāttukottai Cettis, and it has been recorded that they 'have often found human bones and ashes at some depth below the floor on which the sacred image stands, thus indicating that the original shrine was erected over the relics of some saint or important person.'⁴ One record, of the 9th cent. A.D., at Solapuram, N. Arcot, states that the Ganga King Rājāditya caused to be built a temple to Išvara Śiva on the spot where his father had been buried. Another inscription records that a shrine was built over or near the burial-ground of the Chola King Aditya I. An inscription found in the Cholesvara temple at Melpadi states that, at the end of the 10th cent. A.D., Rājārāja I. 'had been pleased to build the temple of Arinjīśvara as a burial place for the lord who died at Arrur.'⁵ It has been suggested that 'the cell-like proportions of the shrine chamber of a typical South Indian temple may be traced to the Dravidian cell tomb or Dolmen.'⁶

Instances are known where dolmens have actually been transformed into Śiva shrines by placing in them the typical symbol of the deity.⁷

In S. India the typical Hindu temples were endowed and enlarged from the 10th to the 12th centuries, under the Chola kings, and in Bengal from the 9th to the 12th centuries, under the Pāla dynasties. The origin of the worship of Śiva, as symbolized in the chief temples of the early Pallava, Pāndya, and Chola dynasties by the *linga*, has been explained as follows:

The *linga* 'resembled the tomb stone, or Virakals which used to be set on the graves of Dravidian warriors and sometimes worshipped. Some of the Śaiva temples are even believed to be the graves of Siddhas, or Saints.'⁸

Purāṇic Hinduism, which arose during the period of the revival of Hindu rule and tradition under the Guptas of Kanauj, from the 4th and 5th centuries, absorbed the prevailing Mahāyāna Buddhist idol-worship. The Buddhist worship of the burial-mound, or votive *stūpa*, has also been held to have been absorbed into Hinduism in the form of the worship of the *linga* by Śaivas.⁹

Śiva is not only worshipped under the form of Ardhanārīśa,¹⁰ but is symbolized everywhere by the bull Nandi and by the phallic male and female emblems, the *linga* and the *yōni*. The two earliest known representations of the *linga* are said to date from about the 1st cent. B.C.; one from Bhiṭa is now in the Lucknow Museum, the other

was recently discovered¹ at Gudimallam in N. Arcot.

Although they are realistically phallic, it is claimed that 'there is nothing to be ashamed of'; the two great Generative Principles of the Universe, Śiva and Śakti, or Puruṣa and Prakṛti, the father and mother of all creations, the energy and matter of the physical scientist, are symbolized briefly in the form of the līṅga and yōni. For the past two thousand years at least, the Hindus, males and females, have been offering worship to this symbol of the Great Architect of the Universe, without in the least adverting to or feeling conscious of the so-called obscenity of this pure symbol of the fatherhood and motherhood of the supreme deity; to them it is a symbol and nothing more.²

The stronghold of those worshippers of Śiva who venerate the deity in the form of the līṅga and who are known as Līṅgayats (*q.v.*) is in S. Bombay, Belgaum, Bijapur, and Dhānvār, while of the 3,000,000 Līṅgayats classed as such in the *Indian Census Report* of 1911 only a little over one-tenth are to be found in the Madras Presidency. The stronghold of the Śāktas, or worshippers of the Śakti aspect of Śiva, is in Bengal, where the majority of Brāhmins, Kayasthas, and Vaidyas are Śāktas, who are also spread throughout N. Bihār, Gujarāt, and in the Marāṭhā countries.³ The worship of the *śakti*, or female energy, of Śiva is inculcated in *Tantras* chiefly devoted to the goddess known as Ānanda-bhairavi, Tripura Sundari, and Lalita, the worship known as the Chakrapujā being centred chiefly in mystic circles, representing in some cases the material object worshipped through pictures, though in other cases the living material object is worshipped. Śiva is thus considered subsidiary to his *śakti*, and the ideal is that motherhood is the chief element in creation. The Śāktas base their doctrines on the assumption that through Śiva and Śakti there is a drop, Bindu, formed which develops into a female element Nāda (sound), containing in itself the names of all things to be created. With Bindu and Nāda are associated male and female elements so that the substance—*kāmakaḷā*—is formed from which creation ensues.

Rāmānuja, in the 12th cent., states⁴ that there were two extreme sects of worshippers of Śiva, known as the Kāpālikas and Kālāmukhas, who held fanciful theories of reality, all of which are opposed to the *Vedas*. The Kāpālikas are those who hope to reach *nirvāṇa* by meditation and who know the meaning of the six marks (*mudrās*)—the necklace, the gold ornament, the earring, the head-jewel, the ashes, and the sacred thread. There seems to have been but slight difference recognized between the Kāpālikas and Kālāmukhas, whose chief temple was at Śrīśaila, the Holy Mount. Rāmānuja describes the Kālāmukhas as using a skull as a drinking-vessel, smearing themselves with the ashes of a dead body, eating human flesh, holding a club, setting up a wine-jar as a site for offerings to the deity. Both Mādhava⁵ and Ānandagiri described Śaṅkara as having controversies with the Kāpālikas—at Ujjayini according to the commentators—where Śiva, as Bhairava, was worshipped with human sacrifices and wine libations. Śaṅkara, in the 8th cent., in his commentary on the *Vedānta Sūtras*,⁶ states that the Śaivas, or Mahāśvaras, held that Paśupati, or Śiva, was 'the Lord' and the 'operative cause' of the creation of the world. They believed that Śiva taught five categories, viz. *kārya* (effect), *kāraṇa* (cause), *yōga* (union), *viddhi* (ritual), *duḥkhānta* (the end of pain and final deliverance, so that the bonds of the soul [*paśu*] might be severed). Mādhava, in the latter half of the 14th cent., in

his *Sarva-darśana-saṅgraha*, described three Śaiva systems—the Nakulīśa-Paśupatas,¹ the Śaiva system, and the Pratyabhijñā, or recognitive system. In his account of the Nakulīśa-Paśupatas he states that they teach the five topics mentioned by Śaṅkara as the tenets of the worshippers of Paśupati, viz. *kārya*, *kāraṇa*, *yōga*, *viddhi*, and *duḥkhānta*, as taught in a work entitled the *Pañchādhyāyī* or *Pañchārtha-vidyā*. The name Lakulī means one who bears a club (*lakula*), and, according to the Purāṇic account,² Śiva, by his Yōga powers, entered into a dead body at a cemetery and became incarnate as Lakulī at Kalyāvarāhāna or Kārōhāna, in the Lata country at Baroda. The system as taught by Lakulī, probably the author of the *Pañchādhyāyī*³ in the 1st cent. A.D., was the main system from which later Śaiva systems arose. This main system, according to Mādhava, aimed at union or conjunction of the soul with Śiva—a mystic union to be reached by pious mutterings, meditation, and the cessation of all action, so that a state of mere feeling (*sainvid*) is attained. By Yōgic practices the ascetic (*siddha*) gains miraculous powers of assuming various shapes and forms and of receiving messages from the dead. The religious emotions are to be excited by song and dance, by laughter, by simulating the acts and gestures of one in love, by speaking wildly, by wearing ashes and flowers from the images in the temples, and by loud uttering of a sacred sound, *hum*, like the sound *vaṣaṭ*, an imitation of a sound ascribed to a bull. The nature of the *viddhi*, or rules of conduct, of the Kālāmukhas, which appears to have been identical with that of the Nakulīśa-paśupatas, may be judged from the following statement:

'It appears quite probable that this viddhi of the paśupatas is responsible for the origin and existence of obscene sculptures in Hindu temples.'⁴

Mādhava describes the Pratyabhijñā, or recognitive, system of teaching as follows:

'There being a God whose omnipotence is learned from accredited legends, from accepted revelation, and from argumentation, there arises in relation to my presented personal self the cognition that I am that very God—in virtue of the recollection of the powers of that God.'⁵

This system was expounded in Kashmir by Abhinava Gupta at the beginning of the 11th cent. (A.D. 993–1015) in his commentaries—the *Pratyabhijñā-sūtras* and *Paramārtha-sāra*—which he wrote of the *siddha* Somānanda, from whom he was fourth in succession. The *Śiva-drṣṭi*, which set forth the metaphysical doctrines of Kashmir Śaivism is now lost, but an epitome was composed by Utpāla, the pupil of Abhinava Gupta, in 190 *anuṣṭubh* verses known as the *Pratyabhijñā sūtras*. The system described by Mādhava under the name of the Śaiva system corresponds to the Śaiva Siddhānta system of Tamil-land and has been described as 'a dualistic system fundamentally different from the monistic philosophy which constitutes Kashmir Śaivism.'⁶ The same authority further describes this Śaiva system as 'plain and unvarnished dualism or even pluralism.'⁷ The Kashmir and Tamil schools of Śaivism, which arose out of the extreme schools of the Nakulīśa-paśupatas, were both faced by the difficulties inherent in teaching what they both describe as the highest mysticism—an absorption of the soul into a universal unconscious Soul of the universe, which often ends in nothing—and at

sects of India, the really important point was not the character of the god, the doctrine, or the ceremony, but the admission that the right to worship, teach and officiate resided in the Brāhmins.¹

In some well-known temples in S. India the ancient blood rites and drunken orgies are permitted to be revived yearly as a compromise with the aboriginal worshippers, whose primitive shrines were annexed by Brāhman priests acting under the protection of local chieftains, who in return for their patronage and countenance obtained rank as Kṣatriyas with spurious pedigrees. Dubois² mentions cases where out-caste pariahs still act as priests in Hindu temples, and others in which the village out-castes have the prior right to enter the sanctuary of the temple and make offerings to the gods, and the Brāhmins do not begin till they have ended. The *Sthala Māhātmya* (local record) of the now ruined temple at Sri Sailam (the Holy Mount) describes its dedication to Mallikārjuna, and how in the 4th cent. B.C. the daughter of the Maurya Chandra Gupta was so full of love for the deity that she presented jasmine flowers (*mallikā*) daily at the shrine.

It is also recorded that the Buddhist Nāgārjuna 'summoned Bhikṣus or devotees to reside in it and stored it with all the Buddhist canonical books and their commentaries.'³

Brāhmanism gained the temple on the decay of Buddhism and dedicated it to the worship of Śiva and his *śakti*, Mādhavi or Brahma-rambhā. It is, however, the only temple in the south where all castes and creeds, both men and women, can join in the worship. In the 14th cent. there were evidently human sacrifices, for an inscription of that period records:

'Hosts of Koṅgu heroes highly excited under religious fervour cut off their heads and tongues as offerings and obtained a brilliant body of blessed limbs. The next moment they shine with three eyes, five faces and five tongues and become the eight embodied Śiva.'⁴

The annual festival now held to the god and goddess lasts from February to the end of May, at which period the Brāhman head of the Pushpagiri Maṭha at Cudapah officiates. At other times a Śaiva mendicant attends to the temple and deity, while the jungle Chenchus do service. Here the transition is clear from the worship of a primitive forest deity by human sacrifices to the settling of Buddhists, who in turn were ousted by Brāhmins, who brought the aboriginal deity into Hinduism under the form of Śiva. At the Śaiva temple at Tiruvottiyūr inscriptions of the 13th cent. record that a ritual was then in vogue in the temple which included animal sacrifices and their surrounding saturnalia of horrors, and at the present day animal sacrifices are made yearly to the goddess and intoxicating drink is offered to her.

'Orgiastic rites are observed and the terrible and all swallowing spirit is believed to be appeased.'⁵

At Tiruvottiyūr, as at the temple at Melkote in Mysore, the aboriginal object of worship was an ant-hill, abode of the cobra or *nāga*-snake. The prevailing animism of the village folk of S. India has always incited them to worship objects which they imagine to be the abode of some personal agency or power.

It is reported that in 1904 two little boys watching cattle in the fields of a village near Ellore imagined that they heard a noise of trumpets resounding from an ant-hill. The news spread, and the place became a place of pilgrimage. 'Every Sunday as many as 5000 people, men and women, assembled before the ant-hill, and might be seen prostrate on their faces, rapt in adoration.'⁶

With few exceptions all the village deities of S. India are goddesses, wandering spirits of the dead, goddesses of famine, plague, and pestilence, all of whom are appeased by sacrifices and offerings of sheep, goats, fowls, buffaloes, and pigs.

The explanation of the fact that these evil spirits are goddesses is 'in all probability simply that the feminine characteristics of the Dravidians are such as to make their ghosts more feared than those of men.'¹

These local goddesses are often considered to be wives of Śiva.

'A favourite method of attaching a Dravidian goddess to the Hindu pantheon is by a marriage with Śiva or some one of his incarnations.'²

The fact that Śaktism, or the worship of cosmic power personified as a female, has not developed into a special cult in Tamil-land, as it did in Bengal, has been held to militate against the theory that the worship of tribal goddesses was based on a matriarchal state of society.³

Instances are numerous where the deities worshipped are merely images representing local saints or recent heroes.

Many Śaiva temples of S. India are now being renovated by Nāttukottai Cettis, and it has been recorded that they 'have often found human bones and ashes at some depth below the floor on which the sacred image stands, thus indicating that the original shrine was erected over the relics of some saint or important person.'⁴ One record, of the 9th cent. A.D., at Solapuram, N. Arcot, states that the Ganga King Rājāditya caused to be built a temple to Išvara Śiva on the spot where his father had been buried. Another inscription records that a shrine was built over or near the burial-ground of the Chola King Aditya I. An inscription found in the Cholesvara temple at Melpadi states that, at the end of the 10th cent. A.D., Rājārāja I. 'had been pleased to build the temple of Arinjīśvara as a burial place for the lord who died at Arrūr.'⁵ It has been suggested that 'the cell-like proportions of the shrine chamber of a typical South Indian temple may be traced to the Dravidian cell tomb or Dolmen.'⁶

Instances are known where dolmens have actually been transformed into Śiva shrines by placing in them the typical symbol of the deity.⁷

In S. India the typical Hindu temples were endowed and enlarged from the 10th to the 12th centuries, under the Chola kings, and in Bengal from the 9th to the 12th centuries, under the Pāla dynasties. The origin of the worship of Śiva, as symbolized in the chief temples of the early Pallava, Pāndya, and Chola dynasties by the *linga*, has been explained as follows:

The *linga* 'resembled the tomb stone, or Virakals which used to be set on the graves of Dravidian warriors and sometimes worshipped. Some of the Śaiva temples are even believed to be the graves of Siddhas, or Saints.'⁸

Purāṇic Hinduism, which arose during the period of the revival of Hindu rule and tradition under the Guptas of Kanauj, from the 4th and 5th centuries, absorbed the prevailing Mahāyāna Buddhist idol-worship. The Buddhist worship of the burial-mound, or votive *stūpa*, has also been held to have been absorbed into Hinduism in the form of the worship of the *linga* by Śaivas.⁹

Śiva is not only worshipped under the form of Ardhanārīṣa,¹⁰ but is symbolized everywhere by the bull Nandi and by the phallic male and female emblems, the *linga* and the *yōni*. The two earliest known representations of the *linga* are said to date from about the 1st cent. B.C.; one from Bhiṭa is now in the Lucknow Museum, the other

was recently discovered¹ at Gudimallam in N. Arcot.

Although they are realistically phallic, it is claimed that 'there is nothing to be ashamed of; the two great Generative Principles of the Universe, Śiva and Śakti, or Puruṣa and Prakṛti, the father and mother of all creations, the energy and matter of the physical scientist, are symbolized briefly in the form of the *liṅga* and *yōni*. For the past two thousand years at least, the Hindus, males and females, have been offering worship to this symbol of the Great Architect of the Universe, without in the least adverting to or feeling conscious of the so-called obscenity of this pure symbol of the fatherhood and motherhood of the supreme deity; to them it is a symbol and nothing more.'²

The stronghold of those worshippers of Śiva who venerate the deity in the form of the *liṅga* and who are known as *Liṅgayats* (*g.v.*) is in S. Bombay, Belgaum, Bijapur, and Dhānvār, while of the 3,000,000 *Liṅgayats* classed as such in the *Indian Census Report* of 1911 only a little over one-tenth are to be found in the Madras Presidency. The stronghold of the Śāktas, or worshippers of the Śakti aspect of Śiva, is in Bengal, where the majority of Brāhmins, Kayasthas, and Vaidyas are Śāktas, who are also spread throughout N. Bihār, Gujarāt, and in the Marāṭhā countries.³ The worship of the *śakti*, or female energy, of Śiva is inculcated in *Tantras* chiefly devoted to the goddess known as Ānanda-bhairavi, Tripura Sundarī, and Lalitā, the worship known as the Chakrapujā being centred chiefly in mystic circles, representing in some cases the material object worshipped through pictures, though in other cases the living material object is worshipped. Śiva is thus considered subsidiary to his *śakti*, and the ideal is that motherhood is the chief element in creation. The Śāktas base their doctrines on the assumption that through Śiva and Śakti there is a drop, Bindu, formed which develops into a female element Nāda (sound), containing in itself the names of all things to be created. With Bindu and Nāda are associated male and female elements so that the substance—*kāmakaṭā*—is formed from which creation ensues.

Rāmānuja, in the 12th cent., states⁴ that there were two extreme sects of worshippers of Śiva, known as the Kāpālikas and Kālāmukhas, who held fanciful theories of reality, all of which are opposed to the *Vedas*. The Kāpālikas are those who hope to reach *nirvāṇa* by meditation and who know the meaning of the six marks (*mudrās*)—the necklace, the gold ornament, the earring, the head-jewel, the ashes, and the sacred thread. There seems to have been but slight difference recognized between the Kāpālikas and Kālāmukhas, whose chief temple was at Śrīśaila, the Holy Mount. Rāmānuja describes the Kālāmukhas as using a skull as a drinking-vessel, smearing themselves with the ashes of a dead body, eating human flesh, holding a club, setting up a wine-jar as a site for offerings to the deity. Both Mādhava⁵ and Ānandagiri described Śaṅkara as having controversies with the Kāpālikas—at Ujjayini according to the commentators—where Śiva, as Bhairava, was worshipped with human sacrifices and wine libations. Śaṅkara, in the 8th cent., in his commentary on the *Vedānta Sūtras*,⁶ states that the Śaivas, or Mahēśvaras, held that Paśupati, or Śiva, was 'the Lord' and the 'operative cause' of the creation of the world. They believed that Śiva taught five categories, viz. *kārya* (effect), *kāraṇa* (cause), *yōga* (union), *viddhi* (ritual), *duḥkhānta* (the end of pain and final deliverance, so that the bonds of the soul [*paśu*] might be severed). Mādhava, in the latter half of the 14th cent., in

his *Sarva-darśana-saṅgraha*, described three Śaiva systems—the Nakulīśa-Paśupatas,¹ the Śaiva system, and the Pratyabhijñā, or cognitive system. In his account of the Nakulīśa-Paśupatas he states that they teach the five topics mentioned by Śaṅkara as the tenets of the worshippers of Paśupati, viz. *kārya*, *kāraṇa*, *yōga*, *viddhi*, and *duḥkhānta*, as taught in a work entitled the *Pañchādhyāyī* or *Pañchārtha-vidyā*. The name Lakulīn means one who bears a club (*lakula*), and, according to the Purāṇic account,² Śiva, by his Yōga powers, entered into a dead body at a cemetery and became incarnate as Lakulī at Kalyāvarōhana or Kārōhana, in the Lata country at Baroda. The system as taught by Lakulī, probably the author of the *Pañchādhyāyī*³ in the 1st cent. A.D., was the main system from which later Śaiva systems arose. This main system, according to Mādhava, aimed at union or conjunction of the soul with Śiva—a mystic union to be reached by pious mutterings, meditation, and the cessation of all action, so that a state of mere feeling (*saṁvid*) is attained. By Yōgic practices the ascetic (*siddha*) gains miraculous powers of assuming various shapes and forms and of receiving messages from the dead. The religious emotions are to be excited by song and dance, by laughter, by simulating the acts and gestures of one in love, by speaking wildly, by wearing ashes and flowers from the images in the temples, and by loud uttering of a sacred sound, *hum*, like the sound *vaṣaṭ*, an imitation of a sound ascribed to a bull. The nature of the *viddhi*, or rules of conduct, of the Kālāmukhas, which appears to have been identical with that of the Nakulīśa-paśupatas, may be judged from the following statement:

'It appears quite probable that this *viddhi* of the paśupatas is responsible for the origin and existence of obscene sculptures in Hindu temples.'⁴

Mādhava describes the Pratyabhijñā, or cognitive, system of teaching as follows:

'There being a God whose omnipotence is learned from accredited legends, from accepted revelation, and from argumentation, there arises in relation to my presented personal self the cognition that I am that very God—in virtue of the recollection of the powers of that God.'⁵

This system was expounded in Kashmir by Abhinava Gupta at the beginning of the 11th cent. (A.D. 993-1015) in his commentaries—the *Pratyabhijñā-vimarśini* and *Paramārtha-sāra*—which he wrote on the *Śiva-dṛṣṭi* of the *siddha* Somānanda, from whom he was fourth in succession. The *Śiva-dṛṣṭi*, which set forth the metaphysical doctrines of Kashmir Śaivism is now lost, but an epitome was composed by Utpāla, the pupil of Abhinava Gupta, in 190 *anuṣṭubh* verses known as the *Pratyabhijñā sūtras*. The system described by Mādhava under the name of the Śaiva system corresponds to the Śaiva Siddhānta system of Tamil-land and has been described as 'a dualistic system fundamentally different from the monistic philosophy which constitutes Kashmir Śaivism.'⁶ The same authority further describes this Śaiva system as 'plain and unvarnished dualism or even pluralism.'⁷ The Kashmir and Tamil schools of Śaivism, which arose out of the extreme schools of the Nakulīśa-paśupatas, were both faced by the difficulties inherent in teaching what they both describe as the highest mysticism—an absorption of the soul into a universal unconscious Soul of the universe, which often ends in nothing—and at

the same time the realization of a personal revealed God. The revelation of Śiva, according to Āgamic teachings, was uttered from the divine voice of the five faces of the deity, representing his *chit*, *ānanda*, *ichehḥā*, *jñāna*, and *kriyā* aspects (intelligence, bliss, will, knowledge, creation) called *Īśāna*, *Tat-puruṣa*, *Sadyōjaṭa*, *Aghora*, and *Vāma*. Here the revelation rests on the dualism, but in Kashmir in the 9th cent. the sage Vasugupta declared a new revelation, as expounded by his pupil Kalala, in the *Spanda-sūtras*, or *kārikas*, teaching the *advaita*, or non-dualism, of the Kashmir system or *Trika* (the *Paṭi-paśu-pāśam*). In this *Spanda* school the soul gains knowledge through intense *Yōgic* contemplation, whereby the vision of *Parama-Śiva* ('highest Śiva') as Supreme Soul of the universe is realized and the individual soul is absorbed in a mystic trance of peace and quietism. In the *Pratyabhijñā* school the soul by its own intuition, trained under the instruction of a *guru*, recognizes itself as God and so rests in mystic bliss of oneness with God. The sectarian *Upaniṣads*, which treat of the nature of Śiva, in many instances teach this spiritual monism. The *Saiva Kaivalya Upaniṣad* says of Śiva:

'He is *Brahmā*, he is Śiva, he is *Indra*, he is undecaying, supreme, self-resplendent, he is *Viṣṇu*, he is breath, he is the spirit, the supreme Lord, he is all that has been or that shall be eternal.'

The *Atharvaśiras* also teaches that *Rudra* is Śiva 'who evolves, creates and sustains all worlds. The *Nīla-Rudra Upaniṣad* says of the soul:

'I formed of earth (*Prithvi-mayah*) beheld descending from the sky, that blue-necked *Rudra*.'

In the *Pañcha-brahma Upaniṣad*, 20, we read:

'In this city of *Brahman* (body) there is, O Sage, a small lotus-like house. In the centre of it there is a subtle ether. He is Śiva, *Sad-chid-ānanda*. He should be sought after by those desirous for salvation.'

In order to explain the true nature of Śiva and his manifestations throughout the universe, Śaivism essays a metaphysical analysis of objective reality through its 'thatnesses,' or *tattvas*. These *tattvas* transcend all physical notions of reality, but are believed capable of being realized through the long trained thought of Eastern sages.

To realize them the means are said to be 'self-culture, mental, moral, spiritual and even physical, which constitutes what is called *Yoga*, in the true sense of the word, which enables a Spirit to shake off the very limitations that make of the real experienter such a limited entity and to rise to those regions of experience which the highest *Tattvas* are. Those who train themselves by this method of *Yoga*, and who are called *Yogins*, can and do realize the *Tattvas* by direct experience as clearly as, indeed more clearly than, we perceive the physical and sense objects.¹

The primary *tattvas* are 36 in number, and the highest *tattva* is that of the spiritual essence, or 'thatness,' of Śiva, existing alone before the manifestation of a universe. Śiva manifests in the universe through his grace in order that the *paśu*, the flock of souls, may gain knowledge of their oneness with the Supreme Soul and so find rest from transmigrations through which they are doomed to pass by their ignorance and resulting actions. The manifestation of the universe is analyzed, through the *tattvas*, in Kashmir Śaivism in the same way as it is in the Śaiva school of S. India,² where the *Parama Brahman*, or Śiva, manifests regions (*bhūvanas*) for the souls, through a *śakti* associated with a metaphysical conception of abstract matter termed pure *māyā* or *suddha māyā*. This pure *māyā* is also termed *kuṭali*, *kundalini*, and sometimes *vinḍu* and even *śakti*; and its first manifestation is *nāṭam* or *vāc*—the subtle basis of the 'sound' or 'word' which precedes the beginning of all things. From the *Śiva-Śakti tattva* arises the *Sadā Śiva tattva*, or the eternal aspect of Śiva, also termed *Sādākhya*, in which the *śaktis*, or energies of *jñāna* (wisdom) and *kriyā* (action or creation), are in equilibrium. In the term *Sādākhya*

the first glimmer of a physical conception arises from amid the vague metaphysical speculations of the Śaiva systems both of Kashmir and of S. India. In the southern school¹ the workings of Śiva and *śakti* are figuratively illustrated by the analogy of the reproductive organism of a lotus, where the stamens of the lotus are compared to the lord, the *Sadā Śiva*, and the pistil to the *Śakti-tattva*, while above the *śakti* is seated the supreme Śiva. The same system teaches² that the subtlest form of matter, the imperceptible *māyā*, is the product of *Bindu*, or *Vindu*, which means a seed, a drop, or a point. In *Yōga* teachings *Bindu* was the centre of a mystic wheel (*chakra*), of which there are supposed to be six in the body as dynamic *tattvic* centres, the principal of which, the *mūlādhāra*, or chief region, is described as like a red lotus of four petals situated in the lower part of the body near the spinal cord.³ By concentrating the mind on these *chakras*, or force centres, in the body, the *Yōgi*, ever since Vedic times, has hoped to obtain absolute knowledge, and to discover the mysteries of creation, in the psychic energy of the *kuṇḍalini*. In the *Hatha Yōga*, and the higher *Yōga*, the *Rāja Yōga*, the *kuṇḍalini* is described as the highest *śakti*. It is supposed to be coiled up like a serpent (*kuṇḍali*) nine inches from the middle of the body, and is covered by a membranous covering. In the *Yōga* system the terms *kuṭali*, *kuṇḍalini*, *śakti*, *īśvari*, *bindu*, or *vinḍu*, are thus used to signify the seat and source of creative energy in man and are then applied to mean the creative force, or *śakti*, of the creator.⁴

In the Śaiva systems of Kashmir and S. India the *Sādākhya tattva* or *Sadā-Śiva tattva* is the beginning of the development of the manifest world from the energy of the *Śiva-Śakti tattva*. The term *Sādākhya* implies the beginning of the being (*sat*) of a real manifest world free from *Yōgic* mysticism and metaphysical speculations or dogmas.

Although the *Sādākhya tattva* is a stepping-stone towards a reality,⁵ it is held to be 'just the beginning of activity—of just the first stirring of life—and therefore the thought or feeling of the Ideal Universe at this stage is only a dim one, like a faint and indistinct picture of a long-forgotten scene which is beginning to reform itself in one's memory and is still in the background of consciousness.'⁶

Hence creation is described as a process where from the *Sadā Śiva tattva* arises the *Malāśvara tattva*, or principle of obscuring (*tirobhava*) true knowledge from the soul until it has eaten the fruits of its *karma*. Thence springs the pure *tattva* of wisdom, the *suddhā vidyā tattva*, known as *Rudra*, the source of destruction and regeneration, which *suddhā vidyā* further develops as *Brahmā* the creator and *Viṣṇu* the preserver of the universe.

From *suddhā vidyā* arise through impure *māyā* the five *tattvas* of limited experiences—those of (1) *kālam*, 'time'; (2) *niyati*, 'order' or 'necessity,' through which *karma* acts on its fate or destiny; thence (3) *kalā*, 'learning' or 'contingency,' the *tattva* of the faculty which enables man to experience perceptions; then (4) *vidyā*, 'knowledge,' for the intellectual power of the soul; from *vidyā* arises (5) *rāgam*, 'desire,' and thence *puruṣa*, or limited individual spirit or man, with a five-fold clothing or body, the *pañcha-kāṇḍuka* of *kālam*,

⁵ Cf. *Sādākhya-yām-bhavam yatas prabhriti Sad itiprakhya*, quoted in Chatterji, p. 67. (The derivation from *Sādākhya* by Western authorities is clearly erroneous.)

⁶ Chatterji, p. 67.

¹ Chatterji, p. 162.

² Cf. art. *Dravidians* (South India).

niyati, kalā, rūgam, and vidyā. From the *tattva kalā* arises *prakṛti*, undeveloped matter, with the three *guṇas* of *sattva, rajas, tamas*, 'goodness,' 'passion,' 'darkness,' in equilibrium. Thence ensue *tattvas* of the *buddhi*, 'intellect,' of *manas*, 'mind,' of *ahamkāram*, 'individuality,' of *chitta*, 'will,' with the *tattvas* of the five organs of sense, of the five organs of action, and five subtle elements of sound, touch, form, taste, smell, and of ether, air, fire, water, and earth.

The Kashmir school of thought is based on the belief that 'concentration of thought can be practised to absolute perfection and that when perfected, by its means alone, everything can be known and realized by direct experience.'¹

The system teaches that through a knowledge of the *tattvas* the soul can realize God, as identical with the individual soul, as pure unconscious soul of the universe.

The Tamil Śaivas of S. India base their knowledge of Śiva on twelve Sanskrit *sūtras* forming a portion of the *Vidyā* section of the *Raurava Āgama* which were expounded at the beginning of the 13th cent. by the Vellāla, Meykaṇḍa Devar, 'the divine Seer of Truth,' in his *Śiva-jñāna-bodham*, 'Instruction in the knowledge of Truth.' The Śaiva *Āgamas*² are each divided into four parts of *Charyā, Kriyā, Yoga, and Vidyā*. The chief Śaiva *Āgamas* are 28 in number, and are held to contain a direct revelation from Śiva for all classes, even Śūdras and women, who were competent to receive *dikṣā*, or consecration from a *gurū*, and to follow the path to salvation. The Śaiva sage Tiru Mūlar, who has been ascribed to the 9th cent. A.D., says in his *Tiru Mantram*:

'The Vedas and the Āgamas are both true and both are the word of God. The first is a general treatise and the latter a special one. When examined and where difference is perceived between the Vedānta and Siddhānta they will perceive no difference.'³

The distinction between the *Vedas* and *Āgamas* was not only a religious but also a racial distinction. Brāhman Śaivas still adhere to the Vedic ritual, as they hold that the *Vedas* and *Vedānta* were a special revelation for all Aryan people. All Śūdras, and consequently most of the Dravidians and people who resided outside the Aryan pale, were excluded from even hearing the sacred sound of the *Vedas*, and accordingly they, with all women and those of mixed castes, were excluded from Vedic religious ceremonies and from salvation. Brāhmins who were Śaiva worshipped Śiva according to the Vedic ritual; but, as the Dravidian population of S. India was in the majority, the claim was early raised that both *Vedas* and *Āgamas*, or *Tantras*, were of equal authority in ritual and ceremony. Śrīkaṇṭha Sivāchārya, held by Tamil Śaivas to have lived before the 9th cent., wrote a commentary based on Āgamic teachings, in which he held that there was no difference between the *Vedas* and *Āgamas*.⁴ He declared that the *Vedas* may properly be called Śiva *Āgamas* as having been revealed by, or come down (*āgama*) from, Śiva.

¹ Accordingly Śiva Āgama is two-fold, one being intended for the three higher castes, the other being intended for all. The Vedas are intended for people of the three classes, and the other for all.'⁵

It was not until the 17th cent. that the Śaiva teacher Appaya Dikshitar (1552-1624) endeavoured to unite the two streams of belief and salvation which flowed from Aryan Vedic and non-Aryan Āgamic sources. Appaya Dikshitar was intellectually swayed—as all southern Śaivas are—by the spiritual singularity of the *māyā* doctrines of

Śaṅkara, but he would gladly have accepted a personal deity such as the Nārāyaṇa of the school of the Vaiṣṇava Āchārya Rāmānuja. He begins his *Siddhānta-lēśa*, an exposition of the teachings of Śaṅkara, with this statement:

'Just as the Ganges springs from the feet of Viṣṇu and gains many a land and flourishes, so the wise words which flowed from the fair lotus lips of Śaṅkara have divided a thousand-fold as they reach teachers among whom arise differences as to the nature of God and of the soul's bondage, all of which teachings are intended as stepping-stones to the true knowledge that Brahman is One only, without a Second.'¹

The S. Indian Tamil school of Śaivism, known as the 'pure' (or *Suddha*) Śaiva Siddhānta, in its ultimate teachings, has always contended against a non-dualism, or *advaita*, wherein the soul loses its identity through final absorption into an unconscious soul of the universe—into *Brahman*, 'One only, without a second.' It has also striven to free itself from the *māyā* teachings of Śaṅkara and to approach an ideal where the soul in final salvation

'retains its individual consciousness, remains for evermore in separate existence, sharing the blessedness and wisdom of the Supreme but unmingled with his essence. In fact the doctrine held by Śaivas on this point is hardly to be distinguished from Christian teachings.'²

The Śaiva Siddhānta in Tamil-land rests for its primary dogmas on the exposition by Meykaṇḍa, in the 13th cent., of the twelve Sanskrit stanzas from the *Raurava Āgama*. The *Āgamas* have been ascribed to a period somewhere between the 5th and 8th centuries of our era, and the development of Tantric worship has been ascribed to a period before Nāgārjuna (c. A.D. 200).³ The *Uttara Kāraṇa Āgama* refers to the persecution of the Jains by Tiru-Jñāna Sambandhar, held to have taken place in the 7th cent.; and other *Āgamas* direct that the hymns of the earlier Śaiva saints, Appar and Sundara, should be recited during the temple services. The *Āgamas* are referred to frequently in the hymns of the Śaiva saint, Mānikka Vāchakar, who has been assigned to about the 9th century.⁴ Down to the present day non-Aryan Śaivas adopt the Āgamic teachings and ritual, while the Aryan Śaivas retain the Vedic ritual, although Vaidik, or Smārta, Brāhmins may be found worshipping the *līṅga* in the Śaiva temple. The Āgamic ritual and teachings were current long before the time of Meykaṇḍa in the 13th century. The Chola sovereign Rājārāja (A.D. 985-1014), who built the Brhadiśvara temple at Tanjore, is recorded to have appointed Brāhman priests from the Ārya, Madhya, and Gauda countries to act as teachers and priests in the temple. Rājendra Chola, shortly afterwards, in the first quarter of the 11th cent., is recorded in Āgamanta works to have brought Brāhman Śaiva teachers to the south from the Amardaka Maṭha on the banks of the Godavari with the following result:

'An impetus was given to the spread of Śaivism and a very large number of original works belonging to the Āgamanta school of Śaivism was written.'⁵

The early Śaiva saints had, from the 5th to the 11th century, sung of their faith in Śiva and of his grace, whereby he had revealed himself to them as ideal love and bliss. These Śaiva saints were 63 in number, and their hymns were sung in 274 Śaiva temples⁶ still held sacred as having been visited by these saints. The most renowned of the temples had been built and endowed by Pallava and Chola kings on the sites of previous and primitive shrines. The Śaiva saints believed in

the revelation that their inward eye had gained of the divine, and the Śaiva sages who succeeded them placed this mystic knowledge of God as the foundation of all their efforts to reason out their beliefs and faiths. The Śaiva Siddhānta, which they formulated, is therefore closer akin to a mystic phase of religious belief than it is to a philosophic school of reasoning from the known to the unknown. The sages strove in their chief, fourteen Śiva Siddhānta, *Sūtras* to steer clear of a mysticism wherein the self vanishes with the absorption of the soul and all personality into a *Brahman* as the unconscious Soul of the universe. Still Tamil Śaivas style their system as follows:

'Mysticism of the highest quality as its bed-rock is formed of the twenty-eight divine Āgamas of spiritually supernal order.'¹

The *Siddhānta* teaches that the soul is eternal, formless, all-pervasive (*vibhu*), and that its all-pervading nature (*vyāpaka*) leads it to become one with what it dwells in for the time being, with the material or the divine. The original sin, the *pāva-mūlam*, of the soul is an eternal ignorance which reduces the soul to the condition of *ānava* (from *anu*, 'atom'), so that it cannot attain to its true all-pervading nature freed from the material body. The soul, by assimilating itself to the material, which is without intelligence and unknowing, the product of elemental matter (*māyā*), has desires and delusions which draw it into actions (*karma*), good and evil. Through its *ānava* it tends to be drawn away from the feet of the Lord. Its true intuitions tend to urge it to free itself from its material surroundings and to seek rest and support in the absolute true and real, the ideal love and bliss—the ideal which has set Śiva as supreme god of Tamil-land.

The soul can know nothing of itself. It is not pure knowledge (*chit*), like the Lord; for the soul and its surroundings of *karma*, *māyā*, and *ānava* are unintelligent. How then, it is asked, can the soul gain knowledge of the divine? The answer is that knowledge can be gained only through the free grace of the Lord, and the soul becomes 'intelligent or unintelligent according as divine irradiation is given or withheld.'² The authoritative *Śiva-jñāna-Siddhiyar* of Aruṇāṇḍī Śiva Āchārya, a pupil of Meykanda, says of Śiva:

'If you contemplate Him as beyond contemplation, even this gives no benefit as it is a mere fiction. If you contemplate Him as yourself, this also is a fiction. The only way to know Him is by understanding Him through his Arul, or Grace.'³

The same idea of final salvation flowing from the grace of Śiva was set forth by Umāpati, a Śaiva sage of the 14th cent., in his *Tiru-Arul-payan* ('Fruit of Divine Grace') in the words:

'Where the search ends there is the abode of the Lord.'

ŚAKA ERA.—The Śaka era is one of many reckonings which are or have been in use in India, and has the special interest of being the most important of them. It is treated as running from either of two points in March, A.D. 78—as a solar reckoning, from the Hindu vernal equinox, and, as a luni-solar reckoning, from the first day of the bright fortnight of the Hindu month Chaitra.

In N. India, i.e. in those parts which lie to the north of the rivers Narbadā and Mahānadi, the chief reckoning is the Vikrama or Samvat era, known in an early stage as the time or reckoning of the Mālava people, the starting-point of which, as fixed in mediæval times, is, from one point of view, the earlier one, the first day of the bright

fortnight at Kārttika, in September, 58 B.C., and, from another point of view, the same day of Chaitra in March of the same year. The Śaka era is the chief reckoning of S. India, though, in fact, it had its origin in western parts of N. India; it prevails, however, to a certain extent in N. India too, and in Kashmir, Nēpāl, and Assam. Like the Vikrama era, it is in use for historical, calendrical, and all general purposes. But it is also an astronomers' reckoning, which the Vikrama era never has been.

The first Indian astronomical reckoning was the Kaliyuga era; this was devised by the Hindu astronomers about A.D. 400, and was laid out so as to start from an assumed general conjunction of the sun, moon, and the planets, at the conventional Hindu vernal equinox in February 3102 B.C. The Kaliyuga era has always been more or less in use for astronomy from the time of its invention, and to a small extent for other purposes also. But about A.D. 500 the Śaka era was taken up by the Hindu astronomers as a second reckoning, for laying down more recent epochs for some of their calculative purposes, and was fitted by them to the exact solar and luni-solar starting-points mentioned above; they used it to such an extent that it soon very largely superseded the Kaliyuga reckoning; and it is, in fact, owing to its adoption by them, and to their use of it for calendrical as well as calculative purposes, that it gradually acquired its wide prevalence, extending not only throughout India but also across the sea to Cambodia, Java, and Ceylon.

The Kaliyuga era is a purely artificial reckoning, invented by the astronomers. Not so, however, the Vikrama and Śaka eras. These have actually existed from 58 B.C. and A.D. 78 respectively, and had their origins in historical events which happened in those years, the Śaka era owing its birth to an irruption of foreigners, who invaded India from the west, established themselves and acquired dominion in India, and founded this reckoning there, and who, whether they were or were not actually Śakas, i.e. Scythians, were recalled as Śakas in later times.

In its earliest stages the reckoning of A.D. 78, like other Indian eras, ran on for a long time without a name, its years being simply quoted by their numbers as 'the year so-and-so,' and in this way it is found used in inscriptions and on coins from soon after its foundation down to nearly A.D. 400. The earliest inscriptional instance of the connexion of the name of the Śakas with the reckoning is found in a record of A.D. 578, after which time it was habitual; the connexion, however, is carried back to A.D. 505 by an astronomical date. The era also became known as the era of Śalivāhana; but this name for it was of late invention, the earliest known certain instance of the use of it being found in an inscription of A.D. 1354; it was applied to the Śaka era in imitation of the association of the name of Vikrama with the northern era, which dates from some time in the 9th or 10th century A.D. The popular belief, shown, e.g., in the introductory passages of some of the *Pañchāṅgs*, or Hindu almanacs, is that the Vikrama era was founded by a King Vikrama reigning in 58 B.C. at Ujjain in Mālwā, and that the Śaka era was founded by a King Śalivāhana reigning A.D. 78 at Pratishthāna, which is the modern Paithān, on the Gōdāvarī, in the Nizām's territory; this, however, is fiction, without any real basis.

LITERATURE.—For more details about the Śaka, Vikrama, and Kaliyuga eras, with an account of the other reckonings and the Hindu calendar, see the present writer's art. SAKHIBHAVAS.—The Sakhībhāvas are a branch of the Rādhāvallabhīs (*q.v.*), small in number and of little importance. They carry to extremes the worship of Rādhā, Kṛṣṇa's mistress, whom they look upon as his *sakti*, or energetic power. The men assume the character of Rādhā's *sakhīs*, or girl friends, and, to enforce the idea of the change of sex, assume female garb, with all women's manners and customs, even pretending to be subject to the catamenia. Their aim is to be accepted as genuine *sakhīs* in a future life, and thus to enjoy a share of Kṛṣṇa's favours. They are of ill repute, and do not show themselves much in public. According to Wilson, they are to be found in Jaipur and Benares and also in Bengal. Some of them also are wandering mendicants. They appear to have been numerous in the 17th century.

SAKHĪ SARWAR.—Sakhī Sarwar, or Nigūhā, is a famous Muhammadan shrine in the Derā Ghazī Khān District of the Panjāb (lat. 29° 59' N.; long. 70° 18' E.), situated on the high bank of a hill stream in the Dāman-i-Koh, or flanks of the Sulaimān range, in arid jungle scenery.

The place takes its name from the saint Sakhī Sarwar, or 'generous leader,' also known as Lakh-dātā, 'giver of lakhs,' Lālanwālā, 'he of the rubies,' or Rohiānwālā, 'he of the hills.' He is generally known by the title of Sultān, 'lord.' His real name was Sayyid Aḥmad, but his exact date is unknown, tradition varying from the 12th to the 16th cent. A.D. His life is a mass of legends, describing the miracles which he worked. Within the enclosure of his shrine are to be seen the tomb of the saint, of his lady known as Bibī Rūṣ, and that of a *jinn*, or demon, whom he overcame. The place is visited by sick people, who, as a proof of their recovery, hang small ornamented pillows on the walls, or, when cured of ophthalmia, offer, in performance of a vow, eyes made of gold or silver.¹ Other persons vow to shave the hair of an expected child at the shrine and to present its weight in gold or silver. Some childless people vow their first child to the saint, and on its birth take it to the shrine with a cord round its neck. Sacred pigeons, fed from the proceeds of an endowment, are attached to the shrine. The marks of the finger of 'Alī, son-in-law of the Prophet, and the print of his foot are shown to visitors. Diseases, like hysteria, which are supposed to be the result of spirit action are said to be cured here. Huge cakes are offered at the tomb, on receipt of which the priests read the benediction (*darūd*), return a portion of the offering, and keep the remainder for themselves.² Many shrines of the saint are found in other parts of the Province. A favourite method of sacrificing to him is to place dough on a piece of ground on which a large fire has been previously lighted, and to distribute it when it is baked. He is also worshipped by the rite of sleeping on the ground instead of on a bed—a primitive ascetic rite.³ The followers of the saint are known as Sulṭānī, and have special priests called Barhai, or Bharnā.⁴ Rose⁵ traces a connexion between them and the Yogīs (*q.v.*). The cult, again, is

associated with that of the earth-god, Bhairōn, and Bhāi Pherū, the *numen* of the whirlwinds common in the Panjāb. There is also a tradition of a criminal leaping over a rock near the shrine, which may be associated with a fertility cult.¹

Rose further states that at pilgrimages 'blankets of black, the colour of Śiva, are worn. In the east of the Panjāb, at least, the cult of Sakhī Sarwar is peculiarly favoured by women, which is consistent with its connection with Bhairava, the earth being the emblem of fertility, and this again is in accord with the somewhat Paphian rites observed at the shrine itself. Further, the theory that the worship is really one of the earth-god would account for its being essentially the cult of the Jāt peasantry.'²

It therefore seems probable that the place may have been for ages the seat of the cult of the earth-god and of the powers of fertility and that this was taken over by Buddhism and Hinduism, and finally connected with a modern Muhammadan saint—an interesting example of that fusion of cults which is at the basis of so much in modern Hinduism.

SALISH.—The Salish peoples lived in the four adjacent States of Washington, Idaho, Montana, and Oregon. A marked distinction existed between the coast Salish west of the Cascade range and the Salish of the interior. The social organization of both was very loose, the various tribes having little unity in spite of the existence of a head or premier chief for each. The coast Salish possessed three castes, but clans and gentes were replaced by village communities in which descent was usually patrilineal, although a man might also become a chief among his mother's people. In the interior, however, personal ability counted for more than descent in determining leadership, whether in war, in peace, or in religious ceremonies. The interior tribes also depended far more on the chase than did those of the coast, who were principally fish-eaters.

I. COAST SALISH.—**1. Supernatural beings.**—Among most of the coast Salish 'the Great Transformer,' called usually by some variant of the word Kūls, was the highest object of worship, though the Nanaimo, while recognizing him, paid higher regard to the sun. Kūls was similar in character to Raven² and Mink of the northern tribes, but, since he was also the highest deity, he was not such an utter charlatan. C. Hill-Tout³ mentions a 'sky chief,' addressed by the Halkomelem tribe as 'parent,' 'father,' or 'creator,' but does not state whether he was identical with Kūls.

A multitude of lesser potencies furnished individual helpers, or *sulia*, with which each person was provided among the more southerly tribes. Nearer the Kwakiutl, however, they were obtained only by prominent men such as shamans, warriors, hunters, and chiefs. Among most of the lower Fraser tribes the chief was also a tribal high-priest, without whom no religious ceremony or observance could be performed; in other words, he was the leader in national religious observances.

2. Shamanism.—The shamans were of three

⁵ *Census of India*, 1901, vol. xvii. pt. i. p. 133.

kinds: (1) the shamans proper, called *skelam* ('to heal,' 'to make well') by some of the Fraser tribes, cured internal diseases produced by witchcraft, the absence of the soul, etc., and employed the usual methods; (2) the *olia*, or soothsayer, besides interpreting dreams, visions, omens, and portents, healed external injuries and took care of the bodies of the dead; he alone might prepare a body for burial and protect a person from the evil influence of ghosts, of which all the Salish were extremely afraid; (3) the *seuvel*, or wizards, who might be men or women, instead of being universally abhorred as among most tribes, were recognized as a regular class. They were employed to injure people, and they did this by washing their hands in water at sun-down and repeating the victim's name, or by repeating formulæ over some of his belongings. They were also engaged by the relatives of a deceased person to hold converse with the ghost and adjure it never to come back to trouble the living. After a person had died, they were employed to drive away sickness. Corresponding to this class among the Songish were the *sioua* women, who were acquainted with herbs and performed the functions of midwives.

3. The dead.—The stories told of the world of the dead were obtained from the first class of shamans and differed little from those found elsewhere. The salmon-feast, celebrated by all these tribes when the great salmon-run began, was the only one of importance outside of the winter potlaches, and partook somewhat of a religious character.

II. *BELLACoola*.—The Bellacoola, an isolated Salish group on Bentinck arm and Dean inlet, were unlike all the others in having evolved a mythology of considerable system and originality.¹ They postulated five different worlds, two of which were above and two below the plane of this earth. In the highest realm, called *Atsaaktl*, resided an old woman called *Kamait*, *Tsi sisnaahitl* ('our woman'), or *Ekuyakimtotlsitl* ('afraid of nothing'). This world was believed to be a treeless plain over which a wind continually blew towards *Kamait*'s house, situated in the far east; but near the house it was calm. In front stood a post in the shape of a monster whose mouth formed the door, and near it was gravel of three colours, blue, black, and white. Behind the house was a salt-water pond in which *Kamait*s bathed. In the same pond lived a snake, or fish, prominent in Bellacoola mythology, called the *sisiutl*.

In the centre of the lower heaven, *Senh*, stood the House of Myths (*Nusmeta*), also known as 'the-house-where-man-was-created,' 'the-house-from-which-people-came-down,' or 'the-house-to-which-people-go.' This was ruled by *Senh*, the sun, also called 'our father,' or 'sacred one.' He was the only deity to whom the Bellacoola prayed, for they did not pray to *Kamait*s. Indeed, *Kamait*s does not appear prominently in the religious thought of the nation except for the war which she waged in primitive times with the mountains and her final victory over them. A second deity, who lived in the back part of the House of Myths, and who was of almost equal importance with *Senh*, was *Atlkuntam*. The two together might be called the rulers of mankind. Near the fire was an old man called *Snutikulhals*, who formerly ruled over the house, but had given up his place in favour of those two deities. Besides those three there were a number of inferior beings, many of whom had to do solely with the *kusiut* ceremony. Of the others, one gave a child its individual fea. . . another, a female deity,

rocked infants and the young of animals before sending them down into the world; a third was 'the mother of flowers'; and there were two beings whose function it was to determine when a person was to die. Still others acted as messengers for the superior deities. Raven was said by some to have his abode in this house, and to him was attributed the invention of the salmon-weir and of the ceremonial whistles and the institution of the ceremonies themselves. The beings concerned particularly with the *kusiut* were nine brothers and a sister. There were special deities to initiate shamans and one whose office was to protect mountain-goat hunters. We also find a belief in the thunder-bird. In a room in the back part of the House of Myths resided several deities who initiated the cannibal dancer and other novices. Along the course pursued by the sun, which is represented as a celestial bridge, were stationed several additional beings, and twenty-four were guardians of the sky, which they fed with fire-wood continually. Where the sun set was a post supporting the sky and preventing the sun from falling into the lower world. Our world was supposed to be an island in the ocean, held up by a giant who sat in the far east with legs apart. The earth was fastened by two ropes to a long stone bar held in his hands, and, when he got tired and moved his hands, there was an earthquake. If he moved the earth westward, people had epidemics; if eastward, sickness disappeared. In the sea dwelt a being who swallowed and gave forth the water of the ocean twice every day. Salmon were supposed to come from a land in the far west. The world nearest beneath us was described as the country of the ghosts and lay along the sandy banks of the river. Winter in their country was our summer, and their summer was our winter; their night was our day, and their day our night. There was a dancing-house in that country, where the *kusiut* was performed, and the ghosts entered it through the smoke-hole by means of a rope-ladder. They were not allowed to return directly to our earth by this ladder to be reborn, but might ascend another to the lower heaven and be sent down from there by the deities. Those who enjoyed staying in the ghost country descended to the lowest world of all, whence there was no return. From the world above were sent down the ancestors of each of the Bellacoola village communities.

III. *THOMPSON RIVER TRIBES*.—Thanks to the researches of Boas, Teit, and Hill-Tout, our knowledge of the religion of the *Ntlakypamuk*, or Thompson River Indians, is much more ample than that of any other of the interior Salish tribes, but the rites and beliefs of all were nearly the same.

I. *Cosmological beliefs*.—According to Teit, the Thompson River Indians believed the world to be square with its corners directed towards the cardinal points, and Lytton, where Coyote's son reached the earth, was its centre. Round the edges were lakes, over which clouds and mists hovered. The earth rose towards the north, and that was why it was colder there. Cold winds were caused every time people far in the north left their houses, and warm winds by people far in the south. Formerly the northern and southern people waged war with each other, exposing the earth to alternate periods of extreme heat and extreme cold, but their wars were ended by the marriage of the daughter of the chief of the south to the son of the chief of the north. Thunder was caused by a huge bird like a grouse. It shot arrows by using its wings as a bow, and their rebound in the air produced the noise. Fog or mist was described as the steam of the earth rising

¹ The Bellacoola of the c. E. r.

is all taken from Boas, 'The' in *Memoirs of the Jesup* II. (1893).

when it was heated, or was said to be caused by Coyote turning over. Lakes and ponds originated at the time of a deluge, which also swept the fish into them. Fire and water were in the possession of certain animals, from which they were liberated. By the Upper Thompsons rain and snow were said to be made by the 'Old Man' scratching his back or urinating, but the Lower Thompsons ascribed their production to a female deity. The sun and moon were formerly men, and the reason why the latter is less bright is that his sister Hare or Frog sits continually on his face. Haloes about the sun and moon were their respective 'houses.' Stars were described as transformed people or as roots growing in the upper world, though special tales were told of the Pleiades and the stars of the Great Dipper. The Milky Way was called 'the trail of the stars,' 'what has been emptied on the trail of the stars,' or 'the tracks of the dead.' The rainbow was formerly a friend of the thunder, which was in the habit of painting its face frequently with bright colours.

2. Supernatural beings. — All sorts of 'land mysteries' and 'water mysteries' were prayed to. Those that might in any way be considered tribal deities were the sun, the dawn, the rain, tops of mountains, certain lakes, the spirit of sweat-bathing, and perhaps also the Old Man, who was said to live on the tops of high mountains, and in former days sent the Old Coyote, the principal Ntlakyapamuk transformer, to set the world in order. There were also three brothers, called Koaktlka, and another individual, who acted as transformers. The three brothers were finally changed into stone, while Old Coyote retreated to his house of ice. After that the Old Man himself travelled throughout the world. He thus appears to have occupied an elevated position in native mythology, but little attention was actually paid to him in daily life. The leading objects of regard were the sun and the dawn, the latter being frequently invoked by boys and girls during their puberty ceremonials. The spirit of sweat-bathing naturally derived his importance from the prominent place which sweat-bathing occupied in the acquirement of guardian-spirits. Each person, male or female, whether a shaman or not, possessed a guardian-spirit which differed somewhat for a shaman, warrior, hunter, fisherman, gambler, runner, etc., but all were otherwise much alike and resembled the personal *manitus* found elsewhere in N. America. A very few shamans inherited guardian-spirits which had been especially powerful, but most were acquired by a longer or shorter course of sweat-bathing, fasting, abstinence from women, and isolation in the mountains. Dwarfs and giants were believed in by the Upper Thompson Indians, the latter being supposed to inhabit the Okinagan country, and there was a race of pale, ghost-like people who sometimes pursued lonely travellers. They were different from ghosts only in one particular—they could not be deterred from pursuit by turning out of the trail.

3. The dead.—The land of souls was thought to be beneath, towards sunset, and was approached over a dimly-lit trail, which finally descended a gentle slope and came to a stream spanned by a single log. Just before this another trail joined it, used by shamans as a short cut when pursuing a soul that had been carried off. At either end of the log bridge was a guardian, who sent back souls whose time had not yet come. Another stood at the entrance of the land of souls. From the bridge the trail rose gradually, and it began to grow light again. At the top of the ascent was an immense pile of clothing, where the souls left everything that they had worn in this world.

Further on the trail ended at the door of a great lodge, made of hard white material similar to limestone. This door was narrow, but at the opposite or western end was a wider one opening into the soul country. In the lodge there was always some one to welcome the new-comer, and generally his departed friends gathered there to receive him when they learned that he was coming. The land of the souls was a most delightful country, full of berries and flowers; the air was pleasant and still; and it was always light and warm. Some said that the souls went naked without appearing to notice it, but others supposed that they wore clothes such as they had had on earth. There is another story describing the journey to the land of souls which makes it lead to a lake on which one must paddle for days in a dim atmosphere. A notion existed that animals also have worlds situated under ground; when many went back there, they became scarce on our earth.

Each soul had a shadow or ghost, which remained behind after death, visiting for four days the persons and places formerly frequented by the dead man, after which it generally haunted the place where the body was buried. These ghosts plotted to take away souls from living persons, and were consequently much feared. Suicides did not go to the abode of souls, but became 'lost,' or ceased to exist. The souls of those who were drowned perished entirely, or continued to dwell in the water, or followed the waters to a land beyond them which shamans could not reach. Some said that the souls of those who had led good lives reached the spirit country much more quickly, but in general moral character seems to have affected their future very slightly. The soul of a dead child might return in one of the same sex born soon afterwards, but otherwise rebirth was not believed in. It was thought that the souls would continue in the country of the dead until the Old Man and Coyote came again. These would be preceded by messengers and would bring the souls with them. Christians were believed to go to the land of souls over a different trail from that used by others.

4. Shamanism and witchcraft.—The doings of shamans and wizards, although interesting, present few features not found in other parts of the continent. It was believed that they could harm a person wearing an article of clothing of Indian make more easily than one who was dressed like a white man. Shamans were greatly feared on account of their power of bewitching; but, if it was thought that they had injured or caused the death of any one, they were sometimes killed, though ordinarily failure to cure simply made it necessary to return the fee. Occasionally they were called in to treat horses or dogs if these were highly valued.

5. Prophets.—As elsewhere in America, prophets made their appearance every now and then, generally claiming some message from the spirit-world, and they drew large followings for a time, the Indians gathering from all quarters to see and hear them. They foretold such affairs of general interest as epidemics and the coming of the Whites with the consequent changes in customs and manners. See art. PROPHECY (American).

6. Tabus, etc.—There were numerous tabus and certain ceremonies when the firstfruits, roots, etc., came. When the first tobacco was gathered, the inhabitants of each lodge went through a special ceremony, and there were larger festivals for feasting, dancing, and praying participated in by each neighbourhood.

LITERATURE.—The Salish have been treated by F. Boas in report v. 'On the North-Western Tribes of Canada,' in *Report*

kinds: (1) the shamans proper, called *skelam* ('to heal,' 'to make well') by some of the Fraser tribes, cured internal diseases produced by witchcraft, the absence of the soul, etc., and employed the usual methods; (2) the *olia*, or soothsayer, besides interpreting dreams, visions, omens, and portents, healed external injuries and took care of the bodies of the dead; he alone might prepare a body for burial and protect a person from the evil influence of ghosts, of which all the Salish were extremely afraid; (3) the *seuvel*, or wizards, who might be men or women, instead of being universally abhorred as among most tribes, were recognized as a regular class. They were employed to injure people, and they did this by washing their hands in water at sun-down and repeating the victim's name, or by repeating formulæ over some of his belongings. They were also engaged by the relatives of a deceased person to hold converse with the ghost and adjure it never to come back to trouble the living. After a person had died, they were employed to drive away sickness. Corresponding to this class among the Songish were the *siona* women, who were acquainted with herbs and performed the functions of midwives.

3. The dead.—The stories told of the world of the dead were obtained from the first class of shamans and differed little from those found elsewhere. The salmon-feast, celebrated by all these tribes when the great salmon-run began, was the only one of importance outside of the winter pot-latches, and partook somewhat of a religious character.

II. *BELLACoola*.—The Bellacoola, an isolated Salish group on Bentinck arm and Dean inlet, were unlike all the others in having evolved a mythology of considerable system and originality.¹ They postulated five different worlds, two of which were above and two below the plane of this earth. In the highest realm, called Atsaaktl, resided an old woman called Kamait, Tsi sisnahitl ('our woman'), or Eku yakimtotlsitl ('afraid of nothing'). This world was believed to be a treeless plain over which a wind continually blew towards Kamait's house, situated in the far east; but near the house it was calm. In front stood a post in the shape of a monster whose mouth formed the door, and near it was gravel of three colours, blue, black, and white. Behind the house was a salt-water pond in which Kamait bathed. In the same pond lived a snake, or fish, prominent in Bellacoola mythology, called the *sisiutl*.

In the centre of the lower heaven, Sonh, stood the House of Myths (Nusmeta), also known as 'the-house-where-man-was-created,' 'the-house-from-which-people-came-down,' or 'the-house-to-which-people-go.' This was ruled by Senh, the sun, also called 'our father,' or 'sacred one.' He was the only deity to whom the Bellacoola prayed, for they did not pray to Kamait. Indeed, Kamait does not appear prominently in the religious thought of the nation except for the war which she waged in primitive times with the mountains and her final victory over them. A second deity, who lived in the back part of the House of Myths, and who was of almost equal importance with Senh, was Atlkuntam. The two together might be called the rulers of mankind. Near the fire was an old man called Snutkulkhals, who formerly ruled over the house, but had given up his place in favour of those two deities. Besides those three there were a number of inferior beings, many of whom had to do solely with the *kusiut* ceremony. Of the others, one gave a child its individual features; another, a female deity,

rocked infants and the young of animals before sending them down into the world; a third was 'the mother of flowers'; and there were two beings whose function it was to determine when a person was to die. Still others acted as messengers for the superior deities. Raven was said by some to have his abode in this house, and to him was attributed the invention of the salmon-weir and of the ceremonial whistles and the institution of the ceremonies themselves. The beings concerned particularly with the *kusiut* were nine brothers and a sister. There were special deities to initiate shamans and one whose office was to protect mountain-goat hunters. We also find a belief in the thunder-bird. In a room in the back part of the House of Myths resided several deities who initiated the cannibal dancer and other novices. Along the course pursued by the sun, which is represented as a celestial bridge, were stationed several additional beings, and twenty-four were guardians of the sky, which they fed with fire-wood continually. Where the sun set was a post supporting the sky and preventing the sun from falling into the lower world. Our world was supposed to be an island in the ocean, held up by a giant who sat in the far east with legs apart. The earth was fastened by two ropes to a long stone bar held in his hands, and, when he got tired and moved his hands, there was an earthquake. If he moved the earth westward, people had epidemics; if eastward, sickness disappeared. In the sea dwelt a being who swallowed and gave forth the water of the ocean twice every day. Salmon were supposed to come from a land in the far west. The world nearest beneath us was described as the country of the ghosts and lay along the sandy banks of the river. Winter in their country was our summer, and their summer was our winter; their night was our day, and their day our night. There was a dancing-house in that country, where the *kusiut* was performed, and the ghosts entered it through the smoke-hole by means of a rope-ladder. They were not allowed to return directly to our earth by this ladder to be reborn, but might ascend another to the lower heaven and be sent down from there by the deities. Those who enjoyed staying in the ghost country descended to the lowest world of all, whence there was no return. From the world above were sent down the ancestors of each of the Bellacoola village communities.

III. *THOMPSON RIVER TRIBES*.—Thanks to the researches of Boas, Teit, and Hill-Tout, our knowledge of the religion of the Ntlakypamuk, or Thompson River Indians, is much more ample than that of any other of the interior Salish tribes, but the rites and beliefs of all were nearly the same.

1. Cosmological beliefs. — According to Teit, the Thompson River Indians believed the world to be square with its corners directed towards the cardinal points, and Lytton, where Coyote's son reached the earth, was its centre. Round the edges were lakes, over which clouds and mists hovered. The earth rose towards the north, and that was why it was colder there. Cold winds were caused every time people far in the north left their houses, and warm winds by people far in the south. Formerly the northern and southern people waged war with each other, exposing the earth to alternate periods of extreme heat and extreme cold, but their wars were ended by the marriage of the daughter of the chief of the south to the son of the chief of the north. Thunder was caused by a huge bird like a grouse. It shot arrows by using its wings as a bow, and their rebound in the air produced the noise. Fog or mist was described as the steam of the earth rising

¹ The Bellacoola information is all taken from Boas, 'The Mythology of the Bella Coola Indians,' in *Memoirs of the Jeup North Pacific Expedition*, vol. i. pt. ii. [1893].

when it was heated, or was said to be caused by Coyote turning over. Lakes and ponds originated at the time of a deluge, which also swept the fish into them. Fire and water were in the possession of certain animals, from which they were liberated. By the Upper Thompsons rain and snow were said to be made by the 'Old Man' scratching his back or urinating, but the Lower Thompsons ascribed their production to a female deity. The sun and moon were formerly men, and the reason why the latter is less bright is that his sister Hare or Frog sits continually on his face. Haloes about the sun and moon were their respective 'houses.' Stars were described as transformed people or as roots growing in the upper world, though special tales were told of the Pleiades and the stars of the Great Dipper. The Milky Way was called 'the trail of the stars,' 'what has been emptied on the trail of the stars,' or 'the tracks of the dead.' The rainbow was formerly a friend of the thunder, which was in the habit of painting its face frequently with bright colours.

2. Supernatural beings. — All sorts of 'land mysteries' and 'water mysteries' were prayed to. Those that might in any way be considered tribal deities were the sun, the dawn, the rain, tops of mountains, certain lakes, the spirit of sweat-bathing, and perhaps also the Old Man, who was said to live on the tops of high mountains, and in former days sent the Old Coyote, the principal Ntlakyapamuk transformer, to set the world in order. There were also three brothers, called Koakltka, and another individual, who acted as transformers. The three brothers were finally changed into stone, while Old Coyote retreated to his house of ice. After that the Old Man himself travelled throughout the world. He thus appears to have occupied an elevated position in native mythology, but little attention was actually paid to him in daily life. The leading objects of regard were the sun and the dawn, the latter being frequently invoked by boys and girls during their puberty ceremonials. The spirit of sweat-bathing naturally derived his importance from the prominent place which sweat-bathing occupied in the acquirement of guardian-spirits. Each person, male or female, whether a shaman or not, possessed a guardian-spirit which differed somewhat for a shaman, warrior, hunter, fisherman, gambler, runner, etc., but all were otherwise much alike and resembled the personal *manitus* found elsewhere in N. America. A very few shamans inherited guardian-spirits which had been especially powerful, but most were acquired by a longer or shorter course of sweat-bathing, fasting, abstinence from women, and isolation in the mountains. Dwarfs and giants were believed in by the Upper Thompson Indians, the latter being supposed to inhabit the Okinagan country, and there was a race of pale, ghost-like people who sometimes pursued lonely travellers. They were different from ghosts only in one particular—they could not be deterred from pursuit by turning out of the trail.

3. The dead. — The land of souls was thought to be beneath, towards sunset, and was approached over a dimly-lit trail, which finally descended a gentle slope and came to a stream spanned by a single log. Just before this another trail joined it, used by shamans as a short cut when pursuing a soul that had been carried off. At either end of the log bridge was a guardian, who sent back souls whose time had not yet come. Another stood at the entrance of the land of souls. From the bridge the trail rose gradually, and it began to grow light again. At the top of the ascent was an immense pile of clothing, where the souls left everything that they had worn in this world.

Further on the trail ended at the door of a great lodge, made of hard white material similar to limestone. This door was narrow, but at the opposite or western end was a wider one opening into the soul country. In the lodge there was always some one to welcome the new-comer, and generally his departed friends gathered there to receive him when they learned that he was coming. The land of the souls was a most delightful country, full of berries and flowers; the air was pleasant and still; and it was always light and warm. Some said that the souls went naked without appearing to notice it, but others supposed that they wore clothes such as they had had on earth. There is another story describing the journey to the land of souls which makes it lead to a lake on which one must paddle for days in a dim atmosphere. A notion existed that animals also have worlds situated under ground; when many went back there, they became scarce on our earth.

Each soul had a shadow or ghost, which remained behind after death, visiting for four days the persons and places formerly frequented by the dead man, after which it generally haunted the place where the body was buried. These ghosts plotted to take away souls from living persons, and were consequently much feared. Suicides did not go to the abode of souls, but became 'lost,' or ceased to exist. The souls of those who were drowned perished entirely, or continued to dwell in the water, or followed the waters to a land beyond them which shamans could not reach. Some said that the souls of those who had led good lives reached the spirit country much more quickly, but in general moral character seems to have affected their future very slightly. The soul of a dead child might return in one of the same sex born soon afterwards, but otherwise rebirth was not believed in. It was thought that the souls would continue in the country of the dead until the Old Man and Coyote came again. These would be preceded by messengers and would bring the souls with them. Christians were believed to go to the land of souls over a different trail from that used by others.

4. Shamanism and witchcraft. — The doings of shamans and wizards, although interesting, present few features not found in other parts of the continent. It was believed that they could harm a person wearing an article of clothing of Indian make more easily than one who was dressed like a white man. Shamans were greatly feared on account of their power of bewitching; but, if it was thought that they had injured or caused the death of any one, they were sometimes killed, though ordinarily failure to cure simply made it necessary to return the fee. Occasionally they were called in to treat horses or dogs if these were highly valued.

5. Prophets. — As elsewhere in America, prophets made their appearance every now and then, generally claiming some message from the spirit-world, and they drew large followings for a time, the Indians gathering from all quarters to see and hear them. They foretold such affairs of general interest as epidemics and the coming of the Whites with the consequent changes in customs and manners. See art. PROPHECY (American).

6. Tabus, etc. — There were numerous tabus and certain ceremonies when the firstfruits, roots, etc., came. When the first tobacco was gathered, the inhabitants of each lodge went through a special ceremony, and there were larger festivals for feasting, dancing, and praying participated in by each neighbourhood.

LITERATURE. — The Salish have been treated by F. Boas in report v. 'On the North-Western Tribes of Canada,' in *Report*

of the *British Association for the Advancement of Science*, 1889, p. 801 ff., report vi., *ib.* 1890, p. 562 ff., report vii., *ib.* 1891, p. 408 ff., and report x., *ib.* 1895, p. 523 ff., and by C. Hill-Tout, 'On the Ethnological Survey of Canada,' in *Rep. Brit. Assoc. for Adv. of Science*, 1899, p. 500 ff., 1900, p. 472 ff., and 1902, p. 355 ff., and in *JAI* xxxiv. [1904] 20-91. Besides having report vii., 'On the N.W. Tribes of Canada' devoted to them, the Bella Coola have been the subject of a special paper by Boas, in *Memoirs of the Amer. Mus. of Nat. Hist.*, *Jesup North Pacific Expedition*, vol. i. pt. ii. [1898], 'The Mythology of the Bella Coola Indians.' The interior Salish have been discussed by Boas in report vi. 'On the N.W. Tribes of Canada,' and by Hill-Tout, 'On the Ethnological Survey of Canada,' 1899, but most thoroughly by J. Teit and F. Boas, 'The Thompson Indians of British Columbia,' in *Memoirs of Amer. Mus. of Nat. Hist.*, *Jesup N. Pacific Expedition*, vol. i. pt. iv. [1900], and by Teit in vol. ii. pts. v. and vii. of the same series. The myths of the Thompson River Indians have been treated by Teit in the *Memoirs of the American Folk-lore Society*, vi. [1898] The material on the Salish of Washington and Oregon leaves much to be desired. We are dependent principally on G. Gibbs, 'The Tribes of Western Washington and North-Western Oregon' (*Contributions to N. American Ethnology*, vol. i., Washington, 1877), in J. W. Powell's *Survey of the Rocky Mountain Region*, and M. Eells, 'The Twana, Chemakum and Klallam Indians of Washington Territory,' in the *Report of the Smithsonian Institution* for 1887, pt. i., Washington, 1889, p. 605; also see Boas in *JAF* xi. [1898] 23 ff., 133 ff., and 'Kathlanet Texts,' *Bull* 26, *BE*, Washington, 1901; and *Globus*, lxiii. [1893] 164 ff., 172 ff., 190 ff.

JOHN R. SWANTON.

SALIVA.—In the folk-beliefs of most backward races and among the less intelligent classes in civilized communities many superstitious beliefs are associated with this bodily secretion.

According to J. E. Crombie, this has been explained as follows:

'At one time the life of a man must have been generally believed to have been bound up in his saliva; just as it can be shown that the life of a man has been very generally believed to have been bound up in his blood . . . therefore the spitting rite is a parallel to the blood rite.'¹

This theory has been extended by E. S. Hartland:

'The transfer of saliva is more than a gift of a portion of the spitter's life. It is a gift of a portion of himself, which is thus put into the power of the recipient as a pledge of goodwill. Nay, it is a bodily union with the recipient, such as can be effected by a blood-covenant. Possibly, as Mr. Crombie suggests, it is, where an interchange of saliva occurs, a form of blood-covenant consequent upon milder manners. . . . Rather it seems to be a more evanescent and less solemn, though still emphatic, form, intended only for temporary purposes.'²

To this it may be added that the effect of the transfer of saliva depends upon the intention of the spitter. It is often the result of a kindly intention, that of associating the personality of the spitter with the person on whom it is discharged; where the intent is hostile, it implies reprobation, abhorrence, or contempt. The exact purport of some of the beliefs and usages quoted below is vague and uncertain; but most of the cases may be explained on the principles already stated.

1. Saliva as a part of the personality.—This often appears in popular belief and usage; e.g., English slang 'spit' = a facsimile—'He's the very spit of his father or mother'; French, 'C'est son père tout craché';³ 'Ce'estoit luy tout craché.'⁴ In the folk-tales saliva is often represented as speaking, warning the hero or heroine of approaching danger, and so on.⁵ Among practices to obtain children Hartland quotes the case of a gypsy woman drinking the water in which her husband has spat.

'What is the meaning of the expression "He is the very spit of his father" current not only in England, but also, according to the learned Liebrecht, in France, Italy, and Portugal, and alluded to by Voltaire and La Fontaine, if it point not back to a similar, perhaps a more repulsive ceremony formerly practised by the folk all over Western Europe?'⁶

2. Saliva causing conception.—The belief that saliva, as part of the personality, may cause conception is common in the lower culture.

In the *Popol Vuh* the demi-god Hunhun Ahpu spits into the hand of the princess Xquiq, and she finds herself pregnant.¹ According to the Hindu legend, Agni spat upon the waters, and three personages, Ekata, Dvita, and Trita, were born.² The Chapotás of Bengal profess to be descended from a man who sprang from some betel-leaf which Siva, after chewing it, spat out.³ In the Teutonic myth Quasir, at the making of a covenant between the Aesir and the Vanir, was formed out of their spittle, and in the Edda the spittle of the waves was shaped by the gods into a man.⁴ In the Garo creation legend Nostu spits upon the lilies and grass in the water, and the land is formed.⁵ In Egyptian mythology Isis gathers up the spittle which falls from Ra, and from earth and the spittle forms a snake.⁶ In parts of England the fertilization of the turkey and the capercaillie is caused by the same means.⁷ Many similar beliefs are collected by Hartland.⁸

3. Black magic worked through saliva.—The belief that magic may be worked to the injury of the owner by the acquisition of a piece of his clothing, hair, nail-parings, or other personal relics is common in the lower culture, and extends to saliva.⁹

'Every part of a man's body is regarded by primitive science as impregnated with his properties; but such parts are especially so considered which themselves are held to have a special connection with the life and soul.'¹⁰

In S. India saliva is placed in a coco-nut, which is pierced with twenty-one nails, buried, and a fowl sacrificed, for purposes of black magic.¹¹ In Polynesia sorcerers 'secure something connected with the body of the object of vengeance; the parings of the nails, a lock of the hair, the saliva from the mouth, or other secretions from the body.'¹² Spittle, like hair, is *tapu* in New Zealand.¹³ Among the Columbians spittle is collected and given to a magician, who charms away the owner's life.¹⁴ Hence this substance is carefully guarded.

'The use of the portable spittoon by the Sandwich Island chiefs, in which the saliva was carefully deposited, carried by a confidential servant, and buried every morning . . . originated in their dread of sorcery.'¹⁵

In Hawaii a chief of high rank held the office of spittoon-bearer to the king.¹⁶ Among the Burmese and Shans the disposal of the saliva and water in which clothes have been washed is superintended with anxious care to avoid witchcraft.¹⁷

4. Spitting on oneself.—Hence spitting on oneself, clothes, or other personal articles enforces the influence of the personality on such things, and produces union or communion with them.

In Theocritus the maiden who rejects a rough country lover spits in her breast as a protective (*ῥίσις εἰς τὴν ἐντὺν κἀκλον*).¹⁸

'Hunc puer, hunc juvenis turba circumterit arcta;
Despuit in molles et sibi quisque sinus.'¹⁹

The Cherokee brave, on the eve of battle, chewed a charmed root and spat the juice on his body to protect himself from bullets.²⁰ In Lesbos, if a person admires a child, the mother spits three times in her bosom.²¹ In Germany, if a person happens to spit on himself, he will hear some news; in Jamaica it means that some one is saying something untrue about him.²²

5. Union promoted by spitting on another.—The belief that, by dropping saliva on a person or thing, union may be created, or immunity from sorcery,

witchcraft, or the evil eye secured, is common. The idea appears in many different forms.

(a) *Spitting as a form of salutation or greeting.*—

The *Wapichana* share with the *Mest* . . . a curious habit of spitting on things or people as a compliment or sign of gratitude. I remember one man . . . was so pleased at my late return that he took my hand in his and spat repeatedly at the key, saying constantly "Ereka Ekepa!" (God is good!) (The old lady's favored of me was peculiar; she took my hand in her own, turned it palm upwards, and spat on it . . . the doctor likewise . . . says the spitting is accidental, a by-product of the performance which the natives call *luta*, and which consisted in blowing a blessing.¹ On the *Lower Congo*, "in saying good-bye to each other, they pretend to spit on the forehead and hands of the departing one, and on some grass which, after being spat upon, they stick in the hair of the beloved one leaving them. This is to bring good luck and keep away evil spirits."² In *Yucatan* "the highest mark of respect was to place the right hand, adorned with spittle, on the ground, and then to rub it over the heart."³ Among the *Mest* spitting is a sign of welcome; women spit on their palms and shake hands with a visitor.⁴

(b) *On receiving the handset or first coin in the day, or a gift.*—

"This is common here in London, and perhaps over great part of England, for Apple-women, Cyster-women &c. &c. some Dutchers, to spit on the money as they first receive in the morning, so they call good handset."⁵ The custom is common in Great Britain and Ireland.⁶ In E. Africa people spit on a gift for good luck.⁷ An *Alta* Barber . . . spit on the coin which I gave him . . . and my native friends told me that he did so for fear lest the coin, owing to some sorcery on my part, should not only itself return to me, but at the same time take with it all the money with which it had been in contact in his bag.⁸

(c) *Salutation of children with saliva.*—The usual explanation of this custom is that it is intended to ward off the spells of witches or fairies or to counteract the evil eye.

Hartland regards this as "only a specialisation of a more general intention. The evidence points to the meaning of the ceremony as a welcome into the world, an acknowledgment of kinship, a desire to express those friendly feelings which in certain times none but a Pagan could entertain, whatever flattering words might be spoken."⁹

In Cork, immediately after birth, the child is sometimes spat on by the father, and in *Wicklow* they spit on a child for luck the first day it is brought out after birth; at *Santhoshin*, when old women meet a baby out with its nurse, they spit on the ground all round it in a circle, to keep fairies from it.¹⁰ In modern Greece a visitor's first greeting to a baby is to spit on it.¹¹

A special case is that of the use of saliva in the baptismal rite of the Roman Catholic Church. "The priest exorcises the child; anoints his ears and nostrils with spittle—after our Lord's example, who thus cured the deaf and dumb man—and asks him in three separate interrogations whether he renounces Satan, all his works, and all his pomps."¹²

In modern Greece "at a baptism . . . the priest opens the window by exorcising all evil spirits and influences from the four corners of the room by swinging his cross, but the midwife, who usually knows something of magic, or one of the god-parents, accompanies him and makes assurances doubly sure by spitting in each suspected nook."¹³

(d) *Procuring communion with sacred objects by means of saliva.*—In many places communion with sacred objects is procured by spitting upon them.

In Guatemala at small chapels along the road the passer-by halts, gathers a handful of rice, rubs his legs with them, spat reverently upon them, and with a prayer places them upon the altar with a small stone and an offering of pepper, salt, or cacao, which no one dared to touch.¹

In Korea "my cosines occasionally added a few stones to the heap of more than usual importance even by the wayside, bowing before them and . . . practice of folk-medicine . . . image from the boat and . . . behalf of the patient; after closing the image and enforcing on his mind the necessity of remembering the lesson, by way of indelibly fixing it on his memory, he winds up by spitting with juice in his face."² "The *Bazulu* worship a big block of granite, dance round it on one leg, and at the same time spit on it."³

At Brighton there is a stone wall in which is a crystal, called by schoolboys 'the holy stone'; it used to be the custom for every boy who passed this stone to spit on it for luck.⁴

Sometimes the spitting seems to be a form of coercion of the *nunen* in the sacred object:

"In the Tamil districts, if a temple car does not move from its position when an attempt is made to drag it, a lot of people, who are allowed to get intoxicated, are given toddy mixed with castor-oil. Some of this they spit out upon the wheels of the car, which cannot stand defilement, and proceeds to move."⁵

The idea of communion is perhaps shown when in Japan pilgrims to Buddhist shrines chew strips of paper into pellets and spit them out at the images of guardian deities; if the pellet sticks, the prayer will be heard; if not, the prayer will not be heard.⁶

(e) *Spitting as an asseveration or as a bond of union.*—

Among the *Bechuana*, "when it thunders every one trembles; if there are several together, one asks the other with uneasiness, Is there any one amongst us who devalues the wealth of others? All then spit on the ground saying, We do not devalue the wealth of others."⁷ When in the 18th cent. English *tsankas* combined against their landlords, "it is usual with them to assemble round a great stone, upon which they are to spit, believing this practice bound with a promise of what they will do, and stand to be as sacred and binding as if they had taken a public oath."⁸

Spitting, again, is a means of transmitting magical powers.

In Baluchistan the holy man who is able to charm away locusts passes on the charm to his successor by spitting into his mouth; the man thus initiated goes mad, but this passes off and leaves wonderful power.⁹

6. *Spitting as a mark of contempt or hatred.*—Here the intent is changed, and the object is to exhibit enmity or aversion.

Spitting in the face was common among the Jews.¹⁰ Among the Greeks we have the phrase of *Hephaistos*, *utroas pposomai*.¹¹ Compare with this *Blak* speech:¹²

"I do defy him, and I spit at him;
Call him a slanderous coward and a villain."¹³
"As she spit in his face, so she defied him."¹⁴

"The fanatic sinner, spitting in disgust on the ground, declared that this made matters worse, and that he believed me not only to be a *Blak* (infidel), but also a spy."¹⁵

When a girl in E. Africa is found not to be a virgin, the women spit on her pudenda.¹⁶ Among the Fellahin of Palestine, if a man marries a widow, unless she needs protection, the men

spit on her face as she goes to her new home.¹ If a Hebrew refused to perform his legal duties towards his sister-in-law, she was directed to spit in his face, saying: 'So shall it be done unto the man that doth not build up his brother's house';² and, if a widow repudiates the levirate, she takes off her sandal and spits on the ground.³ In Scotland, when two boys quarrelled, and one wet the buttons of the other with his saliva, this was a challenge to fight or be dubbed a coward; when children try to solve a puzzle, the usual way of acknowledging defeat is to spit on the ground.⁴

Hence spitting becomes an embodied curse.⁵

When a Zulu is doing magic, while he is eating 'he spits in different directions, especially in the direction of those he hates, or who are at enmity with him, and whom he thus, as it were, defies, fully believing that he is surrounding himself with a preserving influence against their machinations and power, and at the same time exerting an influence injurious to them.'⁶

7. Saliva of various kinds.—There are numerous varieties of saliva in folk-belief.

(a) *Saliva of gods.*—

Of Marduk, the god of Babylon, it is said, 'the spittle of life is thine,' probably in allusion to its magical qualities.⁷ The spittle of the Teutonic gods had mighty virtues.⁸ Tchim-paz or Ohkai, the god of the Mordvins, spat on the waters, and his spittle grew into a mountain.⁹

The modern Icelanders relate that Christ, while walking with Peter along the seashore, spat into the sea, and from his spittle a stone-grig developed. Peter also spat, and his saliva turned into a female stone-grig. Both these are excellent eating. The Devil, who was not far behind, saw this, and also spat into the sea. But his spittle changed into a jellyfish, which is fit for nothing.¹⁰

(b) *Saliva of holy men.*—The spittle of holy men has manifold virtues.

Vaishnavas in S. India regard a piece of food which a *guru* has tasted and the water with which he has rinsed out his mouth as sacred, and swallow them with avidity.¹¹ In Madras a Māḍiga woman spits on the assembled people, who believe that the spittle removes pollution because she is an impersonation of the goddess Mātangi.¹²

The Quissama of Angola 'practise the fine old recipe that Mr. Hamilton has remarked to be so much in vogue among the Kafir medicine men, i.e., that, in cases where medicine has been administered, in order to give it proper efficacy, the doctor spits his saliva down the patient's throat.'¹³ In Borneo the natives 'brought portions of cooked rice on leaves, and begged the Englishmen to spit into them. After which they ate them up, thinking they should be the better for it.'¹⁴

At the sacrifice of the Meriah victim of the Kandhs (*q.v.*), who was regarded as semi-divine, while he was being taken in procession, some persons solicited a drop of his saliva and anointed their heads with it.¹⁵

(c) *Saliva poisonous.*—Some saliva is regarded as poisonous.

According to Socrates, a man ejects saliva because it is injurious to keep it in his system.¹⁶ The famous Mahmūd Begādā of Gujarāt was, it is said, nourished on poison, and by chewing certain fruits he could discharge saliva so poisonous that any one touching it died.¹⁷ In the Malay Peninsula the Kenaboi have such an evil reputation that any one treading on their spittle is believed to suffer from boils and blains.¹⁸ The spittle of a witch—e.g., among the Babylonians—is naturally poisonous.¹⁹ So also is the saliva of various animals—the lizard, the snake, the rukh in the East; in Ireland, if a weasel spits in milk, those who drink it suffer from gripes.²⁰

(d) *Saliva medicinal.*—Some saliva is curative. The virtues of fasting spittle are widely recognized.

In Scotland its prophylactic properties are famous,¹ as also in Arabia,² and in Madagascar.³ Pliny gives many prescriptions of this kind. Beneath the tongue of a mad dog is a slimy saliva which, taken in drink, prevents hydrophobia; the foam from a horse's mouth is useful in ear disease, in chafing caused by riding, and in diseases of the uterus.⁴ Serpent's slime and foam form the *anguinum*, or snake-egg, which has magical powers.⁵ A dry white moss grows on stones near streams; if one of these stones, with the addition of human saliva, is rubbed against another, it cures ring-worm when rubbed on the part affected, with the spell, 'Cantharides begone, a wild wolf seeks thy blood!'⁶ Some people used to rub their own spittle with the finger behind the ear to relieve disquietude of mind.⁷ Sometimes the cure was effected by transference, as when a person suffering from cough spat into the mouth of a small frog and gained relief.⁸ A sort of lizard in Malabar is believed to suck the blood of children by looking at them; as soon as people catch sight of the creature, they apply saliva to the child's navel, from which it is supposed that the poisoned blood is thus extracted.⁹ As a cure for gout, in Italy, a small boy, while fasting, is made to spit thrice on the affected limb, to repeat a charm, and to spit behind him thrice for three successive mornings.¹⁰ In the Greek Islands thrush (*afta*) in a child is cured by the mother showing the sore to the evening stars, spitting on it, and saying: 'This evening stars and *afta*, tomorrow no stars and no *afta*.'¹¹ In the Panjab a clan of Aroras can cure hydrophobia by spitting on a little earth and applying it to the bite.¹² A gentleman travelling by train in Germany was asked to spit in the face of a man suffering from a fit.¹³ Magyars believe that styes on the eye can be cured by some one spitting on them.¹⁴ In Lesbos, to cure a wasp sting spit four times on the place, do this thrice, and say *πίε*, 'drink.'¹⁵ In Ireland it is believed that pricking of the foot ('pins and needles') is relieved by wetting the popliteal space with saliva.¹⁶

8. Protective powers of saliva.—The use of saliva is valuable against fascination and ill-luck generally.

(a) *Against fascination.*—Spitting is a common mode of repelling the evil eye.

In Greece saliva obtained from a person who is suspected of having unintentionally over-looked a child is mixed with water, and the patient is made to drink it; or the incautious person is asked to spit in the child's face.¹⁷ In Scotland spitting three times in a person's face, turning a live coal in the fire, and exclaiming, 'The Lord be with us!' protects from the evil eye.¹⁸ When making a protective necklace in the Malay Peninsula, the maker recites a charm and spits twice on the necklace.¹⁹ Over-praise—'fore-speaking,' as it is called in Scotland—is dangerous. In Russia, if a person praises a baby without the precautionary ejaculation, 'God save the mark!' the nurse spits in the person's face.²⁰

(b) *Against unlucky animals, things, etc.*—

In Aetolia, when travellers meet an unlucky animal, they spit three times before continuing the journey.²¹ In Macedonia a certain insect which enters houses in summer is supposed to bring fever, and people spit three times when it appears.²² In Great Britain and Ireland the sight of a single magpie is ominous, and in Cheshire people spit on the ground and make a cross with the foot to drive away ill luck.²³ The Irish, when they see a caterpillar creeping, spit three times on it, lest it may come to the house and sleep with the person who has seen it; they do the same on meeting a stoat in the morning.²⁴ In Central India people spit three times on seeing a falling star.²⁵ In Italy, when a hare is released as a scape-animal, to remove disease, the officiant must spit three times behind it, and must not look back or leave the house for three-quarters of an hour.²⁶ In Humaun, in order to stop a hail-storm, people spit on the stones as they fall, or sprinkle on them some drops of blood from the body of a noted magician.²⁷ It is a common practice to spit on a witch

or sorcerer, or, as a protective, to get the witch to spit on her supposed victim.¹ Muhammad, in order to make a bad dream harmless, used to spit three times over the left shoulder—a habit still prevailing in Egypt.² In the Aegean Islands, when dough is being kneaded by a woman, if another woman chances to arrive, she must spit on the ground to charm away the evil of her presence; otherwise she will 'carry away the bread with her.'³ In Shetland, when a sick person describes his ailment, the listener is apt to have the disease conveyed to himself, unless he spits covertly.⁴

Among the Kikuyu of E. Africa 'if a man hears that a near relative is very ill he makes a point of going to see him, and takes the precaution of getting him to spit ceremonially on his hand and rub his visitor on his navel. If a man goes to see his sick father or mother he takes a piece of mutton fat, and the sick parent ceremonially spits on it, and the visitor rubs the saliva covered piece of fat on his navel.'⁵

The same procedure takes place on hearing unlucky names.

In parts of Wales it was the custom to spit when the name of the Devil was mentioned, and at the prayer in the Litany 'to beat down Satan under our feet.'⁶ In Greece, if children are sent to draw water, they must spit three times into the spring before they dip their pitchers, to escape the Nereids; in folk rites the traveller spits in the water before crossing or when crossing haunted water.⁷

Muhammad ordained: 'There is a demon called Khinzab, who casts doubt into prayer; when you are aware of it, take protection with God, and spit over your left arm three times. . . . When you stand up to prayer, spit not in front because you are then in God's presence; neither spit on your right hand, because an angel is there; spit therefore on your left side, or under your feet, and throw earth over it.'⁸

The evil influence of seeing the moon through glass or through the bough of a tree is broken by taking a piece of money from the pocket and spitting on each side of the coin.

In Clare, when the new moon is seen for the first time, people turn thrice sunwards, bowing and spitting at each turn.⁹

Spitting thus becomes a symbolical purification from the effects of tabu.

In Japan 'in the Izanagi myth a God of the Spittle (Hayatama no wo) is the result of that deity's spitting during the ceremony of divorce. The "spittle" deity is here associated with another God, who is styled a God of Purification. A commentator on this passage says that "at the present day spitting is essential in the purification ceremony." The ritual, however, does not mention it. Another writer adds that "this is the reason why at the present day people spit when they see anything impure." In the myth of Susa no wo spittle is mentioned along with the nails of the fingers and toes and nose-mucus among the materials for expiatory offerings. When Hohodemi is recommended to "spit thrice" before giving back the lost fish-hook to his brother, a magical effect is probably intended, such as to convey to him any impurity which may have become attached to his own person. Rinsing the mouth as a purifying ceremony before pronouncing an oath is mentioned in the *Nihongi* [ii. 96].'¹⁰

9. Reinforcing the powers of spittle.—The efficacy of the saliva is increased by spitting out certain substances with it.

At the Lemuria the Roman house-father laid the ghosts by spitting out black beans as he walked, saying, 'With these I redeem me and mine.'¹¹ In Melanesia a charm for stopping rain is to chew ginger, which is then expectorated in a fine spray; the same process, with appropriate words, is used to propitiate or avert any possibly dangerous influence, as, e.g., that of a stranger; Government parties and camps are charmed by a man walking round them and spraying chewed ginger from his mouth.¹² When the Shans are building a house, they chew betel-nut and spit it into each hole dug for a post, to expel evil spirits; to expel disease the Malay medicine-man, with a charm, ejects chewed betel-leaf on the patient's person, and, when taking omens for agriculture, the farmer chews betel, repeats

charms, and spits it out in the direction of the cardinal points.¹ At meals the Hausas always spit out some of the kola-nut on the ground as an offering.²

To relieve evil dreams the Zulu medicine-man prescribes: 'When you dream of him, take this medicine and chew it; then take a stone or a piece of firewood, and spit on it the spittle which is in your mouth when you dream of him, mixed with this medicine. . . . and throw it behind your back without looking.'³

10. The use of saliva in magic.—This assumes many forms which may be explained on the principles already stated.

In N. India, at cotton-picking, women spit out parched rice as a magical mode of improving the produce.⁴ In a Vedic charm to appease wrath the person takes a stone, spits round it while reciting a charm, and lays an arrow on a bow while standing in the shadow of the wrathful one.⁵ Natives of Australia of the Irriakura [a certain bulb] totem, before eating the tubers, rub them in their hands, and, putting them in their mouths, blow them out again in all directions, obviously to increase the crop.⁶ In W. Africa the owner of a portable charm, in the morning, before speaking to any one, wets his finger with saliva, draws it over the amulet, and then down his forehead, saying: 'May every man, woman, and child do good to me.'⁷ In Shetland the fishermen spit into the mouth of the last caught cod, 'and the consequence, they say, is that it will be followed by a fish equally large or larger.'⁸ In India it is believed that buffalo's saliva, if applied to the soles of the feet, causes sleep, possibly because the animal is sluggish.⁹

'The Galelareese think that when your teeth are being filed you should keep spitting on a pebble, for this establishes a homeopathic connexion between you and the pebble, by virtue of which your teeth will henceforth be as hard and durable as a stone.'¹⁰

11. Toleration and horror of saliva.—Among some people saliva, preferably that of women, is not regarded with abhorrence.

In some of the Polynesian islands the kava root is chewed by old women in a ceremonial way and distributed at feasts.¹¹ Among some American Indian tribes cassava root is chewed by young women and the liquor drunk.¹² It is believed that the Kafir beer is made in the same way.¹³

But among people, like the Hindus, who are subject to rigid tabus of food and drinking it is regarded with disgust.

Dubois remarks that 'their strong aversion to wind instruments of music' is due to 'their insurmountable horror of saliva. They would look on a man who spat upon the floor as quite destitute of good manners. Spittoons are to be found in every house; but should none be provided and any one require to spit he would have to go outside.'¹⁴

The danger of treading on saliva is as old as the days of Manu,¹⁵ and has been perpetuated in the custom which prevailed among some menial tribes in Bombay, Madras, and the Central Provinces up to quite recent times, of requiring them to carry spitting-pots hung round their necks in order to avoid danger to travellers.¹⁶ Spitting on a man of high caste is a serious offence in India. 'They who spat upon the Brahmana . . . sit in the middle of a pool of blood, chewing hair.'¹⁷ If a low caste man spits on a superior, the king shall cause his lips to be cut off.¹⁸ After spitting, a Brahman has to sip water.¹⁹

In Ceylon 'the most dreaded of all punishments under the Kandyan dynasty was to hand over the lady of a high caste offender to the Rodiyas [degraded menials]; and the mode of her adoption was by the Rodiya taking betel from his own mouth and placing it in hers, after which till death her degradation was indelible.'²⁰

Buddhist monks in Burma may not spit on green grass or in fresh water.²¹ The ancient Persians never deified a river with

forms. The ancient Greeks said, *Xaïpe!*, 'Be glad!', 'Be joyful!' The Romans said, *Salve!*, 'Be well!', 'Be in good health,' or, more formally, *Salvere jubeo*, 'I bid you be well.' The idea underlying this Roman salutation underlies that of many modern peoples, though in different countries the reference to the health of one's friends is expressed in different ways. Thus in English one says, 'How are you?', 'How do you do?', or 'I hope you are well?' The French say, *Comment vous portez-vous?*, 'How do you carry yourself?', and the Germans, *Wie befinden Sie sich?*, 'How do you find yourself?' Similarly the Arabic *Salaam aleika*, 'Peace be unto thee!', includes the idea of a wish for the health of the one saluted, as did the Hebrew *Shalom*, 'Peace!' Both, however, included much more, as will be noted below.

In common intercourse still less formal greetings are generally employed. Thus in English we say, 'Good morning!' (Old English, 'Good morrow!'), 'Good day!', or 'Good evening!' The Germans say, *Guten Morgen!*, the French, *Bon jour!*, the Italians, *Buono giorno!* The Arabs of the Levant similarly say, *Naharak said!*, 'May your day be happy!'. All these imply the wish that the one saluted may have a happy day or evening. Possibly the original meaning was, 'May God give you a good day!' In Occidental lands one replies to such a greeting by simply repeating it, but in the Levant politeness demands that the response shall add something to the original wish. Thus, when a friend says, *Naharak said!*, it is polite to reply, *Naharak said wa mubarrak!*, 'May your day be happy and blessed!' In Japan the greetings among equals are similarly brief. Thus in the morning one says to a friend, *Ohayo!*, literally, 'Honourably early!'; later on one says, *Konnichiwa!*, literally, 'To-day!'; and in the evening the greeting is *Oyasuminasai!*, 'Honourably rest!' In like manner in China one says, *Tso shan!*, literally, 'Early time!', which is equivalent to 'Good morning!', and *Tso tau!*, 'Early rest!', for 'Good night!' The Japanese also have a greeting which makes inquiry for one's health—*Ikagadesuka?*, 'How is it?' In Occidental countries the more formal salutations addressed to friends who have been long absent or to persons to whom one is introduced for the first time are not as a rule crystallized into such set phrases as those that have just been considered. They express the pleasure of the speaker at seeing a friend again or at making the acquaintance of the stranger: 'I am glad to see you again!', 'I am glad to meet you!', or 'I am delighted to see you!' The Japanese, when introduced to a stranger, say, *Hajimete omeni kakaimusu!*, literally, 'See you for the first time!' A young person meeting an older person says, *Doka yoroshiku!*, 'Please in your favour!' The Chinese have a form of salutation, *Yat yat pat kin ue sam tsau hai!*, literally, 'One day not see like three falls!', equivalent to 'If I do not see you for a day, it is like three years!'.¹

In the Occident, when one receives a call, the greetings are soon over and the time is passed in conversation upon other topics, but in Syria the greetings and inquiries for the guest's health and that of his family last for some time, and during the call the conversation will often be interrupted by saying the greetings and making the inquiries all over again. Among equals the salutations at parting are as a rule brief and informal. The Greeks employed at times the same phrase as in greeting, *Xaïpe!* at others *Eppwde!* 'Be strengthened!'. The Romans said, *Valle!*, or *Valcas!*, 'Be well!', 'Be strong!' Alkin to this is the English 'Farewell!', meaning, 'May it go well with you!', or 'May you prosper!' More frequently 'Good-

bye' is employed. This is believed by many to be a corruption of 'God be with you!'. If this be the correct etymology, it has a religious colouring. Probably a similar thought underlay the German *Auf Wiedersehen!* and the French *Au revoir!* Of similar import was the Hebrew parting salutation, 'Go in peace!' (1 S 20⁴²), and the modern Arabic *Ma'salameh*, 'With peace!' The Chinese say, *Maan maan haang*, 'Slowly, slowly walk!', or *Tsing wooi*, 'Please return!' The Japanese say, *Sayonara*, 'If it must be so!'

Along with the words which are uttered in formal and impressive salutations there are often physical contacts. These vary with different countries and with the degree of intimacy between the persons concerned. In civilized countries the most common and universal form of contact is 'shaking hands.' The persons performing the salutation grasp each other by the right hand and gently shake or press the hand thus grasped. The cordiality of the salutation may be graded by the vigour or listlessness of the pressure. Another method of expressing cordial salutation frequent among relatives and intimate friends is kissing (*q.v.*), sometimes on the cheek, or, in cases of great intimacy, on the mouth. In some countries kissing is largely confined to greetings between women. In Syria men as well as women kiss one another, often on both cheeks. Sometimes men will grasp one another by the shoulders and, without kissing, place the head first over one shoulder and then over the other. Perhaps this is the modern survival of 'falling on the neck' (Gn 33⁴ 45¹⁴). Still another method of physical contact is 'touching noses.' This is employed among various savage peoples, as, e.g., the Melanesians.¹

Even when there is no physical contact, any salutation which is at all formal is accompanied by a bow or an inclination of the head. This is almost universal in modern civilized society, and in some parts of the world the custom is very ancient. Confucius is said by his disciples to have bowed forward when saluting one who was in mourning.² In Syria a bow is often accompanied by a sweeping motion of the right hand towards the ground. At other times the hand is made to touch one's breast, lips, and forehead.

In some countries there is a strict etiquette concerning salutations.

'Among modern Moslems one riding should first salute one on foot; one who passes by should first salute a person standing or sitting; a small party those of a large party; a young person should be first saluted by the aged. One who enters a house should first salute the people of that house.'³

Similarly among the Tikopia of Melanesia⁴ 'a man who wishes to pass another who is sitting down will call out as he approaches: "*O mata, mata,*" meaning "eye," and if the answer comes "*Poi, erau,*" "Yes, all right," he goes by. If there are two or more people sitting down, he will say, "*Oto mata,*" and will be answered as before. Several men going together ask leave to pass in the same way. A man walks upright, but a woman who is passing bends down slightly with her hands between her thighs. If a man went by without the proper greeting, it would be supposed that he was angry and he would have to return and sit down near those whom he had passed. If he explained that this behaviour had been due to carelessness, he would be called a fool and his apologies would be accepted. . . . When a man goes to visit another at his house, he calls out the name of the occupant at some distance, and if the latter is at home, the visitor is invited to enter. If there is no answer, the visitor will wait for a time and then go away. Only near relatives may enter a house without invitation. Similarly in the Levant a Moslem on approaching the house of a neighbour gives a peculiar call in order that the women may retire to their own apartments before he enters.'

It is not possible to trace in detail the customs of salutation among all peoples within the compass of an article. Certain forms of etiquette are observed throughout the world. Among the peasantry of

Palestine, e.g., one says to a guest, 'Fât,' 'Enter,' 'Foddell,' 'Welcome!,' 'Marhabâ!,' 'Welcome!,' or 'Miyet marhabâ!,' 'A hundred welcomes! One familiarly asks, 'Kaif halak?,' 'How are you?' The reply is, 'Humdillah,' 'Praise God!,' i.e. 'Praise God I am well,' the full form of the phrase being 'Humdillah salaameh.' In the early morning one greets another with 'Subahkum b'l-khair!,' 'May your morning be in good [fortune]!,' to which the reply is, 'Yâ subah el-khair,' 'Oh, the morning is good! At evening the greeting is 'Mesaikum b'l-khair!,' and the response, 'Mesa el-khair! At night it is 'Lailtak saideh!,' 'May your night be happy!'

3. To monarchs. — Superiors and especially monarchs are in all countries saluted with much greater formality than equals. In the countries around the eastern end of the Mediterranean it was customary in ancient times to prostrate oneself before a monarch. Thus Araunah, the Jebusite, bowed himself before David with his face to the ground (2 S 24²⁰). Not only the foreigner, but Nathan, David's frequent adviser, did likewise (1 K 1²³), and even David's favourite wife, Bathsheba (1^{26, 31}). Such homage was not, however, confined to kings, but was also accorded to prophets (see 2 K 21^{4, 27}). Its motive was probably the belief that in both kings and prophets a superhuman spirit dwelt. Physicians are still often thus saluted at hospitals in the Levant.² Perhaps this is in part an earnest way of proffering a request for healing, just as Esther is said to have fallen on her face before Ahasuerus (Xerxes) when she wished to make a particularly urgent request (Est 8³). Where such customs prevailed, it was natural that conquered princes should fall on their faces and kiss the feet of their conquerors. The act was at once an expression of homage and an appeal for mercy. Assyrian kings say again and again in their annals that such-and-such a king came and kissed their feet, and the Black Obelisk of Shalmaneser III. pictures Sui, king of Gilzan, and Jehu, king of Israel, in the act of doing this.

Similar customs are found in many other parts of the world. Thus among the Melanesians a visitor who visits a chief in his house kneels at the door and moves towards the chief on his hands and knees. When he reaches him, they touch noses in the customary manner, and the visitor withdraws a pace or two, and sits down cross-legged. No other position is allowed in the presence of the chief. When the interview is finished, the visitor asks permission to go, and leaves on his hands and knees in a similar manner, without turning his back to the chief. If a man wishes to pass a chief out of doors, he will say, 'O mata pa' (mata, 'eye'; pa, 'father'). The chief will reply, 'Elaru! saere, opoi!,' 'All right! Walk, yes,' and the man will go by on hands and knees as when approaching him.³

In India similarly deep obeisance has always been performed before a sovereign. Thus we read in the *Rāmāyana* :

'And with greetings and obeisance spake their message calm and bold,
Softly tell their gentle accents as their happy tale they told.
Greetings to thee, mighty monarch!'

According to the *Sakuntala* of Kalidasa, the Shakespeare of India, it was customary for subjects on approaching a king to shout, 'May the king be victorious!', 'O king, be victorious!', or 'May our sovereign be victorious!'

In like manner in less effusive China the customs,

as we learn from the *Analects* of Confucius, were not radically different. When Confucius entered the gate of the palace of the prince, it was with body somewhat bent forward, almost as though he could not be admitted. When passing the throne, his look would change somewhat; he would turn aside and make a sort of obeisance, and the words that he spoke seemed as though he were deficient in utterance.¹

At modern European courts the ceremonial, though less demonstrative than that among many of the ancients, nevertheless emphasizes in a variety of ways that the sovereign is not an ordinary mortal and must be much more ceremoniously saluted. The climax of salutations to royal personages is found in the public ceremonies of welcome which are prepared for them when they pay visits to cities on public occasions or return from victories or long absences. A fine literary description of such a welcoming salute is found in the *Rāmāyana*, in the passage which tells of Rāma's return to Ayodhya :

'Elephants in golden trappings thousand chiefs and nobles bore,
Chariot cars and gallant chargers speeding by Sarayu's shore,

And the serried troops of battle marched with colours rich and brave,
Proudly o'er the gay procession did Ayodhya's banners wave.

In their stately gilded litters royal dames and damsels came,
Queen Kausalya first and foremost, Queen Sumitra rich in fame,

Pious priest and learned Brahman, chief of guild from near and far,
Noble chief and stately courtier with the wreath and water jar.

Stately march of gallant chargers and the roll of battle car,
Heavy tread of royal tuskers and the beat of drum of war.

Women with their loving greetings, children with their joyous cry,
Tottering age and lisping infant hailed the righteous chief and high.

Bharat lifted up his glances unto Rama from afar,
Unto Sita, unto Lakhsman, seated on the Pushpa car,

And he waived high his greetings and he poured his plous lay,
As one wafts the pious mantra to the rising God of Day!'

Mutatis mutandis, similar scenes of salutation have occurred in all civilized countries. They have been accorded not to kings alone, but to presidents, generals, governors, and distinguished visitors. Salutations given in different cities and countries to visiting delegations since the Great War began, such as the French delegation to the United States of America in May 1917, although they lacked the peculiar colour imparted by the native Indian bent as well as the religious flavour of that accorded to Rāma, in spontaneous heartiness and general interest resembled that described in the epic.

4. In letters. — Salutations in letters exhibit much the same variation as other greetings, though they have some peculiarities of their own. Among the ancient Romans the salutation in a letter was reduced to a designation of the person addressed and of the writer of the letter. Thus a letter of Cicero, selected at random, begins: '*Cicero Attico S.*,'⁵ the 'S.' standing for *socio*, 'colleague.' A letter of Pliny selected in the same way begins: '*C. Plinius Hispaniae suae S.*'⁶ This dignified brevity corresponds to the French form, in which after the name of the person addressed a simple '*Monsieur*' or '*Madame*' is placed. In very

⁵ See the ed. published by T. Holme, London, 1902, pp. 43 and 76.

formal letters in English the name is followed by a simple 'Sir' or 'Madam,' but it is far more common to prefix to the 'Sir' or 'Madam' a conventional 'Dear.' Similarly the Germans in beginning a letter place after the name of the person addressed 'Mein Herr,' literally 'My lord,' though *Herr* has been attenuated till it means simply 'gentleman.' In ancient Babylonia it was customary to insert after the address a sentence of good wishes. Thus in a letter selected at random from the time of the 1st dynasty of Babylon (c. 2000 B.C.) we find the following beginning:

'To Manatum speak, saying: Yamsi-Shamash says: "May Shamash and Marduk make thee to live!"'¹

Then the business follows. Most of the letters from the time of the Neo-Babylonian and early Persian empires (c. 550-450 B.C.) are somewhat more elaborate. An equal is addressed as 'brother,' a priest as 'father.' Thus a letter taken at random begins:

'Letter from Nabu-zira-ibni to Rimut, his brother. May Bel and Nabu grant peace unto my brother.'

Another runs:

'Letter from Nabu-zira-ibashshi to the lady Sikkû, my sister. May Bel and Nabu grant peace and life unto my sister.'

Still another:

'Letter from Nabu-suma-ibni unto the priest of Sippar, my father. May Bel and Nabu grant peace and life unto my father.'²

A somewhat similar form of letter was widely employed in the Levant for centuries. A letter written from Egypt in 172 B.C. begins:

'Isias to her brother, greeting: If you are well and other things happen as you wish, it would be in accordance with my constant prayer to the gods. I too am in good health, and so is the boy: and all at home make constant remembrance of you.'³

In the letters of Paul to the Thessalonians we have the same elements expanded. The salutation is longer; the prayer is made more prominent; and the assertion that the recipients of the letter are constantly borne in mind is more emphatic. Still another letter from Egypt may be cited to show the frequent recurrence of the religious element in such salutations:

'Ammonios to his sister Tachnumi, much greeting: Before all things I pray that you may be in good health, and each day I make the act of worship for you.'⁴

The classical Arabic form of greeting in a letter is given in the story of Bilkis, in the letter which Solomon is said to have written the Sabæan queen:

'From the servant of Allah, Solomon son of David, to Bilkis queen of Saba. In the name of Allah, the Merciful, the Gracious! Peace upon all those who follow the right guidance! As to what follows'⁵ (then follows the business in hand).

Epistolary salutations present an endless variety. The above are but a few examples.

As in the case of oral greetings, the salutations in letters addressed to monarchs are more elaborate and tend to greater adulation. The following is typical of the beginnings of letters addressed to Assyrian kings of the Sargonid dynasty:

'To the king my lord, thy servant Ishtar-iddin-apla, chief of the astronomers of Arbela, makes report to the king, my lord. May Nabu, Marduk, and Ishtar of Arbela be gracious to the king, my lord.'⁶

There are many variations in detail. The climax of adulatory addresses to sovereigns is reached in the letters sent by Syrian vassals and officials in the 14th cent. B.C. to their overlord, the king of Egypt. One of these runs:

'Rib-Adda sends to his lord, the king of countries, the

great king, the king of battle. May Ba'alat of Gebal give power to the king, my lord. At the feet of my lord, my sun-god, seven times and seven times I fall! (then the business which called forth the letter is taken up).'¹

In all monarchical countries letters to the sovereign are of course begun in a more formal way than letters to one's equals, though in Occidental countries and in modern times such adulation as was expressed to the kings of Egypt is lacking. The correspondence of one monarch with another (unless they are of close kin, as in modern Europe) has probably always been attended with greater formality than that between private persons. The El-Amarna letters afford us glimpses of the earliest royal international correspondence of which we know. Kings greeted one another as follows:

'To Kadashman-Kharbe king of Karduniash (Babylon), my brother, speak saying: Nimmuria (Amenophis III.), the great king, king of Egypt, thy brother. With me there is peace (or health). With thee may there be peace (or health); to thy house, to thy wife, to thy sons, to thy princes, to thy horses, to thy chariots, in the midst of thy lands may there be peace (or health)!'²

The salutations of the Babylonian king and the king of Mitanni to the king of Egypt are variations of this formula.

The salutations at the conclusions of letters differ greatly in different countries and with different individuals. Letters written in ancient Babylonia and Assyria contained no salutation at the end; when the business part was completed, the epistle broke off abruptly. The Romans at the close of a letter wrote a simple 'Vale!' At the end of many letters written in κοινή Greek salutations are sent by the writer to friends of the recipient or members of his family. The term employed is ἀσπάζομαι, 'I welcome,' 'I greet,' 'I salute.'³ It is employed in the Gospels, where the disciples are bidden to salute the house which they entered (Mt 10¹²). Similar greetings expressed by the same word are found in the Epistles of Paul (see, e.g., Ro 16^{3a}, 1 Co 16^{19a}). In addition to such greetings Greek letters usually concluded with a farewell expressed by some form of the verb ῥώννυμι, 'I strengthen,' 'I make strong.' Thus the letter sent by the Church at Jerusalem to the Christians of Antioch, Syria, and Cilicia (Ac 15²³⁻²⁵) ends with a simple ἐρρωσθε, 'Farewell.' Later Christian usage expanded this. Thus Ignatius concludes his letter to Polycarp with ἐρρωσθε ἐν τῷ Κυρίῳ, 'Farewell in the Lord.' In the papyri the formula is often expanded as ἐρρωσθαι σε εὐχομαι, 'I pray that you may be strong,'⁴ ἐρρωσται σοι εὐχομαι πολλοῖς χρόνοις, 'It be strengthened to you I pray many times.'⁵ The Japanese write, 'Oomni gotaisetsuni,' 'Take care of your honourable body.' In the Occident such salutations have shrunk to an expression of 'good wishes,' 'kind regards,' an assurance of the writer's 'sentiments très distingués,' or some equivalent formula. Often this is accompanied by a 'Good-bye,' 'Au revoir,' or 'Auf Wiedersehen.'

5. The religious element is prominent in many of the salutations which have been noted above. All those which call upon God or some god to bless or to give health breathe a religious atmosphere. This atmosphere is wide-spread; it is found in some degree in most parts of the world, though it is much more prominent among some peoples than among others. There is very little, if any, of it in Japanese salutations. One such Chinese salutation is known to the writer: 'Poo shat tsunk; fok fai ko tsung tai,' 'The gods bless you and make you grow very fast.' In Spain, when one wishes to deny

a beggar, he says, 'Pardon brother!' or 'May God relieve you!' The beggar answers, 'Go, your worships, with God; another time it will be.'

Certain religions, such as early Christianity and Muhammadanism, introduced new elements into salutations or gave new emphasis to old ones. The influence of early Christianity upon salutations is patent to one who compares early Christian letters with other letters of the time. This difference is most manifest in letters addressed to groups of people or to churches. Thus in the Epistles of Paul the ordinary *χαίρειν* is displaced by the benediction: 'Grace to you, and peace, from God our Father and the Lord Jesus Christ' (Ro 1⁷; cf. also 1 Co 1³, 2 Co 1³, Gal 1³, Eph 1³, Ph 1³, Col 1³). Similarly in place of the farewell *ἐρωσθε* he employed a benediction. It varies in different Epistles more than the greeting at the beginning does, but nearly always contains the phrase, 'The grace of our Lord Jesus Christ be with you.'

The letters of Ignatius of Antioch contain a variety of salutations. Like Paul, he introduces considerable theology into his descriptions of the churches addressed, but his actual salutations are much more varied than those of Paul.

Thus to the Smyrneans he employs *πλείστα χαίρειν*, 'Much greeting'; to the Trallians he says, 'Whom I greet in the fullness in the apostolic manner and pray for much joy' (*εὐχομαι πλείστα χαίρειν*); to the Magnesians, 'In whom [viz. Jesus Christ] may you have much joy' (*πλείστα χαίρειν ὑμᾶς εἰν*); but to the Philadelphians, 'Whom I greet (*ἀσπάζομαι*) in the blood of Jesus Christ, which is an eternal and abiding joy.'

His final salutations also differ from those in heathen letters of the time.

Thus to the Smyrneans he says, 'Farewell [or be strong—*ἐρωσθε*] in the grace of God'; to the Philadelphians, 'Farewell in Jesus Christ, our common hope'; to the Magnesians, 'Farewell in divine unity, possessing no party spirit, which is Jesus Christ'; to the Trallians, 'Farewell in Jesus Christ, being in subjection to the bishop as to the commandment, likewise also to the presbyter; and each of you love one another with undivided heart. My spirit sanctifies itself for you, not only now, but when I attain to God (for I am still in danger), but faithful is the Father in Jesus Christ to fulfil my desire and yours; in whom may we be found blameless!'

As time passed, this exuberance of Christian greeting in some degree subsided, but still Christian epistolary greeting retained a character of its own. The letters of Augustine, e.g., begin with the salutation '*In Domino salutem*.' As in the letters of Paul and Ignatius of Antioch, many adjectives and sometimes some theology are introduced into the description of the person addressed, but, however much of this there may be, the real address usually concludes with the salutation '*In Domino salutem*.' The parting salutations of the letters of Augustine are exceedingly varied. Sometimes they end with a benediction, sometimes with a simple '*Amen*,'¹ sometimes with a salutation such as: '*Saluto et pignus pacis, quod Domino Deo nostro adjuvante feliciter accepisti ea dilectione qua debeo*';² at times they conclude abruptly without salutation.

Again passing over several centuries and taking the letters of Bernard of Clairvaux as an example, we find numerous instances where there is reversion to the old Roman form. Thus one letter begins, '*Bernardus abbas Clare-Vallis, Romano suo, quod suo*';³ another, '*Thomæ dilecto filio, Bernardus, quod filio*.'⁴ At other times he recurs to the formula of Augustine, '*In Domino salutem*,'⁵

still again he varies this with such phrases as '*Salutem plurimam dicit*.'¹ Formal salutations at the end of the letter he usually omits.

It is clear from these examples that for a time at least Christianity imparted a religious flavour peculiarly its own to epistolary salutations. Indeed, in circles that are particularly pious some attempts are still made to retain something of this flavour. Such writers begin letters 'Dear brother' and conclude them with 'Yours in the Lord' or a similar phrase.

The colouring that Muhammadanism imparted to epistolary salutations has been already indicated by the quotation made from the story of Bilkis (above, § 4). Islām has, however, imparted a religious significance to one old Semitic greeting, '*Salaameh alaik!*', 'Peace (or health) be to you!', to which the proper reply is, '*Wa alaik salaameh!*', 'And to you be peace!' This is regarded as a proper greeting among believers, but it is thought not quite right to say it to foreigners. When one meets Bedū or Muslims from the desert, who seldom come in contact with foreigners, one may, even though a Christian, receive this greeting, but in the towns, where the inhabitants are sophisticated, one will be saluted with '*Naharak said!*' or some phrase to which no religious interpretation could possibly attach. When the Bedū meet one another, they often employ the salutation '*Gawwāk!*', an abbreviation of '*Gawwāk Allah!*', 'May Allah give you strength!' Sometimes the invocation of peace is varied thus: '*Allah yusalimak!*', 'Allah preserve you in peace!'²

6. National characteristics are often strikingly manifest in salutations. One needs only to glance at the difference between a list of Japanese salutations and a similar list of those employed in the Levant to be convinced of this. The Japanese greetings are non-religious and self-restrained; they are polite but dignified. Those of the Levant often exhibit great religiosity and servility. Perhaps it is not quite accurate to call these national characteristics, as they are in the Levant confined to no one nation; in this region race has mingled with race as in a great melting-pot until the forms of salutation have in some degree become those of a region rather than a nation. It has been said that the characteristics of Western peoples are also revealed by their greetings. Thus the French '*Comment vous portez-vous?*' betrays the French feeling for artistic effect. The German '*Wie befinden Sie sich?*' is prompted by the Teutonic tendency to introspection; one wishes to know what his neighbour discovers when he turns his outer consciousness in upon his Ego. The English and American 'How do you do?' reveals the social bent towards work and activity; the standard of wellbeing is efficient work.

SALVATION (Assyro-Babylonian).—Notwithstanding all the inscriptions of a religious nature left by the Assyro-Babylonians, there are few which show any really spiritual conception of the future life in which the people believed, and the state of existence therein. The belief which they had in heaven and hell ('the land of No-return') was a very different one¹ from that of Christian theology, though the latter is based upon the teaching of the Hebrews (who were likewise Semites) among whom Christianity had its origin. In one thing, however, the creed of the Babylonians and our own are in agreement—the necessity for salvation from the pains of hell. Their conception of that place, however, differed considerably from the views which Christians hold. The hell of the Babylonians was apparently not a place of fire and brimstone, in which the unrighteous were tormented, but simply a domain of ignominious existence, 'where dust was their nourishment, and their food mud.' Both creeds, however, have felt the necessity of salvation from this undesirable abode, whatever its torments and its miseries may have been conceived to be.

The Babylonians, therefore, like the Christians, found a belief in the existence of a 'merciful God' needful, the deity in question being Merodach,² though the adjective (*rēminū*) could probably be applied to other divinities of their pantheon. In both cases the right to accord salvation was based upon self-sacrifice; but, unlike Christ, Merodach did not submit to anything resembling the death of the Cross—his self-sacrifice was the conflict waged by him³ on behalf of Creation as a whole, and the shedding of his blood⁴ in order that mankind might come into being.

It is doubtful whether the Babylonians held the dogma of original sin. That some isolated sect may have believed in this is not only possible, but probable. In this connexion it is to be noted that the Babylonians seem to have thought that the sin or misdeed which brought upon a man the anger of the gods might possibly have been an involuntary one. He might, without knowing, have eaten of some forbidden thing or have trampled upon some sacred object. And not only might the sin have been committed unawares, but the deity sinned against might be one whom he did not know. These involuntary sins, with others which were not so, were expiated by punishment in this world; hence the need of litanies and prayers to excite the divine being's commiseration and pardon, so that the sin that a man had sinned might turn to good, and the misdeed that he had committed might be carried away by the wind. No second expiation, in all probability, was in such a case regarded as being necessary; and it may likewise be supposed that, if a man had already been saved from the effects of his sins in this world, no saving power needed to be invoked on his behalf in the world to come.

Another aspect of the question of salvation and divine disfavour, however, is to be found in the final tablet of the Gilgameš legend, which gives

descriptions of the two states of happiness and misery, and regards the two differing treatments accorded to the dead (in this case a warrior) as being due to the consideration whether the departed had received due burial or not.¹ But there was apparently something more than this—he had to die the death of the [? righteous], or the like. The happy warrior, who had fallen in battle, supported by his father and mother and attended by his wife, reposed in the resting-place of [? the just], pure (holy) water was given him to drink, and the food which he ate was probably of the same sacred nature.

The above is followed by the second picture. The spirit (*edimmu*) of him whose corpse had been thrown down on the plain reposed not in the earth. Apparently it remained, in this case, without a caretaker, and was compelled to subsist on the leavings of the dish and the remains of the food which was thrown into the street (? in the great city of the under world, presided over by Ereš-kigal and Nergal, her spouse). It is clear that the spirits of the departed, saved and unsaved, needed nourishment, like their contemporaries and descendants who still inhabited the earth.

These details seem to have been given by the spirit of Enkidu (Ēa-bani) to his old friend and master, Gilgameš, when the former was allowed to visit earth again and communicate what he had seen in the regions below. But the ideal of existence is that announced by Ut-napištim in the Flood-story which forms the 11th tablet of that same series. In this² the Babylonian Noah states that he intended, on account of the hatred of Enlil, the 'older Bēl,' in whose territory he could no longer dwell, to descend to the Abyss, the abode of Ēa (Oannes) his lord, where he would henceforth constantly dwell. This view of the life beyond the grave seems to have been that generally accepted by the Sumero-Akkadians of Babylonia during the final centuries of the 3rd millennium B.C., and probably later. When a man died, it was said that his god took him to himself, and we may therefore suppose that there were as many heavens or abodes of bliss as there were great gods in the Babylonian pantheon. Every good man (*i.e.* every man after his god's own heart) was regarded as going and dwelling evermore with the deity whom he had worshipped and served faithfully during his lifetime. Each god thus became a saviour, and had for his faithful servants his own special salvation—even Nergal, the king of the under world, in whose abode the hero Etana³ seems finally to have dwelt.

The word for 'salvation' in Semitic Akkadian (Babylonian), when found, will probably be some form of *ēzēbu*, 'to escape.' For 'to save' the Shaphel (or Shuphul) was used, as in Aramaic: *Aššur-šēziba(n)ni*, 'Aššur, save me'; *Nabū-šēzib(anni)*, 'Nebo, save (me),' etc., also *Mušēzib-Marduk*, 'Merodach is a saviour,' etc., with such feminines as *Mušēzibtu*, 'She who saves,' in which a goddess's name is understood. [*Ēlēr*]a *gamāl ā sūzubu tādī*, 'Thou knowest (how to) protect, spare, and save (O Šamaš)'; *Yāti Nabū-na'id šar Bābīlī*

SALVATION (Buddhist).—As meaning (1) well-being won and held against disaster, (2) assurance and realization of blissful security hereafter, salvation is a structural idea in Buddhism no less than in other religions. The facts of suffering and of death wherever there is life, the possibility of escape from all three for all living things—these are corner-stones of Buddhist doctrine. But the question of ultimate safety is developed in accordance with the evolutionary and non-animistic standpoint of that doctrine.

The word 'salvation' has its counterpart in the terms *su-v-atthi* or *sotthi* and *sotthibhāva* ('well-being,' 'health,' *salus*, 'safe,' and 'safety'), and *khema*, or *yogakkhema*, 'security,' 'salvation.' See, e.g., the refrain:

Etena saccena suvatthi hotu!
'By this truth salvation may there be!'

in the *Rātānā-sutta* of the *Sutta-Nipāta* and *Khuddaka-pāṭha*; and in the *Mangala-sutta* of the same works:

'They who such things have done are nowhere worsted. Everywhere they go to salvation' (or 'walk in safety,' *sotthim gacchanti*),

where 'salvation' and 'safety' refer to present and future. Or, again, the frequent references in the anthologies of the Canon, such as:

'O would that I who hourly waste might change
For that which ne'er decays—who ever burn
Might change for that cool bliss, e'en for the peace
That passeth all, safety beyond compare!

Make thee
Adept in the path to sure salvation leading.

Yea, to the mighty haven doth it wend;
High peace it brings and bliss lies at the end.'¹

In these verses 'safety,' 'salvation,' 'haven' are all equivalents of [*yogak*] *khema*. And the two terms are combined in a *sutta* of the *Āṅguttara-Nikāya*,² where a layman asks Ananda the Elder whether there is any one thing (or doctrine, *dhamma*) where (*sic*) an earnest devoted member of the order could win emancipation, or eradicate the *āsava*s,³ or win ultimate *yogakkhema*. Ananda replies in terms of mental training of eleven stages. The layman exclaims that, whereas, if he were in a burning house, one door would suffice 'to make himself safe (*sotthim*),' he had now learnt of eleven doors to the 'ambrosial' 'whereby safety was attainable.

To these terms should be added that of 'refuge' (lit. 'resort,' *saraṇa*). To confess that he 'takes refuge in the Buddha, the Norm, the Order' is the first step of every Buddhist layman or *religieux* in the path to salvation.⁵ And the *Sutta* literature abounds in similar figures illustrating life as

¹ C. A. F. Rhys Davids, *Psalms of the Early Buddhists*, 2 vols., London, 1910–13, II. verses 32, 415, 422.

² v. 342 f.

³ The poisons of sense-desires, renewed life, opinions or error, and nescience.

⁴ *Amata*, lit. the 'not-dead,' 'immortal,' a word equivalent to 'salvation,' but implying not safety so much as 'the divine,' or 'bliss,' and, in its first intention, like *ἀμφορία*, a heavenly elixir.

⁵ *Khuddaka-pāṭha*, I.; *Vinaya Texts*, I (SBE xiii.) 115.

perilous and pointing to the pressing need of seeking salvation.

Coming from terms to meaning, we find that salvation in Buddhism is, ultimately, escape from *dukkha*, i.e. from suffering, pain, misery, sorrow, proximately, from the lusts, enmity, and stupidity that inevitably entail suffering, however much they may induce transient delights or satisfaction. These causes of *dukkha* are constantly represented as dangerous, not because, as a body of 'sin,' they set man at enmity with a deity, but because they hold him in bondage to misery now or hereafter. Thus 'salvation,' for a Buddhist, is a state of sentient existence conceived as freed from *dukkha*. Nor is the sentient, conceived as thus freed in a future life, considered as a saved 'soul' or detached entity. Salvation as fruition is the pleasanter environment in some heaven, the happier mental processes set going afresh in a suitable celestial mind-and-body, which are the resultants of previous mental activity. But such salvation is relative only. In a celestial rebirth *dukkha* is driven far away, for the chief sorrow is decay, disease, death, and the gods (i.e. the communities of happily reborn persons) live well and long. But eventually death comes again, for life is, in its essence, growth followed by decay. And the only final salvation is to end life, either as *arhat* on earth or as a god in some immaterial heaven. Of the ultimate destiny of those who accomplish the final going out, or *parinibbāna*, as of flame in water, the scriptures speak in solemn triumph, but do not speculate. Neither the words nor the concepts of life apply.

'Nowhere is measure for one gone to oblivion,
That whereby we speak of him—that exists no longer.
Wholly cut off are all forms of our knowing,
Out off the channels of speech, every one.'¹

'Whose range is in the Void and th' Unmarked
And Liberty: as flight of birds in air
So hard is it to track the trail of him.'²

'Set free from bonds, happy and void of longing
Him gods and men, here on this earth or yonder
Or in the heavens, in every sphere of being
Seeking they seek vainly, they will not find him.'³

C. A. F. RHYS DAVIDS.

SALVATION (Christian).—This article does not intrude into the domain of exegetical or doctrinal theology. It attempts to follow, through the history of Israel and through the period covered by the NT, the experience of salvation. The point of view from which it has been written, as well as the conclusion which it seeks to establish, is the unity and continuity of the experience, as well as its vital and growing quality.

I. THE EXPERIENCE OF SALVATION IN THE HISTORY OF ISRAEL.—I. Its interpreters.—An older method of study went to the OT to discover what it had to say of all topics which theology had defined, and particularly how its utterances anticipated and illustrated conclusions at which dogmatic had arrived. Such a method was, no doubt, mechanical, and inevitably missed the vividness and fullness with which the OT presents the great varieties of religion. But it did grasp one fact of first-rate importance, viz. the unity of the OT as a statement of the salvation experienced in Israel and set forth by its great religious teachers. Its error lay in its conception of unity as bare logical identity, to which the actual increases brought by

¹ *Sutta-Nipāta*, verse 1075.

² *Psalms of the Early Buddhists*, II.; *Psalms of the Brethren*, verse 92.

the discipline of centuries are indifferent and irrelevant. It ought to be possible to conserve the truth of this older view without being misled by its rigid and abstract scheme.

The historical and critical method of study has established what the least technically trained mind never failed to discover, viz. that the OT is a history, the history of a salvation, which had very rude and even crude beginnings, which grew in ethical quality and religious meaning, till it was ready under the quickening force of new influences to enter upon a further historic development, of which the NT is the literary record and the whole subsequent history of man the rich and varied consequence. It is literal fact that the salvation which, in the Christian gospel, has penetrated to the confines of the world, and is producing profound and revolutionary changes among all races of men, had its historic origin in the experience of a group of tribes which entered Palestine from the desert and occupied it in the name of Jahweh, their God.

It is in this experience, and in this only, that the significance and value of Israel for the moral progress of mankind consist. The point of interest does not lie in the customs prevalent in Israel, which differed little from those of surrounding peoples; or in the details of legislation, which may have been copied from the laws of nations somewhat higher in the scale of material civilization; or in the apparatus of worship, which, in the earlier periods at any rate, had little in it that was unique or distinctive; or even in the ideas entertained by Hebrews regarding creation, cosmogony, or similar subjects, which seem to have been drawn from the common stock of Semitic reflexion upon the mysteries of the universe. Our valuation of Israel's history depends entirely on its whole scope, and on the tendency manifested in its whole development. An observer of its earlier stages would have found nothing to indicate its future course. He would have noted merely one more Semitic people, and would have predicted no more than an ordinary political career, including possibly a period of imperial expansion, followed by swift decay and complete extinction. In one sense, indeed, such a prediction, made so easily and so confidently, would have been sound and accurate. Israel showed no more political genius than its neighbours and rivals, and shared in the disasters that overtook the Oriental world. All this estimate and prediction, however, would have been superficial, and would have missed the heart of Israel's historic value. Beneath the casing of customs and culture and philosophical opinion, apart from, and deeper than, the surface movements that led through calamity to ruin, there was a life of the spirit, for which it is no more than plain justice to claim absolute uniqueness. It could not have been predicted from the phenomena attendant upon Israel's origin, it could not have been inferred from any qualities displayed by Israel at any stage of its career, that, as the ages rolled by, there would have been developed a conscience singularly enlightened and sensitive, clear to discern everlasting moral verities, and drastic in self-analysis and self-condemnation, together with an extraordinary power of moral recovery, and a conviction, deeper even than the sense of sin and failure, of the presence and action, in all the long tragedy of Israel's political destruction, of a purpose at once omnipotent and redemptive. Yet this is precisely what did happen; and this is the pre-Christian stage of that salvation which, through the Christian Church, has become the permanent possession of the race and is gradually being communicated to the whole world.

The history of such a salvation was, as we have said, unpredictable from the standpoint of its beginning. It was also unnoticed by the vast majority of those who took part in its onward movement. Even very sophisticated and self-conscious people are not continually reflecting upon the lives they are leading day by day. They act for the most part automatically; other incidents of life flow by in a kind of dream. Conceive, then, how few, in an age long previous to the intense subjectivism which is our inheritance, were capable of estimating the nature of the forces which moved in their national history or of discovering their direction. The multitudes of men and women which made up the Israel of these early times were no more intelligent or introspective than the modern *fellahin* who till the same fields where their remote ancestors carried on a scarcely less primitive agriculture. At the same time, two points are to be noted. First, these simple and unknowing souls were experiencing, to the extent of their capacity, the salvation of which they had such dim and shallow apprehension. They lived by things of which they could give no adequate account. He who toiled in vineyard or wheatfield and brought his offering to Jahweh, and, if need were, died in defence of his wife and children, was 'being saved,' and was proving a living link in the chain which binds the dim apprehensions of primitive times to the richer and clearer experiences of the Christian believer. Second, not all in Israel, even in the very early stages of its advance, were thus spiritually unawakened. In the history of Israel, as in all history, we have to reckon with personality. That there should arise in any nation at any time a man who is able to lift himself above the stream of incident and event in which most of his contemporaries are submerged, and to grasp the significance of a history which to most other men is blind or misleading, is very wonderful. All attempts to explain such a man fail. This wonder stands out in the history of Israel, not to be missed or explained away. The prophets understood: that is their greatness. In the mirror of their consciousness we discern the meaning of Israel's history. They are not students of the history, painfully piecing together its chronicles, and precariously drawing deductions. Nor are they makers of the history in the sense in which monarchs and conquerors make or mar the fortunes of men. Their function, in reference to their nation, is more intimate, and their influence more profound and far-reaching. Their experience is that of the people to whom they belong, with all the difference that lies between consciousness and unconsciousness, between clear sight and purblind vision, and with the yet wider difference between subjection to an unknown purpose and devotion to a purpose recognized with deep intuition and accepted, with entire consecration, as the vocation of life. Their salvation is the salvation of Israel. They, like the humblest of their fellow-countrymen, are being educated and trained in the moral life. Salvation means for them, as for others, a moral discipline. In them, however, in virtue not so much of greater religious susceptibility as of greater willingness to obey a higher guidance, the salvation proceeds at a swifter rate and reaches nobler results.

As we read the story of their inner life, we see what no observer could have predicted—the intended issue of Israel's history. Not to create a State or Empire, but to make men like these, is the teleology of Israel's strange and infinitely tragic career. This is the salvation of which Israel was meant to be the recipient and the exponent—the creation of just such a character related in this manner to God, marked by such communion with

Him, and showing in life and conduct the ethical fruit of such divine fellowship. The prophets were themselves 'saved' with a salvation which is not static, but dynamic, and exerts upon and through its recipients a moral energy which is inexhaustible. Their salvation, accordingly, is not merely a high degree of that which was common to all Israelites. It becomes, in their experience of it, the condition under which salvation is possible as an experience for all. Being saved themselves, they become the saviours of those whose life they share, as being with them members of Israel.

They have a message to deliver to their fellows. They have much moral and religious truth to communicate. Their duty was, as one of their titles signifies, to interpret for the ignorant and unenlightened the divine principles immanent in the history of Israel. But the supreme service that they rendered to their people was the life they lived. By it they illustrated the meaning of the divine salvation, and proved its reality. By it, moreover, they mediated that salvation to their people. Salvation became, in the life and ministry of these men, a fact of the moral order. Through them and their actions and sufferings God was approaching Israel, in the energy of His redeeming purpose. To cleave to them, to obey their counsels, and to breathe their spirit was salvation for the whole body of the people, or, failing a national obedience, for such circles as might permit the prophetic spirit to permeate and govern them. Such is the fact of salvation, as it presents itself in the history of Israel and in that interpretation of the history, given by prophetic men, which we find in the OT. It is an experience which rises from rudimentary forms towards great spiritual fullness, and contains the promise and the potency of yet greater experience, still to come.

2. Its source.—The salvation which was an experience in Israel originated in the act of God. No doubt, Israel might be saved at any given moment of need by human instrumentality. But the instinct of Israel always passed beyond the human agent to the real doer, who was Jahweh Himself, 'who himself saveth you out of all your calamities and your distresses' (1 S 10¹⁹). To prefer the human to the divine Saviour is practical apostasy. The creed of Israel is, in brief, 'Jahweh saves'; and their creed is not the work of philosophers, the product of speculation, but the immediate deliverance of an experience, too real and too great to be susceptible of any other explanation than this, that it is the direct, though not unmediated, operation of God Himself.

The OT as a whole is no more than illustration and exposition of this primary conviction. In its most rudimentary form this creed contains the germs of the whole subsequent religious development. The elements of special importance lie hidden in of faith.

—God is conceived as a Power, who does things. To pass from the *Upanigads* to the Prophets is to leave one universe of religious thought for another, wholly different in fundamental conceptions. In the one God is substance, in the other He is power. In the one He is, and all being is merged in Him. In the other He acts, and is the source of all the energy that is needed for His purposes. It may be that some higher synthesis of these widely contrasted ideas of the divine nature is possible; but no attempt to harmonize them must ignore their difference. To say '*Brahman-atman*,' and to say 'Jahweh saves,' represent two worlds of experience, which cannot be inhabited together. Indian thought is, necessarily, without history, and does no more than confront the illusory manifold of the world's life with the sublime monotony of its assertion that all being is one. Hebrew experience is essentially historic, and is the product of an immanent energy, moving towards a goal, which the rarer minds alone, and they only dimly, can discern in the distant future.

A curious contrast may be observed between the ancient Hebrew cultivator and the toiler in the wide Gangetic plain. The former is not nearly so intellectual or reflective as the latter. He holds no metaphysical theory about the constitution of the world. He is simpler and cruder in his ideas, and stands much nearer the primitive animism. Yet he entertains an idea, and he uses a term, which are destined to carry his suc-

cessors towards experiences incomparably richer than his and yet genetically connected with them. The idea is that God is one who exerts power, and the term is 'the Spirit of God.' From the beginning of Israel's history, so far as we know it, the Hebrew mind discerned the operation of God in the world, and yet never proceeded to a philosophical theory of the relation of God to the world. Its ideas had little philosophic breadth, but great experimental intensity. The powers that control the history of Israel are God's; and, wherever these powers are seen in action, they are identified with the Spirit of God. God—God acting in the world—God acting by His Spirit: this is the primitive, simple, yet far-reaching Hebrew doctrine of God.

(b) *The character of God.*—In 'Jahweh saves' the emphasis passes from the one term to the other. Jahweh is known as Saviour of Israel. God loves Israel, and will save Israel out of all his distresses. What that saving action might involve—what exertions on God's part, and what discipline on man's—what issues it might have for the people, and what form it might assume lay within the unknown future. But the abiding conviction was that God's action would be saving, that His settled purpose was redemptive, and that He would not cease His dealing with Israel till the deliverance was complete. Here we touch the earliest Hebrew thought of God: He is one who loves and saves. Whatever His love and His people's need require, He will do. Whatever He does is the expression of His love for His people, and is meant for the furtherance of their salvation. It would be ridiculous to attribute to the early mind of Israel exalted conceptions of the moral character of God and rich religious experience of salvation. But it would be equally unhistorical to deny, even to the tribes that broke in from the desert to occupy the hills and valleys of Palestine, the conviction that they were living under the direction and inspiration of a Saviour-God.

History itself, becoming articulate in the prophets, would unfold the meaning of salvation, and would bring home to the awakening religious consciousness what are the real evils from which men are suffering, and what God is willing to do for their deliverance. But, whatever befalls the people of Israel, whether judgments smite them or mercies crown them, they are being 'saved'; God is making His salvation known; God is revealing Himself. Students of the OT are apt to be disastrously doctrinaire in their methods, whether their conclusions are conservative or advanced. The interest of the OT lies not in opinions which may or may not be supported by proof texts, but in the picture which it presents of a nation in the hands of God. Israel does not consist in pupils being instructed in theological lore; it is a community of men and women who, collectively and individually, are being saved, with a salvation which is, fundamentally, a moral experience. Of that experience, and of those in those far-off days subjected to it, the members of the Christian Church are the heirs and the successors. The history of Israel is not closed. It is continued in the history of mankind. The religion of Israel is not superseded. It remains, man's only religion. The theology of Israel is not an anachronism. It is the abiding truth of God.

3. Its warrant.—Salvation in Israel is an experience of the present, and contains a prophecy of the future. But it is securely grounded in the past, and derives therefrom its confidence and its strength. 'Behind the people's national life lay the consciousness of redemption as much as it lies behind the life of the Christian.'¹ The point of interest is not the outward form which the deed of redemption assumed. It is certain that some visitor (let us suppose) from the Farther East would have sent to the court which he represented a very different account of the incidents connected with the deliverance from Egypt from that which the prophetic historian gives in Exodus. Such differences do not impugn the historicity of the event itself, and in no way invalidate its significance for the conscience and intelligence of Israel. In this event the religion of Israel is born. Upon this event the salvation of Israel is established. In the experience which Israel then passed through God became known to His people; not, be it noted, by a formula, but by a personal name, which gathered to itself epithets descriptive of personal qualities. When we ask how the primitive mind would most naturally express the relation towards God into which the experience of deliverance had introduced the redeemed people, one form at once suggests itself, viz. a 'covenant.' It is true that most of the great 'covenant' passages belong to an age far later than that of the exodus—e.g., Lv 26⁴⁴, Ezk 16⁶⁰. But this is no evidence against the primitive character of the thought and no proof of the unhistorical nature of the narrative, which describes the institu-

¹ A. B. Davidson, s.v. 'God,' in *HDB* li. 202^b.

tion of the covenant as following immediately upon the national deliverance. The very fact of the redemption creates the covenant relationship. The God who saves does, in the very act, pledge Himself to persevere in one line of action towards the people whom He has redeemed. Salvation was undertaken on His initiative. It becomes the goal of His action. He is vitally concerned with reaching it. His movement towards it is the only reliable revelation of His nature, and forms the ever-renewed proof of His being. In every time of strain and doubt the disciplined mind of Israel goes back to the covenant into which God entered of His own free motion, and cleaves, even amid sorest trial, to the faithfulness which will not suffer Him to forget His obligations. In like manner, the people who are the subjects of God's redeeming action stand pledged to carry out the divine purpose in saving them, as it is gradually disclosed to them. Salvation is their privilege. It is also their vocation. The scope of the privilege and the nature of the vocation are alike disclosed only through long ages, in which the self-consciousness of the nation became explicit and the national ideal became clear and full. But the most glorious utterances of the most inspired prophet turn back upon the earliest experiences of mutual pledges between Jahweh and Israel, and present the fulfilment of what was germinal therein (cf. Dt 26¹⁶⁻¹⁹).

It is impossible, in describing the covenant relation between Jahweh and Israel, to avoid using terms which imply personality on both sides. God is intensely personal and has all the qualities by which men recognize a personal as distinguished from an impersonal force. Israel also is personal, viewed in its national and corporate existence—in this sense at least that it is susceptible of a moral discipline and is being led to a spiritual consummation, in both of which every individual Israelite has his part as a member of a living whole. God and Israel, accordingly, confront one another, God viewing Israel as the object of His love, and Israel gradually recognizing God for what He is and discerning more clearly His demands and purposes.

The relationship between these two, therefore, is wholly personal. God knows Israel in its weakness, its need, and its possibilities, and bends Himself to make of Israel what He will. Israel makes progressive discovery of God, gaining insight into His character and beginning to discern His aim.

'All Israel's history is filled with this reciprocal knowledge, rising up from strength to strength, till One came who knew the Father, and whom the Father knew in fulness.'¹

Knowledge of God, in fact, is one of the Biblical synonyms for salvation; and in this lies the uniqueness of the Bible among all the 'Sacred Books of the East.' It is not a disquisition; it is the record of an experience, gained in actual fellowship with God.

4. Its verification and exploration.—It belongs to the essence of religious experience that it can never be immobile. In the life of the spirit there is no stable equilibrium. The intense interest belonging to Israel's history lies in the double movement discernible throughout its whole course. On the one hand, there is a constant downward tendency, a ceaseless misunderstanding of God and misinterpretation of His salvation. On the other hand, there is an upward movement, towards a discovery of God and a realization of His purposes. This movement, though it be the true life of Israel, does not proceed by steady uninterrupted progress, nor does it include within its scope even the majority of the people. It is marked by revivals. It is concentrated in unique personali-

ties. It extends to circles who are but dimly discernible and whose exact numbers cannot be calculated. The details of this experimental verification and exploration of the divine salvation are of thrilling interest. They have their parallels and analogies in all religions and in the discipline of every separate soul.

The history of religious experience in Israel has never been written; and still less has a history of religious experience as such been attempted. Perhaps such books, condensing the spiritual progress of mankind, could never be composed with any hope of accuracy. The value of the OT literature is that it presents a touchstone, by which we may evaluate religion anywhere and note its progress in races or individuals. That touchstone is the ethical element in the conception of God. Where it is seen that God is righteous and requires righteousness, there the higher life of man ripens towards noble fruit; the divine salvation opens to vision and appropriation that are in fact boundless; and communion with God is not an occasional ecstasy, but a reality of the daily life and its continual delight. The use of this ethical standpoint, in reviewing religious life in general, establishes this conclusion, viz. that progress in the discovery of salvation is always accompanied by disillusion, and often by the utmost sorrow and pain. The form of salvation breaks, as advance is made; and salvation itself has to be sought in some deeper region, where the soul shall find itself more perfectly at home.

The OT records are full of this strange mingling of victory and defeat, of despair and exultation. The form which salvation at first assumes is national and political. It is identical with the integrity and independence of the Hebrew nationality. Its great events are deliverances from national peril. Its scope and contents consist in peace and plenty, and the abundance and security of those possessions are the normal conditions of happy and prosperous living. Precisely at this point lay the testing of Israel's moral sense; and here emerges the tragedy of Israel's history. Will Israel discover no more in Jahweh than Moab in Chemosh? Will Israel explore the farther reaches of salvation or be satisfied with external satisfactions and external deliverances?

The history gives a sad and terrible answer to these questions. The 'Israel' which we name as such, for purposes of comparison with 'Egypt' or 'Assyria,' failed in moral discernment, and was not merely destroyed politically, but deprived of place and function in the moral development of mankind. At the same time, there was another 'Israel,' the true Israel, consisting of those persons, whose numbers are unknown and whose experiences are largely unrecorded, who were being taught another conception of God and were making proof of another kind of salvation. Their existence and the continuity of their religious experience are facts absolutely certain, and of transcendent importance for the vindication of revelation and the upward movement of humanity. While the political fabric of Israel's existence lasted, they testified that the condition of its permanence was obedience to the moral will of Israel's God, that God would save those who yielded Him this obedience, and that, should disaster threaten, such obedience would secure the divine salvation. Those OT writings which belong to the period of national independence develop the idea of righteousness into its social applications, and connect it vitally with the presence of God and the enjoyment of His favour. We have before us the picture of a community of which God is at once the Head and the indwelling life. Every member of this organism is related to every other, through

¹ A. B. Davidson, *The Theology of the OT*, Edinburgh, 1904, p. 78.

the relation in which all stand to the unseen King. In their fulfilment of their mutual obligations, they are glorifying God and are pursuing a path of moral education in which conscience will be enlightened, the will trained, and faith strengthened.

Israel is the microcosm of salvation, the prefigurement of a redeemed and perfected humanity.

'J' chose a nation, because His idea of mankind, of which He will be God, is that of a social organism. It is this organism of which He is God. But though the relation might seem to be with the ideal unity, it operated in disposing all the parts making up the unity rightly to one another. And in this way each individual felt 'J' to be his God.¹

This conception of a religious organism and a social salvation is the contribution of pre-Exilic Israel to the spiritual progress of the race. Any experience, Christian or other, which omits it is to that extent impoverished, and is condemned from the point of view of a full salvation.

The time came, however, when the national form of existence, which had conveyed and conserved the divine salvation, became too narrow and limited for the experience which had been made possible within it. Whether the transition to a fuller salvation could have been made without the tragedy of Israel's destruction as a political institution is a fruitless problem. We may dream of a people learning to distinguish between form and content, discovering that the essence of salvation was separable from the outward framework of the State, and passing onward to a knowledge of God, so deep and intimate that it ceased to be a national perquisite and was fitted to the needs and destined for the reception of all men everywhere.

In point of fact, however, the political 'Israel' did not rise to this thought of God, and so failed in its historic mission. It did not 'lose' its life, and therefore did not 'save' it. It perished as a nation, and did not survive as a community of the Spirit. The inner Israel, which did know God and was testing His power to save, suffered intensely at the hands of its politically-minded fellow-citizens. Its affirmation of an ethically conditioned salvation seemed, at one period, to be the dream of an impossible patriotism, and, at another, to be treason against the State and impiety against a God whose very existence was bound up with that of His people. Then, when the worst happened, and the political Israel passed amid unknown agonies to its doom, those very persons who were proving in their own souls the permanence of a moral union with God shared the sorrows of those whose ignorance and disobedience had made that judgment inevitable, and felt their griefs the more intensely that they discerned the nature and guilt of the sin which was thus receiving its due reward.

Thus the older form of salvation was broken up and a new experience of God's saving help was born, amid such confusion and pain as have made the Exile the symbol of the utmost desolation that the human soul can bear.

The transition was accomplished in anguish—an anguish which, ideally, need not have been. Yet through the agony the new fact came gloriously into being, a salvation in which the living God grasped and mastered and held the soul, when all the lesser values of life were discredited, and all its earthly treasures dispersed for ever. Salvation, in this era of national disintegration, is concentrated in the experience of individuals, of whom Jeremiah and Ezekiel stand out as examples. The State is gone; but God remains; and His presence is salvation. The religious experience of such men forms at once the goal of Israel's past and the starting-point of Israel's future.

The secret of Israel is its relation to God. Its

salvation rests on the 'covenant' between God and His people. And now the covenant is passing to a new stage of experimental verification and new ranges of discovery. Its subjects are human souls, taken out of the broken forms of national life and dealt with in their bare humanity, with its needs and possibilities; and its experiences lie within the compass of a divine fellowship, realized with an intensity and tenderness unknown hitherto. It is a 'new covenant,' and yet its source is the changeless love of God; its guarantee is His steadfast purpose of mercy; and its issue is the understanding of His unchangeable will of righteousness and profound surrender to it. This is the imperishable gain of the Exile. Salvation is a relation of the human soul to God, a fellowship of man with God, enduring through the dissolution of forms of life, which had seemed inseparable from well-being, and dependent only on man's entire subjection to divine holy will and unwavering confidence in divine power and faithfulness. This individual salvation is the complement to the social salvation of the pre-Exilic period. Israel has made the experiment for humanity. A social salvation that is not rooted in a personal covenant with God is imperfect and insecure.

The history of Israel, however, is not closed with the Exile; nor is its contribution to the religious experience of mankind exhausted. There follow the strange and disappointing centuries which intervene between the Exile and Israel's new birth in Christianity. We observe with impatience and regret that the vision of a new religious life, individual, subjective, free, and rich, is clouded over by the intervention of another external framework. It is not now a political fabric that in part conceals, and in part conveys, the new salvation. It is something more unfamiliar, and even less pleasing, to modern eyes—a system of ceremonial law, laid with iron rigidity upon souls which had caught the sight and even tasted the joys of the liberty of the spirit. If it was difficult to imagine the religious life of the national period, it is still more difficult to figure to ourselves the possibility of any noble, joyous, and progressive life lived under the yoke of the law. Yet the patent and amazing fact is that such a life was lived by a community which accepted every jot and tittle of the law as of divine enactment, and set itself resolutely to the laborious task of complete fulfilment.

In short, we have to revise our first rough estimate of the ceremonial law, and to distinguish between law and legalism.

We can well imagine that a discipline of law was needed for a religious consciousness which had been formed in the intense and individualizing experiences of the Exile. There is danger of subjectivism and mysticism, with their incapacity for educative or evangelistic work. There is need of training in the ethical and religious meanings and issues of a life lived in thoroughgoing submission to the will of a holy God. The sequence with which we are familiar in the inner life—after conversion, sanctification—is wrought out in the life of Israel: after the Exile, the return to Palestine and the scheme of 'a holy people in a holy land.' We are conscious of a change of atmosphere when we compare the post-Exilic 'Church' with the pre-Exilic 'nation.' The priest is a much less inspiring personality than the prophet. The social salvation of the earlier period seems more ethically fruitful, and more capable of modern applications, than the religious experience shaped and limited by a legal dispensation. Yet this judgment is certainly incomplete and misleading. Conceive the inner life of this people as depicted in the Psalter. Follow the narrative of their conflicts with heathen elements surviving among themselves and their splendid resistance to a tyranny which would have destroyed their very soul. How easily they might have perished, absorbed into surrounding populations, and losing all religious function in the history of the race! And, instead of this doom, the divine saving power is manifest in their life; and they verify the salvation of God by a demonstration absolutely conclusive, and explore its riches in a manner which has made their devotional literature the nourishment of the soul of man in every age and clime. The sense of sin as an infinite injury to God and man, the exercise of faith which throws itself absolutely on God and owes its standing to His sovereign grace, the joy of reconciliation and forgiveness, the

¹ A. B. Davidson, s.c. 'Prophecy,' in *HDB* iv. 120.

converse of the soul with God, progress in moral achievement through lowliest obedience—these elements of a full salvation were being wrought into the experience of men and women, to form permanent features in the redemption of man. With such a treasure they could not afford to part. Persecution might break upon them, but its bitterness did not lessen their assurance of salvation. Rather did the things that they suffered unlock the stores of divine help. The fire not only tried and purified them, but it revealed a Presence with them, which, in its radiance and its sustaining comfort, was their salvation and their song. The OT ought not to have closed with Malachi; it ought to have culminated in the books of the Maccabees.

At the same time, these blessed experiences were enclosed, as it were, in a rigid framework of precept. Israel was still in the hands of a Pedagogue, and the time of liberty was not yet. The defects of law are manifest. It is a burden, not an inspiration. It suggests a false inference, viz. that men are saved by their observance of precepts, not by their inward relation to the Source of all truth and right, by works, not by faith. It begets a misconception of God, exaggerating His transcendence, neglecting His knowableness and accessibility, forgetting the affinity of man with God and the susceptibility of human nature for divine fellowship. It creates a spirit of bigotry and exclusiveness, and makes those who are the subjects of divine salvation not the saviours of men, but their tyrants.

These defects had not belonged to the great days of Israel's religion, when the prophets were its evangelists and its examples. But they were rife in the days when the priest and the scribe dominated the spirit of the people.

It became increasingly evident, accordingly, that the end was not yet. The salvation of men lay still in the future. Not till the shell of law was broken, even as the older shell of nationality had been broken, could the human spirit enter on the treasure of grace reserved for it in the intention of Him who is the Saviour of men. In this legal period the true evangelical succession belongs to those who, penetrated by the sense of need, waited for the consolation of Israel.

Once more the easily neglected fact of 'the Remnant' stands out as the most remarkable and the most influential element in the history of Israel. Once more the unifying principle in the history of divine salvation becomes apparent, binding the far-off Hebrew tribes breaking into Palestine in the power of a recent deliverance with the disciplined souls who poured forth in the Psalms their confessions and aspirations, and with all, in every age, who have made the supreme discovery that, in the stress of life, the human spirit cannot stay itself upon any form, political, ritual, or intellectual, but only upon God, obeyed and trusted to the last limit of a surrendered will.

5. Its instruments and mediators.—As long as the religion of Israel is living, i.e. as long as men are conscious of redeeming forces operating in their lives, God is known to be acting directly for and within His people. His presence and His power are both immediate. It is only when the last and most decadent state of religion in Israel is reached that God is conceived of as remote, and a cosmological and metaphysical machinery has to be invented to connect Him with His world and provide channels for the course of His operations. In that age such an OT concept as 'the Spirit of God,' which was meant to express God's presence to and in the world without identifying Him with it, has been changed to mean a kind of being intermediate between God and the world. It may be said, broadly, for all religion and all theology that only when the sense of the divine salvation has become feeble and empty is such an artificial conception of God's relation to the world and human history tolerable to the intelligence; attractive to the heart that pants after the living God it never can be. The divine salvation in Israel, accordingly, is always God's own immediate work. It does not follow that it operates magically or without means and instruments. The idea of mediation runs deep through the OT.¹ But it stands in no manner of opposition to the immediacy of God's presence and working. It has no reference to the supposed necessity of an intermediate being to cross the chasm between infinite and finite. It belongs to a totally different universe of thought. It means that the divine salvation, being the salvation of man, must find in man its adequate organ. God and man are by nature so close together that nothing that is not perfectly human is needed, or can be permitted, to intervene

between them. Man needs to be saved. Only God can save him; and God can save man only by man.

This is the message of Israel's religion. Its history is the history of saviours, i.e. of organs and instruments of the divine salvation, human all of them, each with some special aspect of the great work to do, each with special aptitude and fitness. In each it is the Spirit of God, i.e. God Himself in power, who operates. In each the saviour is not the man, but God, choosing, preparing, finding, in the man, the adequate organ for His saving work, and so, also, for the revelation of His being and character. As we turn the pages of the record, we note that, in every age, men needed, and God provided, saviours. We observe the suddenness of their appearance and the spontaneity of their ministry. There is nothing stereotyped or predictable in their service. There is clearly-marked immediacy in their personal experience and strongly-defined originality in their service. Yet there is equally observable a profound unity connecting them; so that, from whatever grade they come (peasant or prince), to whatever age they belong (pre-Exilic, Exilic, or post-Exilic), whatever their precise commission may be (that of warrior, statesman, priest, or prophet), they form one company and toil at one task. They are the agents of one salvation, which originates in the counsels of a righteous God, consists in moral oneness with Him, and is secure in His power and goodness. The mediation of salvation in the OT is not confined, however, to the individual saviours, to whose actions more or less full allusion is made. A broad generalization arises out of the history. Thoughts begin to shape themselves which rise beyond the confines of the history. It becomes apparent, e.g., that the full salvation of Israel cannot be achieved by the sporadic endeavours of any individual members of Israel. The double conception of Israel, noticed before, receives now a special and crowning application. Not only is 'the Remnant,' the inner, the true 'Israel,' the subject of the divine salvation; it is also the mediator of that salvation to the political 'Israel,' whose ignorance of God's real character and mind was plunging it into ruin. Not only so; but, when the political Israel perishes, the true Israel survives, not in weakened, but in heightened, power and nobler function. It is called to mediate salvation to nations that know not God, to be the instrument of a salvation which shall include mankind. There is no doctrinaire universalism in those writings which thus exalt the function of Israel. They are not operating with abstract conceptions and deductive logic. They are interpreting the experience of a people and of disciplined souls within it.

Thus there arose, says Davidson, 'the great conception of "the servant of the Lord." The phrase expresses the highest generalization on the meaning of Israel in the religious life of mankind—Israel is the Servant of J^h to the nations to bring to them the knowledge of God.'²

When we ponder the work of mediation, we perceive that it necessarily involved two sides or aspects, and that, therefore, those who laboured at it must necessarily have possessed a twofold qualification. On the one side, God must be made known to man—not in a theoretic manner, and not through a magical phrase, but in His character as a living God, engaged in carrying forward His purposes for His people. On the other, men must be led into a condition of moral harmony with the will of God, not as mere acceptance of a code, but as loyal surrender to a personal and gracious authority.

The servants of God through whose activities and experiences this double work is done have

¹ Though the word *μεσίτης* occurs only once in LXX (Job 9³³); see art. MEDIATION.

² HDB iv. 122.

plainly a double relationship—to God, on the one hand, and to the people, on the other. They are God's agents and representatives. They also act on behalf of the people and represent them. This is true of them all, princes and statesmen and warriors, as well as prophets and priests; true also of the company, or inner circle, which constituted the true Israel. To discharge their functions, accordingly, their sympathy must include both God and man. They must be at one with God, knowing His mind and receiving communications from Him. They must be at one with the people, not as being mere political nationalists, but as discerning, realizing, and seeking to further the true purpose of the nation's existence and the real trend of its history. Technical distinctions ought not to hide from us that which underlies separate stereotyped manner or office, viz. a life actually lived, in which God is moving towards man, and man is rising towards God. In the religious experience of such servants the divine salvation becomes a power available for all who range themselves with them in their faith and obedience. In this sense, while they are being saved themselves, they become saviours of their people. They are the organic centre of the redeemed community. In them God is present as saving power. The degree of their consciousness or the outward form of their work does not alter the reality of their divine vocation. They serve, in the measure of their loyalty and in the sphere of their operation, as meeting-points for God and man. Mediation is accomplished, not by cultus or dogma, but by life.

This life, moreover, as the problem of salvation deepened in the course of Israel's history, necessarily became harder and more marked by suffering. A soldier or statesman in Israel, if he was a genuine servant of Jahveh, had hard work to do and much suffering to undergo, and his labour and pain were the condition of the people's salvation. Yet he might not penetrate to the heart of God's concern for Israel or to the depths of Israel's need. He might not, accordingly, load himself with the whole burden created by the people's ignorance and sin. Suppose, however, a different case. Suppose a patriotic Israelite, clearly discerning the mistaken optimism of the 'false prophets', i.e. the political nationalists; feeling in his inmost soul the demands made as well by the love as by the holiness of God, and the failure on Israel's part to respond by a changed mind and a morally renewed life; reading aright the story of Israel's past, and foreseeing nothing but multiplied disaster and ultimate ruin as the issue of present materialism and corruption. It is plain that he will suffer, as none other in Israel save those like-minded with himself can suffer. The afflictions of his people, coming on them as the fruit of their doings, are his afflictions, though he deserve them not; and in his case they are intensified a thousandfold by his sense of the guilt of which they are the exposure and the judgment. It is true, the guilt is not his, and his sufferings are not his punishment. But, if any one should imagine that on that account the suffering is less, or that the sufferer is able to throw off the pain, he cannot know the passionate heart of one who knows and loves both God and his fellow-countrymen. There is no sorrow like the sorrow of the soul which is consciously and voluntarily identified with God in His holiness and man in his need.

This is the sorrow that sounds, as one long cry of anguish, through the life of Jeremiah. It was the sorrow also of others, unrecorded, who are, however, grouped around the central figures in the tragedy of Israel's judgment, a dim and piteous remnant of the nation that had so fearfully missed its way. This sorrow, the experience of living souls in Israel, lasted through the centuries, and is the most significant fact in the history of

Israel. The prophetic minds which surveyed and interpreted that history could not miss this significance. Such sorrow has atoning value. Sin makes a breach with God. The life of the innocent Servant of the Lord, freely and consciously given, amid unknown grief and pain, for a guilty nation, is an expiation for guilt, and effects the reconciliation of God and man. Language borrowed from the ritual of sacrificial worship is applied with enriched meaning to the sorrows of the Servant: 'God hath laid on him the iniquity of us all. . . . He bears the sin of many, he makes intercession for the transgressors' (Is 53: 12). The theological implications of such a view of the sufferings of the Servant will necessarily be of the highest importance for thought. The important point is that the sufferings actually endured by servants of God in Israel, or by Israel as the Servant, have value for God and have a saving efficacy for men. Yet not merely as the pain of individuals, standing apart from God. If this were the meaning, we would have a reversion to a heathen view of God and of sacrifice, as though a man offered his pain to God and God were placated thereby. God in Israel is not thus separated from His servants. Their pain is His. 'In all their affliction he is afflicted' (Is 63: 9). At the heart of the religion of Israel there is pain, divine pain. This is the everlasting rock on which the divine salvation rests; and this is the power which, exerted upon the hearts of men, leads them to a new vision of God and awakens in them deep compunction and relenting towards Him. No religion which ever linked man with God has been without some sight of this principle of redemptive suffering. But in the religion of Israel it finds rich and adequate expression, and becomes the chief and proximate source of the Christian message of salvation, as proclaimed and illustrated in NT Scriptures.

As we ponder the conception of the Suffering Servant and note how the NT reverts to it in its fullest interpretation of the Person and Work of Christ, we are apt to ask what becomes of it in the intervening period. It is incredible that it should have disappeared for hundreds of years, and then have owed its re-emergence to the genius of the apostle Paul, who used it to replace the primitive religion of Jesus by a Christianity of which he was practically the inventor. Two points here are of importance.

(1) The true succession in religion does not run through books, or systems of thought, or ceremonial practices. It is to be traced in actual experience; or else its existence evaporates into scholastic theology or magic ritual. The succession in Israel is manifest, and belongs, not to any officials, but to the souls which, through national and personal discipline, were led into an apprehension of God far other than theoretic and a service greater than political or intellectual. The existence of such servants and sufferers is not in any doubt in the centuries immediately preceding the rise of Christianity. They form, in part, the martyr-age of the religion of Israel; and, where no names stand pre-eminent, there is an unmistakable company of those that 'wait for the consolation' of Israel. In them the calling of the true Israel, the Servant of the Lord, is continued. Out of the heart of their experience there shall arise the final redemption of man.

(2) But, further, it would seem that the absence from Palestinian Jewish literature of the idea of the redemptive value of the suffering of the righteous is due to Pharisaism, which, in its just quarrel with the later Maccabees, sought to obliterate almost the very memory of the deeds and sufferings of the great founders of the family. Where the influence of Pharisaism is not felt, these sufferings are remembered and are interpreted in the spirit of Is 53.

'In Second but more especially in Fourth Maccabees we have the only clear survivals in the later Jewish literature of that doctrine of vicarious suffering, atonement, or reconciliation of the Divine favour by the blood of heroes willingly offered for the nation, which appears so clearly in the doctrine of the Suffering Servant of Deutero-Isaiah, and thereafter seems obliterated from synagogue teaching, awakening again to a world-wide significance only in the Christian doctrine of the Cross.'

Pharisaism had no use for the doctrine; but it formed a vital part of the religion of the common people, who believed, unintelligently and crudely perhaps, but passionately, that the sufferings of

the righteous did have atoning value, and annually in the Feast of Renewal celebrated the memory of such martyred yet triumphant servants of God. Thus the main stream of Israel's religion passes through the ages and is ushered at last into the great ocean of the Christian salvation.

6. Its consummation.—Salvation, in the widest, most formal conception of it, is throughout the OT a life completely determined by the sovereign will of God. The content of this idea grows richer as God is construed with an ever-increasing moral and spiritual discernment. Gradually it becomes identical with knowledge of God and fellowship with Him, implying at the same time removal of all barriers to those blessed experiences. But the religion of Israel is never individualistic and mystical, though it is intensely personal and intimate. It could never rest content with a *merely* individual religious life; or, rather, it kept true to its deeply social and historic character. Salvation cannot be consummated, even for the individual, without the environment of a redeemed community, and, indeed, a redeemed world. Cosmology has no interest *per se* for the OT or, we may add, for the NT. But the religious mind of Israel demands the complete penetration of the whole sphere of human life by the sovereign will of God. Till that be accomplished salvation is incomplete. Out of this demand apocalyptic is born. Faith grasps ever more firmly the thought of the divine supremacy. At the same time, it sees ever more clearly that the utmost efforts, even of the most devoted servants of God, cannot vindicate this supremacy, under the existing circumstances of human life. Nothing earthly, no human society or institution can perfectly express the glory of God. Even nature itself in some sense fails to do so. And, as terrible and prolonged experience shows, there are evil forces running rampant among men and occupying the very air around them which baffle the wit and overwhelm the power of man. Very early, therefore, faith rises above the level of human enterprise and fastens upon divine intervention, as essential to final salvation. In doing so faith strikes upon a radical incapacity of the human understanding. It is not possible to express in terms of time and space that which is, in the very idea of it, above both. Apocalyptic is, therefore, necessarily and essentially symbolical. Its truth is the supremacy and omnipotence and faithfulness of God—in short, the central message of the OT, viz. that Jahweh saves. Its religious value is hope, sustaining, comforting, strengthening, especially in dark times of oppression and persecution and apparent disaster. Its vehicle is picture and symbol, whose use and value lie wholly in their vivid presentation to the mind of that which no picture or symbol can adequately represent. Take the symbol apart from the religious truth, and it becomes crass, foolish, mischievous. Take apocalyptic away from prophecy, and it becomes mere mythology. This, however, is very likely to happen when faith decays; and it is precisely what did happen in the later stages of Israel's religion, and, we may add, has happened again and again in the religious life of mankind. Indeed, when we note the amount of apocalyptic in the later literature of Israel, and note how its figures are drawn from the mythologies of the nations around, we are apt to think that this kind of thing, materialistic and semi-pagan, was the whole religion of the Jews, or at least constituted their main religious pabulum. But such a view would certainly be an exaggeration. Within the circles which formed the religious core of the nation, 'the circles in which Christianity arose,'¹ the great thoughts of prophecy regarding redemp-

tion are still dominant. Apocalyptic did, indeed, make definite some of these thoughts, notably the personality of Him in whom Jahweh would visit His people and achieve His salvation; and it did carry forward the religious mind towards questions which the OT canonical writings did not settle, particularly the problem of death and immortality; and in general it did fulfil its proper function of inspiring hope and courage. Educated in faith, quickened in hope, patient in prolonged delay, the true Israel, undeluded by political fantasies, and unintoxicated by mythical imaginings, waited for its 'consolation' with gaze fixed heavenwards for the breaking of the day.

II. SALVATION AS AN EXPERIENCE WITHIN THE TIMES OF THE NT.—The Christian creed and the Christian Church can be understood only through the experience of which they are, respectively, the intellectual and the institutional forms. It may be doubted whether Biblical Theology, Church History, and History of Dogma have always borne in mind that they were dealing, not with intellectual conceptions or institutional forms *per se*, but with these as the outcome and vestiture of an actual religious experience, which is, in a large measure, different from, and, in respect of value, much greater than, the forms in which it was clothed and through which it, in part, expressed itself. Certain it is that the point of view of experience must be carefully adhered to, if the birth and permanence of the Christian community are to be understood; and those studies, now happily increasing, which seek to depict the experience which lies behind creed and culture bring new light and life to the more rigidly intellectual disciplines. It may happen that 'advanced' views will have to endure correction, as well as those that are 'conservative.' Our hope must be that the result will be a new valuation of redeeming forces, a new emphasis on vital truths, and a new discernment of continuity amid change and unity amid variety.

1. Jesus and His disciples.—The fact presented to our view in the Synoptic Gospels is a religious experience, possessed by a group of persons, gathered round the central figure of Jesus of Nazareth.

In seeking to realize what that experience was, all the difficulties beset us which belong to the problem of life. If Christianity were a mosaic of ideas and practices, the work of understanding it though toilsome would be comparatively simple. But Christianity is, primarily and ultimately, life; and to penetrate to its secret needs more than tabulation and classification of details. This, at least, is true, that life begets life. There were religious life and experience in Israel before Jesus gathered His disciples about Him. It is certain that neither to His consciousness nor to theirs did the life and experience which they possessed present themselves as marking a breach with the past. They did rejoice in what they regarded as development, or even transition, into a new region of saving powers. But they would have rejected with horror the suggestion that they were founding a new religion, or were abandoning the highway of salvation, trodden by patriot and martyr, saint and seer, of Israel's lineage. Their conviction expresses the literal truth, and we may accept their estimate as the clue to the facts regarding them. They represent the element which is continuous in the history of Israel from the very earliest times. Their religion is the religion of the prophets. Jesus Himself and, with one or two exceptions, the young men who were attracted to Him or were summoned by Him to His side belonged to that inner heart of Israel which in every age had beat true to God and had consciously received the com-

¹ Cf. G. A. Smith, *Jerusalem*, London, 1907-08, II. 539 ff.

munications of His mind and will. They inherited the fruits of that discipline of spirit which is the real history of Israel, and which lies behind and apart from political changes and varying forms of thought. The religious gains of that history may be summed up in two words—possession and expectation. The devotional literature on which the souls of the contemporaries of Jesus were nourished bears witness to a real knowledge of God, certifying itself in a definite moral character. The men and women who gathered round Jesus were not legalists. They were oppressed by legalism, administered by bigots. But their religion was not law; and it seems certain that the experience of Paul was not the path by which the primitive believers ordinarily entered the Christian Church. To believe in a living God, to know the effects of His saving power, to love Him with heart and soul and mind, to obey Him with more than formal rectitude—these elements of a deep and true religion were found in the aspirations and, in a measure, in the spiritual attainments of those who came to hail Jesus as Lord. Yet none of them was satisfied with the position that He had reached, or recognized in it the end of God's dealing with His people. The Kingdom of God had not come; and nothing in the state of Israel or the world could be right till there came a direct, manifest, and supernatural intervention of divine power and glory. This expectation centred in the figure of the King-Messiah. In endeavouring to reproduce the mind of those who became disciples of Jesus we must do justice to the religious quality of this expectation. It is true that it was at once apocalyptic and political. They could not conceive of divine intervention in any other form than that of which the deliverance from Egypt was the classical example. Another deliverer was to secure the emancipation of Israel and to establish Jewish supremacy. As nationalist, as particularist, this was the form of their hope. And yet it would be gross misunderstanding to suppose that their expectation had no other contents. They shared with all Israel the Baptist's summons to repentance. For them the coming of the Kingdom was poised upon a religious preparation; and its arrival was to be accompanied by a perfecting of religious knowledge, as well as by national triumph.

By both these influences—their actual religious life and their Messianic hope—they were attracted to Jesus. This is the twofold explanation of the Christian movement, as we find it in the first group of disciples, and as we trace it afterwards throughout the Hellenic world. Christianity was borne into both Jewish and Hellenic circles on a wave of Messianism; but it had power and permanence only as a religious experience; and it is in its religious qualities that we must seek for its essence.

When we watch the cinematographic pictures in the Synoptic Gospels, and seek to comprehend the life behind the stories, the following notes and characteristics cannot be missed.

(a) *The experience was intensely individual.*—It is difficult to remember, when reading the Synoptic Gospels, that we are watching the beginning of a great world movement, which gave rise, in its development, to vast intellectual systems and huge ecclesiastical apparatus. In these stories we seem to be concerned only with a man among other men. And, indeed, this is precisely where the point of interest does lie. Let apocalyptic lie over. Let Christology wait. Meantime, see what one Man made of other men. The beginning of Christianity was not a 'mass movement.' It was personal contact of individuals with Jesus and, later, of individuals with other single souls. The Gospels are largely made up of 'cases.' The details

of the narrative, the outward form of recorded events, are of subordinate value. The heart of the situation lies in the souls with whom Jesus dealt, His handling of them, and the stamp He put upon them. Sometimes the need which confronted Jesus was mainly physical; and He met it in quick compassion with a word of power. Sometimes the need was definitely and keenly religious, and then His compassion was yet more tender, and His power more wonderful (Lk 7³⁶⁻⁵⁰ 19¹⁻¹⁰ 23³⁹⁻⁴³). Sometimes the case was harder than that of conscious need—a condition of moral torpor—and this He provoked into action by a summons and a challenge (Mk 2¹³⁻¹⁵, Lk 5²⁷). Often He had to deal with an unawakened conscience and a spiritual self-sufficiency which was impervious to criticism, and then He spared no sternness of rebuke that might pierce the harness of conceit (Lk 7⁴⁰, Mt 23³⁵). Where He found an open mind and an unprejudiced judgment, He was frank to acknowledge the honest and good heart and eager to win a full surrender to the claim of God (Mk 12²⁸⁻³⁴).

The moral state which moved Him to most severe criticism and most sorely tried His good will was that of a divided heart; and here His demand for absolute surrender was inexorable (Lk 9⁵⁷⁻⁶², Mk 10¹⁷⁻²²). The cases recorded in the first chapter of the Fourth Gospel (vv. 34-51) are too thoroughly human to be dismissed as unhistorical. They are at least typical of the manner in which disciples attached themselves to Jesus. They came by way of the Messianic expectation, and they cast their thoughts into Messianic forms; but the roots of their conviction run deep into the soil of a personal experience. The Messianic form might break, or be changed out of knowledge, but the attachment would remain and be ready to find for itself more adequate expression. These stories give the real origins of Christianity. Forms of thought, inherited from Jewish tradition, or intruded from Oriental religions or from Hellenic speculation, do not afford the clue. The clue is the universal demand of the human spirit, welling up in real human hearts and met by a living human voice.

(b) *The experience was, fundamentally, a process of education.*—A book which marked an epoch in the study of the Gospels bears the title, *The Training of the Twelve*, but the idea of training for a vocation might be extended beyond the Twelve to all disciples. Jesus is characteristically Hebrew in His conception of religion. He is not misled by intellectualism or subdued by emotionalism. He is living in the region of redemptive forces which operated in the long history of Israel, and He desires to have every man whom He summons to be subjected to these forces, to be mastered and made by them, and to become their living vehicle. His deepest equation for 'salvation' is 'life'—not a state, but an energy, working now as a dynamic in the world of men, and finding its triumph in a universe remade. His 'message of the Kingdom' was not a phrase to be learned in a few moments of memory-work and then repeated with fanatic reiteration or deadly monotony. Entrance into the Kingdom is not accomplished by cold assent or spasmodic feeling. The Kingdom is a great determining and fertilizing idea, or world of ideas, a realm of facts and forces, of motives and ideals, into which men could enter only *sub persona infantis*, whose wealth is open only to the poor in spirit, amid whose impulses and influences men might live and grow to a wonderful maturity of knowledge, character, and power. In one sense, men were already in the Kingdom and the Kingdom was in them. In another sense, they were to be prepared for the Kingdom and were to be at once its heralds and its servants. It is both *Gabe* and

Aufgabe. When we ponder the fact, than which none in the gospel narrative is more certain, that Jesus occupied Himself mainly in the making and training of men, we are growingly convinced that both the 'liberal Jesus' picture and the 'apocalyptic dreamer' picture are out of focus. If either of these was accurate, we would need to say that His methods did not correspond with His aims, and we would need to explain the success of the movement which bears His name by attributing it to some other than Himself. He could have no central place in the Christian religion.

How, then, did Jesus train men for the Kingdom of God? The answer is: By making them sharers in His own thought of God. Yet there is nothing doctrinaire in this. He gives no new definition of God, though He does use a new name for God—new, at least, in His use of it. He stands deep within the OT religion, and is Himself the fulfilment of the highest spiritual type which the OT records supply, viz. the believing man, the man who knows God, deriving His knowledge, on the one hand, from God's self-communications in revealing words and deeds and, on the other, from the activity of his own soul in prayer and meditation, in deep discernment and lowly obedience. The God of Jesus is the God of the OT, apprehended, not through the medium of Jewish forms of thought, but directly with the unveiled face of a Hebrew prophet. He knows God; He sees God; He hears God speaking. And it is into His own acquaintance with God that He seeks to lead His disciples. He will be satisfied if He can give them the guiding principle by which they will be led into a life-long exploration of the divine nature and a continuous application of the divine mind to all the emergencies of their life in the world. In that case the cause which He has at heart will be secure. They will be fit persons to preach the gospel, to bear witness to Him, and to prepare for the coming of the Kingdom. In the nature of the case, accordingly, the educative process to which Jesus submitted His disciples could not follow the conventional forms of school theology. He trained His disciples mainly in two ways.

(1) He trained them by admitting them to a share in His own experience, whether of action or of suffering. In Mk 3¹⁴ we have the reason of His appointment of the Twelve, viz. to 'be with Him.' The stories illustrate the meaning. They watched Him at His work; they underwent a slow and largely unconscious revolution in their thoughts of the Kingdom of God and of the salvation of men. They heard Him speak to the people, and they were profoundly disturbed. Not that there was any obscurity in the words of Jesus. They were simple, lowly, and persuasive. But the disciples differed from probably the majority of the hearers of Jesus in not being satisfied with the mere charm of His teaching. They were constantly being thrown into amazement and perplexity. Their distress of mind, indeed, is evidence that their Master's method was proving successful. They were learning, very slowly indeed, but surely, to think, to apprehend, to discover, and to possess. Their fathers' God was being interpreted for them by Jesus; and they began to understand what human life might be under such divine governance, and what their vocation was as servants of such a redeeming purpose. Their being 'with Him,' however, meant far more than seeing or hearing. It meant what was indefinable, and indescribable in any memoirs, their entrance into the secret of His personality, and that secret was His life in God. They heard Him pray. They felt the thrill of His exultation (Lk 10²¹). Three of them, at least, felt beneath them the unplumbed depth of His sorrow (Mk 14³²⁻³⁴). No human

beings were ever nearer God than these men who had been with Jesus from the beginning (Jn 15²⁷). What they carried out of that companionship was Christianity. Lessons, however, are not learned by looking on. They require the supplement of, at least, tentative effort.

(2) This, accordingly, was the second aspect of Jesus' training of His disciples. He sent them forth to preach (Mk 3¹⁴). Such tentative efforts at evangelism must have been very crude, and could have had little success. Yet in them the disciples were exploring the divine resources, and Jesus recognized in their achievements the operation of the divine omnipotence and the presage of the triumph of the Kingdom (Lk 10¹⁷⁻²⁰). More broadly and more deeply He impressed upon them the necessity of a living experience as the condition of growing knowledge. He is leading them into new regions of unexplored truth. They must, therefore, literally come after Him, putting their feet down in His very footsteps. He is introducing them to new values. To appreciate them, they must be willing to forgo every other advantage. He is opening to them a new life. To obtain it, they must die. The surrender value of the Kingdom is life itself (Mk 9⁴²⁻⁵⁰, Mt 16²⁴⁻²⁶, Lk 14²⁵⁻³⁵). This, then, is what we behold in the Gospels—men in process of being made.

'The greatest miracle in history seems to me the transformation that Jesus effected in those men. Everything else in Christian or secular history, compared to it, seems easy and explicable; and it was achieved by the love of Jesus.'¹

The Gospels explain Christianity. To go outside of them is to pick up a great deal of information, and to throw light on many points in the history of the Christian movement; but the Gospels contain the only authentic and valid explanation of how Christianity got under way, and of what it essentially is. It began as an experience created by Jesus of Nazareth, and that is what it is at this day.

(c) *The experience may be characterized as a paradox.*—(1) It has the note of immediacy. Jesus is concerned with the condition of men, as it directly presents itself to His penetrating insight, and He seeks to produce an immediate effect within their life and character.

(a) Thus, the need and peril of men are interpreted by Him in the light of their present moral state; and His main effort is to direct men to an apprehension of their inward condition as the source of their real danger. The distinction of righteous and unrighteous, of those who were sure of their place in the Kingdom and those who had no such hope, had been externalized and falsified beyond endurance by a mind which understood God so well as to have pity on man. To be formally correct in opinion and conduct, while permitting the soul to be devastated by moral evil; to allow evil desires to occupy the imagination, even though they find no concrete expression; to be legally just, without one generous impulse overflowing in unconscious grace of helpfulness; above all, to have no decision of character, and to allow the cause of God to remain unchosen and unserved—these are real grounds of exclusion from the Kingdom and its salvation. Moral evil, clothing itself in actions which the perpetrators themselves know to be wrong, is, of course, absolutely inconsistent with a place in the Realm of God. On this Jesus did not need to insist. What He emphasized was rather, first, the ruinous effects of sin within the life; and, second, the attitude of God towards those who were thus hopelessly lost.

The yearning of God over sinful, suffering Israel which utters its passion through a Hosea or a Jeremiah finds new and more compassionate voice

¹ T. R. Glover, *The Jesus of History*, London, 1917, p. 681.

in Jesus of Nazareth. The old religion of Israel, never forgotten, though sorely travestied by its professional exponents, came to life again through the ministry of Jesus, and surrounded those who were its objects with a more inexorable holiness and a more tender pity.

(β) If the need which Jesus uncovered so relentlessly and so mercifully was thus immediate, so also was the salvation which He promised. It was, as it has been happily described, 'a thoroughly effective salvation.' It was not to take effect at an unknown date, amid scenes of apocalyptic splendour, but right now, in the moment in which sin was actually ruining human life. This immediate salvation shines in a twofold light. It is forgiveness by God, and it is sonship towards God; and these two are one. The one Jesus announces directly, positively, absolutely, in full view of the action of legalism in at once banishing the soul from the Realm of God and enclosing it in the paralysis of despair. He never argues the matter. He has authority to forgive sins, and He exercises it royally. He understands God. He has caught the simplicities of an old-time experience: 'There is forgiveness with thee'; and He echoes it in His pronouncement: 'Thy sins are forgiven.' To imagine that Jesus, and those to whom He gave such assurance, were thinking only of a future when they would find themselves denizens of a glittering region of Jewish supremacy is to misread the simplest records of the human heart. God in His love, man in his need, Jesus speaking for God and bringing God near—these are the abiding three in the Christian salvation; and their relations to one another are never more vividly presented than in the stories of forgiven sinners told in the Gospels. The other view of salvation, viz. sonship, cannot, in the nature of the case, be thus condensed into a sentence. It is the translation into human life of Jesus' conception of God. The 'Jahweh' of the OT, Redeemer, Saviour, Father, of His people, is 'the Father' of Jesus' faith and preaching. Words, even Jesus' words, cannot exhaust the fullness of this Fatherhood. The Father loves and saves; He cares and keeps. The world is under the Father's governance; and His omnipotence is available for all the ends of His love. Into such a region of fatherly control and filial confidence the disciples of Jesus enter in company with their Master. To say that it was an unfamiliar region, and that their steps in it were slow and stumbling, that they but dimly apprehended the mind of God, often burdened themselves with needless anxieties and ridiculous scruples, and often behaved in an unfilial and unbrotherly manner, is only to repeat what we have noted—that they were in process of training, a training, however, which was conducted within the circle of divine saving power and, in essence, was their salvation. No doubt, Jesus had much to communicate before He could set forth His whole thought of God, and so demonstrate it that it would waken in sinful hearts a perfect conviction and a victorious faith.

Still it remains true that, in the company of Jesus, as He lived and taught, salvation, both as deliverance from sin and as enjoyment of God, was a fact of human experience—a fact, in respect of range and degree, new in the history of the human spirit, type and norm of Christian salvation as such, a religious standard of absolute and universal validity.

(2) It had, besides the note of immediacy, the contrasted note of imperfection and expectation. The difference between these two notes is one of emphasis on Jesus' part, and of appreciation on the part of the disciples. It is remarkable that each receives such ample recognition in the

Synoptic narratives. Either by itself might have formed the organizing idea in a constructive theory of Jesus' message and mission. In point of fact, both are present, and there is no theoretic synthesis of them. The centre of unity must lie in Jesus' dynamic conception of the Reign of God. God is working for the salvation of men. Age after age He has been present in redeeming power. In every age men have had experience of this 'plenteous redemption.' Yet no age has seen the completion of the divine history. Always men have been waiting for that consummation which will mean that God's power is operating in unhindered freedom throughout the whole creation. Jesus was conscious that that power was operating in His ministry. The healing of disease, the expulsion of demons, the forgiveness of sins, the unfailing providence of the Heavenly Father, the development of the filial character, the reproduction of the Father's 'perfection,' meant for Him the presence of the Kingdom; and for those who partook of such benefits they meant aspects and proofs of the great salvation. Yet the highest range of such blessed experiences did not amount in sum to the whole salvation; and the Kingdom had not come, though its influence, as a dynamic both in the inner man and in the outer world, was making itself plainly felt. Jesus' gaze throughout His whole mission is fixed on the future. He is as convinced as any of the prophets that the present is not the end, that, beyond any present achievement of divine power, there is a goal when the divine movement shall be complete and the Kingdom shall have come. Teleology and eschatology are essential to Jesus' conception of God and His relation to the world. But Jesus' occupation with the future never led Him to belittle the present. He did not despise this world and man's life in it; and His directions as to conduct are not merely temporary rules for a mode of existence which stands in no living relation to the Messianic Kingdom. The end is certain; and, when confronted by doubt or outrageous denial, He asserted His own amazing claims and His own sublime faith. Yet He never represents the Kingdom as coming with the inevitableness of bare omnipotent decree. For Him, as for the Hebrew prophets, the coming of the Kingdom is ethically conditioned. It is the goal of God's saving work, and that goal cannot be reached apart from man's attitude to the Kingdom. The Kingdom is God's, and the power is wholly His, and the glory shall be His alone. Nevertheless, the Kingdom is an end for man, to be served by man, with complete inward identification of will with the will of God.

This service of the Kingdom takes two forms. On the one hand, with reference to the world, it is a ministry of help to be carried out to the last limit of life itself. On the other hand, with reference to God, it is fulfilled in intercessory prayer. In prayer, especially in intercessory prayer, there is more than submission to the divine will. There is such an entrance into the will of God as gives to it scope and freedom and enables God to carry out His purpose with a fullness and swiftness which, apart from such prayer, would be impossible (Mt 9:37, Mk 11:23-25, Lk 11:13-18). The actual word for 'hope' does not appear in the text, but the explanation is probably that the Kingdom which were from the ex- which were the natural case, His strong assur- s blent with His deep in-

It comes through service. The certainty of its coming quickens the present ministry of those who expect a share in it. Those whom Jesus called were being prepared for the Kingdom. But their preparation was not a tedious interval, to be hurried through, that the joys of the Kingdom might the sooner be possessed. It was itself result and proof of the imminence of the Kingdom, and was conducted under the present control of spiritual

powers resident in the Kingdom. The disciple band is the community of the Kingdom. Its members are in possession of the privileges of the Kingdom. The OT oracle of the New Covenant is fulfilled in their experience. Their sins are forgiven. God is their God, and they are His people. His law is not a burden, but is within, the standard of their character and the delight of their souls. They know God in His Fatherhood, and commit themselves to the omnipotence of His love. They thrill with the sense that the redemption of Israel is proceeding before their eyes, and they answer joyfully the call to prepare the way for its consummation. These brief months of discipleship, before the Cross had thrown its shadow on their souls, were the springtime of Christianity. The Christian salvation is there, in bloom and promise. The Kingdom of God has come, as a possession, and is sure to come, as an inheritance.

The teaching of Jesus is an exultant 'Lift up your hearts!' The company of disciples makes response, 'We lift them up unto the Lord.'

(d) *The experience is the creation of Jesus.*—This aspect of the experience of the disciples carries us beyond what is observable in any company that ever surrounded any human leader of a school or founder of a religion. It is not that they ever paid Him, consciously and expressly, divine honours. Disciples of other masters have been led to regard their teachers as in some sense divine. The disciples of Jesus, however, were too thoroughgoing in their monotheism to dream of regarding Him as a second God or as a demi-god. It is the more remarkable to observe, therefore, that the religious experience of the disciples is the creation of Jesus. In its origin and development it is bound up with the Person and Presence of their Master. He pervades it as an immediate possession, and His figure stands at the goal of its consummation.

Take any element of their religious life, and Jesus is inseparable from it, in a sense and degree which wholly differentiates their relation to Him from that of pupil to teacher. He created in them the sense of sin. What legalism could not produce, what the thunders of the Baptist's threatenings could not effect, the personality of Jesus wrought for them and in them. To hear Him as He re-valued legal estimates of right and wrong was not to listen to a wise Teacher merely, but to look into a stainless soul, moving in unshadowed light, and wielding absolute moral authority. Even the general hearers felt this: 'for he taught them as one having authority, and not as the scribes' (Mt 7²⁹). How much more those to whom He unveiled the inmost secrets of the moral life, forcing them to face the infinite standard of divine purity and love (Mt 6¹⁴, 18¹⁵⁻²³), and turning them back on themselves with a correspondingly absolute demand (Mt 18¹⁵, 19¹⁰⁻¹², 24²⁶, Mk 9⁴¹⁻⁴⁹). Yet even such hearing was not enough. They might have stood out against it. More penetrating and illuminating was the sight of sin which they got, standing by, when Jesus laid bare the festering sores of some human soul. They were gazing through His eyes into the moral abyss that yawns beneath the surface of respectable society and underlies the most decorous existence. Nay, more: they could not fail to note that sinners whom law had failed to convince broke down in godly sorrow under the spell of Jesus' holy yet tender influence. Above all, they were themselves in the same condemnation, and even in a deeper self-judgment, subjected as they were to a more constant and more searching discipline. Whatever occasions the prominence given to Peter in the Synoptic narrative, there is no doubt that the references form a human document of profound psychological interest, and of first-rate historic importance.

We see the thing happening: conviction of sin wrought by the personality of Jesus; a character displayed and a character re-made. Whatever the world knows of sin—and apart from knowledge of sin the knowledge of salvation is worthless—it owes to Jesus of Nazareth, as He stamped it deep in the hearts of these men.

He won from them trust in Himself as Saviour. We would, indeed, have been entitled to suspect the narrative had we found resounding titles adorning it and a theory of their Master's Person and Work detailed therein. What we do find is much more impressive: a company of men and women, gathered round one Man, and finding Him to be for them the means and assurance of divine salvation, the source of their confidence towards

God, the warrant of their standing in His Kingdom, a fountain of life and joy, the object of a hope that rose above the earth. They were moving up and down in the Realm of God, with Jesus as Instructor and Guide, Shepherd and Friend. They were themselves the community of the Kingdom (Lk 12³²), the new Temple, of which their Master is the Builder, Maker, and Lord (Mt 16¹⁸). The most sacred thing in the aspirations of humanity is theirs; and they owe it to Jesus. They heard Him pray. He taught them to pray. He introduced them to God. He brought God to them. This they had because Jesus gave it to them, and without Him it would not have been possible, and as a dream (Mt 6⁹⁻¹³ 7¹¹). To Jesus, accordingly, they surrendered themselves with an absoluteness which must have been the degradation and enslavement, if it had not been the emancipation and perfecting, of their manhood (Mt 4¹⁸⁻²² 19²⁷ 5¹⁰⁻¹² 10³⁸). Words like these open a view into the consciousness of Jesus which carries with it amazing inferences as to His person. But they also reveal the consciousness of the disciples, created through intercourse with Jesus, rising towards Him, under the constraint of His holiness and love, in the spontaneity of a free and full surrender. This is not learning a lesson in religion. It is religion itself, and its centre is Jesus. They had, in their vocabulary, only one name to give Him (Mt 16¹⁶), and this title of Messiah carried with it to their imagination much that had to be unlearned and laid aside. None the less, it summed up for them what they believed of God's redemptive work in the history of His people; and their application of it to Jesus was not the result of ingenious exegesis, but the expression of an attitude towards Him that was, in essence, religious trust (Mt 16¹⁷). We are a long way from Jn 1¹²⁻¹⁸; but that statement contains no more than this experience, of which it is only the expression in the terms suggested by the educative processes of a generation.

'For those who attached themselves to Him, Jesus became Messiah and more. And . . . the experience of "the more" was also latent in the consciousness of the disciples, waiting to be quickened by [an] . . . event, and developed by a future experience.'¹

(e) *Estimate.*—In seeking to estimate the salvation value of this experience of the disciples of Jesus, we cannot fail to be impressed by its superiority to anything that contemporary religion in Palestine could supply. To vindicate its superiority, it is enough to say that it was the religion of Israel, in all the highest qualities manifest in the post-Exilic stage of its history. Here we have the piety of the Psalter, with its sense of sin and of the holiness of God, its realization of forgiveness, and its possession of the divine favour; and, at the same time, the alertness and certainty of moral judgment begotten of centuries of discipline and education under Law and Prophets; together with the hope which never failed the old religion, and was never brighter or more confident than in those disciples of the Nazarene.

We have all these things, with an added intensity and assurance, which differentiate the experience of the disciples from the type of spiritual life of which theirs was the consequence and the flower. The difference is felt in the whole narrative. It is the difference which their Master made. It is the difference of a new era in the religious history of mankind (Lk 10²³). And it is needless to say that the religion of the disciples knows nothing of the gleam of legalism; while, with all its mistaken Messianism, it is free from craze or frenzy. It is salvation in the concrete, communion with God, and deliverance from fear. We are not surprised, accordingly, to find that it has the note of joy,

¹ O. A. Scott, s.v. 'Christ, Christology,' in *DAC* I. 153b.

heard in the OT fitfully like songs in the night, but now full-throated and exuberant, like the joy of 'children of the bride-chamber' (Mt 9¹⁵). A. B. Bruce has a chapter on 'the joy of the Jesus-circle,'¹ which he analyzes as 'the joy of love, the joy of fresh inspiration, and the joy of liberty.' It is the 'shining morning face' of the young Church of Christ, never seen again in history, yet very lovely in the time of its continuance, 'while the Bridegroom was with them.'

The very beauty of this phase of religious life, however, reminds us that it was, in the nature of the case, vague, inadequate, and unstable. These features, of course, with the dangers which threatened, were quite hidden from the minds of the disciples themselves. To them the matter seemed definite enough, and they were confident in its permanence. They had in the current Messianism a form of thought into which they easily ran all their experiences. Their Master was the Messiah. He would inaugurate and preside over the coming Reign of God. True, they were learning a great deal about God and His Kingdom which was inconsistent with popular Messianism. But they were not critically minded; and the growing spiritual content did not lead them, as yet, even to modify the general thought form.

In one respect this uncriticalness of theirs seriously misled them. It rendered them incapable of assimilating one profound element in OT religion, namely, the place which suffering had to play in the divine salvation. The function of the great sufferers of Israel's past was too deeply printed in the history, the prophecies, and the psalms of Israel's sacred writings to be ignored by any whose souls were fed by these inspired records. The idea of a suffering remnant, of heroes and martyrs, nay, of a martyr nation, lay at the very core of the nation's faith. Even cynicism could make use of such a conception to excuse its selfishness and cruelty (Jn 11⁴⁹). The disciples could have dared and borne anything for such a Master, passing on His way to a throne (Mk 10³⁸). They were even prepared (or thought they were) to perish with Him in His failure (14³¹). But that suffering should be the lot of the Messianic King Himself was unthinkable (Mk 8^{29, 32}). Cross-bearing might be the law of discipleship (Lk 14²⁷); but it could never apply to Him, who was to approve and reward His servants. The redemptive value of the suffering of righteous servants of the Lord had not perished out of the religious consciousness of Israel, even under the blight of legalism, and was destined to a splendid revival. But never, within the OT canon or out of it, had a synthesis been made of the Suffering Servant and the Messianic King. Never had it been discerned that His were the sufferings that were to redeem Israel and inaugurate the Kingdom.

That synthesis took place in the consciousness of Jesus. To Him 'Son of Man' = 'Messiah' = 'Suffering Servant'; and He sees that by the path of suffering, at once divinely appointed and freely chosen, and by none other, can the purpose of God be fulfilled and salvation won (Mk 8³¹ 9¹² 10⁴⁵ 14²²⁻²⁴). But teaching, warning, and prediction fell unheeded on ears stopped by theological commonplaces. Between them and their Master a rift opened, which, in His death, widened to a great gulf. Refusing to catch His meaning, they missed the element of sorrow borne and victory won which was needed to give their experience depth and permanence and to enable their faith to bear undismayed the fact of the Crucifixion.

It is an absolutely safe historical judgment that no development of the religion of Israel could take place till the synthesis referred to had been made. Without the combination of the

two elements which lay side by side within it, viz. Messianic sovereignty and vicarious suffering, the religion of Israel could not have survived. In point of fact, it has not survived, apart from this combination. Christianity is the religion of Israel, thought through in its ideal unity, and grasped in the reality of a great experience.

The salvation value of the experience of the disciples, prior to the Crucifixion, depended on their being able to rise experimentally to the height of this great synthesis. If they are not able to do so, then, the Messiahship of the Master being disproved, as suffering would disprove it, the experience itself would vanish with the form with which, unhappily, they had identified it. Three things are needed ere they can move to a higher plane of religious attainment: (i.) a death, which shall shatter their false Messianism; (ii.) a victory, which shall restore to them all of which they deemed the death had robbed them; (iii.) the abiding presence of Jesus, which shall reproduce in undreamed of power and joy their life with Him in Galilee.

2. The Apostolic Church.—(a) *The creation of the Church.*—The movement inaugurated by Jesus of Nazareth seemed, both to its enemies and to its adherents (Lk 24²¹), to have been brought to a close by His death. In point of fact, after a few weeks during which it had disappeared from observation, it is seen to be in action, with renewed energies, equipped with new instrumentalities, and manifesting unconquerable hope. A community exists, consisting of the original disciples, united, as they had been before His death, by common allegiance to Jesus, and living the same kind of life which they had formerly owed to His presence with them; and to this community accessions are constantly being made, as they had formerly been, by the spell of His personality. The creation, more properly the reconstitution, of the Church of Christ is due to three vital facts.

(1) The first is a fact of religious experience, appreciable only by its subjects, though its outward manifestation fell under common observation; viz. that Jesus is present in power in the company of those who believe in Him. This is the meaning of Pentecost (Ac 2³³), as well as of all those gifts and powers and fruits which occupy so large a space in the records and are always referred to the Spirit of God. They mean that Jesus is operating in full saving power in the lives of His disciples. They are simply Jesus at work now, as once He worked in the days of His flesh. To say that the Spirit is present, or that Jesus is present in the Spirit, is to say the same thing (Ro 8⁹, 2 Co 3¹⁷, 1 Co 6¹⁷). It is certain that the Church would not have come into existence to cultivate a hero's memory or perpetuate the cult of a demi-god. It was essentially the community of the Spirit; and that meant the spiritual presence of Jesus. This was as true on the day of Pentecost as it has ever been in the ages of the Church's ripest spirituality and clearest thought, though in the first stages of its experience the operations of the Spirit were little understood, and the quality and reach of the saving power of Christ had only begun to be appreciated.

(2) The second is a fact of history, which, however, derives its significance from, while at the same time supplying the necessary basis to, the experience of the day of Pentecost. Only One whom the power of God had raised to a position of sovereignty in the realm of redeeming forces could 'pour' on His disciples what was seen and heard that day and has been repeated in every age of the Church's history and in the life of every believer. The resurrection of Jesus, accordingly, stands behind the gift of the Spirit, and, along with that gift, forms the foundation of the Church of Christ. These two were never separate in the apprehension of the Church, and together they establish the Messiahship of Jesus. Jesus is enthroned; and the Spirit has come (Ac 2³²). Therefore, Jesus is the Messiah (2³⁶). The attendant circumstances of the Resurrection and the Pentecostal gift cannot now be straightened out into a formally consistent

¹ *The Galilean Gospel*, Edinburgh, 1882, ch. xii.

narrative. But the two facts themselves establish the redemptive supremacy of Jesus. They explain the existence of the Christian Church; and nothing else does. And they form the bridge, at once historical and experimental, by which the experience of salvation passed over from the confines of Palestine to occupy the wide world of humanity and become the inheritance of mankind.

(3) The third is the fact, terrible in its cruel actuality, of the Cross. It is a strange testimony to the place which Jesus occupied in the Church's faith, and a curious comment on the narrowness of intellectual processes, that this fact had in later ages to be insisted on in its crassness and horror. To the primitive disciples, however, precisely its literalness was its preciousness. By one stroke it destroyed the Messianism which hid from them their Master's Messiahship. In one revealing act it did for them what even their Master's words had failed to do, and brought together what their dogmatic had held apart—the glory of King Messiah and the suffering of the Servant of the Lord. It gave to their growing apprehension the whole world of truth and power, which lay in suffering. What had been missing in their experience before the Crucifixion, the lack of which had doomed to evanescence its highest joys, has been supplied. Through death, inflicted by 'wicked hands,' but appointed by divine redeeming will, Jesus enters on His kingly position. The Kingdom of God is no longer an object to be anticipated, but a power already victorious over the utmost that sin can do. God is not planning salvation; He has effected it, and will make it effective to all who will receive it. 'Christ died for our sins' (1 Co 15³). This is the gospel which Paul 'received.' It is the absolutely primitive faith of the Christian Church. Without it the Church could not have existed. Only such a transmutation of death into victory could have brought the Church into being. The death of Jesus meant either utter and absolute defeat or the fulfilment and interpretation of Is 53. There was no interval of time—not a day or an hour—in which a Christianity existed which did not centre in the Cross. There was never a movement of Christian faith which did not converge on Jesus, Servant of the Lord, suffering and victorious. Anselm did not invent the Atonement, nor did Paul, though they and countless others have sought for theories of it. Suffering needs no key. It is its own interpreter. The religion of Israel had its sanctuary in pain, the suffering of God; and Christianity began its career with this in its heart—'Christ died for our sins.'

(b) *The Christian message of salvation.*—The religion of Israel had always been presented as a gospel. The prophets preached Jahweh as the Redeemer of His people—not an idea, not a remote and careless Deity, but a living being, animated by a gracious purpose and seeking its consummation through toil and pain, opposed by enemies, hindered by His servants, but sure to triumph in a day of mercy and of judgment, for the dawning of which expectant and penitent souls waited in deepest silence. The apostles had no other message, though, as it came from their disciplined and instructed hearts, it had a richer content and a more confident note. Their proclamation still concerned the redeeming power of God. They declared, regarding it, that in Jesus its operation was complete. He is its Agent and Mediator. Through Him, suffering and victorious, it enters afresh the lives of men—of His own selected people, and, as they soon discover to their unspeakable amazement, of all men everywhere who will believingly submit themselves to Jesus. It works with an effective salvation, redeeming men from the evils that had all their lifetime oppressed them,

and placing them under the emancipating influences of the Reign of God, constituting them also heirs of the Kingdom, when, in the hands of the Crucified and Exalted Lord, it shall be established in complete and unquestioned dominion. All this they summed up in a word, which needed the interpretation which they gave it, yet did carry with it the answer to the demand of the heart of Israel, and, indeed, to the religious demands of the human spirit amid all the races of the earth. Jesus is the Christ. Through Him God works savingly. He is the Saving Power of God to all who accept Him.

The proposition, 'Jesus is the Christ,' is not an opinion, however true, which may be held by a sect or by an individual, like any other tenet which intellect might devise and bigotry retain. It is the utterance of an experience, the experience of actual salvation as a power in personal life. It receives from that experience its warrant and proof, its illustration and interpretation. Above all, it is the outcome of an irresistible impulse, to propagate the experience and to bring all men within the scope of the divine salvation. Nothing in the history of the Christian Church is more impressive than the fact that its birth hour is the beginning of its evangelism. The subjects of salvation are its instruments. The disciples remembered how their Master had not kept them always 'with Him,' much as they needed His presence, but had 'despatched them to preach, with the power of casting out demons' (Mk 3¹⁴). And now the same thing is happening under more wonderful conditions. He is with them in power, and He is sending them out on the same errand of mercy. His very voice is in their ears with 'majestic instancy,' saying, 'Go to all the world and preach the gospel to every creature' (16¹⁵). There is nothing formal about it, no clank of machinery. The world, and all the men and women in it, are under bondage. Jesus saves. They knew it by experience; and, therefore, they spoke. They could not help themselves. 'Not for a single day did they cease to teach and preach the gospel of Jesus the Christ in the temple and at home' (Ac 5⁴²). And on journeys of business or flight they did the same thing (8⁴).

It follows that we need not look in the records for any exact reproduction of the mission preaching of the early Church, which must have been marked by the widest variety and must have included every kind of simple and unstudied testimony as well as more formal addresses. A theory can be put into swaddling bands, an experience never. We can see, however, what elements belonged to the message and gave it driving power.

(1) Stories about Jesus.—If any part of the NT gives us the 'mission preaching' of the primitive Church, it is the Synoptic Gospels. Many of the narratives bear traces, according to Denney, of being 'sermon notes.' In any case, they provide what the preacher needed. He claimed that Jesus was the Messiah, and that in Him the power of God wrought savingly. Being challenged, he replied not by argument, but by instances. He gave case after case of Jesus' power to heal and save; and so the Gospels are full of miracles wrought on the bodies and souls of men. He quoted sayings of Jesus, which showed His deep spiritual-mindedness, a knowledge of God greater than that of sage and prophet; and so the Gospels contain teachings of Jesus, though they never present Him merely as a teacher. Above all, he conveyed the impression made by Jesus on those who knew Him; and so the Gospels contain a portrait of Christ at once in His deep humanity and in that quality which, without separating from men, lifts Him out of the class of the 'lost' and sinful and makes it possible for Him to bring near to them the divine salvation. We constantly think of the Gospels as written up, or down, to some theological theory. In point of fact, they are the gospel, as told by individual Christians, in all sorts of places, to all sorts of audiences, told in tale after tale, on a roof-top, by the wayside at the noon hour, round the camp fire, in synagogue or market-place. What the preacher sought to accumulate on the minds of his hearers was simply this: 'If there is to be a Messiah, He is certainly Jesus; not what we had expected; but certainly Jesus is He.'

(2) The word of the Cross.—There were audiences among whom the story of the death of the Christ might seem to bring the missionary's office to an end; for some would think it 'sheer folly' and others would be outraged by such an insult to national and religious feeling. Yet the preacher had no option. He might leave to teachers more learned than he—a Paul or an Apollos—the task of supplying an intellectual solution

of the problem raised by the Cross. But the Cross itself was no problem; it was an integral part of the gospel—the gospel which he and all Christians 'received.' It was simply the redeeming love of God, which, in all ages of Israel's history, had been burdened by the sins of His people, in its last and final act of sin-bearing. Accordingly, even the least lettered preachers told the story of Jesus, with the shadow in it mounting steadily towards the blackness of Calvary. It has been, curiously, maintained that the Gospels sink beneath the level of the primitive gospel which the first disciples 'received' by ignoring the connexion between the death of Jesus and the sins from which He redeemed His people, leaving us no more than a benign and singularly endowed Teacher. The Gospels would thus represent a lapse towards legalism. The absence from the Gospels of such a construction of the Atonement as we get, e.g., in Ro 3 may, however, be much more simply explained.

The early missionaries, whose 'sermon notes' we are supposing the Gospels to be, had no theory, and needed none. But they had a story to tell, and they told it with utter artlessness and consummate skill. They let their hearers feel the weight of sorrow which their Master carried in an intensity of love and pity which divided Him from those whom He sought to save, while it drew Him to them in great nearness of spirit (Mt 11^{25ff}, 81⁷). They told how, once and again, the anguish of His soul broke into tears as He contemplated a woe which He alone understood. They told how, in suggested figure or dark and pregnant saying, He had indicated something of what lay upon His heart; and how He had even definitely predicted a grief so intolerable that it paralyzed their intelligence. Finally, they told the story of the last hours, with such fullness and selection of detail as make them, not an impressive tragedy, but the fulfilment of a purpose, the crowning issue of self-dedication. The narrative is given without one pause of theological explanation, but not without prophetic consciousness.

Simple as they are, these missionaries have been bred on the prophetic writings, and have been instructed by the event to lift into the light the element by which they had been baffled, and to bind together the suffering of the Servant with Messiah's saving work. Their very language echoes strains from the songs of the Servant.¹ They had no theory of the Atonement; but their identification of their Master with the Messiah and with the Servant of the Lord was intentional and was complete. This identification was the very nerve of their gospel. The sorrow of the Redeemer, which is the very sorrow of God (Ac 20²⁹), is set in such relation to the sin of man that it constitutes deliverance from the evils that sin has wrought. The religion of Israel is that of a living God pledged to redemption. In Is 63 the pledge is made in most solemn articulation. In the Cross of Christ it is fulfilled with divine completeness. This is the gospel which the first converts 'received' and which they 'passed on,' not in the language of Romans or Hebrews, but in that of the Synoptic Gospels, as that repeats and illustrates the language of Isaiah (Ac 8²³⁻³⁵).

(3) The resurrection of Jesus.—The heart of the Church's message was redemption. The preaching contained nothing that was not relevant to this mighty fact of the moral world. To prove and illustrate this, the stories of Jesus' ministry were told. He had been, in the experience of His own disciples and of all who trusted Him, the redeeming power of God. The story of the Cross grounds this redemption in suffering, and matches the world's sin with the Redeemer's pain, bloodshedding and sin-remission standing together in the history of God's redeeming acts (Mk 14²⁴, Mt 26²⁸). Here is a claim of transcendent magnitude; the divine redemption is now in action; the divine salvation is now guaranteed. But it is liable to utter rejection, if He in whose name it is made is dead and gone. Death, that complex fact of the physical and moral world, if it be the final act of Jesus' life, does indeed end all. There can be no talk of redemption or salvation, none of a Redeemer and Lord, if there be no more operative in the world the redeeming forces concentrated in Jesus and inseparable from His personality. On this point the missionaries were competent to speak. Their evidence reached the point at issue and established the twofold fact: Jesus lives; Jesus reigns. The first part of the evidence deals with the conquest of death and the continuity between Him whom they had known in the flesh and the glorified being who now reveals Himself to them. He has not changed, nor has His function altered; He still takes command and opens to them the powers and privileges of the Kingdom. The second part of the evidence, accordingly, is the life of the redeemed in the actual experience of reconciliation and forgiveness, of moral power and spiritual joy. This witness is primitive. It is found articulated in such a record as 1 Co 15³⁻¹¹, 12-19. It is repeated in every disciple, as such, who is a living witness to the power of the living Christ. 'The primary testimony of the disciples to Jesus was their testimony to His resurrection: except as Risen and Exalted they never preached Jesus at all.'² What they preached was not a bare physical fact; and what it meant was not the apotheosis of Jesus, who now takes His place as a 'cult god,' comparable to Serapis or Mithras in the ethnic faiths. It was the crowning act of God's long labour of redemption. It was the victory of Jahweh, the Redeemer of Israel. It meant that the power of God to save, as it had worked through Jesus of Nazareth and had been embodied in Him, now operates in

Him, whom it has raised from the dead, in unhindered omnipotence, throughout the whole universe of man's life and discipline. Jesus had always wrought His redeeming works in His Father's name and power. Now, by the Resurrection, He exerts that same power, unrestrained by the limitations of the flesh and the conditions of His earthly ministry, in sovereign freedom and exultant victory. They could remember strange moods and words of His, in which the sense of power and victory found expression—e.g., Lk 10¹⁷⁻²⁴. Already Jesus had been living in the new age, when Satan should be overthrown (v. 18), and the supreme authority vested in the Son (v. 22) should be vindicated to the 'simple-minded,' who were already in a position of privilege for which prophets and kings had longed in vain.

And now the new day, the day of the Resurrection, has dawned. The Crucified is King. This is the message: 'So let all the house of Israel understand beyond a doubt that God has made him both Lord and Christ, this very Jesus whom you have crucified' (Ac 2³⁶). The supremacy of Jesus is an integral part of the Church's faith and the Church's proclamation. The question is not as to the title Kyrios; and no vital element of the faith would be affected by proof that it came into use only after Christianity had been 'carried from the soil of Judaism to that of Hellenism.'³ The real question is as to the function of Jesus in the divine salvation and His place in the Church's faith and witness. This problem was raised, and was settled, or 'the soil of Judaism,' or, rather, within the religion of Israel, by the revelation which, beginning in the life experiences of the prophets and like-minded souls in Israel, culminated in Jesus. It is the question whether the divine action was carried out in Him, and is now being carried on by Him. This question has been answered by the Resurrection. By the Resurrection Jesus is set in a place apart in relation both to God, the only Saviour of men, and to sinful men, needing deliverance. In this place and function the primitive missionaries preached Him. Whatever words they used, even if 'Kyrios' never fell from their lips, they bear witness to His resurrection and to His supremacy; and this is essential Christianity, whatever phrases, in any age, may be used to express the meaning.

(4) The return of Jesus.—The Church's message of salvation is now, in one sense, complete. Jesus in His exaltation is God's final and glorious organ of salvation. The Reign of God has entered on its triumph. Salvation is being made effective in the lives of believers, and the company of the disciples is being increased daily by the addition of the 'saved' (Ac 2⁴⁷). In Jesus, therefore, in His earthly ministry and in His exaltation to Heaven, the disciples were beholding the culmination of the history whose former periods had been marked by God's redemptive dealings with His people Israel; and this they were proclaiming with an exultant confidence, which every new manifestation of saving power made more strong and joyful. The culmination itself, however, is a period, not a point of time. The Resurrection is the beginning of that period, and contains the warrant of its progress, but it is not itself the end.

Contemporaneous with the new age of divine victory there is the old age, in which powers of evil still rage and men are still held in bondage and in misery. The Christian missionaries are confronted, both in Judaism and in the Gentile world, with a vast mass of wretchedness and despair, caused by forces of evil, to which, whether seated in human nature or occupying a place in a supersensuous region, men have yielded, and from which they have sought deliverance in vain. To such a world the message proclaimed (i.) the absolute supremacy of the Exalted Christ over every possible force of evil; (ii.) His return, when 'the end' appointed by God shall have come, in final judgment of all evil, and the salvation of His people. The Parousia, accordingly, is part of the message. It derives its whole value, however, from that which is the heart and core of the message, viz. that the Kingdom has come, Jesus is supreme, salvation is a present experience. It is vain, therefore, either to rule eschatology out of primitive Christianity or to make it the whole of Christianity. The so-called 'consistent eschatology' is too easy. It breaks upon the data. God's redeeming action, in the hands of Him who is the only and altogether adequate organ of this saving power, will be completed in a definite, recognizable, and most glorious intervention. We can understand the powerful effect of this part of the message, how weighty an argument it was for repentance on the part of those who had belonged to the evil age (Ac 3¹⁹⁻²⁴); what a mighty source of comfort to those harassed and oppressed by world powers (1 Th 4¹⁸, Ph 4⁵); and what a steady influence to those who were labouring in the service of the Kingdom (1 Co 15⁵⁸). We can imagine also how the Christian hope would shine into the darkness of the world beyond the confines of Israel, where the same sense of an evil age and the same longing for a new dispensation were deep-seated and universal.

When the message was proclaimed, there was possible for the hearer only one of two attitudes. Either he might believe what was told him, viz. that Jesus was the power of God for salvation, or he might reject it. The nature of the former attitude, moreover, is defined by the burden of the message. It is an attitude, or act, of the soul in reference, not to a proposition, but to a personal

¹ For instances see H. A. A. Kennedy, in *ExpT* xix. [1907-08] 346 ff., 394 ff., 442 ff., 487 ff.

³ W. Morgan, *The Religion and Theology of Paul*, Edinburgh, 1917, p. 47.

power. It carries with it the recognition of that power as now operative in Jesus, the confidence that it is capable of effecting salvation and that nothing is beyond its scope, and the trustful commitment of the soul to Jesus as the active power of God and the bearer of the divine salvation. It is, accordingly, very much more than intellectual assent. It is, even in its most rudimentary stages, a religious experience with the promise and potency of rich moral development. It is the condition of man's realization of the divine salvation, and is the human counterpart of divine power.

The whole of God's redemptive action centres in Jesus the Christ. The whole of man's response to the divine appeal is centred in faith. The object of this faith is always God in His saving power; but it is never truly and adequately exercised apart from Him in whom that power is operative. The range and action of that faith ought to be as wide as the love of God, which has all His power at its disposal. The Christian life itself is simply a training in the exercise of faith. The ministry of Jesus supplied the evangelists with ample illustration of the nature and operation of faith.¹

Their own daily experience added new instances, and made more definite their conception of faith (Ac 3¹⁶ 16³¹). Faith may vary widely, from the crudest 'miracle faith' to the most articulate and educated apprehension. But its value never varies. It is the turning of the soul to Jesus; and in that act the divine salvation enters human life, and begins its beneficent and far-reaching operation.

(c) *Salvation within the Church.*—Christ is 'the power of God' (1 Co 1²⁴). The gospel is 'God's saving power' (Ro 1¹⁶). Salvation consists in the effects wrought by God's power in the lives of those who submit themselves trustfully to Christ, meeting 'point by point'² the ultimate and universal needs of man. Christian faith is belief in the willingness and power of God to deal thus effectively with man's whole case, as he stands in the midst of the world, to the uttermost of his need, to the utmost of his capacity.

Christianity, accordingly, can be understood only through 'human documents,' which, when sympathetically read, become 'human sacraments.'³ These documents are open to our view in the NT. A great deal of the material consists in life stories, in character studies, exhibiting the entrance of divine power into human life through the point of contact established by faith in Christ. Even where names and incidents do not occur, we are aware of many persons thus 'saved,' gathered into small communities at various places in the great world, and all together forming a brotherhood, sharing a common experience, aiding one another in religious faith, and ministering to one another's need to the utmost of gifts and resources. For such persons the various NT writings were composed, in a familiar and occasional manner, according as exigencies required and love prompted. And they were composed, it is also to be particularly noted, by persons who, however gifted naturally or specially endowed by the divine spirit, belonged to the same class as those for and to whom they wrote. They wrote out of the fullness of that very experience which belonged to their readers as well as, though it might be not in the same degree as, themselves. There is, therefore, nothing *ab extra* in the NT as regards its content. It is experimental through and through. Forms of thought may be picked up here or there; but one thing universal all forms, and that is the experi-

ence of God's saving power as it meets man in Christ and the message. It is quite possible to turn over the leaves of the NT and to say, 'Lo this is Oriental, this is Hellenic, this is Roman, and the bulk is Jewish!'¹ But to conclude that, therefore, Christianity is a mosaic of bits picked up, or a window formed of pieces of glass stained by the imaginations of men, is wholly to miss our way. Such a mosaic, or rose-window, of religion might be very beautiful, but it would bear no analogy to Christianity, which in its very origin and in its inmost being is life, is power, is Christ. This point of view, securely established as it is by modern scientific method, has, without doubt, great apologetic value.¹ But it is not a pronouncement in favour of any system of theology which may claim to be orthodox. Rather does it give an earnest warning against the idea that finality can be attained in the work of theological reconstruction; and it suggests that the task of theology is the interpretation of the ever-living experience of the Church, including the criticism of those forms of thought in which that experience has been clothed by the growing apprehension of disciplined Christian intelligence.

When we turn to the NT, to discern what needs of men are met and what blessings are gained in the great salvation, it cannot be with any expectation of making an analysis or enumeration that could conceivably be complete. For one thing, human need is endlessly varied amid the innumerable experiences that make up the sum of human life. For another, growth and development culturally and morally are registered by increasing sense of need. But, more particularly, the greatest needs are not felt till there be a revelation of God to the soul. The religious attitude of the human spirit to God is not, 'Here is a list of my needs; now satisfy them,' but, 'I need Thee,' and the divine response is at the same time the revelation of need and the answer of love.

This, then, is what we find in the NT—a voyage of discovery, an exploration at once of human life and of the divine resources. Those who make the journey report continually new 'finds,' new experiences, new possessions, new prospects. Their language rings with wonder, joy, and praise. One explorer testifies to his friends, as the considered result of his own experience: 'My God shall fulfil every need of yours according to his riches in glory in Christ Jesus' (Ph 4¹⁹).

Although, however, the acceptance of the gospel brings with it wealth that is 'fathomless' (Eph 3⁸) and therefore incalculable, it is possible, contrasting the world to which the bearers of the message belonged with that to which they were introduced through faith, to catch some definite aspects of their experience and to begin to understand what Christianity meant for them.

(1) *Darkness.*—The Gentile world was steeped in darkness. It is true that God was never without His witness; and it is true that He does not deal with men according to the abstractness and hardness of human judgment, but according to His own individual knowledge of them (Ac 10³⁵). None the less, a gross darkness did cover the nations, and such light as they had only renders less excusable their misunderstanding of the divine nature and character (Ro 1²²). The Jewish world is . . . and Jews are in a position of immensely . . . only they had availed themselves of it . . . the ripest and most intelligent adherent of the religion of Israel is still waiting for the light of the knowledge of God. He has not the key to the Scriptures, and is liable to think of God and His ways with men in a manner that mistakes and dishonours Him (Mt 13²³). But He has in Christ made Himself known. That which had been partially disclosed in the progress of Israel's redemption has been gathered into one act. He has sent His Son into the world. God is known, as in Israel, so now in Christ. The darkness is past. The true light is shining. To accept Jesus, preached as Christ, is to pass out of shadows into marvellous light. Conceive the ideas of God entertained in Judaism—how remote and unapproachable! Think of the gods of the Gentiles—how foolish and helpless, how, often, monstrous, capricious, and

¹ E.g., Mk 5³⁴ 36 10³² 21³², Mt 8¹³ 9²² 15²³, Lk 7⁵⁰, Mt 13⁵⁸, Mk 6⁵⁴ 40.

unclean! Then imagine the effect of being led through faith in Jesus to know God in His holy character and in the triumph of His love! It is impossible to mark the contrast too widely (1 Co 12^a, 1 Th 1⁹, Ph 3^a, Jn 14⁹ 17³). Even when, in the effort of philosophic thought, the idea of God had been purified and exalted, the end of the religious quest was still unreachd; and the missionary of Christ had to proclaim a God, ethical and gracious, dealing with the world in mercy and in judgment (Ac 17^{22a}, 30^r). Knowledge of God, accordingly, gained through historic deeds and a historic character, is salvation.

(2) Sin.—The world to which all men, Jews as well as Gentiles, belonged was a world of sin. The deepest problems of the religious heart were relief from guilt, the remission of sins, and reconciliation to God, whom conscience reckoned hostile. The question is not really debatable. The gospel is preached in view of an undeniable situation. Sin? 'Christ died for our sins.' The salvation offered is forgiveness, reconciliation; and the offer is amply verified in the experience. We are so accustomed to go to the NT for theories of atonement that we are apt not to lay the emphasis on the primary fact portrayed in the NT, viz. a life lived without the over-hanging sense of guilt and condemnation. To accept the divine mercy extended in a Christ who died and was now enthroned in power is to pass into a new world. The writings make the contrast vivid; and always the emphasis lies on the immediacy of the experience: instead of guilt, pardon; instead of enmity, reconciliation; instead of despair, peace and joyful confidence. There is nothing abstract, doctrinaire, intellectualist. All is concrete, living, personal. To believe in Jesus, the Christ, was to gain in the moment what all religions sought and none had to offer, not even Judaism. What Jesus gave in the days of His flesh (Mk 21⁰, Mt 11²⁹) He gives now in the day of His accomplished sovereignty. 'In Him we enjoy our redemption, that is, the forgiveness of sins' (Col 1⁴). This is not theory. It is life, and salvation.

(3) Human life.—In the world, where men dwell in alienation from God, human life has not its proper value and human beings have not secured to them their true rank. It is true that theoretical affirmations of the independence and worth of the individual were common in an age when the steam-roller of empire had crushed national and civic freedom. It is true that the Jews claimed to be a spiritual *élite*, and to stand high in the favour of God; but a claim to spiritual rank grounded on ethnic descent defeats itself. All theory, however, broke on the hard facts of the social condition of the Roman world, where the dignity and security of man depended on accidents of birth and fortune. But the situation is absolutely changed for those who have seen and received God in Christ. It is impossible to put this too strongly, if we are to enter into the heart of primitive Christianity. Had Christ been 'a god' or 'a demi-god,' belief in Him would have left the chasms that yawned between man and man uncrossed. But, if God, Creator and Redeemer, be so present in Christ that He manifests and fulfils His gracious will towards sinful men, there is simply no room left for distinctions of grade in humanity.

Man is admitted to the divine. He has gained, in the act of faith, a rank compared with which the decorations of the world are paltry and unreal. This sense of human dignity was profoundly marked in all the teaching of Jesus; and now it belongs to the consciousness of all who believe in Him as the living organ of the divine salvation. Take the highest rank known on earth, rank that carried with it the most sacred privilege and the holiest religious function—kingship and priesthood; that belonged to the humblest believer in Jesus, the slave-girl equally with the Roman noble (Rev 15^r). More profoundly still, consider a standing which belonged in the religion of Israel to the Messianic King, or to the privileged people as a whole. Note how this position of sonship towards God belonged to Jesus, and received in His person an interpretation beyond anything that the highest reach of Hebrew religious aspiration had conceived. Then note what happens in the act of faith in Jesus as Christ. Entrance is made into that very standing of filial relationship to God. It is simple matter of fact that to be receptive of, and to be laid hold of by, the saving power of God in Christ makes a man, not a servant, but a son, not a door-keeper, but a child in the Father's house. This is Jesus' assurance to His disciples, so confident and comprehensive that the Christian Church even yet grasps it too timidly. But it is typical and essential Christianity. It is not the thin and jejune dogma of a vague and philosophic theism. It is a fact in the lives of those who have made the transition from one universe to another through faith in Christ. 'Children of God! That is what we are' (1 Jn 3¹). This is not a guarded inference. It is an actual experience. This is what 'salvation' means for a Christian.

(4) Corruption.—The world into which Christianity entered was morally corrupt. Salvation, operative as a force in that world, meant moral transformation (1 Co 6⁹⁻¹¹). It is not necessary to exaggerate. Even Paul, who dips his brush in darkest colours (Ro 12¹⁻³²), is ready to recognize higher elements in the society to which he bore his message. But the terrible facts of moral decay and impotence are patent. The heart of mankind was aware that the remedy lay not with itself. The demand was for a 'Saviour,' and no religion had any chance of winning adherents which did not present a method of 'salvation.' Historically, Christianity ranks as one of these religions. Its historic warrant lies simply in the fact that it did what it professed to do. It did not, of course, profess to make, on the instant, morally perfect beings. But it did claim that persons submitting themselves to Jesus were, in that act of soul, lifted out of the region of moral decay and death, and were placed in

a new world and made subjects of healing and transforming agencies which contained the promise and potency of a result nothing less than divine perfection.

And the actual healings, the progressive transformations, verified the claim. Whatever may be thought of Jn 4⁴² as the authentic record of an incident in the life of Jesus, it is the exact and reliable account of an experience which included, not only the dwellers in a remote Samaritan town, but all men everywhere who made experiment in the saving power of God in Christ. The method of the Church was the method of Jesus (Mk 21⁷). The success of the Church was the success of Jesus, multiplied by all the difference between a ministry accomplished in the limitations of the body and one achieved in the unhindered exercise of sovereign power (Jn 5²⁸ 14¹²²). Jesus Himself was profoundly aware that a new world of moral and religious powers was coming into being with Himself (Lk 16¹⁶, Mt 11¹¹), and those who enter it become new, as if they had—as indeed they really had—begun life over again (Mt 18³). And this sense of newness pervades the NT (2 Co 5¹⁷, Gal 6¹⁵, Eph 4²⁴, Ro 12², Tit 3⁴, Ro 6⁴). Christians live and move in a 'new sphere of life,' and no symbol is too strong to suggest the wonder of the change—creation, resurrection, or birth. But no physical analogy or metaphysical explanation affects the fact, which is a moral experience, the possibility of which lies in the power of God, and the responsibility for which lies in man's act of repentance and faith. Even as Jesus wrought a moral miracle in His training of His disciples when He was with them, so does He now continue the same operation, through the discipline of life, till He has gained an even more marvellous result. He puts His stamp on them. They are transformed into His likeness. Salvation is none other than this process.

(5) Bondage.—The world lying outside the moral universe, where the holy love of God is dominant through the exalted Saviour, lies in bondage. The philosophic Greek mind construed this through a physical or metaphysical dualism of form and matter. Men, unhappily, are immersed in a material element and are wholly subdued by it. The mind of Israel is not obsessed by such metaphysical abstractions. It knows nothing of metaphysical dualism, and sees in man a unity of matter and spirit, of body and soul, within the sphere of personal life. The religion of Israel, developing through ages of moral education, has reached an analysis of man's condition at once darker and more hopeful than the Greek. The dualism is not between two substances or elements of which man is the combination, but between man in his self-will and God in His holy sovereignty. Sin, therefore, is worse than a misfortune or cruel destiny, of which even great criminals are the helpless and hapless instruments. It is an act of man, which, thrown back upon his own nature and on human society, has produced anarchy and confusion, disorganization and enslavement. To escape from this bondage, the Gentile world had its philosophies and moralities, its popular faiths, and its mystery-religions. The Jews had their Law, magnificently superior in moral quality to anything that the rest of the world could provide. It was, however, at its best, a conspicuous failure, and left men, indeed, in a double bondage—bondage to a code, without the faintest degree of freedom from the tyranny of sin. Here the Christian message intervened and, in a word, emancipated the human spirit for ever. The saving power of God, the power that has met and vanquished sin, is ever active and accessible in Jesus, the living Lord. To accept Jesus as Saviour and Lord is, in that act, to receive the power of God into the springs of life, and to be forthwith under its enabling influence. This power is designated the Spirit, the term which the religion of Israel reserved for God in His indwelling and inworking, in the sphere of human life and on behalf of men. To be a Christian is to believe in Jesus the Christ and to receive the Spirit. To believe in Jesus as the Christ, without having received the Spirit, is not yet to be a Christian (Ac 19¹⁻⁷). To believe in and seek to possess the power of God, without repentance and faith in Christ, is to be miserably self-deceived and hideously guilty (818-24). Here is a moral principle of boundless applicability. Its range of action could not be discerned at first. Dangers threaten its application. But from the beginning 'the reception of the Spirit is the whole of Christianity.'¹

Christianity is the religion of the Spirit. The Church is the community of the Spirit. Legalism, magic, externalism of every sort is condemned from the outset. Without the Spirit there is no salvation. The possession of the Spirit gives the Christian salvation the notes of power (Eph 314-20), freedom (2 Co 317), and joy (Lk 10²¹, Ro 14¹⁷).

(6) Fear of demons.—It is impossible to contemplate the ancient world without observing one feature which it shares with all lands which at the present time are under control of animism—the wide-spread fear of demons. Whatever psychologists or members of the Society for Psychical Research may make of the phenomena, the fear itself is beyond all question. Illustrations abound; and we are to conceive to ourselves a state of mind according to which the supersensuous region, the 'air,' is inhabited by malignant beings seeking the destruction of men in body and in soul. Beings well-disposed towards man no doubt exist and give their aid; but the battle is sore, and the issue is undecided, and the fear remains. The Christian missionaries, like Jesus Himself, shared the belief in the existence of such evil powers, and admitted the helplessness of man in conflict with them. But the message declared that the power of God, almighty in its holiness and love, is now effective in the person of the conquering Christ, to beat back the worst assaults of such enemies and ultimately to banish

them from the universe of God. This is the claim of Jesus (Mt 12²⁸); and the claim is verified by the cases of cure (Mk 13²²). The power of victory resides in the message, and is exercised by those who proclaim it (Mk 16¹⁷). The NT is steeped in the conviction of the reality and fearful workings of these evil spirits, and in the triumphant assurance that they cannot harm those who have taken refuge with the power of God, which acts through the uplifted Lord by faith in Him (2 P 24, Rev 9²⁰, 2 Ti 17, 1 Jn 4⁶, Ja 219 315, Ac 516 87 1616-40). The apostle Paul moves in this region of thought, and contemplates with awe and triumph the havoc wrought by these evil powers and their overwhelming defeat by the sovereign power of God in Christ (Eph 22 612, Ph 210, 1 Co 28, Col 115 214^c, Gal 48^a, Ro 838^c). The point of interest is to be found, of course, not in the alleged reality of these evil beings (a question which, be it noted in passing, has been reopened by the discovery of the 'subconscious'), but in the reality of the fear, and in its expulsion by the conviction of the sole supremacy of that God who, through Jesus, has revealed Himself as the only Redeemer. To the men of that day salvation carried with it deliverance from demons, and to animists of the present day it means the same thing. Missionary records echo the NT sense of immense relief, and the confident security, which is like an awakening out of nightmare.

(7) Fear of death.—A yet more intimate and personal fear possessed the world, apart from the influence that streamed from the resurrection of Jesus—the fear of death. The human heart reacted passionately against this inevitable end of human aspirations and endeavour and enjoyment. And in the age in which Christianity entered on the scene of human hopes and fears the demand for assurance of immortality was loud and insistent. It was met by philosophical arguments and by the promises of the mystery-religions. But the fear and the doubt brooded over mankind. Those who were trained in the religion of Israel were in a different position. Apocalyptic conceptions might help (Dn 12³), and might issue in a dogma of 'resurrection at the last day.' But such a belief was scarcely a deliverance from the gloom of separation from the sphere of life and love. The real line of hope lay in the faith which apprehended God as Redeemer. In this, after the terrible discipline of the Exile, the religion of Israel culminated. The individual human being who commits himself to God possesses a salvation which is not limited to time and space. 'God is not the God of the dead, but of the living' (Lk 20³³). Such a faith, however, needs to be grounded in an act of God, which meets the fact of death once for all, and for ever changes its significance.

The hope of immortality cannot stand apart from the triumph of redeeming love. When that triumph takes place, hope becomes certainty, being, indeed, simply the register of the inner quality of redemption. Salvation from sin is salvation from death, because the enthroned Lord has the whole power of God at His disposal, and none of the powers of the earth or of the air can make head against Him (Ro 838^c). Hence, the message met this profound need of man, not with a speculation, but with a fact: 'Christ is risen.' Questions remain regarding the attendant circumstances of man's future life; but they do not touch the central fact of the resurrection of Christ, which carries everything with it and without which nothing remains (1 Co 1518^c, 16²⁰). Much of Paul's arguing may slip over us, but, as he meets the conjoined evil of sin and death with the double fact of the Cross and the Resurrection of Christ, he is on the secure ground of history and experience; and on that ground the whole primitive Church stands with him.

Salvation, therefore, means deliverance from the thralldom of a life-long fear of death (He 214^c). It means, too, a change in the very nature of death, so that it becomes comparable to the sleep which precedes the daily resurrection to life and action (1 Co 1518^c). It means, even more, a transfiguration in the experience of dying, which is no longer a fate, but an opportunity and condition of realizing what the power of God in Christ can do for a mortal man (1 Co 822). The defeat of death lies in the moral sphere, and is already absolute. The physical counterpart of that victory belongs to the consummation of salvation, when the period ushered in by the Resurrection shall be crowned by the return of the Lord. Then in a transition which, in the nature of the case, is unimaginable death shall be 'swallowed up in victory' (1 Co 1554). But this anticipation is not a hope thrown into the unknown; it is the sure and certain issue of a salvation which is a present experience.

(8) Sensitiveness to suffering.—The world which saw the Roman Empire erect itself above shattered cities and states and an artificial society plant itself upon varied masses of enslaved humanity could not but be full of pain. And the rise of an intense individualism was necessarily accompanied by a developed sensitiveness to suffering. Obviously, here was a need in which body and soul cried for relief and the heart of tortured humanity imperiously demanded comfort. It was slow in coming and miserably inadequate to cope with the extent or the depth of human distress. In the Hellenic-Roman world a noble effort was made to bid defiance to pain and take refuge in the inwardness of the true Good. The defect of this view is the irrelevance of pain. Pain is not conquered till it is seen to have a meaning, in relation to the realization of the highest good of mankind. The wise and devout had much to say of the disciplinary value of suffering and sorrow, and cultivated the hope of another world, which would make amends for the griefs of this one. Yet, apart from the fact that such a literature of consolation, eloquent and tender though it was,

did not reach beyond the *élite* of cultured sufferers and had no message for the dumb pain of the unknown multitude, it missed the point. A Providence which does not take pain into itself can scarcely be a Deity to which the sorrow-laden will take their case. Accordingly, myths of a divine suffering had a wonderful attraction for a world in pain. But they were too unsubstantial, too remote from the bitterness of the woman, the slave, the prisoner, the bereaved, the tormented, to constitute a world-remedy.

Within the discipline of Israel a thought was growing which might seem to have little of hope in it, and yet did contain the secret of consolation. The problem before the exercised soul of Israel was pure pain—not pain demanded by guilt, but the pain of the guiltless, suffering in a world in which moral considerations are confounded and the wicked flourish, while the righteous are cast down. The customary consolations are offered: that the triumphing of the wicked is short, that judgment is sure though delayed, that suffering is disciplinary, that God is the true good of man, and that this good, being inward, spiritual, and permanent, outweighs the evils of life—and all are of no avail. None of them goes to the root of the matter or stays the revolt of the soul. But there was a suffering in Israel which had in it redemptive value—the suffering of those Servants of God who held office under Him as mediators of His redeeming purpose, whose vocation (it came to be seen) was fulfilled in suffering, a suffering, not inflicted by a God who stood outside in untouched bliss, but appointed by God in pursuit of His gracious design, and in some sense shared in by Himself. And this suffering of God is seen in Jesus, identified in the faith of the disciples as the Suffering Servant of the Lord. The message of salvation to a suffering world does not come down upon it from a region of empyrean bliss, but enters it through the door of sympathy, and speaks to it of a divine experience of pain, and comforts it, from within, from a sanctuary of sorrow. Jesus is prepared for His saving office through pain (He 210 68^c). Thus, and thus only, is He enabled to offer 'eternal salvation,' and to 'save to the uttermost' of man's need. Corresponding to human suffering is the suffering of the Christ of God. The Christian preachers did not unfold a theodicy. They laid bare the heart of God. From the point of view of faith in the Servant of the Lord, suffering and victorious, the fact of pain is met, not theoretically, but experientially.

In the first place, it appears as the thing which ought not to be in the universe where love is supreme. It belongs essentially to this world, where the love of God has still to win its practical lordship. Jesus healed disease and relieved suffering as part of His redemptive work; and the Church continued His task, bringing to bear the resources of God which were available to faith both in direct healings (1 Co 129) and in a ceaseless ministry of comfort (2 Co 13^c).

Not merely, however, is pain met by the counter-remedy of divine power; it is taken up into the redemptive operation of God, and is thus transmuted into blessing. It is not endured apart from Christ, nor is He separated from it. Those who preceded Him in time were caught in the tide of suffering, whose waves submerged the soul of Jesus (He 1125). And those who follow Him do so by the way of the Cross, and share His pain, as He does theirs; and in their case, as in His, the suffering is an element in the salvation (Ro 817, Ph 310). A sorrow shared with the Man of Sorrows is a sorrow healed. Never had there been such sufferers as the disciples of Jesus, and never souls so glad (2 Co 48). In the experience of the sufferers pain acts as it did in Jesus, who was perfected by suffering, though in the case of disciples pain had a relation to personal sin which it had not in His case (He 127-11). Nay, the pain of Christians, borne as part of their witness to the world, reproduces the very sufferings of Christ (2 Co 15), and continues them on behalf of the Church (Col 124). Nevertheless, the pain remains as pain, glorified though it be (1 P 413^c). The NT is superhuman, but not inhuman. It does not glorify pain as such, and the Christian experience of pain was not touched with fanaticism. Pain belongs to that period of time in which the Kingdom of God has not yet come in fullness; and the brevity of the trial is frankly appealed to as an element of encouragement (1 P 16, Ro 818, 2 Co 417^c). From a world where pain is inevitable the suffering Church lifted its eyes to that other world where 'there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain' (Rev 214). Meantime, the life-story of believers is included in the redeeming purpose of God, which is no matter of doubt, because it has triumphed in Christ. Providence (q.v.) in the NT was not a Stoic theorem: it was an inference from redemption achieved in Christ (Ro 823). Pain, therefore, in Christian experience is not merely defeated; it is transfigured. Christians are not merely stern and magnificent bearers of pain, they are 'more than conquerors' over it (837); they are saved in it and by it, out of it and over it.

(9) Moral evil.—Passing from separate evils belonging to the present period, we note in it one comprehensive quality. This world is under the control of moral evil; it stands condemned by the holiness of God; and it is reserved for His final judgment. A modern revision of Christianity may reverse this estimate of the world, and take an optimistic view of the forces evident in it. But it is indisputable that the gloomier view was universal in the century in which Christianity was born. It was entertained by reflective minds everywhere. The Christian preachers had scarcely anything to add to its darkness, though they construed it through a more ethical conception of God and a more austere idea of His holiness. Proof that this was the Christian view of the world lies broadcast through the

NT, and may be collected under the heads of *αἰών, κόσμος*, and *γένεα*. In relation to this world, therefore, salvation, which means, as we have seen, so much positively in Christian experience, takes on a strongly negative quality. To be saved is to be saved out of this world and from the 'wrath' which is about to break upon it. It is the purpose of Messiah's coming to save men from this evil world (Gal 1⁴, 1 Th 1¹⁰). This salvation rests upon, and is guaranteed by, His atoning death (Ro 5⁹).

From the very beginning the message warns and pleads in view of this coming doom (Ac 24⁰; cf. Mt 3⁷). Christians are 'refugees' (He 6¹⁸), who, in another metaphor, are anchored to the hope which is as immovable as 'the inner Presence within the veil.' This negative attitude to the world has to be made good by a continual rupture of all ties which could bind a man to that which he has forsaken. Sins are to be broken off (Col 3⁵, Ro 6^{11f}, 1 P 4^{1f}). Even things not sinful must be denounced if they threaten the integrity of a disciple's devotion to the Kingdom. The strenuousness of the Master's words was not forgotten (Lk 9⁵⁷⁻⁶² 14^{25f}), and is echoed by those who know His mind (1 Co 9^{25f}).

Yet salvation, while thus consisting in deliverance from this world, and carrying with it a negative relation to the world, is not in itself negative. It is essentially positive and dynamic. It is intensely individual, but it is not individualistic, and does not terminate in the escape of the solitary soul. It is a gift; but it is the impartation of divine power, of which the 'saved' are at once the subjects and the organs. Hence it is also a task, and is possessed only in fulfilment of vocation. The disciple band, accompanying the Master, trained by Him and sent forth on errands of mercy, remains type and norm of the Christian Church in the primitive times, and, we may surely add, in every period of its history. The task is set by the gift. The gift is God's redeeming love in Jesus, who lived, and died, and rose again. It is received in faith, and operates inexhaustibly through the experience of a lifetime, and, after this life, will continue towards issues of inconceivable glory and joy. Being received, it rises in the individual as a fountain of energy corresponding to its own nature. Received as redeeming love, it acts through the saved, as redeeming love for those whom Jesus died to redeem. There is a uniqueness and absoluteness in the Person and Work of Christ, from which Christian faith has never wavered; but this did not hinder recognition of the moral congruousness of the Church's task with that of its Lord, or the sense of obligation to continue the operation of redeeming love towards the world. To separate the service of love from the experience of love is to cut the nerve of Christian faith. The service is twofold: (i.) confession of Jesus as Lord (Ro 10⁹, Mt 10³²), witness-bearing to the fact and power of His resurrection (Ac 18^{23f}); evangelism, a ministry of reconciliation which is the very action of God towards men between whom and God there exists a state of enmity (2 Co 5¹⁸⁻⁶¹); (ii.) the activities of love in sympathy and help. Love is essentially social. Its bent is towards an organism. The primitive Christians had no social theory; but they were a society. They had no stereotyped programme; but they acted on an inspiration of compassion, and sought to gather into their living body the very Body of Christ, the *disiecta membra* of the dissolving fabric of contemporary civilization. This is what we see in the NT—love in action, having in it the very quality of the divine mercy, seeking the worst, despairing of none, integrating all into the organic unity of the society which is created by Christ and lives in Him. Salvation, accordingly, is social or it is nothing. It is the organization of mankind under the rule of redeeming love.

(10) Doom of the world. — Finally, salvation within the Church, whether viewed as the possession of the 'good things' which the Heavenly Father delights to bestow on His children or as escape from a world which is 'not of the Father' and is doomed to destruction, is not complete in an experience which is measurable by time. There is no hope for this world. Its doom is irrevocable. The only hope for mankind is the replacing of this order by another, in which other powers bear sway and other relations prevail. Salvation belongs to that other order, and comes when that order shall supervene upon this. This is the paradox of the Kingdom of God. It is, and it is to be. Salvation, in like manner, is both immediate as a fact and future as a hope. It is impossible to miss this futuristic note of the Christianity of the NT, however great may be our prejudice against it, or however carefully we may exclude it from our own type of religion. The 'saved' of the times of the NT are looking for a 'salvation' yet to come, ensured to them by the faithfulness of God, certified by the earnest of the Spirit (2 Co 1²² 5⁵) and by incalculable riches of Christ (Eph 2^{7f}). Sometimes the future seems, as it were, in process, and the 'saved' are 'being saved' (1 Co 1¹⁸ 15², 2 Co 2¹⁵). Often it is regarded as about to be ushered in, in a day or an event, whose date cannot be fixed, but which stands imminent to the faith and awe of believers (Ro 13¹¹, 1 Co 3¹⁸, Ph 1²³, 1 Th 5², 2 Th 2¹³, He 1¹⁴ 23. 10 5⁹ 6⁹ 9²⁸, 1 P 1⁵ 8⁹). It is obvious that there was much in this Christian attitude to this world and outlook towards a world to come which resembled the views and estimates entertained by non-Christians. There is, however, one radical and characteristic difference, viz. that the Greek was operating, if we may use the phrase, with the category of substance, the Christian with that of power. The Greek thought of matter, from which he desired to be free. The Christian, trained in the OT, thought of moral evil working through the lower nature but not identical with it; and from this evil he knew he could be delivered only by the act of God. Already he knew by experience the efficacy of that power; and

he expected a day of its complete vindication, in salvation and in judgment.

The 19th cent. mind, accustomed to speak of a 'Christian civilization,' and hearing vaguely of 'evolution,' resented this position, and preferred an optimistic view of the world, as being in a condition of progressive improvement. Probably the Great War will modify, if not reverse, this general estimate, and may lead back to the primitive Christian attitude and outlook. In any case, neither optimism nor meliorism represents the primitive Christian attitude. At the same time, that attitude will be utterly misconceived, if it is stated as a pessimism, with the practical result of leaving the world to grow worse and worse, and even being satisfied that it should do so. Salvation certainly is perfected in the Parousia. But this does not mean that the Kingdom of God is non-existent or impotent, or that its subjects are to stand by as idle spectators of the world's tragedy. The rule of God is real, living, and almighty. It is in the hands of the King Messiah. He is at work in the world. Its evil powers are already broken. He has overcome the world. In the interval which lasts till His return He is in conflict with the world powers. That divine warfare is waged above man, in a manner and by means beyond human calculation; so that believers have constantly to look on, while the Angel of the Lord works wondrously. But it is not waged wholly apart from man. The believer is also a participator in this great conflict. His faith is a factor in the victory. It has three lines of operation: (i.) direct action with reference to the world, in witness-bearing and in Christian ministry, both of these being a vindication to the winning of men looking out for the coming of the Kingdom; (ii.) the devout men in the prison those who waited for

the waiting attitude, which is the essential piety of Israel, from the Exile onwards (Is 40³¹, Ps 62. 5 130^{5f}, Mk 13^{33f}, 33. 37, Mt 24^{42f} 25¹³, Lk 21³⁶, 1 Co 17 16¹³, 1 Th 1¹⁰, 1 P 1¹³, Ja 5⁷, Rev 3³ 16¹⁵, 2 P 3¹²); such waiting is very far from passivity; it is itself issue and proof of the powers of the Kingdom, and is a condition of its arrival; (iii.) as the accompaniment of waiting, prayer. The NT practice of prayer is controlled by the thought of the Kingdom. Its typical aspiration is for the coming of the Kingdom (Mt 6¹⁰). Its requests are directed to all things which carry out the designs of the Kingdom, and are granted, as they are preferred, in the name of Christ (Jn 14^{13f}). Above all, prayer, especially in its *intercessory form*, is work done for the Kingdom, and conditions the coming of the Kingdom. The Kingdom will not come to an unwatchful and prayerless Church. In this, as in other forms of service, the power is God's; and prayer means the presence and operation of God, and, therefore, is sure of its answer (Ro 8^{26f}, He 7²⁵, Jn 16^{23f}, 26⁷).

The coming of the Kingdom, accordingly, with the realization of salvation is 'at hand.' Jesus will return 'very soon' (Rev 22²⁰). The unseen world, eternal and divine, impends over this doomed and transient world, and may break through into it at any moment. And yet its arrival is not a bare event, poised on nothing in human life and history. Some of the conditions of its coming lie within the divine vision only; and therefore the mind of men and angels, as of Messiah Himself in the days of His earthly manifestation, contains no means for determining the date. Others lie within the reach of man, and are summed up in faith, with its exercises of loving service, watchfulness, and prayer. Salvation, in its beginning, continuance, and consummation, as gift, and task, and heritage, is relative to faith, and apart from faith is impossible as an experience. Hence the NT closes, not with a prediction, but with a prayer, 'Amen, Lord Jesus, Come.'

(d) *Defensive statement of the Christian salvation.*—The Christian message of salvation is not addressed to the intellect as a 'faculty,' and does not terminate in the construction of an intellectual system. It comes as a living word, instinct with life and power, and evokes an experience in which the whole man participates, and brings salvation as an invincible spiritual dynamic. If the NT thus escapes intellectualism, however, it is equally removed from emotionalism, and its insistence on experience does not mean surrender to the caprices of subjectivity. It never attempts to separate life and thought. The experience grows towards 'knowledge,' a discernment of the realities of God's character and purpose, of the values and powers of human life, of man's state and need, as well as his destiny and perfection. Such 'knowledge' is a 'gift' of the Spirit (1 Co 12⁹). But it is for the use of the Church at large, and its diffusion and increase are an object of prayer (Ph 1⁹, Eph 1^{17f}). By such knowledge the experience of salvation is interpreted and made aware of itself, and grows clear-eyed and strong. Such an interpretation is the necessary task of the Church throughout all the periods of its history. Gathered into succinct expression as the voice of the Church,

it forms creeds and symbols. Developed systematically, it forms a body of doctrine, growing through criticism to fuller and more concrete statement. Theology is properly soteriology, 'the science of realised redemption.'¹ In the NT, however, the interpretation has not yet taken the form of articulated creed or systematized doctrine. Rather we have in it the work of men, who had the gift of knowledge, setting forth, as occasion served and the needs of the Church required, aspects of the great salvation, and bringing before the minds of Christians the necessary implications and issues of the faith by which they lived. There is no speculation *in vacuo*. Everything said is practical in aim and is relevant to the actual condition of believers. The concern of the writer is always salvation, as message and as experience. Full details belong to the discipline of exegetical and Biblical theology. Here it will be enough to indicate the points at which danger threatened the Church's treasure of salvation within the times covered by the NT literature, and the character of the defensive statement made of the Christian experience.

(1) *Misuse of the Christian hope.*—Eschatology has been, in all ages, the happy hunting-ground for religious cranks. The primitive Church did not escape the presence of such pests. If we suppose the bare idea of the Parousia to take possession of the mind, without any deep insight into the nature of God's redeeming power, or any experimental acquaintance with His salvation, the effect will be inevitable; and there will be persons wandering about in idleness, spinning endless yarns out of their own brains, and sponging on their neighbours for the necessities of existence. This was met on the part of the leaders of the Christian movement by a strong emphasis on the value of the present, as affording the sphere of moral discipline and the opportunity of loving service. It mattered not how short the interval before the Parousia might be; the immediate duty of living under the direction of God's holy will remains unaffected. The certainty of the Return gives great comfort and encouragement in the discipline of life, and adds great urgency to the vocation of the Christian. But there is a conspicuous absence of luscious description of the delights of heaven, and there is a resolute insistence upon the performance of common duties (1 Th 4¹¹, 5¹⁴, 2 Th 2¹⁵, 3¹²). There is no withdrawal of the hope. A Church, or a soul, in 'the great tribulation' could not tolerate that. But there is balance and proportion in statement and conspicuous ethical sanity.

(2) *Perversion of the gift of the Spirit.*—The idea of the Spirit of God has a long history, and is bound up with the idea of salvation. As the latter deepens in moral and religious quality, the former grows in purity and is more and more removed from physical or psychical excitement. Yet there are obvious dangers connected with the possession of the Spirit, which are marked in almost every 'revival.' It is accompanied by intensity and fervour, which are very apt to take crude, offensive, or even unethical forms. The Christian movement did not escape this peril. To believe in Jesus was to receive the Spirit and to become the subject of its special operations. Some of these implied psychical disturbance and the manifestation of supernormal experiences and powers. Inevitably these attracted attention, and captivated the imaginations of minds untrained in the Christian life. The whole Christian movement was in danger of being assimilated to popular animism, especially in those lands where statelier

and colder religions were already being replaced by more fervid and even frenzied types. The apostle Paul understood the danger as none of the other leaders could, and it is the great achievement of his career that he met it fully, and beat back an evil which would have made the Christian salvation a mockery. He did not deny the value of ecstatic phenomena. Intense experiences in the crisis of the soul's inner history may be expected, are to be counted a privilege, and are not to be condemned or repressed (1 Co 14¹⁸, 2 Co 12¹⁻⁵, 1 Th 5¹⁹). But they are not the only or the chief gifts of the Spirit. They occur among many others (1 Co 12^{4-11, 28-31}, Ro 12⁶⁻⁸, Eph 4¹¹). They must submit themselves to one obvious test, viz. value for edification and ministry. Submitted to this test, they sink to the bottom of the scale (1 Co 14¹⁹). The apostle has a broader treatment of the question. He carries out the process begun within the OT, and lifts into full view the moral and religious value of the Spirit. He interprets it through Jesus (Ro 8⁹, 2 Co 3^{3, 17}). This, indeed, is the ultimate valuation of the Spirit as the power of the Christian salvation; for Paul fully believes in demonic powers which are hostile to man and to the Redeemer of men (1 Co 12³). The ecstatic phenomena, though prized, fall out of notice, as he fills the idea of the Spirit with the meaning of salvation, as wrought by the living Lord within the higher life of man.

(3) *Lowering the level of the salvation experience from grace to legalism.*—Here we have a danger, the exact opposite of that which we have just noticed, though often in fact connected with it. An immature Christian has been delivered from the present 'world' or 'age' with its dominant powers of evil. The historic events of the Cross and the Resurrection stand behind him as the guarantees of his deliverance. But how is he to live, and order his doings, in this new world into which he has entered? The intoxicating sense of emancipation carries him on for a while; but, as it subsides, what is to take its place? The nearest, most familiar, answer is to be found in rules and statutes. Let him govern himself by these, and all will be well. The gospel itself, to one in this state of mind, is a new law, embodying the old law, with additions of its own. Salvation, it seems, while made possible by an event now past, has still to be won, and appears as a recompense for a steadfast adhesion to law and a requisite number of 'works.' Thus legalism follows hard upon the gospel. This peril appears within the times of the NT; but it is a familiar phenomenon in the mission field to-day. In another way the danger of legalism threatened. Suppose the intoxicating sense of liberty to be cultivated, and its most intense and bizarre expressions to be prized as notes of a high degree of spirituality, while sheer immorality threatens the unstable soul, how shall this evil be met? A direct and obvious answer is: Cut out the liberty itself, and put this soul, that is not fit for freedom, into the shackles of law. Let the Church administer salvation under a code, apportioning it according to the measure of obedience. The tendency to legalism, accordingly, is entirely natural, and yet it is plain that it subverts Christianity in its inmost essence. Legalism, in point of fact, is not religion at all. Certainly it is not the religion of the OT. Law in the OT presupposes grace. The *Psalmi Paulini*, born in the midst of a law-observing Church, stand an imperishable witness against legalism. Ezekiel, the parent of the later systematized law in Israel, is no legalist.

¹In his sketch of the ideal sanctuary of the future, a great moral change in the people, brought about by the Spirit of Jahveh, is presupposed. The nation, in whose midst Jahveh

¹ P. T. Forsyth, *The Person and Place of Jesus Christ*, London, 1909, p. 216.

deigns to dwell, is a nation prepared for His indwelling by a thorough regeneration of heart and life. . . . Ezekiel's conception of holiness is rooted in a profound conviction of the evil of sin, and in a keen sense of the necessity of personal faith and repentance for acceptance with God.¹

When the religion of Israel culminated in the Person and Work of the Redeemer, it certainly was not to sink its adherents to a lower stage than had been known in the OT. The new stage of the religion of redemption is inaugurated not by a mere event of the past, but by an abiding event, if it may be so described. Resurrection and Pentecost go together. The Redeemer is not dead and relegated to a distant throne. He is living, as Spirit, in His Church. He, by the Spirit, is present and operative in all believers. He is everything to them, standard and strength, guidance and power.

The answer to the practical problem, 'How shall the believer conduct himself in the new world?' is met, as the first demand for salvation is met, by the appeal for faith. Trust the living Lord; receive the Spirit of Jesus. Live by the Spirit; be guided by the Spirit (Gal 5²²). No doubt there are dangers in such a course (5¹⁸). But they are to be met, not by a faint-hearted compromise with legalism, but by the interpretation of the Spirit through the historic Lord, whose *alter ego* the Spirit is—an interpretation which is gathered up into love, that very love which is the essence of God and the motive of the Redeemer's sacrifice (Eph 5²). To a clear eye legalism and the gospel of God stand as contradictions (Gal 5²). Legalism is bondage and shuts the soul into that old world where 'elemental spirits' vaunt themselves against God's redeeming power (4¹⁻⁹). No compromise is possible (2³¹). What is at stake is salvation itself. If legalism triumphs, the labour and suffering of God have been of no avail. He has been defeated. He can do no more. We can understand Paul's passion as he fronted the Judaizers. He saved Christianity as the religion of the Spirit.

(4) *Changing the nature of salvation from the power of God to magic.*—Amid the welter of religions which in the first century of our era were offering 'salvation' to a needy world there was one general conception and one prevalent method. The conception is union with the divine; the method is rite and ceremony, acting magically. The details are curious, but the interest lies in the ruling idea that it is possible by an external act to be united with some superior being or substance, and so be saved from a world which, being material, is inherently evil. The problem, the idea, and the machinery all belong to a far lower level of religious experience than that occupied in common by the religion of Israel and by Christianity. It is true that these 'mystery-religions' were a notable evidence of the world-wide sense of need and did form a *preparatio evangelica* which might truly be regarded as inspired by God. A skilful missionary, therefore, would not enter the lists against them in arid controversy. He would use everything in them which he could transmute into Christian uses. But on two points he could make no compromise: (i.) the nature of faith as the 'universal coefficient of all spiritual blessing' (Ro 1¹⁷);² (ii.) the ethical quality belonging to the Spirit of God and to the life in salvation. Paul is conspicuous for his sympathetic appreciation of all elements, even in heathenism, which have affinities with the religion of redemption. But his conceptions of faith and of the Spirit are rooted in the religion of Israel, and are determined through the Person of Christ, as God's agent in redemption, and the source of salvation to all who believe.

¹ R. L. Ottley, *The Religion of Israel*, Cambridge, 1905, p. 118.

² J. V. Bartlet, in art. BAPTISM (New Testament), vol. II. p. 377b.

'The evidence,' says H. A. A. Kennedy, 'makes it wholly superfluous to seek for the explanation of Paul's use of any of these terms in Hellenistic Mystery-Religion. What we do learn from the parallels is the ability of many of his readers to catch the meaning of a more or less technical terminology, due not merely to a course of instruction in the Old Testament, but to their acquaintance with a religious vocabulary already current among the Mystery-associations.'¹

There is only one 'saving' institution in Christianity, and that is the gospel (Ro 1¹⁶, 1 Co 1¹⁸). Any rite tolerable in the Christian cultus derives its value from the measure in which it sets forth the gospel, and the 'coefficient' of any blessing that it conveys is only and always faith.

(5) *Depriving Christ of His unique function and supreme place in the divine salvation.*—This danger threatened as soon as Christianity entered the region where Greek thought formed the intellectual atmosphere of educated men. The general scheme, developed in various forms of Gnosticism (*q.v.*), and later systematized as Neo-Platonism (*q.v.*), runs on lines such as these: (i.) the idea of God as the indeterminate, a Being above the categories of human thought, and wholly removed from contact with matter; (ii.) the metaphysical and cosmological problem, arising from this dualism of God and the world, viz. how to cross the gulf separating the two—a problem two-sided, how the ineffable perfection of God can conceivably be connected with the material world and how man can rise out of the material to the divine; (iii.) the speculative problem solved by subordinationism, the invention of intermediate beings to account for the existence of the material world; (iv.) the religious problem, solved in three stages—morality, legal and ascetic; contemplation, knowledge; ecstasy, the vision of God, and metaphysical absorption in Him. At this last point philosophical thought joined hands with the mystery-religions.

Such a scheme might readily make room for Christianity, by accommodating Christ with a place, possibly even the first place, amid the crowd of intermediaries, and by giving a Christian tone to asceticism and contemplation, and by transforming the Christian symbols of baptism and the Lord's Supper into 'mysteries.' This subtle danger belongs mainly to a period subsequent to that covered by the NT and, indeed, proved too strong for the early Church, producing that amalgam of historic Christianity with Hellenism and the mystery-religions which we know as Catholicism.

Within the NT itself, however, lies the answer to this peril, and to the NT every revival of Christianity owes its standard and inspiration. It is to be carefully observed, at the same time, wherein the nerve of the answer lies. It does not lie in NT Christology, if by that is meant an intellectual system, woven by St. Paul and crowned by St. John, and reproduced by professional theologians in their various elaborations. It is to be sought in the experience of salvation, which underlies all theory and is registered, particularly, in Christology. For OT and NT alike salvation is not a scheme; it is an action. God is the only Saviour. He acts directly. There are no lists of subordinate beings who should form links between the divine and the human. There is no metaphysical obstacle to His approach to man and to His operation on man's behalf. The history of redemption is the history of such approach and such operation. Its climax is Jesus the Christ. In Jesus God works out to its glorious consummation the salvation of men. There is no other agent of the divine salvation. 'There is no salvation by any one else, nor even a second name under heaven appointed for us men and our salvation' (Ac 4¹²). Far less is there an array of mythological figures, gorgeous or

¹ St. Paul and the Mystery-Religions, p. 198.

grotesque, to help men across the gulf to God. This is historic Christianity, the only Christianity which has a right to the name. Again, however, it is to be repeated that what is primitive and normative for our conception of essential Christianity is the experience of salvation through acceptance of Jesus as Saviour, and not a Christology in the systematized form which we know as Pauline or Johannine. The experience is vital and developing. The Christology keeps pace with it as the registration of its values. The salvation is never construed cosmologically. It is always interpreted, through the sense of sin, as forgiveness and possession of the Spirit (Ac 2³⁸ 3²⁶ 10⁴³). And, whatever rank is ascribed to Jesus, it is His alone.

¹ Jesus had in the earliest preaching and the earliest faith of Christians that solitary and incommunicable place which the Church assigns Him still.¹

From this starting-point the life and thought of the Church move forward together. There is a growing experience of salvation as a present possession, element after element in the great fact of salvation being appropriate to the manifold needs of humanity. There is a corresponding growth in the conception of Christ, a more and more adoring view of Him in His sole sufficiency for salvation, whatever its dimensions and content may be. Various types of Christology are to be found in the NT, but they are not mutually exclusive. The distinctions between them are to be found 'in the aspects of religious experience which are respectively emphasized.'²

Some of these Christologies are 'higher' than others, because they recognize wider reaches of Christ's saving function, not because they have left the ground of experience and have entered the region of speculation. It is true, they use freely the terminology of the educated world of the day, and sometimes deliberately adopt the catch-words of current systems. But they never force Christ and Christian experience into these intellectual formulæ, and they never commit the grotesque mistake, fatally committed by later theology, of imagining that they have explained Christ. Their aim is practical and defensive throughout. They reply to cloudy and pretentious schemes by claiming for Jesus all that they have guessed or imagined, and have distributed among vague divinities. What words are these—'Lord,' 'Logos,' 'Image,' 'Fullness'? They all belong to Jesus. He is Lord of all. He is the Word of God. He is the image of the invisible God. In Him dwells the Fullness. But, though the phrases be borrowed, their content is derived from what the Church knows of Jesus, the only Redeemer. Over against all these elaborate and baseless systems, and high above the frenzied efforts of the mystery-religions, there stands the figure of Jesus, the historic Jesus, the exalted Saviour. All that God is seen in Him. All that God does is done through Him. God is in Him reconciling the world to Himself. Instead of asceticism, or so-called knowledge, or ecstasy, there is but one condition of salvation—the faith that throws itself on the divine mercy, as it reaches men in the depths of their need through Jesus. This is the answer of the NT to the peril of Gnosticism, Docetism, subordinationism, and mysticism, in every shape and form, earlier or later.

(6) Reviewing the experience whose history we have sought to trace, we name, in conclusion, one or two of its abiding features. (i.) Its unity and continuity. It begins deep in the religion of Israel; it culminates in the NT; it moves onwards through the ages; it lives to-day throughout the wide world; and into it multitudes of every race

and culture are continually entering. But fundamentally it is one thing—the action of the Redeeming God, whose nature is love, who moves, through judgment and mercy, to the victory of His saving purpose; and corresponding to this action is the answer of the human heart in trust and devotion. There is no other Christianity than this. (ii.) The place of Jesus in it. The action of God centres in Him. The character of God is disclosed in Him. In Him God enters human life, and through Him communicates Himself to man. The action of faith, in like manner, centres in Him, meets God in Him, knows God as revealed in Him. In Him man enters divine life, and through Him believes in God, worships and serves God, and returns to God the natural gifts which He Himself has imparted. This supremacy of Jesus is essential to Christianity. Wherever and by whomsoever this supremacy is practically acknowledged, there is essential Christianity, even if it be inarticulate. (iii.) Its expansion, intensively and extensively. It is measureless as the love of God, which is a shoreless, unfathomable ocean, covering the depths of human need, surrounding, comprehending, and satisfying the capacities and dreams of man. Hence, it manifests itself in endless variety from generation to generation and from soul to soul. It cannot be run into a mould or stereotyped in a formula. Even within the NT the emphasis varies from the crudest expectation of the Parousia to the wealth of a present union with the living Lord. And always there is the sense of a beyond, uplifting the soul, revealing its necessities, and leading to unknown reaches of attainment. (iv.) It rises out of depths which cannot be plumbed by the logic of the mere understanding. Yet it constantly seeks conscious expression. It is not doctrine; yet a doctrine of salvation is a necessity for those who are 'being saved.' It is needed for their own sakes, that their experience may be strong and deep, able to resist disintegration and perversion; and for the world's sake, that the message of salvation may be clear and powerful. The formulation of such a doctrine, however, can never be complete or final. It is the task of a living Church, continuous and expanding, as the experience of which it is the vital interpretation.

SALVATION (Egyptian).—1. Conceptions of posthumous happiness.—The Egyptian conceptions of posthumous happiness are confused and conflicting. The blessed dead, we are told, dwell in heaven as the intimate companions of the sun-god.¹ It is said of him 'who has reached (the existence yonder) without wrongdoing' that 'he shall continue yonder like a god, stepping forward

² Donney, *Jesus and the Gospel*, p. 17.

³ Scott, s.v. 'Christ, Christology' in *DAC*.

boldly like the Lords of Eternity.¹ The *bai* of such an one 'shall abide beside the Lord of All, his name shall be good in the mouth of the living.'² A righteous dead person, we are also informed, has his place in the Hall before the great god (Osiris),³ or he is clothed in fine linen and is near Osiris.⁴ Again, he may dwell in the Field of Earu, or Field of Offerings, the great city, the possessor of winds, where he is a mighty one (*sakhem*) and a blessed one (*ikh*) and where he ploughs, reaps, eats, drinks, copulates, and does all that is done on earth.⁵

A great official of the XVIIIth dynasty expresses his desire for a happy life after death in the following terms:

'May the memory of me remain on earth, may my soul live with the Lord of Eternity. The keepers of the doors, the guardians of the portals of the Tei shall not drive it back when it comes forth at the summons of the oblationer in my Tomb of the necropolis. May it [my soul] abound in bread, may it overflow with beer, and may it drink the water upon the eddy of the stream. May I enter in and come forth like the blessed who have done what their gods praise. May my name be good among men in the years to come, and may they give me praises at the two seasons by the favour of the city god.'⁶

2. The means of attaining posthumous happiness.—(a) *The virtuous life*.—The idea that the deceased's happiness depended upon his obtaining a favourable verdict at the posthumous trial is already found in inscriptions of the Old Kingdom.⁷ To obtain such a verdict, a man must have been righteous during his life on earth.⁸

Osiris himself did not attain to his position of king and judge of the dead until he had undergone trial before the judicial council of gods at Heliopolis and had by them been proclaimed 'justified' or 'righteous (true) of voice.'⁹

(b) *Identification with Osiris*.—Side by side with the view that the happiness of the dead depended upon how their life on earth had been spent existed the idea that they could attain bliss hereafter through identification with Osiris. Originally only the dead Pharaoh was identified with Osiris, who appears in the *Pyramid Texts* as the prototype of all dead Pharaohs, the dead Pharaoh *par excellence*. This identification ensured to the deceased Pharaoh the same renewed and glorified existence as that of the god. As Osiris lives, he also will live; as Osiris dies not, he will not die; as Osiris was not destroyed, he will not be destroyed.¹⁰ The gods do for the deceased Pharaoh what in the first instance they did for Osiris. Nut, the mother of Osiris, gives the dead Ptöpi his head, unites for him his bones, puts together his limbs for him, and places his heart in his body.¹¹ Isis and Nephthys may also perform this service for him and make his eyes to shine in his head.¹² Again, he is washed and embalmed by Anubis¹³ and revived by Horus.¹⁴ As the representative or successor of Osiris, the departed is said to be a blessed one or spirit (*ikh*), and to be mighty as a god. His soul (*bai*) is within him and his power (*sakhem*) behind him.¹⁵ Finally, the dead Pharaoh must appear before the judicial council of the gods, by whom, like Osiris, he is pronounced 'justified,' 'righteous

of voice,'¹ thanks to the pleading of Thöth, who also made Osiris to triumph over his enemies.² He can now enter upon a glorified existence—according to one conception, in heaven, or, according to another, in the West.³ After the VIth dynasty every dead person was identified with Osiris, and the custom then arose of appending to the deceased's name the Osirian epithet 'justified.' The tendency, therefore, was to regard the deceased as righteous or 'justified,' not on his own merits, but, owing to his identification with Osiris, his personality and acts becoming merged in those of his righteous and justified prototype.⁴ This is apparent in the following passages, which depict the dead in the rôle of the accused and justified Osiris:

'He [the dead Unis identified with Osiris] is justified by what he hath done. . . . The Two Rights have held the legal hearing. Shu was witness. The Two Rights have ordained that the thrones of Geb belong to him, that he should raise himself up for that which he desired, that his limbs which were in concealment should be joined together, that he should unite with those who are in Nun, and that he should put an end to the words in Heliopolis.'⁵

'Atum, father of the gods, is satisfied, Shu and Tefnut are satisfied, Geb and Nut are satisfied, Osiris and Isis are satisfied, Seth and Nephthys are satisfied . . . with that great and mighty utterance that came out of the mouth of Thöth in favour of Osiris, treasurer of life, seal-bearer of the gods. Anubis who reckons the hearts, he reckons the Osiris Ptöpi from among the gods who belong to the earth unto the gods who are in heaven.'⁶

'O Thöth, who justified Osiris against his enemies, justify NN. against his enemies even as thou didst justify Osiris against his enemies before the judicial council . . . in Heliopolis.'⁷

It should here be noted that a deceased person was identified with Osiris only in his earlier rôle of a dead god-king who had been killed and revived, and who finally had triumphed over his accusing enemies at the trial before the judicial council in Heliopolis. The deceased is always clearly differentiated from Osiris in his later rôle of judge of the dead.⁸

For the various ceremonies and spells through the performance or by the repetition of which a person, during his life or after death, was identified or associated with Osiris, or was rendered righteous or accounted as such, and so obtained justification and posthumous bliss, see art. **RIGHTEOUSNESS** (Egyptian), § 10.

LITERATURE.—See the works cited in the footnotes.

AYLWARD M. BLACKMAN.

SALVATION (Hindu).—The Sanskrit term for 'deliverance' or 'salvation' is *mukti* or *moksha* (*q.v.*). Derived from the root *muc'*, it signified in the first instance 'deliverance' or 'release' in general from pains and penalties of any kind. In all systems, however, of Hindu philosophical and religious thought *mukti*, or *moksha*, has become the technical and specialized expression to denote that deliverance from bondage to the world and its fetters which is the desired and ideal end of the Hindu religious life. Hindu aspiration and longing centre always in *mukti*, in deliverance in one way or another from the weariness and bondage universally associated with temporal existence.

The *mukta*, therefore, is one who is emancipated from all that detracts from fullness of life, who has been discharged from the cramped and fettered conditions of earthly existence, and has entered upon a state of endless freedom and felicity. The sects differ in their interpretation of the conditions and character of the state itself and the means and methods of its attainment. Ultimately, however, Hindu religious thought always formu-

lates 'salvation' in terms of release from bondage to the present evil world to a further unworldly existence, which is not subject to change or liable to distress and harm.

Both terms are employed in the literature in a more general sense. Thus *dāsatvamukti* is release from servitude,¹ *śāpa-mukti* or *mokṣa* is release from an anathema or curse,² and the *śāpamukta* is one who has been thus set free. *Praśnamokṣa* is the answer to or resolution of a question.³ The words are also used with an active connotation; e.g., *ṛṣāmukti* or *mokṣa* is the discharge of an obligation or debt. Technically also *mukti-mārga* or *mokṣamārga* is the path or way of emancipation.

1. Essential character and principles.—In Hindu thought and teaching, therefore, 'salvation' is essentially the solution of intercourse with the material world, with the universe created and visible; it is emancipation from bondage to matter with all that this involves of pain and penalty, and entrance into a haven of rest and peace for ever untroubled by the afflictions and sorrows that attend upon all earthly conditions. There underlies the doctrine, therefore, that deep-rooted conviction of the essential poverty and wretchedness of earthly existence which is so characteristic of every variety of Eastern thought. Throughout the long history of Indian speculation in all its modifications and varieties and in all the sects this conception has retained a leading place, that true freedom and happiness are not attainable here, under the dominance and constraint of earthly passions and privations; only by and through deliverance from every earthly fetter is salvation secure. In the many varieties of religious teaching the goal is ever the same, although the means prescribed for its attainment vary greatly. By the more or less complete suppression of the desires and faculties of the body, by mechanical devices, ascetic or other, for controlling the bodily passions, partial satisfaction is given to the longing for emancipation even in the course of this present life. The final goal, however, is unchanged and unchangeable, and demands the severance of the last earthly tie. This doctrine of salvation by release from earthly bonds is one of the most enduring of Hindu dogmas, because based on the deep underlying presuppositions of Indian thought.

It is further and almost of necessity allied to the equally widely held doctrine of transmigration. Salvation and rest are not attainable, in most instances at least, at once and immediately when the dissolution of the bodily frame supervenes upon death. Through a series of 'recurrent deaths' and rebirths into a new existence upon earth, when the varied fruits of merit and demerit have been fully and finally gathered, and action with its resultant effects is nullified, when *karma* ceases, only then may the goal be reached. The vista of these renewed lives, with their dreary and indefinite sameness of misery, has driven many a man to despair. To hasten their progress is all that in most instances he can hope to do; and the end, whether near or far, often appears so uncertain as to be hardly worth the struggle and endurance necessary for its attainment.

2. History and development of the doctrine.—The most definite statements with regard to the nature and character of *mukti* are to be found in the *Upaniṣad* literature, and in the commentaries of Śaṅkara and Rāmānuja (*gg.v.*) on the *Vedānta Sūtras*.⁴ These thinkers expound, with an insight and conviction that have rarely, if ever, been excelled, its philosophical content and import. The religious aspect of *mukti* and its value for the individual soul are set forth in works of a more definitely religious character and aim, especially in the *Bhagavad-Gītā* (*g.v.*), and in the popular religious literature of the sects. It is the teaching

of the last, rehearsed in the ears of the people and enforced in the schools, that has made the meaning and worth of *mukti* a possession of all the Indian peoples, or at least of that overwhelming proportion of them which has come within the range and influence of Hindu thought. The difference between the two—the philosophical and the religious and popular—may be broadly stated as the difference between salvation by knowledge and salvation by faith. Moreover, in India philosophical theory is in practice always modified and coloured by religious emotion and need; and the creeds and conclusions of religion are rarely, if ever, separated from the principles and doctrines of a generally accepted metaphysic.

In the early literature of the Vedic hymns deliverance is by favour of the gods. The prayers and aspirations of the worshippers are for the most part concerned with the obtaining of earthly good, and their aim and outlook are limited to the present life. The benefits sought are those conducive to temporal well-being and enjoyment, nor is there any apparent consciousness of a need for deliverance, except in so far as it is deliverance from the adverse conditions of the present earthly existence. By the *ṛṣis* and poets, therefore, of this early age 'salvation,' so far as it was a subject of thought at all, was conceived in material, not spiritual, terms, and meant rescue from the pains and penalties of a troubled life to a state of existence more abundantly endowed with earthly goods. The future beyond the grave was not illuminated by a hope which made the present life seem valueless in comparison, nor, on the other hand, did it bear any sure deterrent prospect for the evil-doer. The desire and expectation of good for the most part found their satisfaction in worldly and material advantage. To a future existence after death, with its alternative of felicity or suffering, conditioned by righteous or unjust dealing here, little if any thought was given.

It is in the *Upaniṣads* and the philosophical systems based upon them that the Hindu conception of *mukti* is most fully worked out and expounded. Their leading thought was essentially idealistic, and the only knowledge worthy of the name was in what way and under what conditions release (*mukti*) might be gained from the woes of an earthly life. This teaching, expounded with little order or system in the *Upaniṣad* treatises themselves, was later systematized in the *Vedānta* under the influence and guidance of Śaṅkara, and became the dominant conception of Hindu religious thought. Its only serious rival on the philosophical side, as an ordered theory of human life and destiny, was found in the Sāṅkhya (*g.v.*); and here the difference lay rather in the means by which salvation was to be sought and attained than in the nature of the salvation itself. Invariably the end in view was escape from the world. A more profound distinction separated the philosophic doctrine of the *Vedānta* from the spiritual aspirations and faith of the great popular religions. In the latter a formal profession of belief and acceptance of dogma was quickened by strong emotion and a fervent longing for personal and individual communion with the deity. The adherent of the *bhakti-mārga* (*g.v.*), as he pursued a different road from that of the pure *Vedāntist* or the convinced and life-long ascetic, so sought and won a goal, the nature of which, although it might be and was expressed in similar terms, was interpreted in an entirely different spirit. From the philosophical point of view, however, the *Vedāntic* doctrine has remained dominant, and has been almost universally accepted in India; and has thus, apart from external influences, Christian or other, determined and controlled the form of the

eschatological thought of the great majority of Hindus.

It is not a little remarkable that no direct proof of a doctrine so comprehensive, and so intimately affecting the future state and destiny of man, appears ever to have been attempted, or the want of it to have been deplored. It is dogmatically asserted, with many repetitions and in slightly varying forms; and the contrary teaching is declared untenable, sometimes with the semblance of an attempt at logical or scientific refutation. Full and frequent exposition of the doctrine is also offered; but this always assumes a dogmatic form, and no light is thrown upon its historical development or upon the steps by which the conclusions formulated have been reached. Nor is any direct connexion made with earlier forms of belief as suggested or traced in the Vedic hymns and elsewhere. The doctrine appears complete, thought out in all its relations, and is adopted and enforced as the one tenable and sufficient view of the character and destiny of the human soul.

3. Methods of attainment of salvation.—Indian writers on *mokṣa* almost invariably seek to illuminate their subject by an illustration or an analogy; and these, far more than a rigid or logical proof, make appeal to their readers' sympathies and command their assent. The statements made, however, with regard to *mukṭi* converge upon the same point of view and express essentially the same thought. The principal authorities in the ancient philosophical literature besides the *Upaniṣads* are the *Vedānta Sūtras*, with the commentaries or expositions thereon, and the *Bhagavad-Gītā*, together with other chapters or treatises of the same tendency contained in the *Mahābhārata* (*q.v.*). The *Bhagavad-Gītā* in particular has for its leading motive the duty or propriety of so ordering present conduct as to secure future and abiding felicity, redemption from the evils of this world in submission to the will and leading of the supreme Lord. This redemption is set forth negatively and positively. A few out of many references that might be given will sufficiently indicate the character of the Indian teaching.

(1) *Mukṭi* is negatively release from the restraints of the body to a condition of bodiless existence, which is thenceforth unchanging and eternal.¹ The *mukta*, therefore, is not subject to rebirth or death.²

(2) The passions of desire and self-love, of craving for earthly objects, have ceased to exercise him; he has attained to rest of soul, and no longer fears.³

(3) The *mukta* is no more bound and bewildered by *avidyā* (ignorance), or fretted by consciousness of earthly things.⁴ *Mokṣa* or *mukṭi* is at times described metaphorically as a fruit, to be plucked and enjoyed.⁵ Other metaphors are employed, as that of dreams, etc.⁶

False views also are combated—*e.g.*, that *mukṭi* may be obtained through sleep.⁷ It is argued that this would imply a return to earthly conditions, but *mukṭi* is eternal.

Positively, however, and in its fullest expression, *mukṭi* is union with the supreme Brahman. This is the highest goal, the true life, when all the shadows have passed away, a blissful eternal rest untouched by sorrow and untroubled by fear. To describe this state figurative expressions are freely employed; it is perfect knowledge, supreme felicity, unrestrained freedom. The central thought, however, the background and support of all metaphor, is always that of oneness with Brahman. There is nothing beyond this to be coveted or experienced.

He whose mind is restrained attains emancipation in union with him;⁸ *mokṣa* is oneness with Brahman, and is eternal;⁹

release is the intuition of the highest Self consequent on the destruction of ignorance;¹ the individual soul is Brahman, or has itself in Brahman.²

Indian writers further expound and discuss many ways by which the one end may be reached, some negative, enjoining the disuse or destruction of modes of action and thought which cloud the insight and understanding, and hinder devotion; and some positive, which aim at quickening faith and fortifying the motives or qualities that hasten its attainment. The goal in prospect, however, is always the same; it is *yoga* in the widest acceptance of the term, the severance of all earthly bonds in permanent union with the one and only Lord. In the philosophical idealism of the Vedānta this union is represented as in fact already existent; it is not a hardly-won achievement, a goal to be reached by endeavour, neither is it in the strict sense a union at all. *Mukṭi* is the lifting of the veil of ignorance, which conceals from the soul the truth that it is and always has been one with Brahman. Where there is only one and not another, there can be no union, no coming together of two parties. In the realization of this identity *mokṣa* consists, and the road thereto lies not through something done or accomplished, but through knowledge and the removal of the delusive cloud of ignorance.

There are, however, to the Vedāntist himself subsidiary and less secure methods by which the desired end may be attained, some more ready and effectual than others, but all wearisome and difficult to the soul compared with the direct way of revelation and knowledge. The more noteworthy of these urge the abandonment of all action, thereby to break the bonds of *karma* and secure the cessation of all attachment or desire. Works performed without desire (*trṣṇā*, 'thirst') are valueless, and do not forge fresh links in the otherwise endless unrolling chain of *karma*.³

A second and much-frequented path lies through renunciation (*q.v.*), the voluntary setting aside of the cares and claims of the world, and adoption of a life of entire devotion to spiritual aims and thoughts, either as a *brahmachārin*, or a hermit in the recesses of the forest, or in other ways.⁴ Such ascetic devotion and self-denial are means of very considerable efficacy for the attainment of redemption, and are often commended as an honourable and sure, if long and exacting, way to success;⁵ perfection is by renunciation.⁶ Not seldom this is set forth polemically; the exact performance of the Vedic ritual and the study of Vedic books are no real means to salvation.⁷ It is allowed, however, that these, and especially sacrifice to the gods, are in a less degree efficient for securing deliverance.⁸

By concentration of thought also and meditation (*samādhi* [*q.v.*]) the soul is led to Brahman and achieves its deliverance from bondage to the world;⁹ a man should practise meditation until he is free;¹⁰ *samādhi* is the condition of release from worldly fetters.¹¹

The perfect way, the path chosen by the wise, which supersedes all other ways, is through knowledge.

⁹ *Vedānta Sūtras*, i. 1. 13, ii. 12.

Sect. 1. 11, when that god [Brahman] is known . . . birth and death cease; *ib. ii. 15*, he who sees the real nature of Brahman . . . is freed from all fetters; *ib. vi. 12-15*, the wise who perceive him . . . theirs is eternal happiness . . . they pass over death; *Bhag.-Gitā*, *iv. 18*, the man of understanding attains by knowledge to the everlasting glory; *Vedānta Sūtras*, *i. i. 31*, release follows upon the knowledge of Brahman; *ib. 22*, etc.; *i. i. 1*, the cognition of Brahman is that which effects final release.

In the later and more popular religious literature the chief exponent of these conflicting views of redemption is Kṛṣṇa in the *Bhagavad-Gītā*. There are put into his mouth strong and urgent appeals for devotion, self-consecration to the one divine Lord, that in union with him deliverance and rest may be found; and, on the other hand, doctrinal expositions of the Vedāntic theory of redemption through knowledge alone, delivered with apparently as urgent and sincere conviction as though no other means of salvation existed or were conceivable. Both doctrines seem to be recognized as orthodox, and equally effective for salvation.

Historically also it is through the *Bhagavad-Gītā* and the popular poems of the *Rāmāyana* (*q.v.*) that these thoughts and conceptions of final deliverance have permeated the minds of the Indian peoples, and become a constant part of their accepted philosophy of life. It is with reason that the *Bhagavad-Gītā* has been termed the New Testament of all thoughtful Hindus. Similar teaching has everywhere been popularized and enforced in the vernacular songs and epics, recited in the village assemblies, and taught in the village schools. Philosophically at least Hindu thought is remarkably consentient and harmonious with regard to the ultimate destiny of the soul delivered from the bondage of evil.

4. Nature of final mukti.—The protagonists of the two great schools of Hindu eschatological belief as it concerns the nature and means of ultimate redemption are Śaṅkara, to whom the elaboration and completion of idealistic Vedāntic doctrine are due, and Rāmānuja, the champion of an intimate and personal theism. These two influential teachers in their commentaries on the *Vedānta Sūtras* interpreted the same text in entirely different ways;¹ and the controversy between them turned mainly upon the question of the character and quality of redemption, and the means by which it was to be attained. The philosophical and religious thought of India has been practically determined upon these lines, upon the basis of what may be termed idealistic and theistic teaching respectively, by these leaders and the disciples who followed them. To Śaṅkara, the exponent of the strictest Vedānta, redemption, which was only loosely and inaccurately described as union with Brahman, was not something to be achieved or won, a step forward in a progressive gain or accretion; it was not a new fact, superadded upon the existing facts of experience and life. It was in the fullest sense a revelation, an opening of the eyes, an awakened consciousness of a real fact which had always been there, but veiled from the mind by apathy and ignorance. *Mukti*, therefore, was arrived at through knowledge, the sweeping aside of the delusive veil of *avidyā*. It was not an actual addition to the sum of human possessions and enjoyments, a new fact breaking forth where nothing had been before, but the removal of a barrier and the entering into the secure realization of a permanent and inalienable truth. It is not easy to formulate the Vedāntic conception of *mukti* without employing categories and terms that inevitably suggest personality and its assumed qualities or attributes. To the consistent Vedāntist 'personality' was meaningless; the term had no force, and conveyed

no idea that was capable of being contained within the four corners of his scheme of philosophy. 'I am thou,' 'thou art that' (*i.e.* Brahman), *tat tvam asi*; Brahman and the individual soul of man (*ātman*) were one and the same, and neither was an individual at all in any ordinary or intelligible sense of the word. *Mokṣa*, or *mukti*, was essentially the apprehension of this fact.

There were thus two chief methods of attainment or lines of approach—the ideal or metaphysical, by the way of knowledge, and the theistic and practical, by the way of *bhakti*, faith and love; in each case the end was the same, *mukti*, deliverance from this evil world, achieved not within it by redemption from sin, but by passing beyond it, so as to be no longer within its bounds or subject to its control. It was in this regard that the so-called popular religions, which were all theistic, found themselves in strongest contrast to the metaphysics of the Vedānta. For the most part the belief of the popular faiths has accepted the interpretation of Rāmānuja, and while honouring Śaṅkara has found his doctrine too abstract and uninspiring to satisfy the needs of daily life. Union with Brahman was still the end, the *terminus ad quem*; but it was defined as a goal to be reached by endeavour, not a present and persistent fact to be realized; and the consummated union was such as did not imply the loss of individual self-consciousness or life. In neither case, therefore, was there 'absorption,' in any real or interpretable meaning of the word. That could not be 'absorbed' which was already one with the divine. And in the belief of the adherents of Rāmānuja, or of any one of the numerous successors who accepted his teaching, the soul, when it entered into the bliss of union with its Lord, was not effaced or 'absorbed' in an unconscious identity, but maintained its self-knowledge and capacity, and enjoyed the fruit of its faith and endeavour in unending felicity. With varying degrees of apprehension and detail the religious thought of the Hindus, apart from the bare and unfruitful philosophical theory, holds on to this view of future deliverance, and craves a union with the divine, the essential element of which is not the cessation or destruction of consciousness and personality, but their maintenance, purification, and exaltation.

Practically, therefore, by the Hindus as a whole, both of the north and of the south, the stress is laid upon *bhakti*, not upon any abstract doctrine of the Vedānta. The latter is accepted for argumentative or controversial purposes by those—and they are numerous in India—who have an interest in these things. The real faith as regards the future, upon which a man falls back in circumstances of distress or need, is not an intellectual conclusion of abstract reasoning, but an emotional impulse and conviction of the heart. Apart from the influence of modern sceptical thought, which in India has been neither penetrating nor far-reaching, the belief of the great majority of the Hindu people is neither atheist nor agnostic, but represents a sure and convinced theism.

The third and admittedly subordinate and inferior method was that of works (*karma-mārga*, *karma-kāṇḍa*). For those who were incapable of proceeding by the way of faith or knowledge the less sure way of works was open, and by sacrifice and toil, energy and perseverance, they might finally attain salvation (*mukti*). It was consistently maintained, however, that this was a secondary, tedious, and not always effective road to the end in view. By some its efficacy was altogether denied. Others assigned to it a preliminary or introductory place in the scheme of redemption, claiming that it afforded guidance at the beginning of the journey,

¹ See *SBE* xxxiv. (1890), xxxviii. (1896), xlviii. (1904), where the respective commentaries are translated and elucidated.

but could not conduct to the goal. For this the enlightenment of knowledge or faith was needed. The weary traveller and seeker after rest must add to his works a further achievement of thought or will, and according to the school to whose teaching he lent his ear must trust or know. His future then was secure, and *mukti* already virtually won.

How far these doctrines and theories exercised a really practical influence upon the lives of the theorists or of those whom they taught it is not easy to determine. Probably they always remained to a considerable extent theoretical, accepted like the Vedānta teaching as a whole as a matter of belief, but modifying little the course of daily habit and life. Certainly throughout Indian history, as far as it is possible to trace the hopes and ideas of the great majority of the people, it has been present, not future, deliverance that has occupied their thoughts. *Mukti* has been negative, from the oppressive fear and malign power of the demons, not positive, to a future state of felicity; and immediate deliverance from the grasp of the jealous and ever-present evil powers was that for which men sacrificed and prayed. Demonolatri, sorcery, magic, and the countless charms upon which the common people rested their faith must at all times as now have craved and demanded a deliverance that should be at once effective, not with promise for the future only, but with performance in the present. The nature-worship of both earlier and more recent times has regard to immediate and sensible needs, and pays little heed to the possibilities of a remote future.

In the modern reform movements—the Brāhma Samāj, Sadhārana Samāj (q.v.), and others—the conception of deliverance or salvation, as formulated in the Indian classics, has been modified by Christian influence. The Arya Samāj (q.v.), indeed, stands apart. It is strongly imitative, but consciously and intentionally anti-Christian, and to an even greater extent anti-foreign. The general type of belief and doctrine maintained by the earlier reformers, as by those of preceding centuries, was confessedly eclectic. In regard to the doctrine of *mukti* the ancient Indian faith which found expression in the *Bhagavad-Gītā*, and the teaching of the NT, more especially the words and example of Christ Himself, were combined in a profession of faith which, except in the denial of the divinity of our Lord, was hardly distinguishable from Christian formulas. Practically, however, the tendency was always, as in more recent periods in the West, to lay stress on present duty and service, on an altruism which accentuated the need of immediate physical relief, and to ignore the prospects and conditions of the future, at least so far as they might be supposed to serve as incentives to action in the present. In this service and in devotion to the wellbeing of their fellow-men the Arya Samāj have led the way. Theoretically, however, the purpose of all was the same, viz. to secure for man union with the divine. With Vedāntic thought they were at variance, in that salvation, whatever its terms, was to them a matter of future attainment, not of immediate intellectual recognition of an existing fact. Thus conceived and defined, *mukti*, as a consciously desired goal, came to be more remote and shadowy, as the urgency of present need increased. The doctrine of the abiding felicity of the future in union with God was indeed maintained as a hope, passionately clung to by the more mystical and devout souls; but for the most part men sought the satisfaction of their religious cravings in the discharge of present duty as it appeared to be set before them within the circle of their sect or caste, or in rarer cases as determined by the appeal of the suffering or need of their fellow-men.

The reformers also accepted and emphasized the ancient Hindu belief, practically universal in spite of philosophical dogma, in the permanence of the individual life. The doctrine of absorption, regarded as implying future and final unconsciousness and the cessation of individual being, although theoretically maintained, has never effectively modified or controlled Hindu faith. Partly under the influence of Christianity it was now set aside in favour of a redemption which was definite, personal, and abiding. The future promised a felicity with God, in which the individual according to his merits would or might have a conscious and abiding part.

5. Comparison with other faiths.—The Hindu doctrine, in what it teaches, in the facts of experience which it ignores, and in the difficulties of reason and thought over which it lightly passes, challenges comparison with the teaching of other faiths, especially with Christianity and with some forms of Buddhism. With both these creeds

Hinduism in the days of its greatest plasticity and receptiveness was in long and intimate contact; and it would have been strange if no traces of the mutual intercourse remained. The inference may be accepted; but sufficient evidence is not available to indicate with certainty the doctrines or elements of belief derived from a foreign source. The fundamental thought of *bhakti*, with regard to which the claim of Christian indebtedness has been more often and confidently made than with regard to any other Hindu doctrine or practice, is certainly of Indian origin, and served as a religious motive in India long before Christianity entered the country. In its development and progress it may have owed much to Christian teaching and example. From the first, however, salvation through *bhakti* has laid greater stress upon emotion, upon feeling, and the play of the affections, than Christianity, at least in its more restrained and orthodox forms, has done. The duty or claims of faith and works, when recognized at all, have been relegated to an altogether subordinate position.

The relation of the *mukti* doctrine to Buddhism is more uncertain. It is indeed only with the Mahāyāna teaching that comparison is profitable, or mutual accommodation of doctrine through mutual intercourse may seem to have been possible. For in the Hinayāna the thought of salvation won as the reward of individual insight and achievement, through and in the monastic career alone, is in every respect by way of contrast to the Hindu; even if the same end is sought, the method and means by which deliverance is to be gained are entirely divergent. Of the Mahāyāna doctrine it might not unfairly be said that together with the *bhakti* teaching of Hinduism it is more nearly akin to Christian principle and thought on this subject than any of the other faiths of the world. The difference is to be found rather in the stress laid upon different aspects or elements of the doctrine than in the general or essential character of the respective teaching. The Mahāyāna doctrine emphasizes the necessity and omnipotence of faith to a degree that is strange to Hindu thought. By mere faith in Amida the greatest sinner is delivered from the power and penalty of his sins, and secures entrance into the heaven of eternal bliss. The Indian affinities of this doctrine cannot be questioned. But in its evolution as a doctrine of faith and trust in a living and personal Saviour it has gone far beyond any indigenous teaching of the land whence it came. It is difficult to resist the impression that, where there is so much in common between the *bhakti-mārga* and the Christian and Mahāyāna creeds, there have been also mutual intercourse and discussion that have led to the adoption of elements of belief, perhaps on more sides than one.

In two respects, however, the contrast between the doctrines taught by these three systems is sufficiently great, between Christianity on the one hand, and Hinduism and Mahāyāna Buddhism on the other, to be worthy of notice. Christianity emphasizes and has always emphasized the necessity of moral reformation and effort, if salvation is to be attained; it is by the grace of God, but by grace which co-operates with human endeavour. The element of strain and search on man's part is not wholly absent from this form of Buddhism or from the teaching of Hindu preachers and reformers; but it has, as it were, never taken effect. The ordinary and orthodox attitude is that of passivity, in which the part played by the man himself is reduced to the vanishing point; and there is an entire lack of moral urgency or impulse, or of any conception of need of moral regeneration of character. This may well be deemed the

most important and far-reaching distinction. It is not, however, confined to this one doctrine. It underlies all the thought of East and West, and of Christianity as estimating and encountering rival systems and creeds. The doctrine of salvation in Hinduism is essentially colourless as regards any ethical requirement or necessity.

In another respect also neither Hinduism nor Buddhism has made any approximation to the Christian belief. The Hindu doctrine in particular relegates the attainment of salvation to a distant and uncertain future. It has not formulated, and on its premises it was hardly possible that it should formulate, a doctrine of present and immediate deliverance from the strain and distress of life, or from the thralldom of evil. Only at the close of a series of rebirths and travail in this world is deliverance achieved. Then, when the power of *karma* is exhausted, and no more fruit of deeds remains to be gathered, the end is reached as it were automatically, *mukti* is the attained and inevitable goal. But the way is hard and long, and not all have the courage and good fortune to persevere through successive births, and by zeal and devotion and good works to hasten the desired end.¹ Salvation is from the power and grip of *karma* to a union with the divine, when there will be no further rebirth to the servitude and misery of a life on earth—or, as the Hindu teaching would prefer to express it, no more 'recurrent death' (*punar-mṛityu*)—but in its place a changeless passionless immortality (*amṛitatvam*).

A reminder, however, must be given in conclusion that among the millions who call themselves Hindus it is hardly possible to assert a definitely consistent or unified belief on any theme. Hinduism is almost the last system in the world to possess a clear-cut and stable doctrine. Modifications due to temperament, education, and environment will be found on every hand. Essentially the doctrines above described may be said to represent the convictions of all thoughtful Hindus, and to form the basis of all formulated creed or belief with regard to relief from the burden of the present and final salvation. Moreover, in their application to the hard realities of daily life, and in practical realization of their force and efficacy as a rule or motive of conduct, there will be, as might be expected, almost infinite variation in individual instances. To the majority of the people ultimate *mukti* is a thing too remote to be a controlling factor in their thoughts or lives. At the best it is a theory to which they render a more or less convinced and intellectual assent. The prospect and possibilities of the immediate future make sufficient demands upon their thought and care. To the successive æons of a more distant future and a *samsāra* which holds them in its relentless grasp they pay little practical heed.

LITERATURE.—Reference is made to the subject of *mukti* in all books on Hindu religion or philosophy, but no special treatise is available. Cf. P. Deussen, *The Philosophy of the Upanishads*, tr. A. S. Geden, Edinburgh, 1906; R. W. Frazer, *Indian Thought, Past and Present*, London, 1915; A. Barth, *The Religions of India*², tr. J. Wood, do. 1891; N. Macnicol, *Indian Theism*, Oxford, 1915. For the *bhakti* doctrine see esp. art. BHAKTI-MĀRGA.

A. S. GEDEN.

SALVATION (Iranian).—The idea of 'salvation' may be considered in reference either to the individual or to the community, or indeed to the whole race. In the former acceptance there is nothing in the Avestan system to correspond to the Indian concept of liberation from a succession of rebirths by final extinction or absorption, as not only in Buddhism, but also in other Hindu systems. The Mazdean ideal is quite simple and

singularly like the Christian—the delivery from evil, moral and physical, in this life and the securing of eternal happiness in a conscious individual life of bliss after death. Man is helped to the attainment of this consummation by the revelation of the Good Law of Ahura Mazda and is invited to choose between the service of the supreme deity and that of his enemy, Angra Mainyu, the spirit of evil. Man is endowed with free will and thus has the power and responsibility of the choice. By good thoughts, good words, and good deeds (*humata, hūkhta, hvaršta*), a constantly repeated formula, he acquires merits during his lifetime here and thereby takes his share in the perennial warfare between the good and evil spirits. If he yields to the seductions of evil and indulges in evil thoughts, evil words, and evil deeds (*duzhmata, duzhūkhta, duzhvaršta*), he becomes an enemy of Ahura Mazda and a follower of the *druj*, acquiring demerits for the future. After death there occurs what has been termed a 'spiritual book-keeping'—the soul of the deceased has to face a judgment before the three spirits, Mithra, Rashnu, and Sraosha (personifications of truth, justice, and obedience), and this takes the form of a 'weighing' of merits and demerits.¹ The preponderance of good or evil merits determines the safe passage of the 'Chinvat Bridge' ('the Bridge of Separation'), and the entrance of the soul into Ahura Mazda's heaven, Garō-nmāna—in other words, its eternal salvation. It would appear that we have here a somewhat awkward syncretism of two concepts—that of a regular trial by weighing (as in Egypt) and that of a mythological bridge-test, afterwards borrowed in the Muhammadan Al-Sirat. In any case the soul's salvation and eternal bliss are worked out by its conduct here below in obedience to the Good Law of Ahura as revealed by his prophet Zarathushtra. There is, of course, no idea at all corresponding to the Christian idea of atonement, or the apprehension of the merits of a Saviour, as is found even in some forms of Buddhism. The post-Avestan doctrine is substantially the same, but more precise views are set forth in the Pahlavi treatises on the subject of merit (*kerfak*), and at least in one treatise there is mention of a treasury (*ganj*) of merits accruing from divine worship, which is placed in the hands of the *yazads*, or celestial spirits, who can confer it on the souls of the just.² Spiegel thinks that this concept is of Semitic origin. On the whole, then, the Mazdean doctrine is that each man works out his own salvation, though under the guidance of divine revelation and with the powerful spiritual aids of Ahura Mazda and his hierarchy of spirits, and of the teachings and examples of Zarathushtra and his followers.

When we turn to the question of the salvation of the world, or of humanity at large, we are met with the figure of a future saviour or saviours to come at the end of the world. The word 'Saoshyant' (Pahlavi Soshyōs or Soshyāns) is the future participle of the verb *su* or *sav*, 'to benefit,' 'do good,' 'save,' which is temptingly reminiscent of the Greek verb *σῶω*, whose future participle *σῶσων* is practically identical in form. Now this word can be used both as a common noun and in the plural as well as in the singular: thus in the *Gāthās* Zoroaster and his fellow-workers are designated *saoshyantō*, 'saviours.' But, used as a proper noun in the Later Avesta and in Pahlavi literature, it indicates specifically the three last great prophets, who are to be miraculously born of the seed of Zarathushtra,³ and who are to reign

¹ For a fuller discussion of the whole scene see J. H. Moulton, *Early Zoroastrianism*, London, 1913, pp. 164-177.

² *Shāyast lā-Shāyast*, viii. 4, in *SBE* v. (1880).

³ An ingenious attempt to 'rationalize' the grotesque story of the manner of these miraculous conceptions and births as

¹ Cf. Mt 7:14, στείγῃ ἡ πύλη καὶ περιλειμένη ἡ ὁδὸς ἡ ἀπάγουσα εἰς τὴν ζωὴν, which some have thought to be an echo of Buddhist teaching.

each at the end of a millennium (counting from the end of the millennium of Zarathushtra himself). They are named respectively Ukhshyat-ereta, (Pahl. Hōshedar), Ukhshyat-nemah (Pahl. Hōshedarmāh), and Astvat-ereta, who is *ka' ēxōh* the Saoshyant or 'Messiah' to whom Mazdeans still look forward (the title Sōshyōs alone has survived in Pahlavi, with no individual name). It is this last saviour who is to preside, according to the detailed accounts of the Pahlavi *Bahman-Yasht* and the *Būdahishn*,¹ at the resurrection of the dead and the regeneration of mankind (*tanū-i pasin*, the Avestan *frasho-kereti*), followed by the great flood of molten metal, which is not only to destroy but to purify the creation. It is he, too, who is to prepare, after a great sacrifice of the mystic ox, the ambrosia (*hūsh*) which is to render mankind immortal. According to some authorities, this ἀποκατάστασις is to extend even to hell and the wicked therein:

'Praise to Him, the merciful Lord who maketh the final Retribution, and who at the end shall deliver even the wicked from Hell and restore the whole creation in purity.'²

As to the end of the evil spirit, Ahriman (Angra Mainyu) himself, the Pahlavi theologians are not in agreement. Some seem to have believed in his total annihilation. The Muhammadan treatise *Ulamā-i Islam*³ quotes five different opinions concerning the final end of evil.

L. C. CASARTELLI.

SALVATION (Jewish).—I. SIGNIFICATION OF THE TERM.—Judaism has no equivalent for 'salvation' used theologically, unless we are to see a very rare example of such usage in the phrase *teshu'ah ve-hazalah* in Maimonides' *Yād*.⁴ Redemption from sin here, and deliverance from its consequences hereafter, is an idea which occupies a large place in Jewish theology; but there is no word that succinctly and exactly expresses either side of it, certainly no word that expresses it in its entirety. The Rabbinical writers know such a phrase as *nekiyuth me'avon*, or, more briefly, *nekiyuth* ('purification from sin' or 'purification'). For the second aspect of the idea there is no word or phrase. The sacramentalism attaching to the English term is foreign to Jewish thought. Redemption, according to Judaism, is no mysterious or supernatural process, but essentially simple and straightforward. The divine grace plays a certain part in it, but the chief part, by common consent, is performed by the man himself. In the case of sin—and all men are sinners in various degree—expiation by repentance and suffering is the condition precedent to acceptance by God; and, if that essential condition is satisfied, forgiveness and reconciliation follow as a matter of course. No superhuman ally is needed by the atoning soul. The forces in the sinner's own breast suffice. If they are marshalled in their full strength, they

allegories of the teachings of the Prophet concerning *humata, hukta, and hvarshta* (see above) by a Parsi scholar, Aerpāt Meherjiḥai Palanji Madan (*Actes du douzième Congrès international des Orientalistes, Rome, 1899*, Florence, 1901, I. 213-224), does not seem to have met with any acceptance either from his co-religionists or from Western scholars.

are all-powerful; if they are insufficiently used, or not used at all, nothing avails. The divine grace is freely given, not to supersede, but to aid and crown the sinner's repentance. Salvation, then, is a simpler affair for the Jew than it is for the Christian—simpler because less recondite; but it is less simple, too, in the sense of being less automatic. The Jew trusts to the reformed life as the one trustworthy means of making his peace with God and his conscience. At one of the most impressive moments in the service on the New Year Festival and on the Day of Atonement—the most solemn occasions in the Jewish year—there comes the characteristic cry, 'Repentance, prayer, and righteousness avert the evil decree.' For the Jew contrition, supplication, and, more important still, the contrite life suffice for salvation. Thus it is that the word itself seems somewhat strange to the Jewish mind. The Jew does not anxiously ask himself, 'Am I saved?', as though the matter called for profound heart-searchings. They are superfluous, seeing that, as the means of salvation are obvious and within a man's own control, there can be no doubt about his spiritual state either one way or the other. Rather he will ask himself, 'Am I worthy? Am I genuinely penitent?' Moreover, salvation, in its eschatological sense of deliverance from punishment or assurance of eternal life hereafter, means less to the Jew than to some others. This is because the hereafter generally bulks less in his thoughts. Not, however, because his belief in futurity is less strong, but because it is less dominant. The next world fills a smaller space in his mind because of the larger space occupied by this world. He has his work to do here—work at once mundane and heavenly—and this immediate duty keeps him from thinking mainly about the hereafter. He divides his attention equally between both worlds. This life, with all its strenuous, health-giving activities, is good—good in itself and also in its quality as a preparation for the life to come.¹ It is, according to Rabbinic doctrine, man's one sure chance of justifying himself, of redeeming himself, in God's sight. So he must take this life and make it as good as he can. If he is to be 'saved' hereafter, he must save himself here—save himself by living the worldly life in worthy fashion, by interpreting it in terms of the divine, and energetically giving effect to the interpretation. Thus it is that, while the idea of salvation is in the thoughts and heart of the Jew, the word is never on his lips. He believes in a blissful realm 'beyond these voices,' but he knows that his one hope of entering it lies in his helping to win from those voices their underlying music, to found a Kingdom of God on earth. This is his immediate business and, therefore, his chief concern and preoccupation.

1. In OT.—The word 'salvation,' however, occurs frequently in the English version of the OT. The Hebrew terms so translated are *yeshā'*, *yeshuah*, and *teshu'ah*. Like the English word, these terms have various meanings. They, and the verbal forms connected with them, stand for 'help,' for deliverance from distress or peril of some kind, particularly from enemies (Ps 18² 34⁸, Is 33², Jer 14⁸, 1 S 4³); they are also used to denote rescue from death (Ps 6⁸ 68²⁰) and from sin (Ezk 36²⁹, Ps 51¹⁴). The deliverance is sometimes wrought by earthly means (Ps 33¹⁷ 'An horse is a vain thing for safety'; cf. Pr. 21³¹), more frequently by superhuman agencies. The Hebrew terms further stand for victory (1 S 14⁴⁵, 2 S 19² 23¹⁰, 2 K 5¹; probably the cry rendered 'Save now' in Ps 118²⁵ should be rendered 'Give victory'; it voiced the presentiment of the Maccabean

¹ See art. LIFE AND DEATH (Jewish).

triumph). They variously connote the victory (α) of God (Is 45²², 51⁶, 8), (β) of Israel, his redemption from captivity, the fulfilment of his mission and the conquest of the Gentiles (Is 45¹⁷ 49⁶ 60¹⁸, Ps 147 98¹⁰), and (γ) of God and Israel together (Is 60¹⁰). In Second Isaiah, indeed, the two are identical. The salvation of Israel is always a vindication of God, the redemption of the elect people always the redemption of the divine promise (cf. 51⁴, 56¹⁰). Nor is the promised salvation limited to Israel; it extends to 'the ends of the earth'; but knowledge of the true God, submission to Him, a confession of His kingdom and righteousness, are the conditions precedent (Is 45²²). Thus the Hebrew terms acquire not only a universalistic, but also a spiritual significance. In Is 56 God's 'salvation' is declared to be near, and among its manifestations is the union of 'the strangers' to the Lord. They are to minister unto Him, to love His name, and to be His servants; them He will bring to His holy mountain and make joyful in His house of prayer, which is to be called a house of prayer for all peoples. The worship of the true God, with the inner regeneration which it betokens, is an element of the redemption itself as well as its essential preliminary. And prominent among the instruments of that redemption is Israel; the radiance of His own life is to light the path of regeneration for others: 'I will also give thee for a light to the Gentiles, that thou mayest be my salvation unto the end of the earth' (49⁶). The Hebrew terms are also used eschatologically. Is 25⁸, which describes God as 'swallowing up death for ever (or in victory)', is possibly a reference to the Resurrection (the next chapter plainly alludes to it)—certainly a formulation of the doctrine of last things. The word used to characterize this miraculous event is 'salvation': 'And it shall be said in that day, Lo, this is our God; we have waited for him, and he will save us . . . we will be glad and rejoice in his salvation' (v. 9). But the dividing line between the worldly and the spiritual salvation is necessarily faint and indefinite. God's salvation, just because it is His, must, from the very facts of the case, touch the spirit, though outwardly and directly it affects the temporal life. It implies a recognition of God, homage to Him as the Redeemer; it implies a deepened faith and a changed heart. And this higher connotation of the term is not restricted to eschatological passages; it is to be met with in utterances dealing with the present world-order. Thus one Psalmist (Ps 25¹) can pray: 'Lead me in thy truth, and teach me: for thou art the God of my salvation; on thee do I wait all the day.' Another can cry: 'Mine eyes fail for thy salvation, and for thy righteous word' (119¹²³). In these passages salvation almost certainly means the higher deliverance which is wrought by the illumination of the spirit and the invigoration of the will. In other words, men are helped and saved through the divine truth; they are saved from themselves and for God (cf. Ps 27¹).

2. In Apocrypha and Pseudepigrapha.—In the Apocryphal and Pseudepigraphical writings the usage corresponds in most of its variations with that in the OT (cf. Wis 16⁷, Jth 9¹, 1 Mac 4²⁰). But the eschatological significance becomes more pronounced. Thus in *Enoch* the repentant sinners are saved, delivered from punishment, 'in those days,' i.e. at the Last Judgment (50³; cf. 4 *Escr.* 63² 76¹ 131 97, where the just are saved 'either because of their works or their faith'; Ps. Sol. 18⁶).

3. In Talmudic literature.—In the Talmudic literature deliverance, or salvation, is one of the boons associated with the Messianic order. The Messiah is specifically styled *Gō'āl*, the 'Redeemer'

or 'Saviour'.¹ He was to save not only Israel but humanity.

'The Messiah,' says J. Klausner,² 'was to be both king and saviour. He was not only to overthrow the enemies of the Jewish people, to restore the kingdom, and to rebuild the Temple, but also to set free all mankind from idolatry, to proclaim the glory of the one God throughout the world, and to destroy sin out of the earth.'

The Talmudic connotations of the term may be conveniently gathered from the Prayer Book, in which the equivalent word for 'salvation' denotes deliverance from earthly ills, but more often is used eschatologically. In one paragraph of the *Amidah* (the prayer recited 'standing,' sometimes called the 'Eighteen Blessings') the salvation asked for is health;³ but in another paragraph it expresses the belief in the Resurrection,⁴ and in yet another the Messianic hope.⁵ In at least one instance it seems to have a spiritual connotation; on Sabbaths and festivals a prayer⁶ is offered for such higher blessings as sanctification through the Commandment (*mitzvah*) and the inner purity of sincere service, and with these there is associated the further boon of joy in the divine 'salvation,' to which the context warrants us in attaching a spiritual significance. The hope of salvation in the Messianic time expresses itself with especial force and clearness in certain services of the Synagogue. One example is the service held on Saturday night at the close of the Sabbath; it includes a string of Prophetic utterances containing the promise of national redemption—e.g., Is 12²: 'Behold, God is my salvation; I will trust, and not be afraid. . . . Therefore with joy shall ye draw water out of the wells of salvation.' And the climax of the service is reached in the rite of *habdalah*,⁷ which is a thanksgiving for the 'separation' of the Sabbath from the workaday week and of Israel from the Gentiles. The rite is introduced, at private worship, by other Messianic verses from the OT, and also by a prayer for the coming of Elijah the precursor (see Mal 4⁵). The cup of wine used in the ceremony is styled 'the cup of salvation' (see Ps 116¹³). At least equally notable is the fact that a special day, the seventh day of the Feast of Tabernacles, has been set apart by the Synagogue in honour, so to speak, of the idea of salvation. On that festival, as the Mishnāh records,⁸ a circuit of the altar in the Temple was made daily to the sound of the trumpet (*shōphār*), the worshippers carrying their palms and repeating the cry, 'Save now, I beseech thee,' in Ps 118²⁵. The cry in the Hebrew original is *Hoshiāh-nā*, which was abbreviated into *Hosha'nā* (the 'Hosanna' of Mt 21⁹). On the seventh day there were seven circuits, and hence the day came to be known as *Hosha'nā Rabbāh*, 'the Great Hosannā.' The salvation asked for seems to have been, specifically, the salvation of the soil from drought—the season in which the Tabernacles falls being that of the autumn rains, of which the willow of the brook bound up with the palm (cf. Lv 23⁴⁰), and on this occasion decking the altar, was regarded as the symbol. In course of time an extended significance was given to the Great Hosanna Day. The circuits were taken over by the Synagogue from the Temple, and in the accompanying prayers (called *hosha'noth* from *hosanna*, their refrain) other boons besides rain, the general fertility of the earth, and the physical well-being of man and beast, were asked for—Israel's final ingathering, e.g., the advent of the Messiah, and the restoration of Jerusalem; and they were asked for all the

more passionately because the land was lost and the people scattered. The Great Hosanna (originally only the 'Seventh Day of the Willow,' as the Talmud styles it) had meanwhile, probably because Tabernacles was regarded as a Day of Judgment for the Fruits,¹ become a day of penitence, a faint reminiscence and revival of the recent Day of Atonement, and a supplementary and final effort after reconciliation with God. The additional boon of the divine forgiveness and salvation was accordingly added to the blessings invoked, and the following prayer, with others of a like tenor, was included in the service: 'O God, like sheep we all have gone astray. From out Thy book wipe not our name away. Save! O Save!'² The penitential character of the day (especially emphasized in the Spanish liturgy) is recognizable in all the orthodox Prayer Books. At the final point of the service the palm is laid aside, but the willow is retained, the worshipper beating off its leaves to the cry, 'A voice bringeth good tidings' (cf. Is 52⁷), and then follows a prayer for the Messianic redemption, and for the spiritual 'waters that satisfy the thirsty soul' (cf. Ps 107³).

Thus salvation, attaining its highest and most personal significance, becomes a synonym for redemption from sin and its consequences. As was to be expected, the term is used largely in this sense in the liturgy for the Day of Atonement, the day of the divine salvation.³ There the cry is for spiritual redemption, for escape from the effects and the very bondage of sin, for the creation of the new and the higher man: 'We have done wickedly, therefore we are not saved; but do Thou put it into our hearts to forsake the way of wickedness, and hasten our salvation.'⁴ The utterance is typical. The worshipper's renunciation of the way of wickedness, his restoration to the divine fellowship, constitute his salvation, and the divine help is to hasten it.

II. *ATTAINMENT OF SALVATION*.—Understanding 'salvation' to mean moral and spiritual redemption here or hereafter, let us now consider how, and by whom, it may be attained according to Jewish teaching.

1. *OT teaching*.—In the OT and the Apocrypha the chief, practically the sole, way to divine acceptance lies through obedience and, in the case of sin, through repentance: 'What doth the Lord thy God require of thee, but to fear the Lord thy God, to walk in all his ways, and to love him, and to serve the Lord thy God with all thy heart and with all thy soul'; and, further, 'The Lord shall scatter you among the nations . . . and there ye shall serve gods, the work of men's hands . . . But if from thence thou shalt seek the Lord thy God, thou shalt find him, if thou seek him with all thy heart and with all thy soul' (Dt 10¹² 4^{27a}). These typical utterances might be multiplied indefinitely. Here and there we come upon pregnant sentences briefly summarizing the essentials of the acceptable life. There is, e.g., Ps 15, with its list of prerequisites for him who would abide in God's tabernacle, dwell in His holy hill. The catalogue is almost exclusively ethical; it includes such virtues as truthfulness and sincerity, the avoidance of detraction and usury, and of wrongdoing generally to one's neighbour. Micah (6⁸) has a yet shorter formula: 'What doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?' These utterances are sublime because of their very simplicity. Beside them the tangled schemes of salvation propounded

by later theologians seem forced and artificial. Equally simple are the prescriptions for achieving redemption from sin. Nothing is finer, or more characteristic of the Prophetic teaching on this point, than the exhortation of Hosea (14¹): 'O Israel, return unto the Lord thy God; for thou hast fallen by thine iniquity. Take with you words, and return unto the Lord: say unto him, Take away all iniquity, and accept that which is good (in us)'; upon which follows (v. 4¹) the saving promise: 'I will heal their backsliding, I will love them freely. . . . I will be as the dew unto Israel.' But the repentance must be whole-hearted, not merely lip service or outward show. God refuses to hear the man whose hands are stained with blood, and the sinner must rend his heart and not his garments if he is really to turn unto God (Is 1¹⁵, Jl 2¹³).

2. *Apocrypha*.—The OT is echoed by the Apocrypha. The one way of salvation is service, obedience to the Commandment or the Law (God 'hath mercy on them that accept the Law, and that diligently seek after his statutes' [Sir 18¹⁴, according to Kautzsch's reading; cf. 35¹⁵ Eng. RV and 4 Ezr. 7²² 9^{32a}]). Repentance, too, must be real, finding its expression in amendment: 'Return unto the Lord, and forsake the sin' (Sir 17²⁵). Sometimes faith is postulated as the avenue to acceptance (cf. 4 Ezr. 9⁷), but exceptionally; the chief stress is laid upon works. In an utterance reproduced by the Talmud¹ Ben Sira says (34²³): 'He that washeth himself after touching a dead body, and toucheth it again, what profit hath he in his washing? Even so a man fasting for his sins, and going again, and doing the same; who will listen to his prayer?' In like manner, according to Wis 1⁵ 5^{2a}, the divine criterion of human merit is 'righteousness,' i.e. morality touched by religion, which, in the case of the Jew, becomes obedience to the law or the 'discipline.' They that 'take their fill of lawlessness are consumed'; they are 'amazed at the marvel of God's salvation' wrought for the righteous, who 'live for ever and receive the diadem of beauty from the Lord's hand' (5² 7. 1^{5a}). And righteousness is to know God and to love men (12¹⁹ 15³). But even for the sinner there is acceptance if he repents, and God so accepts him because He loves all His creatures and cannot hate any of them: 'Thou sparest all things, because they are thine . . . for thine incorruptible spirit is in all things' (11²⁶ 12¹; cf. Ps 119⁹⁴). The thought that man is God's handiwork, akin to Him, moreover, through the soul, moves the divine heart to compassion and forgiveness (cf. Is 64^{6a}). The *Psalms of Solomon*, though a product of a different school of religious thought, contain similar doctrine: 'Faithful is the Lord to them that love him in truth, to them that walk in the righteousness of his commandments, in the law which he commanded us that we might live'; and the singer praises God for having accepted his repentance, for having saved him and not appointed him for destruction with sinners (14¹⁶ 16³). In 4 Ezra God declares that 'few shall be saved'; but Ezra invokes the divine rectitude and goodness as a plea for mercy towards 'them that have no store of good works' (8¹ 2³⁶). Thus the Commandment, or the Law, takes high rank in the Apocrypha among the essentials of the acceptable life. It is the Law that nerves the Maccabees for their desperate and glorious conflict with the Greeks (1 Mac 2²⁷ etc.).

3. *Talmud and Midrash*.—(a) *The Law*.—The Law enjoys no less estimation in the Talmud and the Midrashim. The *Tôrâh* is the one 'way of life' here and hereafter,² the corrective to the

evil impulse, the antidote to sin, the source and the guarantee of all moral and spiritual good.¹ In a striking passage the Rabbis, commenting on the words (Jer 16¹¹), 'They have forsaken me and have not kept my law,' picture God as saying, 'Would that they had forsaken Me, but kept My Law!' But how is it possible to keep the Law while forsaking God? The answer is that, if they had occupied themselves with the Law, it would have led them back to God.² The study of the *Tôrāh* is a saving influence—the idea fills a large place in the Rabbinic doctrine. The Mishnah³ gives a catalogue of good actions of which the usufruct is secured in this world, but which are stored up by way of capital, or substance, for enjoyment in the world to come—e.g., filial reverence, visiting the sick, dowering the bride, and peacemaking—and it ends by adding that 'the study of the Law is equal to them all.' What does the phrase mean? Does it mean study only? Was the man of evil life who pondered the *Tôrāh* (i.e. the whole body of religious lore) day and night automatically guaranteed salvation according to the Rabbinic teaching? The entire Talmud and its allied literature refute the notion. Again and again with '*Tôrāh*' the phrase 'good deeds' is joined, to show that religious study and meditation are not enough, that the guarantee of salvation, though it may be obtained through them, is something higher, something essentially independent of them, and is to be looked for in the obedient and devout life. The final aim of knowledge (i.e. of the Law), say the Rabbis, is repentance and good deeds, and God is described as saying, 'Keep my *Tôrāh* in thy heart, but let the fear of me also be before thine eyes; guard thy life from all sin, and purify thyself from all iniquity. Then I will be with thee.'⁴ And, still more plainly and trenchantly, the Rabbis say: 'He that studies *Tôrāh* without practising it—better for him if he had never been born.'⁵ Weber⁶ cites some of these passages, but implies, in spite of them, that the Rabbinical conception of salvation is essentially mechanical. The Psalmists, he remembers, also have high praise for the Law (cf. esp. Ps 119), but on their lips the Law means something more than the written word, something wider and higher. For the Rabbis, on the contrary, the *Tôrāh* is Law pure and simple, and as such they extol it. The distinction is false, as will have been seen. Sometimes, it is true, the *Tôrāh*, or even the study of the *Tôrāh*, stands alone in Talmud and Midrash as the *summum bonum*, as containing all the promise and potency of salvation. But that the thought underlying such utterances is larger than the literal meaning is proved by the quotations just given, and by the spirit of the Talmudic doctrine generally. And this repeated insistence upon the importance of the Law becomes intelligible when it is remembered that, for the Rabbis, the *Tôrāh*, used in the wider sense above indicated, contained all the knowledge and the inspiration needed by the Jew for attaining to the good life. Through study of the Word, and of the teachings which provide its explanation and complement, that saving knowledge and inspiration could most certainly be acquired; but they were useless unless they were translated into action. The very phrase 'to study the Law' was often used in a larger sense, and included obedience to it; and every morning the devout Jew prays for help in his endeavour to understand the *Tôrāh* and lovingly to fulfil it.⁷ The ardour of the Jewish

fathers for the *Tôrāh* was no more mechanical, and no less worthy, than is the zeal of the good Christian who diligently searches the Scriptures for the guidance and illumination which are essential to right living. Unquestionably part of the charm of the *Tôrāh* for the Jew was, and is, the very fact of its being law, though not in the mechanical sense imagined by Weber. For the Jew the *Tôrāh* is law understood as the supreme commandment, and also as discipline. It contains definite, concrete rules, which it is his greatest delight to perform, seeing that they have come from God. 'The joy of the Commandment (*mitzvah*)' is a familiar Rabbinic expression,¹ and the joy was not only real, but also spiritual, springing not from the consciousness of a merely automatic obedience, but from the thought of being at one, through obedience, with the Divine Master. Through the joy of the Commandment, the Talmud explicitly declares,² the Divine Presence is brought down and abides; and this joy, a medieval teacher adds, is even more pleasing to God than the obedience.³ 'To do the will of the Father in heaven' is an equally familiar phrase of the Rabbis; for that a man should make himself light as an eagle, swift as a hart, strong as a lion.⁴ For obedience to the divine commands gives to life all its real meaning and savour. The *Tôrāh*, moreover, was law in the sense of a saving discipline. The Jew saw this, and the thought gladdened him. How low might he not have fallen, to what debasing bondage might he not have been reduced, but for that corrective and exalting influence! He might have been an idolater, a thief, a sensualist—a slave, in short, to his worst self. 'There goes John Bunyan but for the grace of God!'—the saying has its parallel in the utterance of Rabbi Joseph on Pentecost, the Feast of the Law: 'But for this day I might have been some low man in the street.'⁵ The *Tôrāh* saved him from that degradation. 'I will walk at liberty,' says the Psalmist (Ps 119⁶⁵), 'for I have sought thy precepts'; and 'He only is free who gives himself to the *Tôrāh*,' taught the Rabbis in their turn.⁶ 'They that busy themselves with *Tôrāh* and deeds of love,' they say elsewhere,⁷ 'are the masters of their lives; they are free from the yoke of sin, from sorrow, from oppression, from death.' The *Tôrāh* is the guarantee of salvation both here and hereafter. Greater than sacrifice, which procures only earthly life, it secures the heavenly life also.⁸ For, when a man passes hence, none of his possessions goes with him, neither silver, nor gold, nor precious stones, but only *Tôrāh* and good works; they alone hearten him and plead for him.⁹ In this world, too, their power is tremendous. 'He that accepts one single commandment in perfect faith deserves that the Holy Spirit should rest upon him,'¹⁰ and still more definitely Maimonides declares that to fulfil only one of the 613 precepts of the *Tôrāh* for the love of God is to be worthy of eternal life.¹¹ In fine, the *Tôrāh*, according to the Rabbinic conception, is at once the base and the crown of the good life. Its acquisition is the seal of the moral and spiritual perfection which has been already attained by the quest of it. This thought is set forth in a striking passage¹² in which various qualifications, covering almost the entire domain of human excellence, are enumerated as

essential to that acquisition—moderation in worldly enjoyment, patience, goodness of heart, submission under tribulation, contentment, humility, love to God and man. To possess *Tôrāh* is to be assured of salvation because it guarantees the possession of the high attributes by which salvation is automatically attained.

(b) *Faith and belief*.—The Law, then, means practical goodness, but also faith. The sharp distinction between faith and works as the means of salvation is unknown to Judaism. This is easily understood. In a certain sense acceptance by God necessarily presupposes belief in Him. If that belief is lacking—if there is no conviction of God's saving power, no desire for it—then the very idea of salvation is excluded. Used in this sense, faith does, and must, enter into the Rabbinic scheme. 'The just shall live by his faith,' cries Habakkuk (2^d), and this utterance a Talmudic sage cites as an epitome of the entire religion.¹ Faith, moreover, is a saving virtue; it is so fine, so courageous, when confronted with the trials and the tragedy of life, as to deserve God's best blessings. It was Abraham's faith that won for him life in this world and in the next.² In virtue of faith the Israelites were redeemed from Egypt;³ they believed in the divine promise of redemption, though their misery 'shrieked against the creed.' But, as has been said, the salvation of God is obviously conditioned by faith in Him. The good life is the one saving force, according to Judaism, and the good life, also according to Judaism, is the God-inspired life. We reach the same conclusion when we think of salvation through repentance. By repentance all the Jewish teachers mean return to God. Judaism knows no other kind; the word for repentance—*t'shūbāh*—means 'return.' But to go back to God implies the possession of a God to go back to—in other words, it presupposes belief and faith in Him. Works and faith, then, are inseparably bound up together in Judaism as in every other religion. Works are the substance of the ideal life; faith is its spirit, its driving force. But farther than this it is unnecessary to go. The familiar assertion that, according to Judaism, God judges men by their lives, which are within their own control, and not by their creed, which is not, remains unquestionably true. Attempts have been made in the Jewish domain to embody the essentials of belief in a rigid scheme or formula, and they have been rashly understood as touchstones of the Jew's orthodoxy and even of his fitness for salvation. The Thirteen Articles propounded by Maimonides⁴ are the best-known example. But, as all Jewish scholars agree, Maimonides' scheme was never formally accepted by the Synagogue; on the contrary, it was fiercely assailed by many great authorities, some of whom propounded alternative schemes of their own—Abba Mari (13th cent.), with his three creeds, Hisdai Kreskas (14th cent.), with fifteen, and Joseph Albo (15th cent.), also with three. On the other hand, Isaac Abravanel (15th cent.) scouted every attempt to frame a dogmatic scheme; every word of the *Tôrāh*, he declared, was a dogma. Nor did Maimonides himself give out his Thirteen Articles in the name of the Synagogue, though it has in a measure fathered them by permitting their inclusion in the liturgy in hymnal form.⁵ He had no power to claim general authority for them. They represent his personal opinions only, and in selecting them he probably had an eye to the special religious needs and the theological controversies of his day—a remark which applies to

most of the dogmatic schemes put forth by Jewish teachers at various periods. But that Maimonides thoroughly believed in the saving character of his creeds and formulated them only after profound consideration is clear from his own explicit statements.¹

Of far greater moment is the famous passage in the Mishnāh² which runs as follows:

'All Israel have a share in the future life. But these have no share in it:—he who says that the dogma of the Resurrection of the Dead is not taught by the *Tôrāh* [or more broadly, according to another reading, 'he who denies the Resurrection of the Dead'], or that the *Tôrāh* has not come from God, and the "Epicurean." Rabbi Aqiba says, he also that reads external [i.e. heretical] books, or that uses a Scriptural verse as an incantation in order to heal a wound. Abba Saul says, he also that pronounces the Divine Name (the Tetragrammaton) as it is written.'

The Mishnāh then proceeds to supplement these categories by adding the names of certain notorious transgressors, among them Jeroboam, Ahab, King Manasseh, and Balaam. Rabbi Jehudah, however, puts in a plea for Manasseh. The importance of this passage lies in the fact that it forms part of the Mishnāh, the recognized code of the Rabbinical law, and has consequently, in so far as its uncontroversial dicta are concerned, to be regarded as an authoritative utterance of the Synagogue. That it has always possessed this character is certain, and it has shaped not only the belief of orthodoxy, but its practice also. A Jew who denied, e.g., the Scriptural authority of resurrection would be deemed unfit, even to-day, to hold the position either of Rabbi or of religious teacher in a rigidly orthodox congregation. The inclusion of this passage in the Mishnāh has stereotyped orthodox opinion on this particular question beyond the possibility of modification. If it had escaped the Mishnāh, and appeared merely as an *obiter dictum* of the Talmud at large, it might conceivably have gone more or less unregarded. The question arises, however, whether orthodoxy has not invested the passage with a significance which it was never meant to possess. When its various authors declared that this or that person, or category of persons, would have no share in the future life, did they mean the phrase to be taken literally, as a deliberate expression of their opinion that such person or category would be eternally lost? Were they not rather speaking loosely and rhetorically, using the formula, 'these have no share in the future life,' not in its exact eschatological sense, but merely as an arresting way of expressing their opinion of the heinousness of the offences specified? In other words, are we not at liberty to see in the formula one of those exaggerated modes of speech purposely impressive, but literally inexact, which are so dear to the Oriental mind?³ Other Talmudic passages lend support to this suggestion. According to Jer. *Sanh.* x. 28a, among the 'heretical books,' the readers of which, in the opinion of Rabbi Aqiba, will have no share in the future life, are the 'books of Ben Sira.'⁴ Now, Ben Sira (Ecclesiasticus), far from being a heretical book in the opinion of the Talmudic doctors generally, is a work which they prize and often cite with approval.⁵ How, then, could Aqiba have been speaking literally when he consigned to perdition a man who read it? Anticipating the view of a later generation of teachers,⁶ he doubted whether Ecclesiasticus was a 'safe'

¹ Cf. his Introduction to Mishn. *Sanh.* x., end; see, on the whole subject, Schechter, *Studies in Judaism*, 1st ser. ch. vi.

² *Sanh.* x. 1.

³ Cf. Mk 3². This theory is advanced after full consideration of the parallel passage in *R. Hashānāh*, 17a, with its circumstantial description of the future fate of these heretics and sinners.

⁴ M. Joel, *Blicke in die Religionsgeschichte*, Breslau, 1880, p. 68 ff., tries to show that 'Ben Sira' has been erroneously substituted for some other name.

book, and he expressed his doubts with a certain rhetorical violence. But more than this he could not possibly have meant. Again, in *Abhōth de R. Nathan*¹ it is declared that among those who have no share in the future life are the judges of a city. The source of this dictum is to be found in the Talmud.² Merely because the troubles that have befallen Israel are there laid at the door of corrupt judges, therefore the judges of a city, without distinction of moral character, are excluded, for all time, from the world to come. Good and bad are classed together indiscriminately. Is it possible to understand such an utterance literally? Yet again they are declared³ to be eternally lost who profane holy things or despise the religious feasts, and those, again, who put a fellow-man to public shame (the last category is omitted from some variants), and they are lost 'even though they possess *Tōrah* and good deeds.' These are comparatively venial offences, and yet they are to be visited with eternal perdition. Even so conservative a writer as Bacher does not seem to think that the last-cited statement should be taken seriously; he regards it as embodying the theme of a sermon directed against the sins or heresies of the preacher's time.⁴ That all such utterances should be marked by some extravagance of expression is quite intelligible, and that the Rabbis were accustomed to resort to these rhetorical devices is made clear by their language when, instead of denying, they affirm a man's chances of future life. A certain type of persons or actions is declared to merit happiness hereafter for quite inadequate reasons. 'Who,' e.g., the Talmud asks, 'is worthy of the world to come?' And some of the various answers are: he that, at prayer, joins the *Amidah* to the benediction for Israel's deliverance; or he that shows respect to the aged; and he that repeats Ps 145 thrice daily.⁵ These exaggerations are the most familiar things in the Talmudic literature. In *Brākhoth*, 4b, it is declared that he who transgresses the injunctions of the sages makes himself liable to the death penalty. But the offence against which these words are intended as a warning is the trivial one of reading the evening *shema* (Dt 6⁴) after midnight. Yet it is admitted that the right time for reading it lasts till dawn, and that the sages only desire to make the proverbial 'fence to the law,' and to keep men from transgression. Is it not clear, then, that this portentous dictum is merely a conscious exaggeration used for this specific purpose, and not a literally intended pronouncement? It is true that this loose and rhetorical use of the eschatological phrase, in both its positive and its negative forms, seems to have become more frequent in the later Talmudic period, but the fact does not exclude the possibility of its having been in vogue in the earlier times from which the Mishnah in *Sanhedrin* is to be dated. In fact Elazar of Modin, the author of the saying in *Abhōth* above cited, which denies salvation to those who despise the festivals, belongs to those times. This passage, like the Mishnah in *Sanhedrin*, was doubtless a polemical utterance aimed at theological opponents (mainly the Jewish Christians),⁶ such fulminations being the only means of self-defence possessed by the Synagogue. But this very circumstance supports the hypothesis that these expressions were only rhetorical. The invective of rival theologians is notoriously inexact and wild; and, when the Mishnaic sages consigned

their opponents to perdition, they may consciously have meant to do no more than imply that the opinions and the acts which they had in mind were a source of danger to the religion.¹

As an eschatological statement Mishnah *Sanh.* x. 1 must be deemed ineffective from another point of view also. There was always an obvious antidote to its sting. Maimonides² embodies the Mishnaic dictum in his code of Jewish law, as he was bound to do; but he is careful to add that it applies only to offenders who die impenitent. Let the sinner repent, he says, and, though his sin be a denial of the divine existence itself, he will enjoy everlasting life, 'for nothing can stand against repentance.'³ Elsewhere⁴ he seems to affirm that the attainment of moral and spiritual perfection automatically secures eternal bliss for men, the bliss being the perfection itself. Thus, according to the best Jewish teaching, there is hope for the most deep-dyed sinner, even for the worst heretics. The phrase indeed is inadequate; for Judaism has always laid less stress on the revolt of opinion than on the revolt of action. There are teachers, like Moses Mendelssohn, who go so far as to deny that Judaism has any saving truths whatever. Nowhere, said Mendelssohn, does the Bible command men to believe; it commands them to know. Punishment, in the Biblical age, began only at the point where opinion passed over into overt action; up to that point a man might think what he pleased without being chargeable with heresy.

'I recognize,' he says, 'only those as eternal truths which the human mind can comprehend and human powers verify,' and he adds: 'The divine religion brandishes no avenging sword; its power is the divine might of truth.'⁵

It follows that, according to Jewish doctrine, duly considered and properly understood, there is salvation for all. The general declaration of the Mishnah above quoted, 'All Israel have a share in the future life,' might well stand without the subsequent qualifications.⁶ But, as we shall see, for 'all Israel' there might have been substituted 'all men,' if the real heart of Judaism is to be regarded as speaking.

(c) *Repentance*.—We are thrown back, then, upon works as the essential condition of salvation. If they fail, there is, as already stated, repentance, i.e. return to God, and conversion from the evil life. Thus repentance, which K. Kohler⁷ calls 'an exclusively Jewish conception,' is essentially good works; it is a change of temper issuing in the changed, the reformed, life (cf. Is 55⁷, Jl 2¹³, and the OT Prophets, *passim*). The Rabbis emphasize the idea. In the liturgy for New Year and the Day of Atonement, the great festivals of repentance, it is declared that 'penitence, prayer and righteousness (of which charity is the typical example) avert the evil decree.'⁸ With repentance good deeds are repeatedly coupled in the

¹ I. Abrahams (*Studies in Pharisaism*, p. 143) characterizes these utterances as 'theoretical metaphysics rather than practical religious teaching.' Cf. Schechter, *Studies*, 1st ser. ch. vi.

² *Yad*; *Hile. Teshubāh*, iii. 6 ff.

³ *Ib.* iii. 14. According to the Rabbis, God created repentance before the world, which could not otherwise have stood; cf. *Midr. Rabbāh* to Gn 14; and, as Abrahams (p. 145) acutely points out, though the confession of sins on the Day of Atonement specifies offences theoretically unpardonable, the worshipper adds, 'For all these forgive us, O God of forgiveness.'

Rabbinic literature.¹ 'For him,' declare the Rabbis, 'who saith, "I will sin and repent," repentance availeth not.'² Repentance, they also say, 'makes a man a new creature';³ if it fails to do this, it is nothing. But, when it does achieve this, it is all-powerful; it lifts the sinner to the very throne of God.⁴ The sinner is to repent every day; a man's garments should be always white.⁵ But, since man is forgetful of his highest interests, there are special days, the 'Ten Days of Repentance,' ear-marked for this duty and particularly favourable for its fulfilment. On those days the Divine Presence dwells among Israel.⁶ Beginning with the New Year Festival, the Biblical 'Day of Blowing the Trumpets' (Lv 23²³), they reach their close and climax on the Fast of Atonement, the most solemn celebration of the Jewish year (the observance of the 'Day of Blowing the Trumpets' as the New Year festival is post-Exilic, according to Friedmann;⁷ but the distinctive rite of the feast, and its proximity to the Day of Atonement, must have invested it with some of its present solemn and penitential character at an early date; to-day the Prayer Book for the festival shares many of the special features of the liturgy for the Day of Atonement). The traditional solemnity of the Day of Atonement, which extends back to Biblical times (Lv 16¹⁰), its historic associations, the mortification of body and spirit, and the withdrawal from the world, which form part of its observance, make it a peculiarly appropriate opportunity for repentance. It is also a day for the exercise of God's special grace in response to the strenuous effort after reconciliation put forth by a united Israel. It is the day of moral and spiritual salvation *par excellence*. But the sinner must aid its gracious work by his contrition. Three books, say the Rabbis, are opened on New Year's Day—one for the righteous, who are written down for life straightway, another for the wicked, who are irrevocably condemned to die, a third for the 'intermediates,' whose fate, held in abeyance until the Day of Atonement, is determined by the quality of their repentance.⁸ According to another view, repentance atones for small sins; but for the expiation of more serious offences the Day of Atonement is also needed.⁹ But there are limits even to the Day's great power. Without repentance it is ineffective, and, if the worshipper trusts to it alone to bring him absolution automatically, the Day avails him nothing.¹⁰ Moreover, before the sinner can make his peace with Heaven, he must make it with his brother.¹¹ Apart from these admirable reservations, the austerities of the Day have an inherent value as an aid to reconciliation. Fasting takes the place of the ancient sin-offering, and the 'affliction of the soul' is an acceptable offering in God's eyes; He will regard the fat and blood lost by the fasting worshipper as though it were laid upon the altar.¹²

(d) *Asceticism and tribulation*.—Further, there are certain aids to salvation which, joined to amendment, may increase its effectiveness. Among these are the ascetic life, tribulation, and 'the merit of the fathers.' The first is held in especial favour by the mystical school. Thus Balya ibn Pakudah (11th cent.) writes that he

¹ Cf. e.g. *Abkōth*, iv. 17: 'Better an hour of repentance and good deeds in this world than all the life of the world to come.'

⁹ *Mishn. Yōmā*, viii. 9.

¹⁰ *Tos. Yōmā*, iv. 10; *Mishn. Yōmā*, viii. 9.

¹¹ *Midr. Tehillim* to Ps 253; *Berākḥōth*, 17a. These ideas are woven into the liturgy; cf. *Service of the Synagogue*, iii., *The Day of Atonement*, p. 224 ff.

who prefers death in God's service to life in revolt from Him, poverty to riches for His sake, sickness to health, suffering to well-being, and who submits himself joyfully to the divine decrees, is fitted to receive the beatitude which God, in His love and grace, hath stored up in the future world.¹ But asceticism as a means of reconciliation with God is not the exclusive prescription of any one school. Penances for sin are a familiar feature in Jewish teaching and practice; the Rabbinical writings contain many references to them and even prescribe them in detail, their severity being proportionate to the nature of the offence.² Tribulation, too, is an aid to expiation, and opens the way to heaven.³ To go for long without tribulation is to arouse doubts as to one's certainty of eternal life, to justify a man's fear that he is getting his reward here instead of hereafter.⁴ 'If,' say the Rabbis, 'thou desirest life, hope for affliction.'⁵ But, if tribulation atones, death, the supreme visitation, necessarily does so. In this respect it is the mightier of the two; it absolves when affliction and repentance together are powerless.⁶ Death, say the Rabbis,⁷ expiates every sin, blasphemy alone excepted—an utterance which, taken alone, would stretch the scheme of salvation almost to the widest possible limits.

(e) *Imputed merit*.—A potent aid to salvation, in the case of Israel, is the merit of the fathers—an idea which has played a larger part in the literature of the Jew than in his life. The excellences of the three patriarchs (those of the matriarchs also, though this idea is far less emphasized), and indeed of all the righteous Israelites of the past, are supposed to be thrown into a common stock for the benefit of their people, collectively and individually, in every age. The salvation which the Jew might possibly not attain in virtue of his own life may be assured to him by the merit of the righteous dead. Even as a living vine is supported by a lifeless prop, and is thereby kept verdant and flourishing, so the living Israel is upheld by the virtues of the fathers who sleep in the dust.⁸ 'I am black, but comely,' says Israel with Ca 1⁵—'black because of my own actions, comely because of the acts of the fathers.'⁹ The germ of the idea is Biblical. Moses, interceding for his people, appeals, in arrest of judgment, to the righteousness of the patriarchs, God's 'servants' (Ex 32¹³; cf. Lv 26⁴²), though the chief stress is laid on God's covenant with them rather than on their virtues. The Rabbis, however, see in Moses' intercession an appeal to ancestral merit, and expound his appeal in the following parable:

There was once a king, with whom his friend deposited a string of ten pearls. The friend died, leaving one daughter, whom the king then married, giving her as a bridal gift a string of ten pearls of his own. In course of time she lost the gift, and the king threatened to divorce her. Her nearest friend interceded on her behalf. 'Why divorce her?', he pleaded, 'hast thou forgotten the pearls which her father deposited with thee? Take them and make good thy loss.' And the king consented. So, when Israel sinned in the matter of the Golden Calf, and God would have cast them off, Moses makes intercession for them. 'Why,' he asks, 'wouldst thou cast off thy people?' 'Because,' God answers, 'they have broken my Ten Commandments.' 'Remember,' Moses answers, 'the ten temptations that Father Abraham withstood, and let them atone for Israel's ten sins.'¹⁰

This idea of ancestral merit, M. Lazarus rightly says,¹¹ is specifically Jewish. The merit of the fathers, in Jewish teaching, unlike the Atonement

¹ *Hoboth Halebaboth*, ch. iv., ed. M. E. Stern, Vienna, 1856, p. 239; cf. *Reshith Hokhmāh* (16th cent.), ch. vi. end. The Introduction to the *Rogeah* (12th cent.), another work of the mystical school, contains similar doctrine.

in Christianity, does not depend for its efficacy upon the self-immolation of its possessors. The fathers do not deliberately sacrifice themselves for the salvation either of posterity or of their own generation. They may be quite unconscious of the expiatory value of their goodness. What is supposed to happen is a transfer, under God's grace, of that goodness to the credit side of other men's moral account. But, just as probably the belief in the Atonement has seldom weakened any Christian's sense of personal responsibility for his sins, so the thought of imputed virtue has seldom lessened a Jew's desire for personal virtue, or his effort to attain it. The Rabbis make it clear, indeed, that the merit of the fathers is of no avail unless part, at least, of the virtues of the fathers is transmitted with it, and the Jew is expressly warned against saying, 'My father was righteous; I shall be saved for his sake'; Abraham did not save Ishmael.¹ God, moreover, as S. Levy points out,² credits the virtues of the fathers to the children as a token of His love; it is an act of divine grace which no man can claim as a right, or count upon as certain to be exercised. On the other hand, the divine grace is operative when ancestral merit is not available,³ and yet, as we have seen, the good life, equally with the divine grace, is an essential condition of salvation. It is true, then, to say that, great as is the place which the theory of ancestral merit fills in Jewish teaching, its influence upon Jewish conduct has been very small. The Jew has prayed fervently for the exercise of the divine forgiveness on the ground of the virtues of the fathers; but all the time he has felt, and known, that his moral salvation was, in the last resort, mainly, if not exclusively, dependent upon himself.⁴

The 'fathers' whose merit is thus imputed are not exclusively those who lived in the remote past; they may have lived and died recently. The son of a righteous man gets the benefit of his father's rectitude, which directly transmits to him gifts like beauty, wisdom, and longevity, but also aids him indirectly by increasing his worth in the sight of God.⁵ These expiatory offices of the righteous may be exercised even during their lifetime by their prayers and even by their very existence. Their merit avails to redeem the whole world; their lives may redeem it, and so may their death.⁶ The importance attached to this imputed merit is exemplified by the choice of the story of the sacrificial 'binding' of Isaac (Gn 22nd) as the lesson read on the New Year festival. On that day the prayer is offered:

'As Abraham overcame his compassion in order implicitly to do thy will, so may thy compassion overcome thine anger against us.'⁷

In some Jewish liturgies, indeed, Gn 22 is set down for recital every day in the course of the morning service. But the Prayer Book is full of the general idea. In the *Amidah*, one of the oldest and most important constituents of the liturgy, God is described as remembering the pious deeds of the patriarchs, and as bringing a redeemer to their children's children;⁸ and the passage is typical of many similar utterances. The seven circuits of the synagogue, made by the palm-bearers on the Great Hosanna (see above), are associated with the three patriarchs together with Moses, Aaron, Phinehas, and David, whose virtues are invoked as a plea for the divine salvation.⁹

The doctrine of imputed virtue has still wider implications. The good deeds not only of the righteous but also of the average man are placed to the credit of the general account. The world, say the Rabbis, is made up of righteous men and sinners; it is the divine will that they shall live together in a united society so that the righteous may absolve the sinners. When this happens, God is truly exalted.¹ In like manner Maimonides says that it behoves a man to regard himself as partly innocent and partly guilty, and with himself the world at large. If he does one good deed, he inclines himself and the whole world on the side of merit, and obtains 'salvation' and deliverance for himself and for his fellow-men.² According to a beautiful Talmudic idea, if there are no righteous men in a generation, it is saved by the children in the school-house.³ This vicarious power is not, and should not be, merely automatic. The Jewish moralists exhort their readers to strive after the salvation of others, to seek, by precept and example, 'to lead the sinner gently heavenwards.'⁴ As to salvation hereafter, that, too, may be aided by the action of the living. A godly son, by his very godliness, may win eternal rest for his parent.⁵ Hence the superstitious idea which ascribes the same effect to the recital of the *Qaddish*⁶ by orphans; for the fervent 'Amen's' of the righteous deliver sinners from Gehenna.⁷ Intercessory prayer for the dead is not unknown to the Synagogue; but no example of a 'fixed' prayer of this kind is to be found during the first ten centuries of the Christian era.⁸

(f) *Mediation*. — Here the question of the Jewish attitude to mediation as an aid to redemption presents itself. Salvation through a mediator is not an idea alien to Judaism. Intercessory prayer is a familiar feature in Jewish history, Biblical and post-Biblical. What is alien to Judaism is the idea that salvation is possible through a mediator alone, that it may be automatic, that faith in the mediator may avail without repentance or good works.⁹ Equally foreign to Judaism is the idea that invocation may properly be made to the mediator. So to invoke him is to associate divine or semi-divine beings with God, and in effect to limit His power, seeing that He is supposed to need the intercession of others to move His justice or His mercy. It is also to limit the sonship of man, to deprive him of his right of going straight to the Father with his wants and his prayers. It is true that invocations of angels have found a place here and there in the Jewish Prayer Book, though not in the statutory portions of it, but their inclusion has been due chiefly to the influence of the mystics, and representative authority has consistently opposed it.¹⁰ That salvation is of God alone is, it need hardly be said, a reiterated Biblical doctrine (cf. Hos 13^d, Dt 32nd, Is 12^d 43rd, Jon 2^d, Ps 3^d etc.). Hence the idea of the merit of the fathers, as a means of salvation for their descendants, has not gone unchallenged in Judaism. Even some of the those who made a 'covenant' with God. In some liturgies Joseph is substituted for Phinehas.

¹ Midr. *Rabbah* to Lv 23rd.

² *Hile. Teshubah*, iii. 4.

³ *Shab. 33b*. Merit, indeed, may be fully retro-active; the living may be saved by those yet to be born. Thus Noah is said to have owed his deliverance from the Flood to the goodness of his descendants; cf. Midr. *Rabbah* to Gn 6th.

Talmudic Rabbis contested it.¹ According to one opinion, God's grace was extended to the Israelites as a reward for their refusing to rely upon ancestral merit when pleading for pardon.² There were Rabbis also who held that the merit of the fathers, operative once, was efficacious no longer, and they busied themselves about the precise date on which it lost its saving force.³ But all teachers alike maintain that the one external saving power is the divine grace. In the *'Amidah'* the Jew pleads not only the merits of the fathers, but also God's 'Name,' i.e. His reputation, His bond with himself, as a ground for salvation.⁴ On the other hand, the theory of imputed virtue has, for its necessary correlative, the idea of imputed sin. The iniquity of the fathers is visited upon the children, especially if the children perpetuate that iniquity.⁵ But, as a rule, the transmission of the responsibility for ancestral transgression is limited to the sin of Adam, which brought death into the world and increased liability to suffering. The poison with which the serpent infected Eve was transmitted to her descendants; but the *Tôrāh* is its antidote.⁶ Moreover, the transgression of the individual, like his good deeds, may affect the moral and, with it, the material well-being of his generation.⁷ But let Israel be united, let them love one another, and their salvation is assured.⁸

(g) *Grace*.—Crowning all the means of salvation, and completing their effectiveness, is the divine mercy, which compensates for human deficiencies and supplements human merits. 'Not because of our righteous acts,' so the Jew prays daily, 'do we lay our supplications before Thee, but because of Thine abundant mercies. What are we? What is our piety? What our righteousness?'⁹ In like manner, 'He who would purify himself,' say the Rabbis, 'is helped.'¹⁰ 'If,' they also say, 'men have no merits (i.e. no sufficient merits), God gives them His grace; can there be greater goodness than this?'¹¹ The idea inspires the extemporary prayers publicly offered by various sages on days of fasting and humiliation. Thus one cries, 'O King and Father, have mercy upon us for Thine own sake';¹² and another prays, 'If we are bare of good works, deal charitably with us for the sake of the sanctification of Thy name.'¹³ And the very words of these prayers, as well as their spirit, have been incorporated into the liturgy. This divine grace or mercy consists in the acceptance of repentance as the sinner's expiation.¹⁴ In a striking passage the Rabbis speak of repentance as 'a bribe,' which God accepts for the salvation of the sinner. But He does so only in this life; at the judgment hereafter He will be swayed by stern justice only.¹⁵

III. *SALVATION HEREAFTER*.—Thus the complex question arises: What does salvation hereafter mean according to Judaism? What is the future reward of the just? As to the Bible, little can be said on the subject with certainty. The belief in Sheol, the region of the shades or ghosts, prevailed at an early period (cf. Gn 37³⁵), but Sheol seems to have been a colourless, almost a negative, existence, which was regarded with dread. The Psalmists pray to be delivered from it, and apparently to be delivered from it, not for extinction, but for a

heavenly life of conscious spiritual beatitude more or less intense (cf. Ps 16¹⁰, 17¹⁵, 49¹⁵). But such utterances are probably late, and express Jewish thought as it was moulded by external, notably by Greek, influences. On the other hand, there is the story of the translation of Enoch (Gn 5²⁴), who 'walked with God, and he was not; for God took him.' Does this necessarily mean extinction, a preferable alternative to Sheol, as the reward of the patriarch's righteousness? 'God,' says the Psalmist (Ps 49¹⁵), 'will redeem my soul from the power of Sheol; verily he will receive me,' and the Hebrew word for 'receive' is identical with that for 'took' used in the case of Enoch. Does it not seem as though the hope breathed by the poet animated the historian also? At any rate we are entitled to say that, at some period in the Biblical age, the idea, even the conviction, of a spiritual reward for the righteous hereafter was cherished by certain minds in Israel. Parallel with this conviction was the belief in a Messianic era, with which the idea of a resurrection of the dead and a last judgment was closely associated (Is 25⁸, 26¹⁹, Dn 12¹²). This belief is elaborated in the Apocrypha, and is stoutly upheld by the Talmud and the Midrashim. The hope in a physical resurrection was reinforced for the Rabbis by the thought of the miraculous revivals accomplished by Biblical prophets,¹ of the germination of the seed sown in the earth,² and of the divine justice which, to vindicate itself, must needs judge body and soul together, united as in life.³ Restricted at first to the righteous, the resurrection came to be regarded as universal (certain individual sinners and categories of sinners being specifically excepted, as above stated), and the dogma has for centuries past retained this character in orthodox Judaism.⁴ It is embodied in the Prayer Book in many places, notably in the second benediction of the *'Amidah'*,⁵ in the burial service (where the resurrection is associated with the judgment), and in the ancient prayer, originally intended to be recited privately by the Jew on awaking in the morning, which begins, 'O my God, the soul which Thou gavest me is pure.'⁶ The resurrection and the judgment were conceived of as following the advent of the Messianic era, though originally they were supposed to precede it. The dead, aroused by the sound of the trumpet, would rise and be judged; the wicked would be condemned to punishment, temporary or endless, or to extinction (opinion differed on these points), the righteous to everlasting life in paradise. The generic Talmudic name for the future life was *'Olam Habā'*, 'the world to come.' It was at first applied indiscriminately to the Messianic era, the resurrection, and the life in paradise. But at an early date (probably in the 1st or 2nd cent. of the Christian era) the application of the term was limited to the last of these three stages—a practice possibly due to the increased emphasis of individual as distinguished from national hopes of salvation which was the natural consequence of the downfall of the Jewish State.⁷ Thus we find a Talmudic teacher of the 3rd cent. (Rabbi Johanan) declaring that the Biblical prophets only predicted the events of the Messianic age, but, as to the *'Olam Habā'*, no eye but God's hath seen it; and yet another (his contemporary Samuel) affirming that the only difference between the present world-order and the Messianic will be the destruc-

tion of despotism which is to mark the latter.¹ At one and the same time, then, the Messianic age was shorn of much of its miraculous character and its joys, and the true, the ideal, *'Olam Habā* relegated to a heavenly realm which it was beyond human power to picture. This sharp differentiation of the two states of existence became the rule. The modern Jew still distinguishes in his prayers between 'the days of the Messiah' and 'the life of the *'Olam Habā*,' asking to see and taste the varying blessedness associated with each of them.² Concerning the nature of the heavenly bliss conflicting ideas prevailed. According to some teachers, paradise (*Gan Eden*) was an existence, even a place, of fleshly delights; according to others, its joys were purely spiritual.

'Better a single hour of blissfulness of spirit in the world to come than all the life of this world'; and again, 'The future world is not like this world; there is no eating or drinking there, no bodily pleasures, no strife or jealousy or rancour, but the righteous sit with crowns on their heads nourished by the divine splendour';³ and Maimonides⁴ declares that even the crowns in the latter passage are but a figure of speech.

There were teachers, as we have seen, who deprecated any attempt to depict the happiness of the future world, quoting in their support Is 64⁴: Men have not heard, nor perceived by the ear, neither hath the eye seen what God hath prepared for him that waiteth for him. Maimonides himself seems to have had two minds on this subject. While in his Commentary on the Mishnā⁵ he accepted the dogma of a physical resurrection, and also wrote a special tract to vindicate the sincerity of his belief in it, he ignored it altogether in his *Yād*, and gave an exclusively spiritual interpretation of the future world.⁶ But materialistic conceptions of the heavenly life were frankly avowed by certain Jewish teachers in the mediæval period, and it was the task of writers like Maimonides to make war upon their ideas. A like divergence of view prevailed with regard to future punishment. According to some writers—and they formed the majority—there is a veritable Gehenna; 'there is no hell,' say others.⁷ Some teach the doctrine of eternal punishment;⁸ others deny it, regarding Gehenna as a place of purgatory only.⁹ This purgatory lasts twelve months, and its redemptive action is quickened by the intercession of the righteous.¹⁰ Maimonides, in his turn, seems to reject the idea of a hell; the punishment of the evil-doer unworthy of heaven is eternal death, and this death is what is meant by the 'excision' threatened in Gn 17¹¹ and elsewhere in the Pentateuch.¹² Paradise, on the other hand, according to the Rabbinic teachers, is variously a place fragrant with flowers and resplendent with gold and precious stones, through which flow streams of milk, wine, and honey,¹³ but more frequently it is simply a beatific state of being. Maimonides expresses the general view when he says that the reward of the just hereafter is 'bliss.'¹⁴ Joseph Albo, in a fine passage,¹⁵ spiritualizes the punishment as well as the reward. It lies, he says, in the torment of the soul torn by conflicting desires—by its old sinful longings which it can no longer gratify, and by its yearnings after the higher joys which it is not yet pure enough to attain. Agony such as this, he adds, far surpasses all earthly pain.

With the process of time Jewish conceptions of the hereafter have become definitely spiritual. The tendency is to look, when picturing the future life, not to a resurrection of the body, but to the bliss of the soul. The idea of resurrection is sharing the fate of the Messianic hope. Just as the modern Jew pins his faith to a Messianic age rather than to a Messianic person, so he interprets the resurrection wholly in terms of the spirit. For him salvation, both here and hereafter, means life with God—here in the quest of the higher good, hereafter in its full and certain attainment.

IV. SALVATION OF THE GENTILES.—Finally, there is the question of the Gentiles' chances of salvation. From an early date the belief in the universality of the divine grace existed among the Jews. The book of Jonah was written to uphold it, and it found support among the Rabbis. According to the Midrash,¹ Adam was warned that on the day he ate of the forbidden fruit he should die; but God, in His grace, interpreted the word 'day' to mean one of His own days, which lasts a thousand years (Ps 90⁴), and, so prolonging Adam's life, saved him from the punishment entailed by his sin. Adam, in this passage, stands for all humanity, and the idea of universal salvation is thus implicit in the legend. The greatest utterance of the Law, say the Talmudic sages, is 'This is the book of the generations of man; in the day that God created man, in the likeness of God made he him' (Gn 5¹), which proclaims the high lineage of men, all of whom are sons of God. 'Say not, then, O man,' the sages continue, "'I am vile, and my neighbour shall be vile with me." If thou sayest so, know that thou despisest the Divine image in thee and thy neighbour.'² Equal, or only inferior, in rank to this verse, according to the Rabbis,³ is the command (Lv 19¹⁸), 'Thou shalt love thy neighbour as thyself,' which declares that all men are equal in the sight of God. Consistently, then, the Rabbis see in an early *Tōrah* (the seven Noachian precepts [q.v.], which prohibit idolatry, incest, homicide, blasphemy, robbery, lawlessness, and the eating of living flesh) the means of salvation ordained for the world before the birth of Israel and the revelation at Sinai.⁴ In like manner the Talmud points out that the refrain, 'His mercy endureth for ever,' which occurs 26 times in Ps 136, corresponds with the same number of generations that existed before the *Tōrah* was given, but for whom the divine grace atoned.⁵ Even for such deep-dyed sinners as the generation of the Flood God waited in the hope of their repentance.⁶ Nor were the Gentiles cut off from salvation after the *Tōrah* was given; 'deeds of mercy,' declares the Talmud, 'are their sin-offering,' reconciling them with God.⁷ The 70 sacrifices offered in the Temple on the Feast of Tabernacles atoned for the 70 nations.⁸ A striking utterance on this subject is that of the *Peśiqṭā Rabbāthi*,⁹ in which God is described as judging the Gentiles mercifully by their own moral standards and equipment, and in the night, when, for the time, they have ceased from evil-doing. For 'God delighteth not in the destruction of the wicked; all men are His creatures, and what potter desireth that his vessels shall be broken?' Equally impressive is the saying, 'Peace, peace,' God cries to him that is far off as well as to him that is near: "to every human being that draws nigh unto me in repentance I will come and heal him."¹⁰

Thus much as to this life. What of the future life? Here a diversity of opinion confronts us. It is exemplified in the controversy¹ between two Rabbis, one of whom denies, while the other affirms, the possibility of eternal salvation for the Gentile. A passage in the Tosefta² declares plainly that the righteous among the Gentiles will have a share in the 'Olam Habā, and the saying recurs four times in Maimonides' codex.³ Even the Mishnāh in *Sanh.* x. 1, repeatedly quoted in this article, implies the possibility of salvation for others besides the Jew. Since it specifically excludes Balaam from the future life, it would seem to follow that, as a rule, Gentiles are included. This, indeed, is the inference drawn by the Gemara in its comment on the Mishnaic text.⁴ Nine, say the Rabbis elsewhere,⁵ entered paradise living, among them Enoch, Eliezer, the servant of Abraham, Hiram, Ebed-melech, the Ethiopian (cf. Jer 38¹⁷), and Pharaoh's daughter, none of whom was an Israelite. In a notable passage in the *Yalqūt Shimōni* (to Is 26²) God is described as having compassion, at the Last Judgment, upon the sinners in Israel and the righteous among the Gentiles, who are left in Gehenna, but who, with the cry of 'Amen,' acknowledge the justice of their sentence. 'It is the evil impulse,' He says, 'that has caused them to sin.' Thereupon He gives the keys of Gehenna to Michael and Gabriel, who bathe and anoint the sinners, heal them of 'the wounds of purgatory,' clothe them in fair raiment, and finally lift them to God.⁶ It is also noteworthy that eternal salvation for the Gentile is preached even in times of persecution, and by those who had experienced that persecution in their own person. Thus it is not surprising to find the names of deceased Gentiles of eminence—monarchs, philosophers, and others—followed by pious ejaculations, such as 'Peace be to him!' or 'May paradise be his rest!', which are commonly associated with the mention of departed Jews.⁷ In later times Jewish doctrine on this subject became more liberal still. Zunz⁸ tells how a Rabbi of the 17th cent., being asked whether Christians could be saved hereafter, answered that 'God must indeed be cruel if He consigns them to perdition, seeing that they are not bound to obey the Jewish Law.' This commonsense view was virtually anticipated by the author of the *Tana de b. Eliyāhū*, who exclaims, 'I call Heaven and earth to witness that, whether he be Jew or Gentile, the Divine Spirit rests upon every man if his life be worthy,'⁹ and by Hisdai Kreskas, who declares that salvation is attained not by subscription to metaphysical dogmas, but solely by love to God fulfilling itself in action. 'That,' he adds, 'is the cardinal truth of Judaism.'¹⁰ This is the view embodied in the latest teaching. Men like Moses Mendelssohn and H. Wessely, conservative in temper though they were, could say:

'According to the Talmudic doctrine concerning the future happiness of the righteous, the greater part of existing mankind, acknowledging as it does the principles of Revelation and the Divine Unity, is finally destined to everlasting bliss.'¹¹

This view is expressed with especial emphasis and frequency with regard to Christians. They are not idolaters, and, on the other hand, they respect the laws of morality; therefore the de-

nunciations of the Talmud do not apply to them. They are ensured the divine love here and hereafter. They are in every respect on the same level as Jews; 'they are our brothers.'¹² The famous Paris Sanhedrin, convoked by Napoleon I. in 1807, formally reiterated these teachings, and to-day they are fast embedded in the Jewish consciousness. All men, every Jew will now unhesitatingly affirm, are judged by their lives, not by their creed, and all have an equal chance of salvation. Jewish particularism no longer extends to the eschatological domain. On the contrary, since each man's fitness for eternal happiness depends upon his conformity to the standards of conduct imposed upon him by his ethical or spiritual knowledge, it is especially hard for the Jew to enter into the Kingdom of Heaven. 'You only have I known of all the families of the earth: therefore I will visit upon you all your iniquities'—the warning of Amos (3²) still holds good. The election of the Jew does not give him a larger share, or a greater assurance, of the divine grace than it gives to others; it simply increases, in his case, the difficulty of winning it. And, as to the Gentile, let him be true to his own conception of goodness, and he has in that very faithfulness the full guarantee of salvation hereafter.¹³ Far from saying 'Only believe and you shall be saved,' modern Judaism says, 'In spite of notbelieving you shall be saved.' The Jew holds that his theism will one day be the universal religion; but he holds, too, that until that day comes the just God will not reject any of His human children, whatever their theology may be. He could not consistently hold any other view. His religion preaches the fatherhood of God and the brotherhood of man; and, if the sonship binds man to service of the Highest, the fatherhood binds God to forbearance and compassion when the service has been feeble and imperfect. 'I am thine, save me,' cries the Psalmist; the plea is not Jewish merely, but human, and the conviction of its validity comes from the inmost soul of Judaism.

MORRIS JOSEPH.

SALVATION (Muslim).—Immediately after Adam and Eve fell and were banished from 'the place in which they were,' God promised them guidance—a promise which also applies to their descendants:

'Guidance shall come to you from me; whoso shall follow my guidance on them shall come no fear, neither shall they be grieved.'¹

Thus early did God declare that some persons would be saved. Man must be willing to receive this guidance; the wicked cannot receive it.

'Many will He mislead and many guide; but none will He mislead thereby except the wicked.'² 'God guideth whom He will; and He best knoweth who will yield to guidance.'³

'When they went astray, God led their hearts astray, for God guideth not a perverse people.'⁴

¹¹ Zunz, p. 385; cf. the fine passage in S. R. Hirsch's *Nineteen Letters of Ben Uziel*, tr. B. Drachmann, New York, 1899, p. 142 ff.

This offer of guidance, which leads to salvation, is made to all.

'The truth is from your Lord; let him then who will believe.'¹ 'This is no other than a warning to all creatures, to him among you who willeth to walk in a straight path: but you shall not will unless as God willeth.'² God then purposes to forgive some men, i.e. to give them salvation.

'Thus make we our signs clear to those who consider, and God calleth to the abode of peace (paradise), and He guideth whom He will into the right way.'³

This is God's gift to those who believe and obey. They enter into heaven because they have fulfilled certain conditions. It is independent of any moral change in the believer. In emphasizing the idea of forgiveness the Qur'ān seems to lose sight of the fact that man is in a position from which he needs to be redeemed. Thus we read much of guidance and instruction, but little or nothing of redemption. The Qur'ān nowhere teaches that the sinner must be regenerated. According to it, man is not dead in sin; so no new birth of the Spirit is needed; but he must repent.

We shall now see how these ideas are practically worked out in Islām. Though words such as 'mercy' and 'forgiveness' are common, the word for salvation (*najāh*) is only once used in the Qur'ān:

'O my people, how is it that I bid you to salvation, but that ye bid me to the fire?'⁴

The idea which the term *najāh* conveys to the Muslim mind is that of escape from future punishment in hell. *Khalās*, which means 'deliverance,' is also used in the same sense. Thus it is not so much escape from the power of sin in this life as escape from its punishment hereafter that is implied in the term 'salvation.' A mystic might look upon it as release now from ignorance of God's nature—ignorance which prevents the union of the human soul with Him—but even then it is intellectual deliverance, not moral. Muslim theologians explain what may be termed 'the way of salvation' as consisting in submission to the orders concerning the due performance of the five duties of Islām—the recital of the creed, the saying of the five stated daily prayers, fasting (especially in the month of Ramadān), the payment of the legal alms, and the pilgrimage to Mecca. He who does these things is in a state of salvation, though whether he will really attain to salvation he cannot say, as it depends ultimately on the arbitrary decree of God concerning him. To ensure merit all these actions must be done with the closest attention to the prescribed ritual. Muhammad is reported to have said regarding the ablutions before prayer:

'My people will be summoned at the day of judgment with foreheads, arms and feet resplendent with the effects of *wuḍū* [legal ablutions].'

The pilgrimage to Mecca is a sure means of salvation. Man is to be saved by his own works. A believer must accept without reserve the dogmas of Islām, especially those concerning the unity of God and the apostleship of Muhammad; and he perfects that faith by good works. A man who neglects good works would not be a perfect believer, but he will find salvation; for no Muslim, however wicked he may be, can be finally lost. If his intellectual belief from the Muslim standpoint is sound, his moral character is quite a secondary matter. No matter what his crimes may have been, after a period of punishment he will attain salvation, i.e. release from the punishment of his sin.⁵ It will thus be seen that salvation does not necessarily imply a change in the moral nature. All the minute details about ceremonial purification⁶ and the tedious ritual connected with the ceremonies for the removal of bodily defilement

show that stress is laid on outward purification of the body rather than on moral or spiritual purity. It is true that pious men here and there speak of outward purity as being the shell of inward purity, which is the kernel; but neither the Qur'ān nor the traditions nor the books on law put forward moral purity as the essential thing. The notion rather is fostered that salvation depends on scrupulous attention to the ritual of outward purification. Again, as the joys held out to the Muslim in another life are carnal, they do not tend to elevate the moral nature in this life. Many good Muslims escape this danger by looking upon these statements as figurative expressions denoting spiritual joys. It seems doubtful whether Muhammad so intended them, and certainly his followers, except a very few, do not so understand them.

The Islāmic conception of salvation, then, is entirely legalistic; it is not a moral change in the heart now, leading a man to have power over sin to repress it, but a release in the next world from the punishment of hell, in virtue of certain good acts done in this life. It is not a becoming, but a receiving. If, however, the good deeds fall short, then, provided the intellectual assent to certain dogmas is correct, the release may be postponed, but it will come at last, and so all Muslims will be saved.

EDWARD SELL.

SALVATION (Teutonic).—To the ancient Teuton the idea of salvation applied in the first place to the getting rid of those things which to him were absolutely evil. It also meant preservation from such destruction, danger, and calamity as he expected to meet. Salvation thus meant delivery from evil spirits and from anything which they might bring about. Of evil spirits there were a great number and many kinds, such as dwarfs, giants, dragons, and kobolds. Then there were the witches and wizards, the sorcerers and the enchanters, with all their arts and incantations used for the destruction of man. These powers the old Teuton wished to be free from, or, still better, to know how to become independent of. Salvation as a state of happiness was to be achieved only by fight and honest victory, as is abundantly witnessed in the *Nibelungenlied* and in the heroic lays of the Older Edda. How closely the same ideal obtains in regard to salvation in a future existence is seen in such songs as the *Völuspá* and the *Lay of Vafthrudnir*, while in *Hávamál* and in the *Song of the Sun* we observe that no rest or victory of moral order can be had except on the same ground.

The dread of evil, as noticed in all the ancient Teutonic literary remains, was ever at hand, and thus those persons were considered great and real heroes of the people who understood how to combat this evil, whether it was done by craftiness and secret arts, as often in the heroic lays of the Edda, or by valour and strength, as in the Siegfried legends and in the *Beowulf*. The lesson is the same: man had to learn and to dare in order to overcome so as to save or to be saved. Many are the tales of heroes and great men who were either preserved or destroyed in such contest.

Through secret arts man could obtain influence and power even over nature itself, so that he could start storms or still the waves according to his own pleasure. The witches, at least, were expected to be able to do so. Thus all through life men had to be engaged in a constant warfare

¹ xviii. 23.

³ x. 6.

⁴ xl. 44.

⁵ See art. FAITH (Muslim) and SIN (Muslim).

⁶ Cf. art. PURIFICATION (Muslim).

with opposing powers, some of which were almost fathomless in strength and cunning. To those who would not fight, and did not dare to conquer, there was no future. They were stranded somewhere and lost. Thus there are hosts of departed spirits who continue as shadows only; they have no individuality. Before such souls will find rest, they will have to be driven about for ages in winds and storms and among the most forsaken places and awful situations; and, if they are saved at all, it must be through some kind of redemption, as they are unable to extricate themselves from their unhappy state.

These and similar ideas are constantly brought to the front in the Teutonic epics, folklore, and sagas, of which even the *Nibelungenlied* and the *Gudrunlied* are eloquent witnesses.

Now, while salvation or deliverance thus far spoken about refers, in the main, to this life, we also meet with ideas of salvation in the world to come, when that which will never die, 'judgment upon each one dead,' shall be pronounced,¹ for that world is reached only through the Hel-way which all men have to go.

Various are the ways to the kingdom of Death, the abode of Hel, whose habitation is Helheim under one of the roots of Yggdrasil. Her realms all must enter, but all will not have the same future. There are those who can proceed to the regions of the blessed Æsir, and those who must go to Niflheim, the place of punishment for the wicked. All must go as they came. The way of all who fell by the sword is sure to lead to Valhall, to which Odin invites those who are slain in battle. Half of that number, however, belong to Freyja, and those she receives in Folkvang, where her beautiful mansion, Sessrumner, stands. Those received by Odin himself are the great champions, or Einherjars—Odin's elect, who now will enjoy themselves more than ever with battles during the day and during the night with feasts which are held in the great refectory of Gladsheim, the palace of the Æsir. Those who had no opportunity to fall in the fight, but who by risking themselves with the spear-point as a dedication to Odin returned their souls to him, are also received by him as his friends and guests.

And there are other ways to the happy regions of the blessed—ways of peaceable virtues, which lead to salvation, though in other parts of the Æsir heaven, as in Vingolf, the mansion of bliss for noble women with the Asynjes themselves, and in Thrudvang, or Thrudheim, which is Thor's abode. Here he receives his own in his magnificent castle, Bilskirner.

Most people who were drowned are received by Ægir's wife, Ran, in her palace, which she holds open for them at the bottom of the sea, and where they are welcomed and offered 'seat and bed.'² Hoenir cares for those who die in tender years. Indeed, in Egil Skallagrimson's *Sonatorrek*, 20, we read of still another being called Gauta Spjalli, who in the most tender manner is similarly engaged.

The rest of mankind—workers of the peaceful arts, in the field and at home, men and women who have died during the countless ages of human history, but who did not use the sword—have, it is true, no place assigned to them in the Teutonic heaven, yet are understood to pass on and to be somewhere, anxiously awaiting the final outcome of the great strife which they know is going on.

Warriors by profession are not secured a place with Odin or Freyja, but on those who in the great trial have fought the good fight. This brings out the importance, according to Teutonic evaluation, of having preserved a good name and

established a good report while in this life. On this we have the famous 76th and 77th strophes in *Hávamál*, where it says:

'Your cattle shall die; your kindred shall die; you yourself shall die; one thing I know which never dies: the fair name of him who has earned it, and the judgment upon each one dead.'

The more complete interpretation of this passage we must leave out here, but no one will venture to dispute that the main idea conveyed is that man can have no greater possession, when going from this world, than a good name, and that nothing can be of more value to him than a reputation established and known for its integrity. That will go with him to the judgment.

When a deceased person who has received good testimony leaves the Thing in the lower realms, he is brought to a home, which has been prepared for him somewhere 'in the green world of the gods.' What he then first of all has to do is to *leita kunnis*, find and visit kinsmen and friends, who have gone before him to their destination.¹ He not only finds those with whom he became personally acquainted on earth, but he may also visit and converse with ancestors from the beginning of time; and he may hear the history of his race—nay, the history of all past generations—told by persons who were eye-witnesses of the things themselves.² The ways he travels are *munvegjar*,³ paths of pleasure, where the wonderful regions of Urd's and Mimer's realms lie open before him—the entire past and its history.

Above the courts of the Æsirs and far away from the recesses of Hel there is yet another region of bliss, where that god dwells whom no one is as yet able to mention. His hall is called Gimle, and will become the abode of the righteous after Ragnarok, the final dissolution both of the Æsir world and of the Vanir and the race of men. Then, at 'the twilight of the gods,' the last reckoning shall be taken and judgment pronounced. This judgment all mankind and all the Æsir gods are anxiously waiting for. And it will come. Everything will be tried then, for the long strife between good and evil must finally reach a crisis. There will be a call for a great battle which will take place on the Vigrid fields. To that battle Odin will come, with his Einherjars, together with all the Æsirs; all that is good will meet on one side and all that is evil, cowardly, beastly, gruesome, and wicked will hold together on the other. The fight will be fierce and will end with the combat between the Æsir gods and the sons of Surt. The gods are vanquished; Thor and Jörmungandur, Heimdall and Loki, destroy each other. Odin is swallowed up by the Fenris wolf, which in turn is crushed by Vidar, Odin's son. This is the end of the reign of the Æsir. Then the great and mighty one appears, and he will drive all evil to Niflheim, while the good will be gathered together in the halls of Gimle, the home of eternal bliss. Valhall ceases to be Valhall; Sessrumner, Vingolf, and Thrudvang are no more; for all is Gimle and happiness and joy.

Gimle, however, is joined with the new-born earth—the earth which has come in place of the former one, as the new-born from the mother. Of this earth and the conditions brought with her we read in *Völuspá* as follows:

'She (the Vala) sees arise, for the second time, the earth from the deep, beautifully green, waterfalls descending; the eagle flying over, which in the fell captures fish. The Æsir meet on Ida's plain, and of the mighty earth-encirler speak, and there to memory call their mighty deeds, and the supreme god's ancient lore. There shall the wondrous golden tablets in the grass be found, which in days of old had possessed the ruler of the gods, and Fiolnir's race. Unseen shall the fields bring forth; all evil amended. Baldr shall come; Hödr and Baldr, the heavenly gods, Hropt's⁴ glorious dwelling shall

¹ *Hávamál*, 77.

⁴ Another name for Odin.

inhabit. Understand you yet or not?—A hall standing than the sun brighter, with gold bedecked, in Gimle: there shall the righteous people dwell, and for evermore happiness enjoy. Then comes the mighty one to the great judgment, the powerful from above, who rules o'er all. He shall dooms pronounce, and strifes allay, holy peace establish which shall ever be.¹

We believe that in this description ancient Teutonic and Christian eschatology are blended, at least to some extent, but so far no one has been able to tell which is which. The hope of final salvation is expressed, and in terms which we meet in many other of the literary remains of the Teutons. In the Younger Edda, which was composed from ancient sources by Snorra Sturlason († 1241), we read things similar to those in the *Völuspá*. Some of the ideas there presented appear more ethical and ancient than those in the Older Edda, while their form indicates a later period together with more admixtures of external elements than in the strophes just quoted. He says:

'There will be many abodes, some good and some bad. The best place will be Gimle, in heaven, and all who delight in quaffing good drink will find a great store in the hall called Brimir, which is also in the heaven in the region Okolni. There is also a fair hall of ruddy gold called Sindri, which stands on the mountains of Nida. In those halls righteous and well-minded men shall abide. . . . There will arise out of the seas another earth most lovely and verdant, with pleasant fields where the grain shall grow unsworn. Vidar and Vali shall survive; neither the flood nor Surtur's fire shall harm them. They shall dwell on the plain of Ida, where Asgard formerly stood. Thither shall come the sons of Thor, Modi and Magni, bringing with them their Father's mallet Mjölhnir. Baldr and Hödr shall also repair thither from their abode in Hel. There shall they sit and converse together, and call to mind their former knowledge and the perils they underwent, and the fight with the wolf Fenris and the Midgard serpent. There too shall they find in the grass those golden tablets which the Æsir once possessed:

There dwell Vidar and Vali
In the god's holy seats,
When slaked Surtur's fire is,
But Modi and Magni will Mjölhnir possess
And strife put to an end.'

'Thou must know, moreover,' so the prophecy continues, 'that during the conflagration caused by Surtur's fire, a woman named Lif (Life), and a man named Lifthrasir, lie concealed in Hod-Mimir's forest. They shall feed on morning dew, and their descendants shall soon spread over the whole earth. But what thou wilt deem more wonderful is, that the sun shall have brought forth a daughter more lovely than herself, who shall go in the same track formerly trodden by her mother. And now, if thou hast any further questions to ask, I know not who can answer thee, for I never heard tell of any one who could relate what will happen in the other ages of the world. Make, therefore, the best use thou canst of what has been imparted to thee.'²

From the *Völuspá* we have learnt that 'the righteous people shall dwell in Gimle for ever and happiness enjoy.' It is the same view as here quoted that we meet in the *Gylfaginning*. And let us note with regard to 'Lif and Lifthrasir,' who had been kept safe in Hod-Mimir's grove even through the terrible Fimbul-winter, which immediately precedes Ragnarok and the final restoration of all things, that they symbolize the ancient Teutonic belief that the life which in time's morning developed out of chaos is not destroyed even by Surtur's flames, but rescues itself, purified, for the coming age of the world. The same human race will live again. It is not a new creation that the Teutonic people waits for as the final salvation, but a complete regeneration of all—a perfect ἀποκατάστασις τῶν πάντων—when even Surtur himself shall be in Gimle, as we read in the Upsala codex of the *Gylfaginning*: 'best er att vera a Gimle meðr Surt.'

S. G. YOUNGERT.

SALVATION ARMY.—The Salvation Army is a religious organization of international scope which had its beginnings in England in 1865. It may be regarded as having three functions, which are closely interwoven and to be treated as one: it is (1) a mission of Christ's gospel, (2) a religious community, (3) an agency to combat poverty and vice and to further social reform. Its philanthropic and reforming activities have come about as the result of a natural evolution, and have not affected its primary object of militant evangelism, except to strengthen it. The purpose underlying all its activities is to subdue in Christ's name—not merely to teach, but to compel men everywhere to become the disciples of the Son of God.

I. ORIGIN AND DEVELOPMENT.—1. The founder and first General.—The founder and first General of the Salvation Army was William Booth, who was born at Nottingham in 1829. He was brought up within the Church of England, and to its early influence he attributed the fact that, although subsequently becoming a Methodist minister, he never entirely accepted some of the Nonconformist views of denominationalism.¹ At the age of fifteen, about which time he was converted, he joined the Wesleyan Methodists and, as he said later in life, decided that 'God Almighty should have all there was of William Booth.'² Soon afterwards he became the leader of a band of zealous young men whose methods of evangelizing their own town had a curious resemblance, on a small scale, to those adopted by the Salvation Army in later years. They worked among the poorest, utilized in some capacity those who joined them, and anticipated the Army in their aggressiveness, in their meetings for penitents, and even in their small demonstrations of rejoicing. The time was one of unrest in Wesleyan Methodism, and a Reforming element was breaking with the parent body, but the dispute bore chiefly on methods of government, and these did not greatly interest this young disciple. Nevertheless, as the result of a hasty action on the part of his superintendent minister, he became attached to the Reformers. He had already resigned his local preachingship, feeling that the pulpit work allotted to him afforded too little scope for his already ardent evangelism. His minister jumped to the conclusion that he was a 'Reformer,' and cut him off from membership. The Reformers thereupon invited him to join them. This he did in 1851, and became a minister of their body at Spalding in Lincolnshire. A prospective Congregational pulpit had been offered to him, but he found himself unable to accept the Calvinistic doctrines set forth in the books recommended him for preparatory study. Although now a member of the Reforming body, he never seems to have championed their cause as against other Methodists; moreover, he saw that their organization had few elements of permanence (most of the Reformers merged themselves a few years later into what became the United Methodist Free Churches), and, after he had given careful study to the Methodist New Connexion system, he offered himself for its ministry and was accepted. The Methodist New Connexion did not differ greatly in doctrine and general usage from the Wesleyan Methodist, from which it had been the first important secession, but its Conference was constituted on a more democratic pattern, and William Booth hoped to obtain a considerable measure of freedom for the exercise of his evangelistic ambitions. He 'travelled' in its circuits until 1861, but his heart was set upon work among the classes altogether

outside the Churches. He had been greatly influenced by C. G. Finney, whose direct and personal manner helped to mould his own style of appeal, while the American evangelist's 'anxious bench' was perhaps the forerunner of the Salvation Army penitent form. William Booth himself and his wife Catherine,¹ who was becoming known as a preacher of considerable power, had remarkable results following upon their revival services. Certain influences in their Connexion, however, had crystallized against all itinerant evangelism, and at the Conference of 1861 considerable opposition was manifested to the proposal which Booth made, that he should be set apart for purely evangelistic work. A suggested compromise whereby he should retain a circuit while giving part of his time to evangelistic campaigns elsewhere he declined as unworkable, and in the end Mr. and Mrs. Booth left the Connexion. They began at once to travel in various parts of the country conducting services, which were often the means of important spiritual awakenings.

2. **Beginnings in the East End of London.**—Drawn at last to London, partly because of the opportunities for such work which the metropolis presented, and partly from a desire to have a settled home, William Booth 'found his destiny,' as he expressed it, among the outlying masses of the East End. He received an invitation to conduct some services in a tent which had been erected in Whitechapel, the appointed missionary having fallen ill; and, faced by these East End multitudes, he felt, as even he had never felt it before, 'the compassion for souls.' He saw focused there all the problems which arose out of a reckless and godless population, largely untouched by any civilizing or Christianizing influence, and presenting a very Niagara of poverty and vice. He thus describes his experiences:

'When I saw those masses of poor people, so many of them evidently without God or hope in the world, and found that they so readily and eagerly listened to me, following from Open-Air Meeting to tent, and accepting, in many instances, my invitation to kneel at the Saviour's feet there and then, my whole heart went out to them. I walked back to our West-End home and said to my wife:

"O Kate, I have found my destiny! These are the people for whose salvation I have been longing all these years. As I passed by the doors of the flaming gin-palaces to-night I seemed to hear a voice sounding in my ears, 'Where can you go and find such heathen as these, and where is there so great a need for your labours?' And there and then in my soul I offered myself and you and the children up to this great work. Those people shall be our people, and they shall have our God for their God."²

Mrs. Booth's later account of her reply to this announcement is almost as illuminating:

'I remember the emotion that this produced in my soul. I sat gazing into the fire, and the Devil whispered to me, "This means another departure, another start in life!" The question of our support constituted a serious difficulty. Hitherto we had been able to meet our expenses out of the collections which we had made from our more respectable audiences. But it was impossible to suppose that we could do so among the poverty-stricken East-enders—we were afraid even to ask for a collection in such a locality.

Nevertheless, I did not answer discouragingly. After a momentary pause for thought and prayer, I replied, "Well, if you feel you ought to stay, stay. We have trusted the Lord once for our support, and we can trust Him again!"

The Mission in the East End, like the Salvation Army into which it grew, was thus in the first instance to the lowest, those whom society regarded as its outcasts, the 'submerged tenth.' In an address to the Wesleyan Conference in 1880 William Booth described himself and his fellow-missioners as 'moral scavengers who netted the very sewers.'³ 'We want all we can get, but we want the lowest of the low.' Many years afterwards he declared to Cecil Rhodes that he dreamed, day and night, of making new men out of the waste of humanity.

3. **Growth of the Christian Mission.**—When

¹ William Booth married Catherine Mumford in 1855.

² Railton, p. 56.

³ *Ib.* p. 77.

William Booth began his services in the East End, he had no idea of anything beyond a purely local work. It was with some difficulty that he found a suitable habitation for his Mission, and various places were occupied in turn, some of them the most unlikely, to all appearance, for such an enterprise. But his faith was justified, and by 1875, after ten years of vicissitude, trial, and contumely, the Christian Mission, as it was called, was being carried on at 32 stations, in charge of an equal number of evangelists supported out of its funds. It had extended beyond the borders of East London, to Portsmouth and Chatham among other places, largely as the result of campaigns undertaken by Mrs. Booth. Her work in the provinces prepared the way for the spread of the organization, for in every place which she visited she left a nucleus of people whom she had impressed, so that the Christian Mission had only to enter into possession. What the movement owed during those formative years, and subsequently, to 'the Mother of the Army' it is very difficult to estimate. Catherine Booth was a woman of prophetic vision, commanding eloquence, and rare intellectual power. She was the means of introducing to the Mission a new kind of leader, drawn from a different class of society, who was able to devote to the common cause a cultivated mind as well as a consecrated heart. She also helped to secure the support, or at least the sympathetic toleration, of influential people, including certain friends of all evangelical effort who were too zealous for the end in view to be antagonized by methods which undoubtedly shocked their sense of decorum. Along with her persuasive speech she had a capacity for strategy which stood the new organization in good stead. She shared to the full her husband's hope and courage, and her deeply earnest and spiritual temperament was itself a guarantee that beneath the apparent irreverences attaching to an entirely new type of evangelistic propaganda there was a thoroughly wholesome spirit. The converts of the Mission were soon to be counted by the thousand. Many of them had been reclaimed from the utmost degradation, and their testimony was extremely effective. The immediate use of the converts, to work for the salvation of others as an attestation of their own changed lives, was one of the principles by which the Mission developed. The man who had been saved from some vicious course was found to exercise a remarkable spell over his former associates when he appeared among them as a changed character. Writing on this subject later, General Booth said:

'I found that ordinary working-men in their corduroys and bowler hats could command attention from their own class which was refused point-blank to me with my theological terms and superior knowledge. I found that the slaves of intemperance were accessible to the influence and testimony of a little band of converted drunkards, whose message was a message of hope when mine was only too often one of condemnation. I found that the wild and unruly East-enders, whose highest idea of happiness was too often enshrined in a skittle-alley, or a boxing-booth, or a "penny gaff," could be made to feel that there was, after all, "something in religion" when they found their old acquaintances living clean and yet happy and prosperous lives under its influence.'

4. **The name: 'The Salvation Army.'**—During the first ten or twelve years William Booth was feeling his way out of the conventionalism which had hitherto fettered the presentation of religion to the lapsed masses. He saw that some more energetic propaganda was needed than was possible through the ordinary churches and chapels with their formality and sombreness. Already he had been freed from many limitations of both thought and outlook, but his early experiences of irregular 'warfare' in the East End compelled him to revise his whole conception of evangelistic effort, in respect of both the form of its popular appeal and

¹ Friederichs, Preface by General William Booth, p. 4.

the organization necessary to make that appeal continuous. No more than with George Fox in the 17th cent., or John Wesley in the 18th, had the formation of a new sect been his aim. At first, indeed, he passed on his converts to the various Church organizations around, until he found that in some cases they did not go where they were sent, and that in others, when they did go, they were not welcomed, and in consequence were in danger of lapsing. He drew them therefore into small societies, under the care of appointed leaders, and gradually he perceived that his organization, with its love for the lost and sinful, its spirit of aggression, its definite objective, and its impact upon evil at close quarters, had the elements of an army, waging incessant warfare against the enemy of souls. The idea of a war for the souls of men had abundant Biblical foundation, while Bunyan's *Holy War* could be cited, as well as some of the most sacred hymns of the Church. Although the conception of an army came gradually, the name was the result of a sudden inspiration, some months after a semi-military constitution had actually been decided on. The late Commissioner Railton, in drafting an account of the work, had written: 'It will thus be seen that the Christian Mission is a Volunteer Army,' and William Booth revised the sentence to read: 'The Christian Mission is a *Salvation Army*.'

5. The military constitution.—The adoption of a quasi-military system was by no means a mere matter of titles and uniforms; it was not intended as a spectacular demonstration, either to please the adherent or to touch the imagination of the outside public. It corresponded to the conception of a fighting religion. William and Catherine Booth, and now also the small group of kindred spirits whom they had gathered around them, came to see that a military form of government was most likely to secure the authority and discipline which are at the root of all fighting power. Perhaps nothing has been elaborated in the history of mankind which is so effective for bringing instant force to bear upon an objective as a military organization, especially when those who compose it are prompted by a high motive. It is prompt, energetic, decisive, and mobile. It may have the disadvantage of involving a kind of autocracy, but the first General (whose title came about by a process of elimination—he was known at first as General Superintendent) found in practice that what his people wanted was leadership, and that, as long as they were led, the possible evils arising from the concentration of power in the hands of a few individuals little concerned them. The main thing was to secure such a direction of their energies as should tell to the fullest advantage. The Christian Mission had been governed at first on purely paternal lines, all management and control proceeding from its General Superintendent and his immediate assistants. Then it was remodelled on the lines of the representative system of liberal Nonconformity, with conferences and committees; but this entailed obstruction, or at least delay, and at the same time the Mission lost distinctiveness, and was in danger of becoming sectarian. Finally, the committee system was abandoned in favour of this vigorous reorganization into a military body with a 'Council of War' instead of a 'Conference'; and, while this change provoked ridicule in some quarters and resentment in others, especially among religious people, it immediately gave greater cohesion with uniformity and oneness of direction. The inner spirit of the movement all through these early years had been the spirit of war. This was now for the first time recognized. Ranks and titles and military terms came later. No one appreciated better than the founder that organizations are only

temporary adjustments to existing conditions, and that what ultimately signifies is the spirit which animates them.¹ Nevertheless, it is claimed that the government of the Army presents in its main features a strong resemblance to the divinely-appointed government of the Jewish nation and church, and bears a certain likeness also to the system which prevailed in the early Gentile churches, so far as can be judged from the NT. This reorganization on a military basis took place in 1878, in which year a deed-poll was executed and registered setting forth the constitution of the Christian Mission (the name of 'The Salvation Army' was endorsed on the deed by memorandum two years later) and declaring it to be a religious society, composed of persons desiring to unite together for the purpose of spreading the gospel, under the direction of a General Superintendent. The work at once went forward and came into touch with a wider public. At the time of its reorganization it was being carried on at 80 stations, each of them the centre of a witnessing community in a town or district, and these became known as 'corps,' with their 'citadels' or 'halls.' Within less than ten years from that date the 1000th British corps was established, and the work had extended internationally in a remarkable way.

6. Openings in other lands.—The progressive extension of the work of the Salvation Army will be best appreciated from the following list (the dates given are those at which the Army flag was unfurled in the respective countries):

England (1865), Scotland (1878), Wales (1879), Ireland (1880), United States (1880), Australia (1880), France (1881), Canada (1882), Sweden (1882), India (1882), Switzerland (1882), S. Africa (1883), Ceylon (1883), New Zealand (1883), Germany (1886), Denmark (1887), Italy (1887), Holland (1887), Norway (1888), S. America (five Republics) (1889), Finland (1889), Belgium (1889), W. Indies (1892), Dutch E. Indies (1894), Iceland (1895), Japan (1895), Korea (1908), Burma (1914), China (1915), Russia (1917).²

The openings in many of these countries have come about as a result of the inherent vitality of the movement rather than as part of a deliberate scheme. In the case of the United States the first party of officers was sent out in response to an appeal from a family of Salvationist immigrants who had begun to hold meetings in Philadelphia; immigrants were also the means of planting the Army flag in Australia and New Zealand. Within two years the Army extended from the United States into Canada, and it was also by way of America that the Army gained a footing in Germany. A German-American, having been influenced by the Army in New York to such an extent as to resolve to devote his life to the salvation of the Fatherland, was sent to German Switzerland, there to learn more about the Army's work, and subsequently was commissioned to launch it in Stuttgart. In Sweden the work began with the same apparent casualness through a lady who was influenced at meetings addressed by Bramwell Booth, then Chief of the Staff, on a vacation visit to that country; and from this new centre Norway was in turn occupied, the Army finding in all these northern lands some of its most devoted officers. In Holland the way was prepared by a retired officer of the Dutch army who, having seen something of the work in England, introduced workers from London to Amsterdam. From Holland the work spread to the Dutch E. Indies, where there are now corps, not only of Javanese and Sumatran 'soldiers,' but also of Malay and Chinese, with an extensive and growing social organization. The entrance into India, Japan, and other Eastern

¹ *Orders and Regulations for Staff Officers*, London, 1904, introd. by General William Booth, p. xv.

² In Russia there had been for some years the nucleus of an organization, but not until after the revolution of 1917, when religious liberty was proclaimed, was the way cleared for the open establishment of the Army.

countries was gained also under circumstances in which very little of human design was perceptible, and so the expansion went on until 63 countries and colonies have been occupied (the latest being Burma and the new republics of Russia and China), and the salvation of Jesus Christ is proclaimed in 40 languages. In all its missionary activities the Salvation Army adheres to the principle of adaptability of method which characterized its beginnings. No means of approach is slighted, if it seems likely to open a way into the mental processes of the people. This is especially illustrated in India, of which country a famous Hindu said that it would accept Christ 'when He stepped out of trousers and shoes.' The Salvation Army officers have not hesitated to do that when it seemed likely to be availing, and to adopt the turban and dhotee. Its first leader in India, Commissioner Frederick Booth-Tucker, was formerly a member of the Indian Civil Service, who was powerfully attracted to the Salvation Army through a chance reading of the English *War Cry*. The organization in the Indian Empire comprises, besides its direct salvation efforts in a thousand places, a whole network of social and educational agencies, including special schemes for reforming the very lowest of the pariah classes. It aims at nothing less than the general leavening of the lump of India with the spirit of the gospel of Jesus.¹

7. *Co-operation with Governments.*—One remarkable piece of Army work in India is that which is carried on among the criminal tribes, really an aboriginal remnant. The care of some thousands of these outlaws has been handed over to the Army by the Government, and in 32 settlements (continually increasing) they are now being cared for and taught useful occupations. The native non-Christian press, which at one time urged the expulsion of the Army from India, is now generously appreciative of the efforts in this direction.² Various other Governments have given practical expression of their confidence by handing over certain work to the Army and subsidizing it, as, e.g., the work among reformatory boys in Australia and inebriates in New Zealand; and in many colonies the Army has been called into co-operation in the matter of dealing with criminals both before and after their discharge from prison. Holland has done the same, and the Government of the Dutch E. Indies has placed certain of its institutions and hospitals under Army care. Several of the cantonal Governments of Switzerland as well as certain German, Scandinavian, and S. American municipalities subsidize one or other of the Army's agencies; and in nearly every country the recognition of rulers and Governments is forthcoming, by way of special grants and privileges, or (particularly in the case of the United States) by being called into State counsel on problems connected with social relief, or by the personal interest and help of sovereigns and presidents. In some countries the philanthropic side of the work is more appreciated, while in others its purely evangelistic propaganda is regarded as being of the highest value. But the motive of the Army has not altered with the widening of its field and the dispersal of early prejudices; if there has been change, it is in the attitude of those who view it from without.

II. *ORGANIZATION AND POLITY.*—1. *The structure of the Army.*—The General, or, as he is

sometimes designated, the Commander-in-Chief, is in control of the entire Army, directing its operations throughout the world, and appointing the commissioners and other leading officers in the several countries. Each General is required under the deed-poll of 1878 (see above, § 5) at once to appoint his successor, which he does under seal, and the name of the person chosen is not divulged until the proper time. When the first General 'laid down his sword' in 1912, he was succeeded, in harmony with this arrangement, by Bramwell Booth, his eldest son, who had been Chief of the Staff for more than 30 years. This does not imply, however, that the office is hereditary, or that the succession belongs to the holder of any particular command. In 1904 means were provided by deed-poll approved and adopted by the International Staff Council of that year for removing from the position any General proved to be unworthy of confidence, and also for the selection of a General by a High Council of the Army called into being for this purpose, on which every territory is to be represented, should the position become vacant through failure to appoint or from any other cause.

For administrative purposes the Army is organized in two main sections, one of which is known as International Headquarters, and the other as territorial commands. International Headquarters, having its seat in London, includes a number of personally directed departments which are concerned with the oversight and management of the entire Army in its world-wide, as distinct from its local, operations. These departments are controlled by responsible officers acting under instructions of the General and his Chief of the Staff. To International Headquarters are also attached a number of commissioners who travel the world in the spiritual interests of the Army and to stimulate missionary enthusiasm at the various bases. Territorial commands are concerned each with the direction of Army affairs in one or other of the geographical areas into which the world-operations of the Army are divided. A territory, which is the command of an officer known as a territorial commissioner, may include a whole country or part of a country, or a group of two or more countries.¹ It is further partitioned into divisions. Each of the divisions consists of a group of local corps, under a divisional commander who maintains the general oversight and control of the affairs of the group. The local corps, together with their auxiliary wards for the working of towns and districts, are the units of the Army. A corps may consist of one society of Salvationists or a number of such societies together; in the latter case they are known as circle corps. Each is under a commanding officer, who may be assisted by a second, or even by two subordinates.

2. *Property and finance.*—(a) *Property.*—The whole of the Army's property is vested in the General for the time being, as trustee, with full power to dispose of it in any way (in harmony with the trusts) which he thinks most likely to promote the objects of the Army. He is required, however, to keep full accounts, and to publish every year an audited balance-sheet. This enables the General to arrange for the holding and administration of the property in harmony with the various legal systems obtaining in the several countries, while still preserving to himself and his successors the supreme direction and control. The object in view in making these arrangements has been threefold: (1) to secure the property for the Army; (2) to prevent any interference in its management which might be alien to Army principles; (3) to retain perfect freedom to use or dispose of the

¹ See Harold Begbie, *The Light of India*.

² The *Khalsa Advocate*, devoted to championing the cause of the Sikhs, wrote (1913): 'In the Punjab and United Provinces the work of the Salvation Army has been splendidly successful and the Collectors of these districts have warmly praised their activities and spoken of their marvellous achievements in terms of the highest approbation. The number of criminal classes has rapidly diminished as a result of their beneficial influence.'

¹ At the time of writing they number 23, but this number may be increased at any time.

property for the advance of the work, in any way that changing circumstances may require. In some countries, such as the United States, the Army is incorporated under a special act of legislature which defines and guarantees the position of the board of officers by whom the property is administered. In other cases, as in certain Australian States and in S. Africa, the property is administered under trusts publicly declared, on behalf of the General, by the territorial commissioner for the time being. In yet other cases, owing to the absence of any legal recognition of trusteeship for charities or religious associations, the constitution and machinery of a limited liability company have been set up, with the share capital so divided and controlled that, while the requirements of the laws have been complied with, a paramount voice is assured to the General; this is the case in Germany and Norway. In yet other cases, as, *e.g.*, the W. Indies and some of the S. American States, the respective legislatures have constituted the General a 'corporation sole.'

In these various ways 'it is believed that the character of a trust has been imposed upon the property of the Army which the courts of all countries will recognize, and to which they will, within the limits of their respective jurisdictions, give effect.'¹

(b) *Finance*.—In obtaining funds for its work three guiding principles have actuated the leaders of the Army: (1) to stimulate and require the freewill offerings of its own people, in the belief that, if religion is worth anything at all, it is worth paying for; (2) to expect officers of the Army, working as they do for the souls of the people, to live in a simple and self-denying way, and that not as a matter of economy only, but because it harmonizes with the example of Jesus Christ and the spirit of their endeavours; (3) to ask for and accept support from irreligious people for the purpose of spreading religion among them—'getting supplies from the enemy.' The ideal aimed at in arranging the Army's finance is that each country should support its own work, and also contribute to the extension and maintenance of the Army in other and more needy parts of the world, particularly in non-Christian lands. The Salvation Army is an international organization, and, although it has not advanced in the same degree in this matter in all countries, it is very widely realized that the responsibility for the extension of its work and influence rests as much upon the Salvationists of, *e.g.*, the United States or Holland as upon those of Switzerland or the United Kingdom. This principle of international responsibility is illustrated in the work on the whole field. Nor does this apply only or mainly to money. In India, *e.g.*, officers from the United Kingdom, from half-a-dozen European countries, and from the Americas have been working together;² and more recently the missionary contingent which was sent out to China in 1917 was recruited from no fewer than five countries East and West.

Salvation Army finance is divided into national (or territorial) and international categories, and in each territory the finance may again be divided into funds for national and funds for local purposes, the former division holding good in respect of both the evangelistic and the social side of the work. National funds for spiritual work are employed in the general control and extension of the work within a country, and the first charge upon them is the maintenance—necessarily somewhat costly—of the strong driving power at the centre of each command. From this same source contributions are made to new branches and to branches not yet self-supporting, and there are allocations also for such objects as the training of young officers, the assistance of sick and disabled officers and soldiers, and the cost of special campaigns. A somewhat similar system operates in each of the divisions. Local or corps funds are used for the payment of local expenses and for the acquisition and maintenance of buildings. A small proportion of the

corps income is remitted to the headquarters of the division, and of this a proportion is remitted in turn to the territorial headquarters. In this way a fair adjustment of local and central claims is secured. The other section of territorial finance—the social fund—is again divided into (1) funds for the maintenance of the social work, including operations among the homeless, the unemployed, the vicious and unfortunate, and support of the hospitals, schools, and reformatories, which form part of the Army's social work; and (2) local funds for social relief.

The funds of International Headquarters, again, are divided into those for spiritual and those for social purposes. The former, which is the major division, is utilized again in the maintenance of the central driving force, and also in the carrying through of evangelistic campaigns, the training of officers, field and staff, the making of grants for new work (outside the British Isles), and the upkeep of the general organization. The sources of income for this fund are (1) donations of the benevolent outside the Army; (2) gifts of those who have benefited by the Army; (3) certain surpluses from territorial or local funds, which from time to time are forwarded voluntarily; (4) contributions raised by the annual Self-denial Fund¹ (half the proceeds of which are remitted to International Headquarters, mainly for work in non-Christian countries); (5) legacies; (6) profits of publications; (7) proceeds of the sale of uniforms, musical instruments, and other incidentals of Army work. The social funds of International Headquarters are provided in much the same way, by gifts from outsiders, the contributions of people who have benefited, a proportion of the Self-denial Fund, and legacies.

The oversight of expenditure is conducted on a very precise system. Every payment is made in the General's name, and theoretically he is the first party to every transaction, but he is assisted by finance councils and expenditure boards, whose business it is to frame estimates and check outgoings. The functions of these bodies, however, are advisory only, and the final approval of all budgets rests with the highest command. A rigid system of account-keeping is in vogue, and the departments and commands are subject to a double audit—one an internal Army audit with its travelling accountants whose business it is to criticize expenditure as well as to attest accuracy and who report directly to International Headquarters, and the other the audit of the central accounts of each country, including those in London, by local public auditors.

3. *Officers' commands*.—The officers of the Army, who are, in fact, its ministers and who universally testify to having received a definite call of the Holy Spirit to devote themselves to its work, are divided into two classes—staff officers and field officers. All are commissioned either by the General for the time being or in his name; they abandon all secular employments, devote themselves entirely to Army service, and are supported out of its funds.

The staff officers, with the Chief of the Staff at their head, are responsible to the General for the direction of the Army's operations, either internationally or territorially. The highest rank is that of commissioner. Officers of that rank have the direction of departments at International Headquarters, or command the work of the Army in a territory, or are charged with the conduct of some special branch, and are assisted by staff of varying rank.² The field officers are mostly in command of local corps. Their ranks vary.³ It is their business to seek the salvation of the people, to visit, instruct, and advise the soldiers of their corps, to look after the converts, to carry out the weekly programme of meetings, to attend to the organizing side of the work, and generally to represent the Army and exercise an influence for aggressive religion in the neighbourhood. These field officers, unlike the staff officers, who have more the character of fixed points in the Army system, may be likened to an army of manoeuvre. They may be required at any time, without reference to their own choice, to transfer their services from one part of the field to another.

The commissioned officers are assisted by local officers, who are soldiers selected for particular work in their own corps, and who give their time without remuneration, many of them following some secular calling. They answer to the lay workers in some of the churches, except that their responsibility is generally carried much further, and correspondingly they are expected to attain, and many of them do attain, a high standard of self-denial, obedience, and spiritual efficiency. They must give evidence of certain spiritual qualifications; they provide and wear their own prescribed uniform; they neither smoke nor drink; and they are covenanted to discharge the duties allotted to them. They are known by various titles,

¹ The Self-denial Fund originated in 1886, when £4520 was collected; in 1918 the sum raised in the United Kingdom alone was £117,503. The scheme extended to other countries until now at least 70 per cent of the Army's forces all over the world voluntarily join in this yearly self-denying ordinance.

² The ranks of staff officers are (in 1915) commissioner (in some countries described as commander or commandant), colonel, lieutenant-colonel, brigadier, major, staff-captain, and staff-lieutenant.

³ The ranks of field officers are commandant, adjutant, ensign, captain, lieutenant, and sub-lieutenant.

¹ L. A. Atherley-Jones, 'Legal and financial Aspects of the Salvation Army,' in *Essays and Sketches*, p. 196.

² Bramwell Booth, *Servants of All*, London, 1901, p. 120.

including sergeant-major, secretary, treasurer, bandmaster, young people's sergeant-major, and quarter-master. These local officers are a great strength to the Army, often constituting a powerful link between the local leaders and the outside population. The junior or young people's section of the corps is, in the main, organized and maintained by the local officers. The children's services, the company meetings, the Young People's Legion, the Corps Cadets' Brigade, the Life-Saving Scouts and Life-Saving Guards, together with other agencies, form a comprehensive system for the salvation and instruction of young people both in childhood and in adolescence.¹

The Army claims to be a thoroughly democratic body in this respect that the soldier may aspire to any command, and, in fact, all or very nearly all promotion is from the ranks. Candidates for officership, who must be soldiers in good standing, receive a course of instruction (for not less than one year and not more than three) at one or other of the Army's 'Training Garrisons' or colleges. These training institutions, the first of which was opened in London in 1880, have now been established in 22 countries. The training given is not so much scholastic as spiritual and practical, and the cadet learns to do the actual work among the people in which he or she will presently be entirely engaged. Afterwards the 'probationary' is generally appointed in the first instance as lieutenant or sub-lieutenant under a captain of a corps, and continues for a time in the field the studies begun at the training centre. The fitness of officers is judged not alone by their ability to speak, and still less by their erudition, but by the proof that they give of their faith in God, their devotion to their work—above all, by their love of souls.

4. Position of women.—One of the foundation principles of the Salvation Army is that for any position, up to the Generalship itself, women are as eligible as men. Two of the territorial commands at the time of writing—those of the United States and of Denmark—are filled by women, and women are also at the head of many departments, while hundreds of them are in command of local corps. The principle that women have an equal standing with men as publishers of salvation to the world followed as a natural result from the part which women played in the early history of the Army; Catherine Booth was one of those who, long before the birth of the Army, protested strongly against the circumscribed sphere of women's labour in the churches.² She had expressed the belief, in letters written before her marriage, that much of the non-success of the gospel was to be attributed to the restrictions imposed upon the Holy Spirit in this particular. The rise of the Quakers—the Salvationists of the 17th century—had already opened the door to a female ministry, and Mrs. Booth, who amid obloquy and misrepresentations pioneered the ministry of these sisters of the people and shaped the Salvation Army bonnet, was assisting perhaps the next most striking step in religious history in the spiritual enfranchisement of women. When she died in 1890, the number of women officers of the Salvation Army exceeded 5000, and the godly women who publicly declared the works of Jesus Christ were to be counted by tens of thousands.

5. Orders and Regulations.—The system of the Salvation Army and the principles which govern its warfare are set out in a series of *Orders and Regulations*. Separate volumes have been compiled for different classes of officers according to the nature of their service, and every command and following in the Army has its own *vade mecum*. There are *Orders and Regulations* not only for soldiers in the ranks, but also for the various local officers, field officers, officers engaged in social work, staff officers, and territorial commissioners.³ The general aim of this comprehensive series is not only to furnish definite instructions in methods of Army service and principles of organization and government, but also to offer counsel from the vast treasury of experience which the first General and those associated with him have accumulated. William Booth first began to issue instructions to his helpers in the form of correspondence, but with

the growth of the work this method soon became impracticable, and gradually he came to embody his wishes in sets of printed regulations.¹ It was recognized that no code, however deliberately planned, and however capable the men upon whose practical experience it drew, could suffice as a final rule of faith and practice,² but by continual revision and reference to explicit cases these various directions have been made and will continue to be made as useful and particularized as possible. The leaders of the Army have never aimed at anything approaching a compendium of mechanical rules set forth in immutable terms; their aim has been rather to give expression to the demands of a living organism which grows and moves in response to the needs of the world of men for whom it works and to the mind of Christ which those leaders believe it has received of Him.

These regulations make severe demands. Intoxicating liquor is prohibited, severe plainness of dress is enjoined, the wearing of uniform is urged as a witness to salvation, the use of tobacco in the case of officers is required to be given up, and in the case of soldiers, although the renunciation is not compulsory, persistence in the habit is a barrier to promotion, even to the rank of sergeant or bandsman.

In the solemn matters of courtship and marriage the Army takes something more than a parental prerogative. All who are married under the Army flag subscribe to certain *Articles of Marriage*, the purport of which may be gathered from the first of them:

'We do solemnly declare that we have not sought this marriage for the sake of our own happiness and interests only, although we hope these will be furthered thereby; but because we believe that the union will enable us better to please and serve God, and more earnestly and successfully to fight and work in the Salvation Army.'

In their infancy the children of members are dedicated to become future soldiers in the war. The Salvationist conception of domestic duty is perhaps best unfolded in books by William and Catherine Booth.³

6. The Salvationist and the State.—The position of the Salvationist with regard to politics and the State is, in general, one of neutrality. It is impressed upon him in his *Orders and Regulations* that, 'although still living in the world, he is not of it,' and has no more business with its politics than with its pleasures. He is enjoined to render obedience to the Government under which he lives for the time being, to respect authority, and to conform, as far as he conscientiously can, to its requirements. While not forbidden under certain circumstances to join in patriotic or local demonstrations, he is reminded that the Salvation Army is a company of men and women of many nationalities who, while rendering to Cæsar the things that are his, acknowledge a higher authority than Cæsar's.⁴ The super-national character of the Salvation Army is very well illustrated in the German Salvationist adaptation of Hoffman's patriotic song:

'Jesus, Jesus über alles,
Über alles in der Welt.'

At the same time its attitude to public questions is not necessarily negative. When social reform is to the fore, or any matter which concerns the moral well-being of the community, or the position of the Salvation Army, the Salvationist is at liberty to give his support to parties and organizations which are prepared to further the principles to which he stands committed as a Salvationist, but his support of those parties and organizations ceases with the accomplishment of the immediate object. He is advised even then to concern himself, not with parties, but with measures, and with measures only in so far as they have a direct bearing upon his principles and his work as a Salvationist soldier. The same rule holds good in local

politics, while in the case of industrial disputes the Salvation Army still maintains this neutral attitude so far as the merits of the case are concerned, although ready for any opportunity to reconcile the disputants and to alleviate distress.

The Salvation Army in the United Kingdom has at various times assisted in bringing about legislation having a moral purpose; it helped to secure the passage of the Criminal Law Amendment Acts and the Children's Act. It has acted in a like way in other countries, as, e.g., in Japan, where it has been the means of bringing about changes in the laws protecting women. It has helped to win further liberty of speech and opinion both in the United Kingdom and in some Continental countries, where at first it was bitterly persecuted. In the early days of its history in England Acts of Parliament were erroneously evoked, and by-laws were frequently made to prevent open-air meetings. In one year alone more than 600 Salvationists in England, as well as considerable numbers in Sweden, Switzerland, India, and the United States, suffered imprisonment for their action in the open air. The decisions, however, of some local authorities were carried to the higher courts and there reversed; and in many other cases, without taking such a course, the Salvation Army, by a firm though non-provocative attitude, has carried its point and gained toleration and protection for its own street propaganda and that of other bodies. In a wider aspect still the Salvation Army by its work among vast subject populations is rendering a certain amount of imperial service, for it is developing the native power along purely Salvationist and therefore non-insurrectionary lines.

III. THE SALVATION ARMY AS A SPIRITUAL FORCE.—1. 'Articles of War.'—The simplest exposition of the religion of the Army is to be found in its 'Articles of War,' to which every Salvationist subscribes on enrolment. These 'Articles' number sixteen, half of them mainly doctrinal in character, the other half mainly ethical. They are quoted in full in art. CONFESSIONS, vol. iii. p. 887.

2. The need for conversion.—The doctrinal standards of the Salvation Army are in general those of evangelical Christianity.

'We believe,' wrote William Booth, 'the three creeds of the Church with all our heart. We believe every word of the Communion Service, and we go about denouncing the wrath of God against sinners just as people must who really believe that all these things are true.'¹

Catherine Booth was equally explicit:

'We have not given up any of the fundamental doctrines of Christianity, such as the fall, the universal call to repentance, justification by faith through Jesus Christ, a life of obedience, and heaven and hell.'²

Salvationist theology includes the leading truths which are held by all orthodox communities, and any apparent newness of presentation is due mainly to its concentration upon those few and simple truths which it holds to be vital to salvation. In an interview which the late General afforded one of his journalists on the fiftieth anniversary of his own conversion he expounded his idea of the scheme of salvation in considerable detail. After the elementary truths regarding the work of each Person of the Trinity, he instanced three other doctrines upon which, he said, constant stress was laid at almost every public effort of Salvationists. These concerned the day of judgment, the existence of a real place of punishment, and the existence of 'a glorious heaven where all faithful and victorious soldiers will enjoy unspeakable happiness in companionship with saints, angels, and God.' Beyond these, again, there were certain other truths which had a formative influence upon his mind and, in consequence, upon the doctrinal position of the Army. These had been borne in upon him alike by personal experience, by observation, and by his study of the Bible. One was the division of all men into two classes in their relation to God and eternity—the righteous and the wicked. These answered to the two destinies of heaven and hell which awaited men in the next world. There was nothing clearer than that there is a right side and a wrong in the relations of each individual to

the salvation offered by God through the sacrifice of Christ, and that it is within a man's own determination which side he should be on. Change of character can be brought about only by a change of nature, and of this change God is the Author, with the consequence that it is possible to expect and to witness this change even in the worst of characters, where, in the nature of the case, no merely human means, such as good resolutions, even when fortified by ceremonial, can avail. It is God who saves, and therefore no man is beyond the pale of this miracle. At the same time, he could never admit that forfeiture of individual responsibility which seemed to be involved in the extreme Calvinist position. Every man was responsible for his own salvation. It was clear that a man must be empowered to accept or reject the proffered mercy, and that upon his acceptance or rejection depended his eternal destiny, and, further, that this great act of reconciliation with God was a definite transaction, occurring at a given time, on the simple conditions of repentance and faith.

3. Holiness teaching.—The Salvation Army from the beginning had insisted upon the need for definite spiritual development after conversion, or on what it calls a 'full salvation.' In the prominence which it has thus given to the doctrine of entire sanctification it has shown itself in the inheritance of John Wesley, who consistently taught that the same power which pardoned the sinner could purify the heart from evil tendencies and tempers, and it has gone in advance of Wesley in insisting that this perfecting of the heart in love will result in a life of conflict and sacrifice for the salvation of others. Full salvation is not to be introspective merely, but a practical following of Jesus Christ as a living sacrifice; not so much a 'rest of faith' as a 'fighting holiness.'¹ This truth has been placed in the forefront of Salvation Army work, and the 'holiness meeting' is usually a feature of the weekly programme of a corps in every country. The teaching is that the Holy Spirit is able to subdue the whole man—will, thought, feeling, and action—to the law of love and keep him walking according to that law in holiness and righteousness all the days of his life.

This experience is taught as a definite state, first towards sin, and then as to conformity to the known will of God. In a series of *Letters to Salvationists* on this subject William Booth speaks of three conditions in which the soul may be:

'In the first stage the soul is *under sin*—it must sin and sin rules. In the second stage the soul is *over sin*. The yoke of evil is broken. Deliverance as well as pardon has come by Christ. In the third stage, the soul is *without sin*. Then the soul may adopt the words of the Apostle, with a variation, and say, "The very God of peace has sanctified me wholly, and He preserves my whole spirit and soul and body blameless, and He will continue to do so unto the coming of our Lord Jesus Christ. Faithful is He that has called me to this experience of purity, who also will do it."²

The conditions of obtaining this pure heart are (1) obedience in separation from evil, (2) surrender of the soul to the will of God, and (3) faith, which is the committal of the soul to the Sanctifier in full confidence that He will cleanse and keep it from sin.

4. Sacraments.—Conceiving its purpose to be that of calling universal attention to central and vital truths, and making them stand out in the utmost directness before the individual conscience, the Salvation Army has largely avoided the subtleties and intricacies of controversial theology, and this not merely for the sake of peace but for the sake of concentration. The administration of the sacraments was abandoned in 1882, and all ritual which might be supposed to contain some intrinsic

¹ CR xlii. [1882] 170.

¹ See Samuel L. Brengle, *The Way of Holiness*.

² William Booth, *Purity of Heart*, p. 261.

or mystic merit was put on one side. The Army has never denied the value of the sacraments in individual cases, and indeed, occasionally, its members have been granted liberty to partake of these ordinances in one or other of the Churches. But the broad fact upon which Salvationism rests is that the sacraments are not necessary to salvation—whether salvation is considered as an act of divine grace or as a holy life.

The present attitude of the Army on this subject is identical in practice with that of the Society of Friends. The Friends, however, arrived at their position by way of the doctrine of the 'inward light,' whereas the Army takes the simple utilitarian ground that these observances introduce complication, that they are open to argument and attack, and that by many who would participate in them they would not be understood, and, most important of all, that they would often obscure the necessity for the vital experience.

5. Salvationizing methods.—With unchangeableness of principle there is combined the utmost flexibility of method. Some features of the Army's assemblies have aroused intense criticism, but a good deal of its procedure which might seem to be extravagant or even irreverent when described at second-hand is not so at all in the actual circumstances of the occasion. Army demonstrativeness, as Catherine Booth once said, is not a putting on, but a letting out. The Salvationist's vision of a rebellious world and of perishing souls seems to justify any and every device, however sharp, striking, or even vulgar, for attracting, for compelling, the attention of the hardened and indifferent to whom his appeal is made. For this reason ordinary religious phraseology is largely laid on one side, and what has been called 'surprise power' or novelty is utilized. The testimony meeting is described as a 'free and easy,' and the response of 'Amen' as a 'volley.' Many Army services are punctuated from first to last with joyous exclamations, clapping of hands, laughter, or tears. The soul-winning propaganda of the Salvation Army, as illustrated in its street marches and in meetings of an unusual type, has sometimes taken the form of almost physical persuasion. Among the people to whom the Salvationist goes he has to compete with a hundred other clamant appeals to eye-gate and ear-gate, and, his object being to win men for the highest good, he sees it necessary to be in his way as vociferous and aggressive as any. Above all things he is to be definite. It is not his business to produce a vague emotion; he is to bring men to a state in which they are convinced of sin and convicted of its guilt and of its awful peril. Mere belief is not enough; there must be an active repentance. Therein lies one chief reason for the penitent form or mercy-seat. This feature of Salvationist public gatherings is a row of seats immediately in front of the platform, at which seekers are invited to kneel in token of their resolution to abandon their sins and to live henceforth to please God. It is a method which the Army defends on the ground that it is conspicuous enough to register a distinct break in a man's life, and does not lend itself to a mere passing impressionism. A further reason for Salvationist enthusiasm is seen in the fact that many of the workers have themselves passed through such inward experiences as to make it unnatural for them to maintain their ordinary reserve when they speak of such things.¹ Many of them also have witnessed remarkable—they often justify the word 'miraculous'—changes occurring in the lives of

others, such as those described¹ as having occurred in one London corps, where a group of men known locally as 'the terrible ten' were won for God.

6. Other features of propaganda.—Although the first Army band was not established until 1879, the enthusiasm of the movement found expression in song from the very beginning. It carried a step further the evangelistic singing which had been such a feature of the Methodist revival in the previous century. Soon after the commencement of his work in the East End of London William Booth published *The Christian Mission Hymn-Book*, and later a whole series of *Salvation Army Song Books*, which contained songs² in abundance, some of original composition and others gathered from every quarter. These songs were taken up by his people with fervour and spontaneity. Rather to the offence of a good many outsiders, the leaders of the Salvation Army have systematically adapted sacred words to popular tunes on the principle, 'We'll take these songs from the devil; he has no right to a note of music.' But always both rhythm and words were subservient to the Salvationist sentiment. Soon the penetrating melodies, especially those of Salvation Army origin, demanded a more considered musical accompaniment, and bands began to be formed, at first among families or groups of Salvationists, and then as a regular part of each corps, until now, with nearly 30,000 bandmen and more than 20,000 members of Songsters' Brigades, the Salvation Army, as Samuel Morley once prophesied would be the case, has 'sung its way round the world.' In the jubilant cadences has been found a language in which Salvationists of every tongue can understand one another and tell to all men the joy that is in them. The band (in some countries a guitar combination, but more generally with brass instruments) is a feature of Salvation Army work in every part of the world. The strictest surveillance over the bands, both as to personnel and as to music, is maintained at each territorial headquarters. Bandmen have their own *Orders and Regulations*, and the part which the instruments can take in the meetings, both in time and in volume, is carefully limited so as to assist the proceedings without monopolizing them.

Another means of propaganda which the Army was quick to appreciate was the printing-press. Within a few months of the organization becoming known as the Salvation Army the first *War Cry* was established to inspire Salvationists, educate them, and bind them together. This, the *Official Gazette* of the Army, has now (1918) some 80 companions, most of them weekly periodicals, issued in more than 20 languages, including several of the languages of Asia and Africa. The combined circulation is more than seven millions, 1½ millions for each issue, and the total number of readers is estimated at more than seven millions. The selling of these papers by members of the Army is looked upon as offering a precious opportunity of witnessing for Christ. In most territories the name *War Cry*, or its equivalent, is adopted as the title of the official organ—e.g., the *Strijdkreet* of Holland and *Il Grido di Guerre* of Italy; and in addition there are in most countries, as in the United Kingdom, magazines for special departments of the Army's work. By means of explicit instructions and vigilant insight it is ensured that these papers reflect the spirit and polity of the one movement, both in the kind of articles they publish and in the way in which they deal with topics of interest. The power of the

¹ See art. CONVERSION, vol. IV. p. 109b: 'The type of religious experience that seems native to a cultured community is calm and restrained; but the fervours of the Salvation Army and the Methodist meeting are to the psychologist no less natural.'

² Harold Begbie, *Broken Earthenware*.

² Always 'songs' rather than 'hymns,' following the general custom of the Scriptures.

printed word has also been recognized in the systematic publication of books dealing with phases of Salvation Army thought and experience, and of many volumes of a didactic character by William and Catherine Booth, G. S. Railton, and others.

7. Indirect influences.—The influence of any organization beyond the ranks of its immediate followers is difficult to estimate, but some of the features of the Salvation Army are so marked a departure from ordinary religious life and methods that they could hardly fail to have important reactions in the Christian Churches. In one form or another many of the leading authorities of the religious world have testified that its spirit and example have brought about changes which amount to a revolution in the methods of the Church. Bishop Lightfoot of Durham pointed out one influence of the Army upon his own Church—the Church of England:

‘Shall we be satisfied with going on as hitherto, picking up one here and there, gathering together a more or less select congregation, forgetful meanwhile of the Master’s command, “Go ye into the highways and hedges and compel them to come in”? The Salvation Army has taught us a higher lesson than this. Whatever may be its faults, it has at least recalled us to this lost ideal of the work of the Church—the universal compulsion of the souls of men.’

Not only has the Salvation Army stimulated a more aggressive evangelism, but it has also suggested methods of presenting religion to the masses upon which in some instances other bodies have admittedly modelled their own propaganda. The idea of a military organization has been taken up in some cases,¹ and in others the influence of the Army has been apparent in various ‘forward movements’ in Britain. The same leaven has been at work in other lands, as, e.g., in the ‘Innere Mission’ of Germany, in its counterpart in the Scandinavian countries, and similar home mission movements in the United States and the British colonies. In India a ‘Buddhist Salvation Army’ concerns itself with the moral uplifting of those whom it seeks to influence. Individual inspirations, though acknowledged by public men of every communion, including Lutherans, Roman Catholics, Jewish rabbis, and priests of the Greek Church, cannot of course be catalogued; but here again there is abundant evidence that in almost every land the indirect influence of the Army has awakened interest in religion or revived a shaken faith or a languishing devotion among many who have not enlisted under its flag. Thousands of ministers, missionaries, and lay workers serving in other Churches took the first step that led to their present vocation as a result of influences set in motion at its meetings or on reading its publications.

IV. SOCIAL WORK.—**1. The incentive.**—The revival of evangelical zeal in the second half of the 19th cent. which the Salvation Army undoubtedly greatly helped to produce, and which in turn did much to help forward the Salvation Army, brought with it a further realization of the inter-relationship of moral failures and physical and economical evils.² The social conscience of the people was being quickened, and it was revolted by the spectacle of large sections of the people living either on the edge of economic disaster or plunged already into a sea of grinding want, vice, or crime. At the same time, it was seen that the problems to be dealt with required statesmanlike judgment as well as the philanthropic spirit.

¹ E.g., a ‘Church Salvation Army’ was started at Oxford (1882–85), the title being chosen ‘as a tribute to General Booth’; the organization was one of those which were subsequently merged into the Church Army. See Edgar Rowan, *Wilson Carlile and the Church Army*, London, 1905, p. 140.

² Gilbert Slater, *The Making of Modern England*, London, 1913.

William Booth had always deeply sympathized with the workless.

‘When but a mere child,’ he says, ‘the degradation and helpless misery of the poor Stockingers of my native town, wandering gaunt and hunger-stricken through the streets, droning out their melancholy ditties, crowding the Union or toiling like galley slaves on relief works for a bare subsistence, kindled in my heart yearnings to help the poor which have continued to this day and which have had a powerful influence on my whole life.’¹

It is not surprising, therefore, that quite early in its history (1874–78) the Salvation Army had looked with anxious solicitude into the under-world of want and vice, and had stretched out a hand to certain classes of its sad inhabitants. Prison-gate homes and food depots and some scattered efforts on behalf of lost women—the beginnings of the social work which was presently to grow to such world-wide dimensions—were established. But it was not until the middle eighties that the General, greatly moved by the sight of the vagrant and destitute classes, made certain extensive experiments. Then came a more comprehensive scheme, an organized warfare against social evils—at least the worst of them—as a preliminary to evangelizing the outcast with the saving health of religion. It was a deep spiritual sympathy with suffering that led the Salvation Army into its social enterprises, but with this sympathy was linked a keen appreciation of the sufferers’ temporal misery and need.

The social work of the Army is not to be regarded as an additional wing to its main structure, or as a sudden afterthought to modify its governing idea. It is a natural development, involving no departure from the principles by which the Army has been actuated from the beginning. It is true that so far as finance is concerned the spiritual and social operations have since the launching of the Darkest England scheme been sharply distinguished, and subscribers must say to which fund their contributions shall go. This is a matter of legal correctness and of administrative convenience.² The place of social work in the Army’s operations was definitely indicated by William Booth when he wrote:

‘In providing for the relief of temporal misery I reckon that I am only making it easy where it is now difficult, and possible where it is now all but impossible, for men and women to find their way to the Cross.’³

The Darkest England scheme, therefore, when it was unfolded in 1890, did not break so freshly upon the Salvation Army itself as it did upon the outside public, whom it awakened in an extraordinary degree to the social misery which existed, and to the availability of the Army for coping with at least some part of the problem by virtue of the extent and solidarity of its organization. The details of the proposed scheme were only in sketch, to be altered, abandoned, or added to as experience and advisability determined. The general purpose was to offer in the first place to the workless and destitute a chance of recovery through industry and discipline, the Army providing them with the opportunity and meeting their immediate needs. Industrial reclamation was, of course, only one phase of the problem, and perhaps not the acutest. The vicious and the morally helpless had to be dealt with, special provision had to be made for prisoners on their discharge, for the habitually drunken, for lawless lads, and for fallen or tempted women. At the back of every effort was the hope of the spiritual reformation of the individual. His character must be changed, if his character was in question, before any change in circumstances could greatly avail.

The principles of social work as laid down in *Orders and Regulations for Social Officers* (1915) include the importance of

¹ In *Darkest England and the Way Out*, Preface, p. i.

² The Darkest England scheme was declared a separate trust by deed-poll, dated Jan. 1891.

³ In *Darkest England and the Way Out*, Preface, p. iv.

a change of environment, the provision of useful occupation, the cultivation of a spirit of mutual assistance, discipline, and so on, but first of all 'the salvation of the individual through faith in Jesus Christ,' not, indeed, as a condition of being helped, but as the chief ground of hope for effecting any permanent improvement.

2. Organizations.—The social enterprises of the Salvation Army lend themselves to descriptive detail, but here it will be enough to refer the reader to the published accounts of various aspects of the work.¹ The following enumeration of the social activities of the Army, though the list may not be quite complete, affords some idea of the variety and scope of its efforts for the benefit of the poor and friendless of every land :

(a) *For the starving.*—Children's free and farthing breakfasts, midnight soup and bread brigades for the homeless, cheap food depots, special relief funds for cases of special destitution, old clothes depots for sium families, poor men's hotels, cheap grain stores, famine loan fund for the destitute of the East.

(b) *For the drunkards.*—Drunkards' brigades, drunkards' advice and home bureaux, homes for inebriates (men and women).

(c) *For the paupers.*—Workhouse brigades, salvation guardians of the poor, pauper colonies, pauper transportation, labour bureaux, homes for the aged and for the dying.

(d) *For the unemployed.*—Labour bureaux (men and women), industrial homes, labour wood-yards, city salvage brigades, workshops, elevators.

(e) *For the homeless.*—Midnight scouts in cities, shelters for men and women, metropolises.

(f) *For the criminals.*—Prison visitation, police-court work, prison-gate work, prison corps, probationary policy, correspondence bureaux, ex-criminals' homes, and criminal settlements.

(g) *For the daughters of shame.*—Organized visitation of 'walks,' brothels, red-light districts, yoshiwaras, clubs, etc., midnight meetings and marches, receiving homes, industrial homes, factories, 'out of love' funds, service girls' brigades, shepherding brigades, maternity homes, investigation and affiliation departments, mothers' hospitals.

(h) *Slum work.*—Visitation, first-aid brigades, district nursing, 'poorest of the poor' aid.

(i) *For the sick.*—Visitation, hospitals, dispensaries, village dispensing, leper hospitals, maternity nursing.

(j) *For the lost.*—Inquiry and correspondence bureaux, legal assistance.

(k) *Preventive and protective work for young girls.*—Servants' homes, city institutes, registries, students' homes, residential clubs.

(l) *Anti-suicide bureaux.*—Advice department, loan department.

(m) *Land schemes.*—Emigration, home colonization, colonization over the sea, land and farm and irrigation colonies, small holdings.

(n) *Deep sea brigades.*—Mission boats, lifeboat.

(o) *Training colleges.*

(p) *Students' homes.*

(q) *Working-men's associations.*

(r) *Village banks (agricultural).*

W. BRAMWELL BOOTH.

SAMĀDHI.—The use of this term in Buddhism has been explained briefly in the art. **DHYĀNA** (Pali *jhāna*). *Samādhi* is a many-sided word, signifying both (1) a complex state or habit of mind and (2) a system of training or culture intended to produce that state or habit. As (2) it forms one of the three bodies of doctrine (*khandhā*) with which all followers of the holy life in Buddhism were to be continually occupied: *silak-*

¹ E.g., H. Rider Haggard, *Regeneration*; Arnold White, *The Great Idea*; F. A. MacKenzie, *Waste Humanity*; David Lyall, *Handicapped*; see also 'Literature' below.

khandha (morals, ethics), *samādhikkhandha*, and *paññākkhandha* (wisdom, insight).

Thus the distinguished Sister Dhammādinā comprises the Eightfold Path under these three:

<i>Sīla</i> {	right speech " action " livelihood.	<i>Samādhi</i> {	right effort " mindfulness " <i>samādhi</i> .
<i>Paññā</i> {	right views " intention or aspiration.		

She is then asked: 'What is *samādhi*? What induces it? What are the requisites for it? What is the culture of it?' She replies: 'It is concentration of mind; the Four Applications of Mindfulness induce it; the Four Supreme Efforts are its requisites; the practice, development, repetition of these things are the culture of it.'²

Here we see the twofold import of the term as stated above. Let us consider each of these two in order. Concentration is *chittass' ekaggatā*, that is, one-pointedness of mind, or the power of exclusive single-minded attention. This definition is repeated and elaborated in the *Abhidhamma* analyses, where *samādhi* and concentration are described in similar terms:

'Stability, solidity, absorbed steadfastness of thought which . . . is the absence of distraction, is balance, unperturbed mental procedure, calm, the faculty and power of concentration.'³

The commentaries maintained this teaching as handed on by Buddhaghosa:

'What is *samādhi*? It is of many aspects and divers modes . . . not to confuse the issues just here, we say it is concentration of good consciousness. In meaning it is the *samādhānam*;—the "thorough-placing-on-to," that is, on one object of consciousness and its concomitants. Its salient mark is balance; its essential property is the expulsion of wavering, its resulting manifestation is impassivity; happy ease is its proximate antecedent.'⁴

The various channels and modes of *samādhi* are then gone into at length, including *jhāna*, whether induced by self-hypnotism or otherwise. The chief of these are subsequently developed in the following ten chapters of *Visuddhi-Magga*. He concludes the chapter in question with a reply to the inquiries: How is *samādhi* to be cultivated? What is the advantage gained by its culture? The former question is also answered in the ten following chapters. In the eleventh the advantage is stated to be fivefold, according to the lower or higher aims and modes of culture in each practiser:—present happiness, insight into things 'as they really have become' (*yathābhūtam*), superknowledge (*abhiññā*),⁵ rebirth in the Brahmā heaven, and *Nirvāṇa*.

Coming to the more discriminating psychological analyses of later scholastics—e.g., in the *Compendium of Philosophy* by Anuruddha—we find that, whereas *chittass' ekaggatā* is recognized as a constant factor among the seven factors present in every unit of conscious activity, *samādhi* is reserved for the whole of a given state of mind describable as concentration⁶ and is also called 'ecstatic apperception'⁷ in states of mystic or jhānic rapture. In other words, the factor in every act of consciousness which we know as 'selection' becomes, when trained and developed, the power and faculty (*indriya*) of *samādhi*.⁸

Thus *samādhi* is no more confined to the highest, most unworldly aims and activities than is 'concentration' in English-speaking culture. Nor is it right to speak of it as the 'sole' or even the chief

aim of the Buddhist. It is quite essential as a means. But the aims and ideals which it made possible to realize are reserved by Buddhaghosa for the *Paññākkhandha*, the third and last section of the *Visuddhi-Magga*.

LITERATURE.—*A Yogācāra's Manual*, ed. T. W. Rhys Davids, PTS, London, 1896 (the introduction cites a number of passages on *samādhi* from the canon); *A Compendium of Philosophy* (a Pali Manual of approx. 12th cent. A.D.), tr. S. Z. Aung and C. A. F. Rhys Davids, London, 1910, pp. 16, § 5, 53-63, 237, 240. C. A. F. RHYD DAVIDS.

SAMARITANS.—1. Name.—Those who today are called Samaritans are but the last little remnant of a Jewish sect that for centuries has looked upon Mt. Gerizim in Palestine as the one rightful place appointed unto it by God for His worship. Their name has come to its present meaning through several stages of development. First of all it was applied to the once famous capital of the kingdom of Northern Israel. Then, by a natural extension, it was made to include the entire district of which this city was the political head; any dweller within this territory might properly be called a Samaritan. Finally, through NT usage and the practice of early Christian writers, the word came to be limited to adherents of a particular form of faith.¹

2. Origin.—The origin of the Samaritans is veiled in obscurity. The meagre data at our disposal permit and have received different interpretations. According to the Biblical narrative in 2 K 17-18, their beginning is to be dated from the downfall of the kingdom of Northern Israel in 722 B.C.

Then it was that 'Jahweh removed Israel out of his sight, as he spake by the hand of all his servants the prophets. So Israel was carried away out of their own land to Assyria, unto this day. And the king of Assyria brought men from Babylon, and from Cuthah, and from Avva, and from Hamath and Sepharvaim, and placed them in the cities of Samaria instead of the children of Israel: and they possessed Samaria, and dwelt in the cities thereof' (2 K 17²⁴). Thus it came to pass that Israel was removed and that 'there was none left but the tribe of Judah only' (cf. 2 K 17²⁸).

These diverse imported peoples, settled in the devastated land of Israel, were made by Jewish teachers to be the progenitors of the Samaritans. That such a mixed group should speedily come to resemble Israel closely in customs and manner of worship was said to be due to the fact that they were 'lion converts.' Being menaced by a scourge of savage beasts, they found deliverance by worshipping Jahweh as the God of the land under the guidance of a priest, or priests, who were sent back from among the captive Israelites.² Meanwhile they did not abandon their former idolatrous cults,

¹ The city of Samaria is said to have received its name from one Shemer (שֶׁמֶר), who sold to Omri the site on which the city was built (1 K 16²⁴). The term 'Samaritans' (*Shomerōnīm*, שְׁמֶרונים) is found only once in the OT (2 K 17²⁹). Rabbinical writers frequently allude to their northern neighbours as Cutheans, while Josephus calls them by preference Shechemites. They themselves lay claim to the title 'Israel' or 'the Children of Israel.' They acquiesce, however, in the name Samaritans, giving to it their own interpretation of 'observers' or 'keepers', namely, of the Law or the Sabbath (i.e. *Shomerim*, שְׁמֶרִים, from שָׁמַר).

² And so it was, at the beginning of their dwelling there, that they feared not the Lord: therefore the Lord sent lions among them, which killed some of them. Wherefore they spake to the king of Assyria, saying, The nations which thou hast carried away, and placed in the cities of Samaria, know not the manner of the God of the land: therefore he hath sent lions among them, and, behold, they slay them, because they know not the manner of the God of the land. Then the king of Assyria commanded, saying, Carry thither one of the priests whom ye brought from thence; and let them go and dwell there, and let him teach them the manner of the God of the land. So one of the priests whom they had carried away from Samaria came and dwelt in Beth-el, and taught them how they should fear the Lord' (2 K 17²⁸⁻³⁴). The text fluctuates between the singular and plural in its allusion to the priest or priests. It is probable that the plural should be retained throughout. Josephus (*Ant.* ix. xiv. 3) makes the danger that threatened them to have been a pestilence.

for, while 'they feared Jahweh,' at the same time they 'served their own gods, after the manner of the nations from among whom they had been carried away' (2 K 17³³).

Two further OT allusions to the introduction of foreign colonists are found in the book of Ezra. In the first (4²) the Samaritans make request to have part with the returned exiles in rebuilding the Temple at Jerusalem, and urge their claim on the ground that they worship Jahweh as do the Jews, and that they have sacrificed unto Him from the time that they were brought into the land by Esar-haddon, king of Assyria (681-668 B.C.).¹ Further on in the chapter the same people are described as belonging to the 'nations whom the great and noble Osnappar brought over, and set in the city of Samaria, and in the rest of the country beyond the river' (Ezr 4¹⁰).² Both the latter statements are beset with textual difficulties, but they agree with the account of 2 Kings in emphasizing the alien origin of the Samaritans. Later Jewish tradition perpetuates the same disparaging view and uses by preference the term 'Cuthean' for the people of the north.³

The fall of Israel and the deportation of its people are also mentioned in two Assyrian inscriptions. It appears that Shalmaneser IV. (727-722), who began the siege of the city of Samaria, died before its completion, and that accordingly the glory of the conquest was claimed by his successor, Sargon II. (722-705). The latter king says:

'At the beginning of my reign, in my first year . . . Samaria I besieged, I captured. 27,200 people from its midst I carried captive. 50 chariots I took there as an addition to my royal force . . . I returned and made more than formerly to dwell. People from lands which my hands had captured I settled in the midst. My officers over them as governors I appointed. Tribute and taxes I imposed upon them after the Assyrian manner.'⁴

The second inscription is of like purport, with an added statement to the effect that those who were left undisturbed in their homes were permitted to retain their possessions.⁵ In the royal enumeration of the exiles probably only the heads of families were counted, and consequently the total number of captives may have been much greater; but, even so, this deportation can have affected only a small percentage of the entire population.⁶ The capital and the larger towns would doubtless suffer most, whereas the smaller villages of the rural districts would remain largely undisturbed. The concern of the Assyrian conqueror would be to remove the more influential political and religious leaders. Whether there was a further deportation two years later, when Samaria joined in a fruitless uprising against Sargon II., is not stated in the surviving fragments of the inscription which commemorates the event. Accordingly, so far as Assyrian records permit any inference, it appears that the major portion of the Israelites continued to dwell in their own land subject to local Assyrian governors.

¹ Josephus, in reporting this incident, states that the king in question was Shalmaneser IV. (*Ant.* xi. ii. 1; cf. *ICC*, ad loc., and Torrey, *Ezra Studies*, p. 169).

² It is probable that the name Osnappar is a corruption, since it is not otherwise known to have been borne by any king or high official. A widely accepted conjecture would substitute Asshurbanipal (683-626 B.C.) on the ground of resemblance and because he alone of the later Assyrian kings would be in a position to deport colonists from Susa and Elam. Others would restore Shalmaneser, a reading that has the support of Lucian's text of the LXX (cf. L. W. Batten, *The Books of Ezra and Nehemiah* (*ICC*), Edinburgh, 1913, p. 172; *HDB* iii. 634; Torrey, p. 169).

³ *Jos. Ant.* ix. xiv. 3, xi. iv. 3, vii. 2; Schürer, *GVV* ii. 15, note 43, for passages in the Mishnah.

⁴ *RA* 74, as tr. by G. A. Barton, *Archæology and the Bible*, Philadelphia, 1916, p. 369.

⁵ This at least is the presumable meaning of the passage (*ib.* p. 370).

⁶ There is a tradition . . . Sennacherib speaks of . . . the Judæan, and of . . . great, male and female' (*RA* 74, tr. Barton, p. 369).

Such a conclusion receives a measure of confirmation from Biblical data. The Chronicler states that soon after the fall of Samaria King Hezekiah (715 (?)–686 (?) B.C.) sent to all Israel and 'wrote letters also to Ephraim and Manasseh,' inviting them to participate in a great Passover at Jerusalem, with the result that many came from Asher, Manasseh, and Zebulun (2 Ch 30¹⁻¹¹). This implies the continued presence of Israelites in the north.¹ In the next century the reform of Josiah (639–608 B.C.) purged Bethel of its idolatry and took away 'all the houses also of the high places that were in the cities of Samaria, which the kings of Israel had made to provoke Jahweh to anger' (2 K 23¹⁵⁻²⁰). There is no suggestion in this tradition that these high places differed in any particular from those in the south, or that the cultus was other than that which had been established by the kings of Israel. The Chronicler includes Manasseh, Ephraim, and 'all the remnant of Israel' among those who contributed to the repairs of the Temple in the days of Josiah (2 Ch 34⁹; cf. 2 K 22⁴). In the 5th cent. we hear of 80 men who came out of Shechem, Shiloh, and Samaria, bringing offerings to the house of Jahweh. They came in the garb of mourning, doubtless because of the desolation of Jerusalem and the ruin of the Temple (Jer 41⁵). It seems most natural to suppose that these worshippers were Israelites, and that the former relationship to Jerusalem had not yet been interrupted. To a somewhat later period in the same century belongs the tradition already discussed, that the inhabitants of the north claimed the right to co-operate with the returned exiles in the rebuilding of the Temple (Ezr 4²).

These scattered notices are best understood by supposing that the descendants of the Israelites continued to live on in the land of their fathers and that they are the same people that emerged later as the sect of the Samaritans. The loss of the Ten Tribes would then be due more to vicissitudes suffered at home than to deportations. The whole religious development of the Samaritans requires such an ancestry and would be largely inexplicable without it. Rabbinical enactments appear at times frankly to recognize the true situation. A Talmudic booklet (*Masséketh Kuthim*) dealing with the Samaritans closes as follows:

'When shall we receive them? When they give up their faith in Mount Gerizim and acknowledge Jerusalem and the resurrection of the dead. Thenceforth he who robs a Samaritan will be as he who robs an Israelite.'²

Anthropology, working independently, has reached the same conclusion. H. M. Huxley gives it as his judgment that the Samaritans 'are to-day the sole, though degenerate, representatives of the ancient Hebrews.'³

3. The emergence of the Samaritans as an independent religious community.—As to the time and circumstances of the final rupture between the Jews and the Northern Israelites there are two divergent traditions.

One rests upon a brief allusion in Neh 13²⁸, where it is stated that 'one of the sons of Joiada, the son of Eliashib the high priest, was son in law to Sanballat the Hæmonite: therefore I chased him from me. Remember them, O my God, because they have defiled the priesthood, and the covenant of the priesthood, and of the Levites.'

The second and more explicit tradition is recounted by Josephus, who tells us that the schism was occasioned by the marriage of Manasseh, a brother of the high priest Jaddua, to an alien wife, namely to Nikaso, the daughter of Sanballat, the Persian governor of Samaria. The elders at Jerusalem and the high priest demanded that the wife should be divorced, or that Manasseh should renounce his sacerdotal rights. Unwilling to accept such an alternative, he sought help from his aged father—

¹ Cf. E. L. Curtis and A. A. Madsen, *The Books of Chronicles* (*ICC*), Edinburgh, 1910, p. 471 ff., and Montgomery, *The Samaritans*, p. 55.

³ *JE* x. 676.

in-law, who promised to secure for him the dignity and rights of the high priesthood in connexion with a temple that should be built on Mt. Gerizim. The young priest was likewise assured that he should be Sanballat's successor in temporal power. Ultimately the promised religious privileges were gained under the sanction of Alexander the Great, who had meanwhile defeated the Persians at Issus and conquered Syria. Forthwith the temple was built and regular worship was established at the rival sanctuary.¹ If Josephus can thus record an incident that establishes the legitimacy of the priestly line of the rival temple, it is evident that the tradition must have appeared to him well founded, for he otherwise gives abundant evidence of his hostility towards the Samaritans. It is further stated in his account that Manasseh was joined by many priests and Levites who had alien wives, and also that other disaffected Jews, who from time to time became guilty of breaches of the law at Jerusalem, found refuge with the Shechemites.²

These two accounts have this much in common, that each makes mention of the marriage of a member of the Jewish high-priestly family to the daughter of a Sanballat; but in the former instance the priest in question was an unnamed son of Joiada and a grandson of the high priest Eliashib, while in Josephus he is Manasseh, brother of the high priest Jaddua, who was a contemporary of Alexander the Great. Thus the incident would occur, according to Josephus, in 332-331 B.C., or about a century after Nehemiah. Again we note that Nehemiah speaks only of the expulsion of the offender and gives no hint that this act of discipline resulted in the founding of a rival sanctuary on Mt. Gerizim, or in any way affected the Samaritans.³ Without entering upon a discussion of the problem that is thus presented, it may be said that the date fixed by Josephus for the schism appears to be confirmed by several important facts. First in order is the agreement of the Samaritans with the Jews in accepting the fully revised and developed Pentateuch. Had the separation taken place before the sacred documents assumed their present form, the Samaritan Bible would almost certainly give some evidence of belonging to the earlier period. It is further highly significant that, so far as we can discover, Samaritan worship and ritual from the first conformed closely to Jewish rites and practices—a result that could hardly have been anticipated if Jewish influence had made itself felt only indirectly in the time after Nehemiah. A further reason for the later dating of the Samaritan schism is furnished by the recently discovered Elephantine temple papyrus. This document, written in 408-407 B.C., gives no suggestion that a state of bitterest enmity existed openly between Jews and Samaritans. On the other hand, the Jewish community of Egypt can appeal with confidence not only to Jerusalem, but also to the political heads of Samaria for assistance. There is no allusion to a religious head of the Samaritans in this connexion, doubtless because as yet none existed.⁴

¹ Jos. Ant. xi. vii. 2, viii.

² Ib. xi. viii. 2, 7.

³ In spite of these important differences in detail, it is quite generally believed that both accounts must refer to the same experience. Usually a way out of the difficulty is sought by making Josephus to be in error as to the date. It is assumed that Nehemiah's stringent reform in the matter of marriage must have been the immediate occasion of the violent rupture between Jews and Samaritans. On the other hand, it is coming to be recognized that Josephus is here following an independent source which ought not to be discarded too hastily. It is not easy to discover any valid reason why his narrative may not be essentially correct, barring a few details that may have been borrowed from Nehemiah (cf. C. Steuernagel, *SK* lxxii. [1909] 5, and *Handkommentar zum AT*, Göttingen, 1900, iii. 270; B. Stade and A. Bertholet, *Bibl. Theol. des AT*, Tübingen, 1905-11, ii. 27 f.). Torrey would hold the Chronicler responsible for our difficulty, on the supposition that he has fashioned the passage in Nehemiah in such a way as to reflect later events (pp. 330 f., 235, 249). It was desired to show thereby how Nehemiah had dealt with a case precisely like that of Manasseh. It is urged by Torrey with much cogency that, if the great patriot Nehemiah had been connected in written tradition with the Samaritan secession, the facts would not have been forgotten in Jerusalem. No more would the name of the high priest in whose time the momentous event occurred have been lost to memory.

⁴ The Elephantine papyrus is an appeal from a military colony of Egyptian Jews and is addressed to Bagoses (Bagohi), the

Whether the final separation between Judea and Samaria dates from the days of Alexander the Great, or whether it came earlier, we may suppose that it was the culmination of an antagonism that had long existed. Henceforth the enmity was intense, as is made evident by the few manifestations of it that can still be traced in the centuries immediately following and in NT times. During the 3rd cent. we have the testimony of the Chronicler, whose attitude is shown by the way in which he idealizes Rehoboam and his successors, thereby throwing Israel's apostasy into darker relief.¹ He denies to them the right of being regarded as a part of the people of God (2 Ch 13⁹ 25⁷). As for their successors, the Samaritans, they are idolaters and self-confessed aliens (Ezr 4¹⁴). In the opening years of the 2nd cent. Jesus Sirach (c. 180 B.C.) voices a like reprobation. For him, too, the Samaritans are a 'no nation,' a foolish (or godless) people that dwell in Shechem (50^{25 f.}).² At the opening of the Christian era the traditional hatred flashed out in deeds of violence,³ and at all times there existed a dangerous tenseness of feeling (Jn 4⁹ 8⁴⁸, Lk 9^{52 f.}).

4. Later history.—Of the experiences of the Samaritans in the disturbed period following the death of Alexander we have little reliable information; but that they suffered severely, as the tide of war swept backward and forward through their land, may be accepted as certain. During the troubled years of the 3rd and 2nd centuries B.C. doubtless not a few of them found their way to Egypt as emigrants or captives, and became the nucleus of the colonies that existed later at Alexandria and Cairo.⁴ Meanwhile the province of Samaria, by virtue of its geographical position and accessibility, was open to foreign influences. Under the Syrians the city of Samaria continued to be a Gentile centre and the seat of civil administration, as it had been during Persian supremacy. The Samaritans apparently escaped extreme persecution during this early period. This is to be attributed to the fact that they were not disturbed as were the Jews by party factions, and that they held aloof from political movements. However, 2 Mac (5^{23 f.} 6²) implies that in the 2nd cent. they were included by Antiochus Epiphanes in the repressive measures employed by him against the Jews.⁵ Hellenizing influences may well have served to consolidate them more and more and to

Persian governor of Judæa. The petitioners desire permission, or assistance in gaining permission, to rebuild their temple of Jahweh which had been destroyed by their adversaries three years previously. In the course of the letter we learn that an earlier application has been made to the governor, and that at the same time letters of like purport had been dispatched to the high priest in Jerusalem and to influential Jewish leaders. Since no replies had been received, the request to the governor was renewed, and it was added that an appeal for assistance was likewise being forwarded to Dalajah and Shelemjah, the sons of Sanballat the governor of Samaria (cf. Barton, p. 337 f.). The papyrus proves that there was a governor named Sanballat who was in office in 407 B.C., and in so far corroborates the narrative of Neh 13²³. It is quite possible, however, that a grandson of this man, bearing the same name, may have been in authority at the time of Alexander (this is the view of Torrey, p. 330 f.; cf. also pp. 324 and 315 f., and Steuernagel, *SK* lxxii. [1909] 4 f.).

¹ Cf. 2 Ch 11 and 1 K 12:21-24, 2 Ch 13:12 and 1 K 15:2-4, and see Stade-Bertholet, ii. 75 f.

² The authenticity of these verses was questioned by Edersheim, but they are now generally accepted (cf. R. Smend, *Die Weisheit des Jesus Sirach erklärt*, Berlin, 1906, p. 491). Various OT passages have been thought without sufficient reason to contain references of like purport to the Samaritans. Cheyne so interpreted Is 65 and 66:22 (*Jewish Religious Life after the Exile*, New York, 1898, p. 25 f.), but a more probable interpretation can be suggested (cf. Montgomery, p. 70 f.).

³ Jos. Ant. xviii. ii. 2, xx. vi., BJ ii. xii. 3; cf. GJF² ii. 17.

⁴ Jos. Ant. xii. i., xiii. iii. 4.

⁵ Josephus charges the Samaritans with a lapse from faith under Antiochus iv.; but this accusation may have been born of Jewish prejudice, since their subsequent history seems to disprove the charge (Ant. xii. v. 6).

mark them off from the other inhabitants of the district as a distinct sect. In any event it was during this obscure period that they came to wear the aspect under which we know them in later days.

A new crisis in Samaritan history was brought about by the remarkable rise of the Maccabaean princes of Judaea. These leaders gradually extended their conquests northward until they not only mastered Shechem and Mt. Gerizim, but also captured and destroyed the city of Samaria itself. Once established, the Jewish dominion continued, with one or two possible interruptions, down to the days of Pompey and Roman supremacy (63 B.C.). At the time of the destruction of the temple on Mt. Gerizim by John Hyrcanus in 128 B.C.,¹ we can well believe that the Samaritans were called upon to endure other hardships besides the loss of the place and privileges of worship. Roman dominion must have brought most welcome release from the oppression of their hated Jewish rivals. For a time they once again enjoyed a position of relative religious independence, which was not disturbed when they passed under the rule of Herod and then of Archelaus.

Very little is known of the part played by the Samaritans in the Jewish war of A.D. 66-70. Quite probably they held aloof or acted independently, since they could hardly bring themselves to co-operate with their Jewish adversaries, even though they might have little liking for the tyranny of unprincipled Roman officials.² A portion of the sect took part in a fanatical uprising that was quelled by Vespasian with much bloodshed in A.D. 67.³ In the centuries immediately following the Jewish war there are traditions of measures of repression and persecution under the direction of the Roman authorities;⁴ but, through all these trying ordeals, the Samaritans seem to have remained loyal to their faith.

There was a brighter period of considerable material prosperity, as well as of intellectual and religious awakening, in the 4th cent. under the leadership of the national hero Baba Rabba. Marqah, who is honoured by the Samaritans as their greatest theologian, lived somewhat later in the same century.⁵ For the most part, however, Samaritan history under the Christian emperors is a tale of disaster. Repeated fanatical outbreaks were forcibly repressed and severest penalties were inflicted. Often these took the form of drastic legal restraint and the abrogation of civil and religious rights. Finally, in A.D. 529 Justinian quelled a formidable uprising with a harshness from which the Samaritans never recovered. Many were killed, others fled, and still others apostatized.

Whether a second Samaritan temple was built after the destruction of the first by John Hyrcanus in 128 B.C. is not certainly known. By some scholars it is supposed that the Romans did permit such a restoration in the 2nd cent. A.D. as a reward for aid given by the Samaritans in suppressing the rebellion of the Jews under Bar Kokhba (A.D. 132-135). This second temple, it is thought, was finally destroyed in A.D. 484.⁶

Under Muhammadan supremacy the Samaritans had to endure their share of oppression and suffering. Small surviving groups came to be distributed through the larger cities of Palestine. Outside of Nablus, the most important and influential was settled at Damascus.¹ All these communities have long since disappeared, and to-day the sole survivors are found at Nablus, where their numbers have steadily decreased.²

5. Religious beliefs.—The faith of the Samaritans was Jewish monotheism, and there is nothing to indicate that it was influenced in any fundamental way by infusions from pagan religions. It has rather every appearance of being an arrested development of Judaism. The Samaritan canon included only the Pentateuch, which was supposed to be the sole source and standard for faith and conduct. The vital spiritual element, which was represented in Judaism by the prophets, was largely lacking. The writings of the prophets of Northern Israel were not received, and would have been lost had they not been kept by the Jews. Modifications in creed came for the most part through a process of accretion under outside influences and not through a living development from within. The dominant trait of Samaritanism was a conservative and tenacious adherence to traditional belief. This characteristic can be traced even in the heretical movements that are treated in art. SECTS (Samaritan).

In doctrinal achievement the Samaritans seem to have reached a climax in the 4th cent. of the Christian era in the work of Marqah. The essential articles of their faith had, however, become fixed earlier during periods of which we have only the most meagre information. Under the Muslims in the 11th cent. there was an epoch of some little literary activity, and still another in the 14th cent., while Phinehas (Pinias) was high priest, but neither era seems to have resulted in any material contribution to theology. Declining numbers and the struggle for existence are perhaps largely accountable for this lack of intellectual fruitfulness. At the same time, even under favourable conditions, the Samaritans appear never to have shown any theological originality that was at all comparable to that manifested in Judaism. They were distinguished rather at all times by a rigid, if not turbulent, persistence in their ancestral faith. This darker side is somewhat relieved by the brighter picture of their responsiveness to noble impulses that is presented in the NT.

(a) *God*.—The monotheistic confession, 'There is no God but the One' (לֹא אֱלֹהִים אֶלֶּה אֶחָד), is an ever-recurring refrain in Samaritan liturgies. It was with this formula, elaborated and adapted in various ways, that they opposed Christian teaching and Gnostic speculation. In all Samaritan literature a constant theme is the unity of God and His absolute holiness and righteousness. He is usually conceived of as spirit, and there are few expressions that suggest His localization. In Marqah there is a tendency towards the hypostatization of the divine attributes, but this cannot be said to be characteristic of Samaritanism. The avoidance of anthropomorphic and anthropopathic expressions is more marked in the Samaritan Targum than in that of the Jews. At times, however, as in the account of the giving of the Law, the Biblical narrative is closely followed, and it is taught that God wrote the Tables with His own hand and gave them to Moses (Ex 31^{1a}). The disinclination to ascribe to God any form of sensuous activity is prob-

¹ On Samaritan inscriptions that have been found in Damascus, cf. SWA W xxxix. [1903] 127 f.; *MNOPP*, 1902, no. 5.

² In 1163 Benjamin of Tudela speaks of 1000 still clinging to the sacred mountain, whereas now there are fewer than 200, who live in a special quarter of the city of Nablus.

¹ Jos. Ant. xiii. ix. 1, BJ i. ii. 6.

² The recall and banishment of Pontius Pilate in A.D. 36 was brought about by an unwarranted attack that he had made upon a company of Samaritan pilgrims that had assembled at the call of a false prophet (Jos. Ant. xviii. iv. 1, 2). See also the reference given above to the recall of Cumanus (*ib.* xx. vi., BJ ii. xii. 1-7).

³ Jos. BJ iii. vii. 32.

⁴ Cf. Montgomery, p. 89 f.

⁵ Cf. Montgomery, p. 294 f.; Cowley, JE x. 877.

⁶ So Cowley, JE x. 672, on the basis of *Chronicon Paschale*, *Chron. Abul Fath*, and *Chron. Adler*. On the other hand, Procopius, *de Edificiis*, v. 7, states that there was no rebuilding of the temple. A temple is depicted upon early coins of Neapolis, but doubtless it is the one built by Hadrian and dedicated to the Most High Jupiter (*GFV* i. 651, note 13; cf. Montgomery, p. 91, note 35). The first Christian church on Mt. Gerizim was built in A.D. 484.

ably accountable for the failure of the Samaritans to follow the Jews in developing a doctrine of divine fatherhood, since otherwise such a conception would be in accord with their exaltation of His mercy and loving-kindness. The utterance of the ineffable name of Jahweh was avoided by them as by the Jews, but it was written without hesitation.¹

(b) *The Law*.—The one sacred book of the Samaritans was the Pentateuch, which, they believed, embodied the supreme revelation of the divine will. They taught that it was most intimately associated with the being of God, and they accorded it the highest veneration. To-day the surviving Samaritans have one particular roll which they cherish with jealous care, and for which they claim a great antiquity.² Their version of the Law differs from the current Hebrew text in numerous details, but variants of real material importance are comparatively few.³ One instance of particular interest is Dt 27⁴ (cf. Jos 8³⁰), where the Samaritan version makes Moses command the building of an altar on Mt. Gerizim, and not on Mt. Ebal, as in the Hebrew. The charge is often made against the Samaritans that they have tampered with the text of the passage⁴, but there is even greater likelihood of an alteration of the original reading on the part of the Jews.⁵ At the close of the Decalogue in Ex 20¹⁷ and Dt 5²¹ the present Samaritan text also has an added command to build an altar and offer sacrifices on Mt. Gerizim.

The Samaritans were always extremely punctilious in the observance of the Law. Even their Jewish opponents recognized their excessive zeal regarding certain commandments. Rabbi Simon, the son of Gamaliel, is reported to have said, 'Every command the Samaritans keep, they are more scrupulous in observing than Israel.'⁶ The moral side of the Law was emphasized by the Samaritans, and they were less inclined to theological speculation regarding its precepts than were the Jews.

(c) *Moses*.—Something of the sanctity of the Law itself was made by the Samaritans to attach to Moses, through whom the Law was revealed. He is for them the one incomparable prophet and apostle of God. Their Targum in Dt 34¹⁰, by a change of reading, affirms that none shall rise like unto him.⁷ None indeed will be needed, for all things were shown to him in the Holy Mount. There appears to be no particular glorification of his death, but the story of his birth was much embellished and at times took a form that implied pre-existence or a unique creation. His efficacy as mediator and intercessor is highly extolled in later liturgies. Doubtless the advances over Jewish tradition in his exaltation are to be attributed in large measure to Christian and Muhammadan influences, but an additional motive may be found in the fact that the Samaritan Bible did not include a prophetic canon. A measure of compensation for this very serious lack was found in thus venerating Moses, not alone as giver of the Law, but also as the full and perfect embodiment of the

prophetic ideal. For them the Messiah, the Restorer, was a figure of lesser importance. Abraham likewise did not play the same significant part that was assigned to him in Jewish teaching, and much the same may be said of Aaron, and this too in spite of the dominance of priestly influence among the Samaritans. The patriarchs and early leaders did receive, however, a considerable measure of honour, and there was a doctrine of the merits of the Fathers, as in the case of the Jews.

(d) *Mt. Gerizim*.—The claim that Mt. Gerizim was the one rightful centre for the worship of Jahweh continued to be the chief cause of the bitterest strife with the Jews. The issue was clearly stated by the woman of Samaria: 'Our fathers worshipped in this mountain; and ye say, that in Jerusalem is the place where men ought to worship' (Jn 4²⁰). However favourably disposed towards the Samaritans large-minded Jewish teachers might be at times, the claim for the sanctity of Mt. Gerizim always remained an insuperable and divisive dogma.¹ In seeking to substantiate the extravagant claims for this mountain it was possible to point to many sacred associations gathering about its summit and the immediate locality. Abraham, Jacob, and Joshua had worshipped here; the bones of Joseph were buried near at hand; and the Samaritan Scriptures recorded a special command given through Moses to build an altar on this spot.² With such a real basis of tradition it was not difficult to devise further sanctions by identifying Gerizim with Bethel, by making it to be the site of the garden of Eden, the place where altars were built by Adam, Seth, and Noah, the spot of Abraham's sacrifice of Isaac, the mountain which was still shadowed by the presence of God, and to which at last the tabernacle was to be restored. Even when its temple had been destroyed, the Samaritans still clung devotedly to its slopes; and, whenever the way was open, they celebrated their chief festivals near the site of their former sanctuary.³

(e) *The Messiah*.—The expectation of a coming Messiah was doubtless cherished by the Samaritans at an early date, notwithstanding the fact that such a doctrine does not properly fall within the limits of Pentateuchal teachings. While the beginning of the hope is undoubtedly to be attributed to Jewish influence, its later development must have been greatly stimulated by the successive hardships and calamities through which the Samaritans were called to pass. Their Targum is silent on the subject, but we have evidence in Jn 4 for the existence of the belief in definite form in the last Christian century. This testimony is confirmed by the ready response of the Samaritans to the claims of a Messianic pretender in the days of Pontius Pilate.⁴ In the 2nd cent. Justin Martyr ascribes Messianic hopes to the Samaritans as well as to the Jews,⁵ while in the 4th cent. we have in Marqah testimony to the same fact. The first extended treatment of the subject comes, however, from the 14th cent. and, consequently, after an interval that leaves large opportunity for development; but, even so, the primitive character of the hope is apparent when it is compared with Jewish and Christian views.

The name given by the Samaritans to their Messiah is Taheb, 'Restorer.'⁶ His office was to

¹ Cf. citation above from *Masseketh Kuthim*, p. 162b.

² Dt 27⁴; cf. previous statement and the note regarding the reading.

³ For a considerable time during the 18th and 19th centuries they were denied all access to the mountain, and the same was doubtless true of earlier periods.

⁴ Jos. Ant. xviii. iv. 1-2.

⁵ Apol. i. 53.

⁶ Most probably *תהב* (תהבה) is derived from the Aramaic root *תהב*=Heb. *תהב*. For a discussion of the various meanings

¹ In reading they substitute for Jahweh 'the Name' (אֲדֹנָי). The malicious charge that they worshipped a God Ashima (אֲשִׁימָה, 2 K 17³⁰) may possibly have come from this practice (cf. Petermann, *PRE³* xiii. 372). Equally false was the claim that the Samaritans had a dove-cult (cf. *ib.*; Montgomery, p. 320 f.). For the great variety of names and titles given to God by the Samaritans, see Montgomery, p. 214 f.

² They affirm that it was copied by Abishua, the son of Phinehas, the son of Eleazar, the son of Aaron. This tradition appears first in the 14th cent. (Abu'l Fath), and consequently the MS in question may be somewhat older.

³ A brief analysis of the Samaritan variants from the Hebrew is given by E. König, *HDB* v. 68-72.

⁴ Cf. Montgomery, p. 225.

⁵ Cf. Torrey, p. 322 ff.; L. Meyer, *Die Israeliten und ihre Nachbarstämme*, Halle, 1896, p. 545 ff.

⁶ Cf. Montgomery, p. 170.

⁷ It was held that Dt 18¹⁵ referred to Joshua alone.

bring in for Israel the age of divine favour, and to restore the Tabernacle and its services to Mt. Gerizim. It was expected that he would be of the house of Joseph and that he would live for 110 years. He apparently was not thought of as divine, but ranked in importance below Moses. After his death and burial there was to come a culmination of evil, and, following this, the day of judgment. In due course of time various passages from the Pentateuch were interpreted in such a manner as to support the doctrine of the Taheb.¹

(f) *Angels*.—There are repeated allusions in early Christian writers to Samaritan disbelief in angels.² But such statements must be received with caution, since the angelic messengers of the Pentateuch can never have been altogether overlooked. Furthermore, a belief in an order of higher spiritual beings is attested with certainty for the 4th cent. by the first Samaritan literary remains. And this witness is confirmed by their Targum, which often substitutes the mention of an angel for the name of God. Thus it states that man was made in the image of angels, that an angel spake to Moses from the bush, that Enoch was not, for the angels took him. Originally Samaritan teaching on this subject may have been akin to that of the Sadducees, but with the passing years it was doubtless variously modified. It should be added that, while the existence of angels, both good and bad, was an accepted article of belief, these intermediate agents never played the important part with the Samaritans that was assigned to them in later Judaism and Muhammadanism.

(g) *Eschatology*.—The Samaritan doctrine of the future is known to us only in its later developments. It is safe to conjecture that the earliest views were identical with those of the least progressive Judaism of the day. There was the expectation of the Great Day of the Lord, a day of vengeance and recompense.³ Starting with the belief that this was to bring national vindication, they probably advanced, as did the Jews, to the thought of individual reward for the righteous. Such a teaching is found in the 4th cent. in Marqah, who cherishes the hope of the resurrection and the future life. Accordingly, the assertion of early Jewish and Christian writers that the Samaritans were without such a belief is not true for this period, whatever may have been the case earlier. Paradise was usually pictured as a transfigured Gerizim. The wicked, on the other hand, were to be burned with fire. The possibility of repentance after death seems not to have been cut off altogether, at least not for the faithful who may die in their sins, since for such there are prayers of intercession.⁴ The Taheb, at his coming, was to usher in a new age of divine favour (*Rachutha*, רחומה or רחון=Arabic *Ridhwan*) and thus bring to an end the present period of God's displeasure (*Fanutha*, פנמה). According to the Samaritans, this had continued from the day when Eli forsook Mt. Gerizim and established a sanctuary at Shiloh, thus inaugurating the schism of the Jews. In general it should be noted that eschatological speculation did not play the important part with the Samaritans that it did with the post-Exilic Jews, especially in their later apocalypses, nor did it ever have the prominent place that it occupies in Muhammadan teaching.

that have been proposed for the name, cf. Cowley, *Exp.* 5th ser., i. 161 ff.; Montgomery, p. 245 ff., and the literature there cited.

¹ Cf. Montgomery, p. 247 f. ² e.g., Epiphanius, *Haer.* ix. 3 (Dē 823). By a change of reading (אֱלֹהִים for אֱלֹהִים) this passage was made to support a doctrine of future rewards and punishments. 'Till the Day of Vengeance; till the times when their foot shall slide' (cf. Cowley, *JQR* vii. 569 ff.; Montgomery, p. 240).

⁴ Cf. Cowley, in *JE* and in *JQR*, *loc. cit.*

(h) *Festivals*.—We have no account of the earliest festival observances of the Samaritans, but there is no reason to suppose that there was any radical departure from Jewish practice, not at least in so far as this usage was sanctioned by the Pentateuch (cf. Lv 25). After the destruction of the temple on Mt. Gerizim sacrifices were offered only in connexion with the Passover. For a considerable time the Samaritans have been wont to keep this festival on a little plot of ground which they have been able to acquire some distance below and to the west of the summit of the mountain where their temple once stood. Here they encamp with elaborate equipment and in much comfort for the celebration of the Passover and the feast of unleavened bread. No longer do they fear the enemies that formerly made such a protracted sojourn dangerous. Seven lambs have usually been sacrificed in recent years. After having been offered and dressed with due ceremony, they are roasted for several hours in a heated pit and then are hastily eaten with unleavened bread and bitter herbs. All bones and remnants, together with the utensils that have been used in the service, are straightway burned. Everything is supposed to be done in exact accordance with the requirements of the Law (Ex 12).¹

The feast of Pentecost was kept as the anniversary of the giving of the Law. The solemn fast of the Day of Atonement was observed with greater strictness than by the Jews. Not even children under seven were exempted from this fast, but only nursing infants. Conversation was forbidden, and from sunrise to sunset the day was spent in fasting, vigil, and the reading of the Pentateuch and the liturgy.² In connexion with the major celebrations of the Passover of Unleavened Bread, Pentecost, and Tabernacles, there were sacred processions up Mt. Gerizim whenever this was possible. Special liturgical services, made up largely of citations from the Pentateuch, were elaborated in the course of time for these and for lesser occasions.

The sacredness of the Sabbath seems always to have been rigorously guarded by the Samaritans. They allowed no Sabbath day's journey or kindred exceptions, but remained at home except for attendance at the synagogue. The Law was portioned out for reading at their Sabbath services in such a way as to include the whole Pentateuch during the year.³

(i) *The priesthood*.—The central importance of the priesthood among the Samaritans is noteworthy. It appears that from earliest times the high priest and those associated with him have dominated the community. It is said that in 1623–24 successors in the line of Aaron died out, and that since that time the office has been filled by those who are sprung from the tribe of Levi, being descended from the house of Uzziel, son of Kohath. In later days, at least, the Samaritan calendar was calculated semi-annually by the high priest for an ensuing period of six months, and was delivered to the people at two assemblies (חֲבָטִים) held 60 days before the first of Nisan and the first of Tishri respectively.⁴ On these occasions the half-shekel prescribed by the Law (Ex 30³⁴) was supposed to be paid to the high priest. These payments, together with the tithes, made up the major part of his very slender income.⁵

6. *Writings*.—(a) *Pentateuch*.—The Samaritan Pentateuch was known to early Jewish and Christian writers, but later

¹ Among the earlier accounts of the Passover ceremony that by the German Orientalist Petermann is particularly valuable. He was present in 1853, and has recorded his observations in *Reisen im Orient*, Leipzig, 1860, i. 260–292, and in *PRE³* xiii. 378 ff. The present writer has described the Passover of 1903 in *JBL* xxii. (1903) pt. ii. 187–194, and in *ZDPV* xvii. (1904) 194. For recent articles of importance see *Palästina-Jahrbuch*, viii [Berlin, 1913], ed. G. Dalman.

² *PRE³* xiii. 382.

⁴ *PRE³* xiii. 332; *JQR* vii. 127.

⁵ *JQR* vii. 134–140.

⁶ *PRE³* xiii. 382.

seems to have been altogether overlooked, until it was rediscovered and brought to the attention of the modern world by Pietro della Valle in 1616. It is written in the Hebrew language and with a script resembling the most ancient Hebrew characters. The urgent need of a critical text is now at last being supplied by the splendid edition of August Freiherr von Gall.¹ There are some indications of the existence of an early Greek version of the Samaritan Pentateuch, but no MSS of such a translation are known to survive.

The paraphrase of the Pentateuch in the vernacular Aramaic known as the Samaritan Targum is doubtless of a very early date, although we have no reliable information as to its beginning. Quite possibly it may go back ultimately to the same traditional oral Aramaic rendering as is represented in the Jewish Targum of Onkelos.² Its aim was to reproduce the original Hebrew text with a slavish literalness, and consequently the study of the Targum has not thus far yielded any considerable results for Samaritan teaching. The language of the work is important because it represents the particular form of the Aramaic dialect that was in current use among the Samaritans in the period of their greatest vigour. Their earliest and most important surviving literary productions are written in this language, which, however, differed but little from other dialects of Palestinian Aramaic.³ An edition of this Targum was begun by Petermann and subsequently completed by O. Vollers.⁴

Under Muslim supremacy, with the passing of the Aramaic vernacular, the Targum was superseded by an Arabic version of the Pentateuch which recent investigators have concluded dates from the 11th century. This, too, is marked by a painstaking adherence to the original Hebrew.

(b) *Commentaries*.⁵—Of the expository and controversial literature of the Samaritans very little has survived, and what exists is, for the most part, in MS form. A Midrashic work of Marqah in Samaritan Aramaic, belonging probably to the 4th cent. A.D., treats of a variety of topics and of Scriptural passages that were of particular interest to the author. Of the later commentaries in Arabic that by Ibrahim ibn Ya'qub (16th or 16th cent.) on the first four books of the Pentateuch is the most important.

(c) *Liturgies*.—Doubtless the most significant feature of the worship of the Samaritans was always the reading of the Law. To this there came to be added at an early date the use of prayers, hymns, and responses, made up in large measure of Scriptural phrases. The earliest existing collection of such

material is the *Deftar* ('the Book,' Arab. دفتر, Gr. δεικτήριον),

which dates from the 4th cent. and consists for the most part of compositions of Marqah and of a certain Anram, who was probably his father.⁶ The language is Aramaic, and this dialect continues to be used for liturgical compositions down to the 14th cent., when it is superseded by a decadent form of Hebrew. During the 11th and 12th centuries the *Deftar* was extended by the inclusion of later prayers and hymns, and the same thing took place again in the 14th century. In the last-named period the new developments in the liturgy were due to the inspiring influence of Phinehas ben Joseph (1303-63). Special services for the several feasts and fasts were now arranged, and, with various modifications and elaborations, they have continued to be used down to the present time. In all this progress the influence of Jewish teaching and practice is clearly discernible.⁷

(d) *Chronicles*.—As historical records the Samaritan Chronicles have little value. They are relatively late, vague, and contradictory, but it is possible that they have preserved at times older sources.⁸ An Arabic book of Joshua covering the period from the last days of Moses to the 4th cent. is thought to be a compilation going back to the 13th century.⁹ There is a Chronicle called *El-tholideh* (*Et-taulideh*) which was begun by Elnazar ben Amram in the 12th cent. (1140-50), continued by Jacob ben Ishmael, a priest of Damascus, in the 14th cent. (1340-47), and brought down to modern times, probably by Jacob ben Aaron in 1859-60.¹⁰ It is written in Samaritan Hebrew, with an Arabic translation, and covers the period from Adam to the present. Its most valuable feature is the statement of each successive writer regarding the genealogy of the high priests and leading Samaritan families of his day.

The *Chronicle* of Abu'l Fath is one of the fruits of the renaissance of the 14th century. It is written in Arabic and is compiled from earlier sources. The original author brought his account down to the time of Muslim supremacy, and in some MSS there are continuations by later hands.¹¹

The *Chronicle Adler*, so named from its publisher, was compiled in Hebrew from earlier sources in 1900.¹²

(e) *Letters*.—Finally, mention should be made of the correspondence that has been carried on between the Samaritans and European scholars during the last 300 years. Two letters, one from Shechem and one from a Samaritan in Cairo, were sent to Joseph Scaliger in the year 1659 in response to inquiries previously made by him.¹³ In the next century Samaritan letters were received by Robert Huntington, afterwards bishop of Raphoe, and by Hiob Ludolf, the German Orientalist, while in the 19th cent. there was a particularly valuable correspondence with de Sacy. Within the last half century less important letters have been sent, among others to Kautzsch, Cowley, and Montgomery.¹⁴

LITERATURE.—Many of the more important works have been mentioned throughout the article. A full Samaritan bibliography is given by J. A. Montgomery, *The Samaritans, the Earliest Jewish Sect: their History, Theology and Literature*, Philadelphia, 1907, pp. 322-346; cf. also A. E. Cowley, *EBI* iv. 4264 f., *JE* x. 631; J. H. Petermann, *Reisen im Orient*, Leipzig, 1860, i. 233 ff., 280 ff.; *PRE* xiii. 359-391; J. Mills, *Three Months' Residence at Nablus, and an Account of the Modern Samaritans*, London, 1864; J. W. WARREN J. MOULTON.

SAMBATYON (or SABBATION).—The Sambatyon, a mythical river which, according to some narratives, runs on six days and rests on the seventh, and, according to others, runs only every seventh day, is mentioned in several of the mediæval Lost Ten Tribes legends. Its situation varies from Caucasia in the north to Arabia in the south, and from India and even China in the east to Ethiopia in the west. The river, although it had then no mystical or Ten Tribes associations, is first mentioned by Josephus.

*It runs in the middle between Arcea, belonging to Agrippa's kingdom, and Raphanea . . . when it runs, its current is strong, and has plenty of water; after which its springs fail for six days together, and leave its channel dry, as any one may see; after which days it runs on the seventh day as it did before, and as though it had undergone no change at all; it hath also been observed to keep this order perpetually and exactly: whence it is that they call it the *Sabbatic river*, the name being taken from the sacred seventh day among the Jews.¹

Pliny² also mentions the river, but in his account it runs on six days and rests on the seventh. It was in the latter character that Rabbi Akibah referred to it as evidence of the sanctity of the Sabbath.

In the Middle Ages the river was frequently mentioned in the writings of Christians and Arabs as well as of the rabbis, and apparently there was a wide-spread belief in its existence. It was closely interwoven in the legends of Prester John (q.v.), and in fact it was practically impossible to accept the authenticity of that potentate without

accepting that of the river also. Eldad Hadani, who visited Europe in the 9th cent., coming, as he said, from the Lost Ten Tribes who were settled in Asia, gave the legend renewed and fortified currency in Jewish circles. According to Eldad's account, the river surrounded the Sons of Moses, a tribe of Levites, and separated their territories from the tribes of Dan, Naphtali, Gad, and Asher, who dwelt in the land of Cush. It was full of sand and stones, but had little water.

'The stones make a great noise like the waves of the sea and a stormy wind, so that in the night the noise is heard at a distance of half a day's journey . . . and this river of stone and sand rolls during the six working days and rests on the Sabbath-day. As soon as the Sabbath begins, fire surrounds the river, and the flames remain till the next evening, when the Sabbath ends. Thus no human being can reach the river for a distance of half a mile on either side; the fire consumes all that grows there.'¹

Prester John places the river in India.

'Know that from the stone-sea flows a river, which comes from Paradise, passing between us and the great country of the mighty Daniel, king of the Jews. This river flows all the week-days, but remains quiet on the Sabbath-day. When full, this river carries a great quantity of precious stones, consequently no one can pass it except on the Sabbath.'²

In another account, the letter to the Emperor Frederick, it is stated:

'On one side of our country is a river, on the border of which all kinds of excellent spices are found. Near to it is another river, full of stones, which falls into the ocean which flows between the sea and the Nine Tribes of Israel. This river runs all the week till the Sabbath-day, when it rests; it carries large and small stones to the sea, like a river of water does; consequently the Nine Tribes of Israel cannot pass the river.'³

The Italian-Jewish traveller, Obadiah di Bertinoro, writing in 1489, mentioned, on the authority of some Muhammadan traders, that the river was to be found at a distance of fifty days' journey inland from Aden, where it separated the territories of the Children of Moses from other Jewish tribes.

'This river rolls stones all the week-days and rests only during the Sabbath-day; it is therefore impossible for any Jew to go there without profaning the Sabbath.'⁴

Obadiah learnt from another source that Prester John had entirely defeated the Jewish tribes. A few decades earlier, however, a report was current in Jerusalem to the effect that the Sambatyon had dried up and that the Jewish tribes had crossed and had attacked Prester John. Abraham Farissol (1451-1525?), the Italian-Jewish scholar and geographer, identified the Sambatyon and also the river of Gozan (2 K 17^c) with the Ganges, which he believed separated the Indians from the Jews. He placed Prester John also in that region. Abraham Yagel, another Italian-Jewish scholar (16th and 17th centuries), held similar views. Quoting unpublished letters of Maimonides, he said:

'As to your question concerning the Ten Tribes, know ye that their existence is quite certain, and we expect daily their arrival from the dark mountains, the river of Gozan, and the river Sambatyon, places where now they are hidden away. This river flows all the week-days, and rests on the Sabbath. Indeed in the time of my learned and pious grandfather, a bottle was brought filled with the sand of this river, which sand was in movement the six days, and rested on the Sabbath. This is a true fact, for more persons have seen it with their own eyes.'⁵

Yagel mentioned the Sambatyon on several occasions in the course of his writings. He quoted a Christian, named Vincenzo Milano, who said that he had spent twenty-five years as a prisoner of the Turks and in the course of his journeys with them had visited the river.

In his account the river 'is full of water all the week-days, so strong that it rolls along great stones and a quantity of sand, so that no ship dare venture upon it; but on Friday towards

sunset, the river rests, and becomes quite dry, so that a child can cross it. It is said that the river is in some places one and a half, three and four miles broad . . . ships which venture on it lose their way; indeed no ship is yet known to have returned safely from this river.'⁶

In the year 1630 a Jerusalem Jew, Rabbi Baruch, is said to have found himself in the neighbourhood of the river and to have been given a letter from the Children of Moses and neighbouring Jewish tribes to be delivered in Jerusalem. There seems no reason to doubt that a letter purporting to come from the Lost Tribes did exist, for there is considerable evidence to that effect, but regarding its authenticity there is much room for doubt. Baruch's account of the Sambatyon agrees with that of Eldad Hadani.

Manasseh ben Israel repeated in his *Hope of Israel* most of the statements that had previously been made regarding the Sambatyon, in whose existence he believed. He added that a book on the subject was written by two Polish Jews in the year 1634, but was at the instigation of the Jesuits ordered by the senate at Breslau to be burnt. Manasseh also tells a story of a glass of Sambatyon sand being mysteriously agitated. He quotes his father as his authority.

'He told me there was an Arabian at Lisbon, who had such an hour-glass: and that every Friday at evening he would walk in the street called the New Street, and show this glass to Jews who counterfeited Christianity and say, "Ye Jews, shut up your shops, for now the Sabbath comes." Another worthy of credit told me of another hour-glass, which he had some years before, before the Port Mysketa. The Cadi, or Judge of that place, saw him by chance passing that way, and asked him what it was. He commanded it to be taken away, rebuking the Mahomedans that, by this, they did confirm the Jewish Sabbath.'⁷

As late as 1847 one hears of the existence of the river Sambatyon, on the authority of the governor of Aden. In that year a messenger from Tiberias arrived at Aden on a journey in search of assistance for the Jews of the Holy Land. The governor is reported to have advised him to visit the great Jewish kingdom some forty days' journey inland from Aden, the discovery of which, he stated, he had reported to London. The discovery of that great and wealthy kingdom, the governor added, had converted him to the belief in the advent of the Messiah and the return of the kingdom to Israel. But Sambatyon was not there. The governor added that there was another Jewish kingdom in China and that there the river Sambatyon was to be found.

were both a sect and a school; i.e., they had a special rule of discipline—viz. as concerns the undergarment, the girdle, remedies, and beds¹—and they maintained a number of philosophical tenets. Many of these tenets were admitted by the schools (not sects) of a later age—the Vaibhāṣikas, e.g.—and also by some of the old sects.

Of the views of the Sāhmitīyas² the following seem worthy of notice. (1) An *arhat*, i.e. a saint already in possession of *nirvāṇa*, a *jīvanmukta* (q.v.), can fall away; this opinion was common; its importance has been emphasized and exaggerated by J. P. Minayeff.³ (2) There is an 'intermediate state' (*antarābhava*); i.e., the dying consciousness creates a shortlived being which finds the right matrix where the dead being is re-born—a view shared by many sects (Vaibhāṣikas, Tāntrikas).⁴ (3) As concerns *karman*, (a) there is a *paribhogānaya* *punya* distinct from the *tyāgānaya* *punya*; i.e., while there is a merit in giving (*tyāga*), there is also a merit accruing to the giver by the use (*bhoga*) which a monk makes of the object given;⁵ (b) the 'orthodox' strictly understood morality as 'abstaining from (killing, etc.)' (*virati*); but the 'declaration' (*viññapti*) by which a monk binds himself under the obligation of non-killing, etc., is also a moral act; (c) such a *viññapti* creates the kind of action that is styled *aviññapti*;⁶ independently of any further mental action, a man who has 'declared' that he will not kill, etc., goes on accumulating merit.⁷ (4) The most important tenet of the Sāhmitīya creed (and of the Vātsīputriya creed) is the *pudgalavāda*, the belief in a *pudgala*, a sort of person or soul. Whereas the other tenets of the school are the common property of many sects, the *pudgalavāda* is severely criticized by all the non-Sāhmitīyas (or non-Vātsīputriyas) and appears as a form of *sattkāyadrṣṭi* or *śāsvatadrṣṭi*, belief in permanence, belief in *ānman*—a view obviously condemned by Śākyamuni and the scriptures of every sect without exception.⁸

According to the *Kathāvatthu*, the chief scriptural authorities of the Sāhmitīyas are a number of texts⁹ which point to the existence of some transmigrating entity; the Sanskrit sources, including Uddyotakara,¹⁰ lay the stress of the discussion on the *Bhārahārasūtra*,¹¹ 'the sūtra of the burden-bearer,' which describes the *pudgala* as a 'bearer.' In short, the five *skandhas* (the physical and intellectual 'constituents' of the Ego) are the burden; to desire (*īṣṇā*, 'thirst') is to shoulder the burden; to give up desire is to lay down the burden; the bearer is the *pudgala*—e.g., 'this monk, of such a name, of such a family, living on such food, living

so many years.' Now, is it not clear that the bearer (*pudgala*) is not the burden (*skandhas*), that there is an Ego independent of the so-called 'constituents' of the Ego? Thus say the Sāhmitīyas. But the answer is at hand: 'The desire, owing to which the *pudgala* shoulders a new burden at each new birth, is evidently a part of the burden itself.' The simile therefore is not to be understood strictly.

While they maintain that the *pudgala* is different from the *skandhas*, the Sāhmitīyas admit that the *pudgala* is not non-different from the *skandhas*; technically the *pudgala* is 'indescribable' (*avācya*); it cannot be described either as different or as non-different from the *skandhas*.¹ A favourite argument is the attitude of Buddha to the so-called 'unsettled question,' Is the living principle or soul (*jīva*) the body or not?² Buddha condemns both alternatives; he admits the existence of a *jīva*, but refuses to state the relations of the *jīva* with the body. The 'orthodox' answer is that a thing which cannot be described as different or non-different (*sattvānyatva*) is really no thing. No answer can be given to the question, Are the fruits of the mango-trees in the palace of Milinda sweet or bitter?, because there are no mango-trees in the palace of Milinda.³ In the same way there is no *pudgala* or soul (*jīva*):⁴ its 'undenotability' establishes its non-existence.

The present writer believes that the position of the Sāhmitīyas is a good and truly Buddhist one. If we try to state it in plain language, we should say that the relation of the *pudgala* to the *skandhas* is like the relation of the whole (*avayavin*) to its part (*avayava*). The Sāhmitīyas do not maintain that there is a soul existing *in se* apart from the *skandhas*—just as there is no whole apart from its parts, no cloth apart from its threads—but they say that a man is something more than a collection of *skandhas*: he is a *pudgala*, 'a monk of such name, of such family, living so many years.' All these characters, while they belong to the whole, do not belong to the parts or to the constituents; the whole is made up of parts, but it is lacking neither in unity nor in continuity. The *pudgala* cannot be said to be transitory (*anitya*), like the *skandhas*, since it transmigrates, laying down the burden (*skandhas*), shouldering a new burden; it cannot be said to be permanent (*nitya*), since it is made of transitory constituents. The orthodox say that there are parts (threads), but not a whole (a cloth); that there is a series (*saṃtāna*) of states of consciousness, but not a 'serial entity' (*saṃtānin*); and the orthodox are right so far; but are the Sāhmitīyas wrong when they choose to style *saṃtānin* the very processus (*saṃtāna*) of states of consciousness?

The only known treatise where the views of the Sāhmitīyas are explained by themselves is the *Sāhmitīyasastra* or *Sāhmitīyanikāyasastra*, a book translated into Chinese between A.D. 350 and 431.⁵ Until it has been studied, we are dependent upon the statements of the 'orthodox.' It is worth while to remark that they recognize that 'the doctrine of *pudgala* has been taught by Buddha.'⁶

SAMOA.—See POLYNESIA.

SAMOSATENISM.—It was apparently in A.D. 260 that Paul, a native of Samosata and a protégé of Zenobia, queen of Palmyra,¹ succeeded Demetrianus as bishop of Antioch. He had the title of *ducenarius*, from which it may be inferred that along with his bishopric he held high office under Odenathus and Zenobia and was probably governor of Antioch. Not long after his elevation to the episcopate his mode of life and his unorthodox teaching began to cause scandal. A contemporary description of him, taken from an encyclical letter of the Synod of Antioch, to which reference will be made below, is still preserved.² It may be exaggerated in detail, but it cannot be wholly misleading.

In that document it is asserted that Paul, though in his youth he had been poor, and though he had neither inherited property nor prospered in business, had amassed great wealth by acts of sacrilege (*λεροσυλιών*) and by extortion and deceit. He was vain, ostentatious, and fond of notoriety, preferring the title of *ducenarius* to that of bishop, attending to his correspondence as he walked in public, surrounded by his guards, and preceded and followed by crowds. Even in ecclesiastical assemblies (*σύνδοιοι*) he must have his bema and lofty throne and *secretum*, like the rulers of the world; and in his discourses he used violent gesticulations and demanded uproarious applause, as if he were in a theatre. Moreover, he made insulting attacks on the Biblical interpreters of former days, bragging of himself as a sophist. He put a stop to the customary psalms addressed to the Lord Jesus Christ, calling them modern compositions, and had psalms sung to himself by women in the midst of the church on Easter Day. He did not forbid his adulators to describe him, even in his presence, as an angel from heaven—conduct all the more blasphemous because he denied that the Saviour Himself came down from heaven. He had in his household women who at Antioch were called *sub-introductæ* (*συνεισακτοί*), of whom two accompanied him wherever he went. He also connived at similar practices among his clergy, though some had thereby fallen into sin, that he might bind them to himself. And he lived in luxury and surfeiting.

It seems that in Antioch at this period there was a perpetual synod of bishops, priests, and deacons, somewhat resembling the *σύνδοξος ἐνδημοῦσα* of a later date in Constantinople.

That there was a synod in constant session at Antioch seems to be implied by Eus. *HE* vi. xlii. 3, vii. xxvii. 2. In each of these passages reference is made to 'the synod,' though there is no previous statement that such an assembly had been convened. The synod apparently consisted of such bishops of neighbouring cities and provinces as might be in Antioch, together with a smaller number of priests and deacons.³ That it was a fluctuating body may be inferred from the words of Eusebius, *πάντων οὖν κατὰ καιρὸς διαφόρως καὶ πολλάκις ἐπὶ ταῦτ' ἐσθιόντων*, κτλ. And the inference is supported by the varying numbers of bishops who were present on different occasions. Six wrote a letter to Paul,⁴ seventy or eighty voted for his deposition, and between ten and fourteen were responsible for the encyclical epistle which announced it to the Church. These facts give probability to the hypothesis that the epistle was drawn up some time after the condemnation of Paul, when many of those who concurred in it had left Antioch. Further, 'the synod' was actually engaged on the business of Paul for a considerable period. The proceedings against him began before Eusebius, the deacon of Alexandria, became bishop of Laodicea, and lasted till after his death.⁵ In his *Chronicle* Eusebius makes the interval between those events five years (273-278). This may be correct, though his dates are too late; there is at any rate no ground for assuming that the episcopate of Eusebius of Laodicea was short. Helenus of Tarsus presided over the

synod on two occasions. We may perhaps infer that the bishop of Antioch was not the normal president; for Harnack's explanation that on the first occasion the see was vacant¹ is scarcely tenable: Dionysius of Alexandria seems to have been invited to the synod by the letter in which he was informed that Demetrianus had been elected bishop.² In times of special difficulty bishops from distant places were summoned to the assistance of the synod,³ though the decrees actually ran in the name of the local members.⁴ It is clear that Eusebius used the word *σύνδοξος* in this context not only for the council as a permanent body, but also for its frequent meetings.⁵ One of these was no doubt the 'final synod'⁶—i.e. the meeting at which a final decision was reached—though we need not suppose that it was the last which concerned itself with Paul. As we have seen, the encyclical epistle was probably later.

It was natural that Paul's improprieties should be discussed by this synod; but the irregularity of his conduct was soon overshadowed by the unorthodox teaching attributed to him, with which some of his malpractices had an obvious connexion. Accordingly, about the year 264 the synod called to its aid some eminent bishops, among the rest Firmilian of Cappadocia and Dionysius of Alexandria. Dionysius, now old and infirm, contented himself with writing a letter to the church of Antioch expressing his opinion on the questions at issue. Firmilian attended twice and condemned Paul's doctrine. Through his influence, however, Paul having promised to recant, decisive measures were postponed. But the promise was not fulfilled, and matters at last came to a head. Apparently the fresh proceedings began with the presentation to Paul of a statement of belief by six bishops, with a request that he would inform them whether he assented to it.⁷ Subsequently a disputation was held between Paul and a presbyter named Malchion, who was head of the Greek school at Antioch. This disputation was reduced to writing by stenographers. Finally, the synod, including seventy⁸ or eighty⁹ bishops, deposed and excommunicated Paul and elected Domnus to succeed him in the episcopate. These facts were communicated to the Church throughout the empire in the encyclical already mentioned, which was addressed primarily to the bishops of Rome and Alexandria. It reported the opinions of the heresiarch at considerable length. St. Jerome tells us¹⁰ that it was written by Malchion; and it was certainly based, to a large extent, on the speeches made by him in the course of the disputation. The *Acta Disputationis* and the letter of Dionysius referred to above were enclosed with it.

The principal dates may be determined thus. The epistle of the synod was addressed to Dionysius of Rome and Maximus of Alexandria. It must therefore have been dispatched before the death of the former (26th Dec. 268) had been reported at Antioch. We may assume that the deposition, which was somewhat earlier, took place in 263 at the latest. Eusebius in his *History* wrongly places it under Aurelian; in the *Chronicle* he assigns it to the year 265-266. Paul is unlikely to have been appointed bishop before 260, when Antioch fell into the hands of Odenathus. As his episcopate is said to have lasted eight years,¹¹ we may therefore infer that it began in 260, and that he was deposed in 268. The proceedings against Paul began before the death of Dionysius of Alexandria (12 Gallienus, the year ending Sept. 265);¹² but the date cannot be fixed more accurately than between 260 and the early part of 265. His expulsion obviously occurred while Aurelian was in Antioch in 272.

Fortunately sayings of Paul are still extant in sufficient number to enable us to reconstruct his system of doctrine in its main lines without having recourse to the unsupported statements of his enemies. It may be summarized as follows.

He held a Monarchianist doctrine of the God-

head.¹ He insisted strongly on the unity of God, relying mainly on Dt 6⁴; and he identified the uni-personal God with the Father. But the Word or Wisdom was from eternity (*ἀεί*) in God, in the same manner as reason (*λόγος*) is in the heart of man, as an element of his personality. Thus the Word is rightly described as *ὁμοούσιος τῷ θεῷ (πατρί)*, inasmuch as its *οὐσία* or *ὑπόστασις* is identical with that of the Father. The Word was begotten of God before the ages and so had a real existence. Though impersonal, it was therefore in a true sense the Son of God. The word was essentially *λόγος προφορικός, λόγος ἐνεργός*, and therefore attained full existence only in activity. When not active, it may be regarded as dormant in God: it was then not *ἐνυπόστατος*, almost *ἀνυπαρκτός*, existed *τῷ προορισμῷ*; when active, it existed *τῇ ὑπάρξει*.

The Holy Spirit is not often mentioned by Paul, but always as distinct from the Word. He seems to imply some inferiority of the Word to the Spirit, if he is rightly credited with the pronouncement that the Word had need of the Spirit before it became incarnate;² but, on the other hand, Jesus Christ, though begotten of the Spirit, was in no sense divine; it was in virtue of the indwelling Word that he at length 'became God.'

Paul's Christology was Adoptianist.³ Jesus Christ, begotten of the Holy Ghost and born of the Virgin, was a mere man. But 'the man' was anointed by the Holy Ghost and for that reason was called Christ. (Once,⁴ if our texts are correct, Paul said that through the Wisdom he became Christ.) There is no express statement concerning the time or manner of this anointing. But, inasmuch as we are told that Jesus Christ (not merely Jesus) was begotten by the Holy Spirit and born of the Virgin, it may be inferred that it took place at the very moment of conception. Thus Christ was a man like one of us, yet superior to other men in all respects, 'since grace was upon him from the Holy Ghost, and from the promises and from the things that are written' in the Scriptures. So he had a special preparation (*κατασκευή*), such as was vouchsafed to no other, for the reception of the divine Logos. For the Logos or Wisdom went forth from God and was joined to him. In virtue of his unique preparation, the Logos entered into him, not as into a strange place, but, as it were, coming to its home. It came before his birth, for 'Mary received the Logos.' It had come to others, for Wisdom was in the prophets, and still more in Moses. But it was in Christ in such a manner as it had never been in any other; it took up its abode in him as in a sanctuary; it was in the whole man.⁵ Thus dwelling in him, the Logos inspired Christ and through him proclaimed the gospel (Ac 10³⁶), as in former times God spoke through the prophets. The Logos was seen in him. By its active indwelling in Christ it attained its true existence; so that it might be said that its being had its beginning from Nazareth. At length it returned to God and resumed its former state in God, as reason is in the heart of man. So Paul seems to explain the significance of the Ascension.

But, though the Logos was in Christ, it did not invest him with divinity. It dwelt in Christ as we dwell in our houses, neither being part of the other. Each retained its own nature. They were not fused together as constituent parts of a single person, having a single essence, though Christ was one with the Logos, and so Son.⁶ Christ was a human person, who possessed the Logos as an attribute. As man, in virtue of his nature he suffered; as man, in virtue of the grace bestowed

on him by the Holy Spirit, he worked miracles. But, by reason of the indwelling of the Logos, the life of Christ was a continuous progress towards higher things. 'By wisdom he became great.' By the steadfastness of his purpose he was made like to God and remained pure from sin. By contest and labour he conquered the sins of our first parent and established virtue. Finally he became God; i.e., he was united to God in the only way in which unity between persons is possible, by absolute harmony of will. So he attained the title of Redeemer and Saviour of the race. His miracles manifested the harmony of his will with the will of God. Having preserved it inviolable, he is granted the Name which is above every name. His union with God is eternal and will never be dissolved.

Since this deification of Christ seems to have followed by a considerable interval the 'anointing' and the coming of the Logos and to have preceded his contest with sin and the exhibition of his miraculous power, it may probably be connected with the Baptism. It did not entitle Christ to worship as God.¹

The ultimate source of this theological system has been a subject of dispute. Newman maintained that it was of Jewish origin and was devised in order to secure the favour of Queen Zenobia.² But it is improbable that, as Newman assumes and Athanasius states,³ Zenobia was a Jewess;⁴ and the accusation of judaizing which was so often made against Paul, especially by Epiphanius, or the earlier writer whom he followed, may be explained without the aid of this hypothesis. Any teacher who substituted a uni-personal God for the Trinity laid himself open to the charge. The epistle of the Synod of Antioch⁵ implies that Paul's doctrine was a modification of that of the heretic Artemas (Artemon). If that be true, the accusation of judaizing must be at least transferred to his spiritual 'father.' It is unfortunate that we know nothing about Artemon except that he was, in the main, a follower of Theodotus the cobbler, that he probably flourished about the middle of the 3rd cent., and that he was apparently still living in 268.⁶ But Paul's doctrine of God has striking points of contact with that of Hippolytus, who seems in this matter to have differed little from the Theodotians, while the Christology of Paul approaches closely to that of the earlier Theodotians, and still more to that of the Melchizedekians, a later sect of the same school. Thus the testimony of the epistle is confirmed.⁷

Paul refused to submit to the Synod of Antioch. He continued in possession of the 'house of the church' for four years, protected no doubt by Queen Zenobia and still retaining the office of *duccnarius*, which must have given him formidable means of resisting his opponents. He seems also to have had considerable ecclesiastical support. For Basil the deacon tells us that after his excommunication 'there arose schisms of congregations (*λαοὶ*), revolts of priests, disorder of pastors.'⁸ And the epistle of the synod implies as much. It claims indeed to express the unanimous opinion of the assembled ecclesiastics;⁹ but it admits¹⁰ the existence of bishops and presbyters of adjacent places — apparently not a few — who 'flattered' Paul, and (as it seems) preached his doctrines. Thus the immediate result of the condemnation of Paul was the formation of his followers into a sect

outside the Catholic Church. It was evidently for some time a powerful rival of the church in Antioch and its neighbourhood, though its influence was probably not strong outside that district. Its adherents were known later as the Paulianists and were nick-named Samosatites and New Jews by Epiphanius, or the author of his source.

It may be supposed that the synod made attempts to dislodge the heresiarch from the 'house of the church'; and it was probably while this struggle was proceeding that Anatolius, formerly deacon of Alexandria, now co-bishop of Caesarea, first took part in its deliberations.¹ But whatever efforts were made proved fruitless. At length Antioch was wrested from Zenobia by the emperor Aurelian in 272; and, while he was in the city, in response to a petition of the orthodox he decreed that the house should be given to those to whom the bishops of Italy and Rome should award it.²

After this we hear nothing of Paul. He probably died or left Antioch soon afterwards. But the sect did not immediately die out. Its second head was Lucian, one of the most famous Biblical critics and interpreters of the age.³ This we learn from a letter of Alexander, bishop of Alexandria, written about 315.⁴ Lucian, like Paul, was a native of Samosata. He studied at Edessa under Macarius and afterwards settled at Antioch, where he founded a school and was ordained presbyter, probably by Paul. After the deposition of Paul he remained out of the communion of the Church, as Alexander tells us, under three bishops of Antioch. Since the episcopate of Cyril, Paul's third successor in the see, ended in 303,⁵ Lucian must have been reconciled to the Church in that year or perhaps a few years earlier. He was a celibate and famed for his ascetic piety. He suffered martyrdom in 312.

Lucian was the real founder of Arianism.⁶ Many of the early Arians and Semi-Arians were his pupils, and did not consciously deviate from his teaching. This need not surprise us; for, though on his re-admission to the Church he must have satisfied the ecclesiastical authorities at Antioch of his orthodoxy, it does not follow that he would have been accounted orthodox by the Nicene fathers. Thus Epiphanius⁷ charges Lucian and all the Lucianists with denying that the Son of God assumed a soul (ψυχή), 'for they say that he had only flesh.' This doctrine does seem to have been held by Lucian in his later days;⁸ but it is also the reiterated statement of the Synod of Antioch.⁹

The connexion of Lucian with the Paulianists, though the only evidence for it is the statement of Alexander, can scarcely be questioned; and it is important. He seems to have taken no prominent part in the proceedings at Antioch up to 268. In the contemporary documents Paul is represented as the only person with whom the synod had to do; in the final debate Malchion and Paul were the only disputants. But it is clear that the argument on both sides turned largely on the interpretation of passages in the Old and New Testaments.¹⁰ It is impossible to doubt that Lucian, the most learned of Paul's adherents and the founder of the new school of Biblical study at Antioch, was in many instances responsible for the glosses which his bishop put upon them. We do not forget Paul's avowed contempt for the commentators of previous generations. But we may go further. Paul, in spite of the fact that he claimed to be a sophist, was not one who might be expected to elaborate a carefully constructed scheme of theology. He was a man of affairs. Moreover, his life and character could have had no attraction for a pious ascetic student like Lucian.

It is most difficult to believe that he was Lucian's teacher. The probabilities are much in favour of the supposition that tradition had reversed the relation which subsisted between the two men. It is at least worth suggesting that Lucian was the author of the heresy of which Paul, by reason of his exalted ecclesiastical position, his prominence in civil affairs, and his popular gifts, was in his lifetime esteemed the head and after his death the originator; in other words, that Paul was the disciple of Lucian, not Lucian of Paul.

The Paulianist sect remained in being for some time after the defection of Lucian, though apparently in an enfeebled condition. Canon xix. of the Council of Nicaea regards it as an existing body; but the enactment concerning the treatment of such of its clergy and deaconesses as desired admission to the Church suggests that it was dwindling away. Later in the same century St. Athanasius hints that its members were divided among themselves on important questions.¹ In the 5th cent. evidences of its existence are not numerous. Pope Innocent I. refers to it as a contemporary sect; but he cannot have known much about it, for in direct contradiction of Athanasius² he denies that the Paulianists baptized in the three Names.³ Theodoret⁴ classes them with the heresies which had utterly perished, and the very names of which were known only to a few.

Samosatenism cannot be said to have made any considerable contribution to the development of Christian belief. It was an attempt to revivify a system of doctrine which the common sense of the Church had already rejected. It was overwhelmed by the flood of new teaching let loose by its former exponent, Lucian, the martyr of Antioch.

LITERATURE.—Most of the authoritative documents relating to Paul of Samosata may be read in M. J. Routh, *Reliquiae Sacrae*, Oxford, 1846-48, iii. 285-367. For some which he has omitted see Epiphanius, *adv. Hær.* 65; A. Mai, *Nora Collectio*, Rome, 1825-38, vii. 68 ff.; J. B. Pitra, *Analecta Sacra*, Paris, 1870-88, iv. 183-186, 423-425. The sayings of Paul are collected in *JThSt* xix. [1918] 20-45, 115-120. Accounts of his teaching are given in all works on the history of the Church and of Christian doctrine. See especially I. A. Dorner, *Hist. of the Development of the Doctrine of the Person of Christ*, Eng. tr., Edinburgh, 1861-63, div. i. vol. ii. pp. 10-15; A. Harnack, *Die Überlieferung und Bestand der alichr. Litteratur*, Leipzig, 1893, pp. 520-625, *Die Chronologie*, do. 1897-1904, ii. 135-138, *Hist. of Dogma*,² Eng. tr., London, 1894-99, iii. 33-48. SAMOYED.—I. *ETHNOLOGY*.—1. Distribution and number.—Where the coast-line of European Russia is no longer inhabited by Lapps, we find another group of Arctic natives, the Samoyed. Their habitat stretches from the eastern part of the government of Archangel, namely Cheskaya Bay, across the Urals, along the Siberian coast and islands as far east as the Khatonga, between the Yenisei and the Lena. Not all this region, however, is inhabited, the exception being three-quarters of the north-eastern portion of the Taimyr peninsula, which, owing to scarcity of reindeer-moss and of driftwood for fire, is left vacant.

The name 'Samoyed' is perhaps derived from one of the following Russian words: *sam-syebye-yed*, 'self-eater,' 'cannibal' (this derivation is scarcely possible, since cannibalism is not found among the Samoyed); *syryo-yed*, 'raw-eater,' 'raw-meat-eater'; and *sam-odin*, 'alone,' this being the most probable derivation, since 'Samodin' and not 'Samoyed' is the colloquial name for these natives even now. The name 'Samoyed' has also been traced from *Suomi*, the Finnish name for Finland. The Eastern and Taz Samoyed call themselves Nyenach or Khassauo, both words meaning 'man.'

The total number of Samoyed in Europe and

Asia is about 20,000. Those living in Asiatic Russia numbered 12,502 in 1897, and about 14,986 in 1911. Among the Asiatic Samoyed the largest group is formed by the people speaking Yurak Samoyed; in 1911 they numbered 7059. The number of Ostyak Samoyed, or Forest Samoyed, was then 6559, and of Yenisei and Avamsk, or Eastern, Samoyed 1376.

The people speaking the Yurak Samoyed language and the Eastern Samoyed live along the Arctic shore and inland in the mossy or rocky tundra, the Ostyak Samoyed in the forests (*taiga*) from the Upper Taz and Baikha rivers to the Tym and Ket, and even as far south as the Chulim, where, however, the population is very much mixed and is Turkic in speech. Still farther south, in the Kansk district, along the Kana, there is a small remnant (about 400) of the Kamashints nation, which is supposed to be of Samoyedic race—at least it seems to have been so linguistically, though Turkic is their principal language at present.

Besides the Kamashints, several other tribes of the Upper Yenisei are held by some scientists to be of Samoyedic descent. These doubtful Samoyed are: the Karagass, the Beltir, the Sagai, the Motor, the Soyot, and various tribes called Tuba, in the Altai-Sayan region. At the present time, however, all these tribes are linguistically and ethnologically more Turkic than anything else.

2. Language.—The Samoyed languages belong to the Ural-Altaic linguistic group. Castrén, the first linguist to investigate the Samoyed languages and at the same time one of the greatest authorities on the subject, expressed the opinion that the Samoyed languages have 'no nearer relation in the world than the Finnic stock,'¹ and that in fact they form one linguistic family. According to him, the resemblance lies in the fact that in both Finnic and Samoyedic the process of agglutination has made far more progress than in Mongolic, Tungusic, or even Turkic, and also in the great number of root forms they have in common. He conceived Finno-Samoyedic as forming a bridge between Indo-European and Ural-Altaic.² Later Finnish linguists have contradicted Castrén's theory. Thus Finsch,³ quoting Bergroth, says that, while the Ostyak and the Vogul belong to the Finnic linguistic race, the Samoyed have no place in it, and Ahlqvist expresses the opinion that in vocabulary and grammar Finnic and Samoyedic resemble each other no more closely than do Swedish and Portuguese.⁴

Since the Samoyed languages have been less studied than other Ural-Altaic languages, it is perhaps too soon to define the linguistic relationships of these Northern people. With what knowledge we have at present, Castrén's linguistic classification of the Samoyed dialects⁵ still holds good. His linguistic division⁶ is as follows:

(1) Yurak Samoyed, spoken in the north, from the White Sea to the Yenisei Valley.

(2) Tavgi Samoyed, also spoken in the north, from the Yenisei to the Khatonga by the Tavgi proper and the Avamsk Samoyed.

(3) Ostyak Samoyed, spoken on the Upper Taz, Upper Ob, along the Yenisei (Yenisei-Samoyed), and along the Kana (Kamashints).

Each of these groups may be subdivided into several sub-groups.

3. Origin.—There are two main theories as to the geographical position of the original home of the Samoyed.

(1) The first is that they came to their present abode from S. Siberia.⁷ Thus Fischer saw in the Samoyed and the Ugrian Ostyak remnants of the ancient and powerful Chud of Mid-Siberia. Pallas⁸ believed himself to have discovered some remnants of the Samoyed among the Kamashints, Karagass, Koibal, Motor, Arine, and Assan, all living on the Upper Yenisei at the time of his travels. This was contradicted by the traveller who followed him, Stepanoff,⁹ who declared that all these people

were Turko-Tatars. Castrén was the next to investigate the racial relationship of these tribes; he stated¹ that in his time only the Kamashints remained Samoyed, and that the others were now Turks, but had traditions of having used other languages in the past. From this statement, and the fact that some of the clan names of these people are similar in sound to the clan names of the Northern Samoyed, Castrén carried his linguistic views into the sphere of ethnology and concluded that the Finnic, Samoyedic, and Turkic tribes all originated in Central Asia, moving from there to the Upper Yenisei and the Sayan mountains.² Thus Castrén and his followers believe that the majority of the Samoyed migrated northwards from the Sayan mountains along the Yenisei and then spread to the west across the Urals and to the east as far as the river Khatonga. The Samoyed who remained behind and became Mongolized or Turkicized are the present tribes of Soyot, Koibal, and Karagass, together with the group called Tuba, inhabiting the Upper Yenisei region.³

(2) The second theory was advocated by P. J. Strahlenberg⁴ as early as 1730 and brings the Samoyed and the Siberian Finns from the west. Strahlenberg believes that they migrated from Lapland, and, in the opinion of modern Finnish investigators, the Samoyed came to their present homes from the Ural district, whence they spread north-west, north-east, and southwards.⁵ In any case the well-developed reindeer culture of the Samoyed proves that, from whatever region they originally came, they must have been in the Arctic regions for a considerable time. We know also from the Ostyak traditions⁶ that, when this tribe came to W. Siberia (not later than the 11th cent.), they found the Samoyed already there.

4. Physical type.—Influenced by Castrén's superficial identification of the Samoyed with the Finnic tribes, too many ethnologists are inclined to see a resemblance between the peoples of these stocks. The first reliable description of the physical characters of the Samoyed was given by A. T. Middendorff,⁷ who distinguishes among them two main types—the Mongol type (e.g., the Timansk Samoyed) and the Finnic type (e.g., the Kaninsk Samoyed). For the last ten years the attention of anthropologists (K. I. Goroshchenko, A. A. Ivanowski,⁸ and S. I. Rudyenko⁹) has been directed to the resemblance between the Samoyed and the Soyot of the Sayan mountains. But, since the discovery of this resemblance is the result of a comparatively small number of measurements (for some characters the measurements were taken on 20 individuals only), and on the observation of only six anthropological characters (colour of eyes and hair, cephalic index, alveolar index, stature, and length of lower limb), it is safer to look forward to more extensive studies and to adopt the classification of Ivanowski,¹⁰ and make of the Samoyed a special anthropological group. This group can be characterized as follows: dark eyes, dark, straight, and coarse hair, yellow-grey skin, short stature with long trunk and short legs, broad heads, long faces, prominent cheek-bones projecting sideways, absence of Mongolian eye-fold, though the eye has usually the Mongolian narrowness and obliquity.

The present writer's anthropological investigation of the Eastern and Taz-Yurak Samoyed compared with the Western Samoyed (from the Urals to the Taz), studied by Rudyenko,¹¹ seems to show that in all the chief anthropological characters the Eastern and Western Samoyed resemble one another—in fact, are often identical—while the Yurak Samoyed of Taz form a wedge of a slightly different type, taller, with narrower nose, wider forehead, and broader head.

5. Cultural type.—The Samoyed have now one of the most perfect Arctic cultures, namely the reindeer culture. They seem to have conquered

the severe climate and to have developed the appropriate technique, their culture being very little inferior in this respect to that of the Eskimos and Lapps, and decidedly superior to that of the Tungus; hence they are much less capable than the Tungus of accepting European culture and a settled mode of life. Reindeer culture is based on reindeer-breeding,¹ but fishing, hunting, and trapping seem always to be additional aids in the struggle for existence. The Samoyed who live in the sub-Arctic forest regions have far fewer reindeer, and here hunting and fishing may be said to be their chief, sometimes their only, occupations.

All the Samoyed are wanderers, but superficially they may also be called seasonal nomads, as they live along the rivers, lakes, and seashore in summer, and inland, in the *tundra* or the forest, in winter. Some Archangel Samoyed and some Ostyak Samoyed adopt a settled mode of life.

Though reindeer-breeding is an industry which all Northern Europeans and Asiatics practise, there are great differences in method, pointing to the small degree of contact which the present inhabitants of N. Siberia have with one another. Not only do the terms for the reindeer at different stages of its life vary according to the tribe, but we see too, *e.g.*, that the Samoyed never ride their reindeer, which is a favourite mode of progression among the Tungus; that the Samoyed (and Ostyak) drive from the left side of the sledge, while the Tungus (and Yakut) drive from the right, and so on. Whether the Samoyed evolved for themselves the culture under which they now live or adopted it from the former inhabitants of the country, it is clear that they must have been in the Arctic regions for a very long time to have reached their present stage.²

II. RELIGION.—The Samoyed, like the other natives of N. Asia, and indeed of the Arctic region generally, are shamans; *i.e.*, their religion is based on animistic beliefs, and all knowledge of religious secrets is in the possession of a shaman. Nominally only a part of the Yurak Samoyed are still pagan; the rest are members of the Russian Orthodox Church.

1. The shaman.—The shaman of the Samoyed of the river Ket must be a man; among the Tavgi Samoyed and the Yurak Samoyed there are often shamanesses. But, although the most successful healing is often achieved by a Yurak Samoyed shamaness, we never find her as a leader of religious ceremonies. This office is reserved for a male shaman. Also, being a woman, she is debarred from offering sacrifices to the domestic gods—a rite which is performed by an elder male member of the family.

In the northern region, far away from the colonists, the shaman's costume is very rich, but among the Ostyak Samoyed of the forest region it is quite plain. This is due to the prohibition of costumes, as well as of shamanistic practices, by the Russian authorities. In a general way, the details of the costume are not unlike those of the costume of the Ostyak shaman;³ the figure of the ancestor spirit occupies an important place, and the whole universe is represented by various objects embellishing the coat. We find, however, much less iron on the Samoyed shaman's coat than on that of the Ostyak, which, again, has less iron than that of the Yakut and Tungus shamans. The Yurak shamans of the river Taz sometimes have costumes made entirely of skins and furs, reindeer-bone, and mammoth-ivory, but the figure of the sun is usually made of metal.

The shaman is the man who knows the religious secrets and the order of the religious ceremonies. He is an intermediary between the people and the spirits, whose words he interprets. He also acts as an adviser and medicine-man. The office of shaman is often hereditary. The Samoyed call their shaman *tadibey*, and the spirits through which the shaman communicates with the spiritual world *tadebtsy*. The *tadebtsy* act as benevolent or malevolent spirits according to the use which the shaman makes of them.⁴ The Yurak Samoyed call the *tadebtsy* *syaddai* or *syadachi*, and represent them by wooden anthropomorphic figures, which

are used in divination in the same way as the divining-ring (*arpa*) is used by the shamans of the Lapps. Among the Ob Samoyed the shaman's spirit is sometimes called *löz*, *lök*, or *koika*.

2. Gods and spirits.—The name for the shaman's spirits is collective, but each shaman has his own spirits, who accompany him when he is performing his duties. These may be called the shaman's individual spirits. There are three more kinds of spirits: (1) those common to one family—domestic god-spirits; (2) those common to a local group (probably originally to one clan)—ancestor god-spirits; and (3) those common to all the Samoyed—spirits dwelling in the water, stones, and forests.¹

The domestic gods are called by the Yurak Samoyed *haha* (*hahc*); sometimes they are represented by roots or stones of unusual shape, sometimes by anthropomorphic figures. Usually each family has at least one male and one female domestic god; they are kept covered on a special sledge, the '*haha*-sledge,' which is not used for any other purpose, and, when the family moves, special '*haha*-reindeer' draw the sledge. Women are not allowed to uncover the '*haha*-sledge' or even to take care of the reindeer. Even a shamaness, who has her shamanistic spirit and propitiates the higher clan-god, is not allowed to take care of the domestic gods. The '*haha*-sledge' usually stands behind the *chum* (tent) on the outer side of the place of honour called *si*, which is occupied only by the eldest male of the family.

Some of the spirits common to all the Samoyed, such as the spirits of the water (usually malicious) and the spirits of the bushes (usually benevolent), have local names; but the collective name for the chief spirit-gods, whether common to one group or to all the Samoyed, is *num* (*nim*, *nga*). Sometimes the word *haha* is used not only for domestic deities, but also as a generic term for 'deity' in the same sense as *num*. *Num* also means the thunder and the sky, or perhaps it would be more correct to say that the thunder, being a voice of *Num*, is one of his characteristics, and the sky, being the abode of one of the chief *nums* (usually the ancestor *num*), is thus identified with him. Thus the fact that the same word is used for 'deity' and for 'sky' does not necessarily imply that sky-worship is the highest expression of Samoyed religion. In the Yurak Samoyed tales we meet with expressions such as these: 'Num became summer,' 'I sat until Num dawned'; at the same time 'to pray to Num' is a usual expression, but an individual name is then added to the title *Num*. The lesser spirits dwelling in natural objects are vaguely defined; the highest beings have their own individual characteristics, often anthropomorphic or zoomorphic. If by the term 'highest god' we understand the one to whom sacrifices are most often made, and who is concerned directly or indirectly with human affairs, then in the highest god of almost every locality we can trace the ancestor of the people. Among the national gods and goddesses common to all the Samoyed are those connected with fertility.

The house-ancestor gods are identified with a material object more often than are the nature-gods. Sometimes it is difficult to determine whether a god is to be considered as common to one group only or to all the Samoyed; for, if a small group of Yurak Samoyed lives among the Tavgi Samoyed, it may borrow the gods of the latter, even their ancestral gods.

The chief national gods can travel from one place to another; there are, however, several places, far distant from one another, of which nearly all the Samoyed would have heard as being

¹ The forest-spirit exists among the Ostyak Samoyed of the forest region.

² See artt. OSTYAKS and PASTORAL PEOPLES.

³ See art. OSTYAKS.

⁴ M. A. Czaplicka, *Aboriginal Siberia*, p. 239.

holy, as the dwelling-places of gods. Such a Samoyed Jerusalem is to be found on the island of Waigach, which possesses several important *nums* (also called *haha*), some of which are related to one another. Thus the three-headed old man Wesako-haha, living in the extreme south-west of the island, is supposed to be the husband of Nyebye-haha (Mother-god), who lives in the central part of the island, while their son, Nyu-haha, lives in the extreme north-west. Islavin¹ thinks that the gods (represented by stone figures) residing in three other northern localities, viz. at Minisei, a peak of the Urals, in the Yaumau Peninsula, and at a place about 20 versts from Mesen, are also sons of Wesako-haha and Nyebye-haha.

The highest gods worshipped by the Yurak Samoyed are Numkypoi ('among the stars'), who watches man from above; Yaumau ('land's end'); and Yahammü ('out of the water'). The meaning of the term Yaumau is, strictly speaking, 'land's end,' but it is also sometimes used to mean 'river-source,' since the mouth of the river—which is called by the Samoyed the river-source—is understood to be at the end of the earth. The same word is used for the name of a peninsula to the west of the Gulf of Ob. Yaumau has never shown himself to man, but has sent him his iron staff (a rod, probably of Russian workmanship), which was found in the *tundra*. This staff is kept by the Yurak Samoyed near the Plakhina sand-banks on the Northern Yenisei and is held by them in great veneration. Then there is Yaumau-Haddaku (*haddaku* = 'grandmother'), goddess of the fishes, who is responsible for good and bad fishing seasons, and who lives at the mouth of the Ob. The outward shapes of Yaumau and Numkypoi are known only to the shamans, who see them in visions and make wooden images of them. These images are not regarded as gods, but only as their representations. The only image which is held to be itself a god is that of Yahammü. It is supposed to have fallen from the sky into a river, whence it was taken by a Yurak Samoyed, and is a stone of sufficiently unusual shape to have attracted the finder's attention. Its size is about that of a child of five, and it closely resembles the figure of a man in a sitting posture, holding the head of some animal by a bridle. This figure is in charge of a great shaman at a spot about 100 versts from the settlement of Tazovskoye, on the river Taz. Since Yahammü has actually 'descended' to men, he is on the whole more esteemed than Yaumau and Numkypoi, though it is the last-named who is always called 'grandfather' and treated as tribal ancestor, while other gods are so addressed only at the moment when sacrifice is being offered to them.

Among the lesser gods is the god-owner of quadrupeds, particularly reindeer. He is called Illibium Parche, and it is said that he needs no sacrifices, for he has reindeer enough, and, besides, he does not help or heal men.

Kai Donner² found that along the river Tym the Ostyak Samoyed consider their highest god the 'grandfather of the clan,' who is worshipped under various names, while the Ostyak Samoyed along the river Ket symbolize him by a living bear. The Ostyak Samoyed of Ket believe in the transformation of man into an animal, and *vice versa*. If a man jumps over fallen trees and pronounces certain incantations, he will change into a bear.³

Although in a general way we can call the Samoyed polytheists, in practice they are nearer to monotheism. Each Samoyed local group has

several gods, but the individual chooses one god, whom he propitiates, while behaving reverently to the others. In the agglutinative language of the Yurak Samoyed there is a special compound expression *Amgenulumhehon*, meaning 'What *num* do you worship?'—a question which people ask one another when they meet for the first time. It often happens that, if one god does not satisfy the needs of the worshipper, he takes up another.

3. Dualism.—Since the Samoyed believe that evil must be overcome with evil, it is not possible to make a clear division of their spirits into good and bad, for an essentially 'good' spirit can, as a shaman's assistant, act either for good or for evil. Both the shaman's spirits and the highest clan or tribal spirits are apt to act for good or evil according to circumstances. There are, however, two classes of spirits which are well-defined in this respect. The *haha*, or domestic gods, may be described as a class of good spirits, for we never hear of malevolent actions being performed by them against any one, and they are well-disposed towards the inhabitants of the tent, whom they protect in a passive way against *illike*. The latter can be defined clearly as a class of bad spirits. The chief of all the *illike* is Chir or Non, who lives in the dark north. Whenever there is a storm with lightning, the Samoyed say that Chir is fighting with one of the *nums*. All the other gods are a combination of good and evil, but are benevolent to the men who carefully perform the required ceremonies. The evil spirits are conceived by some Samoyed as dwelling underground, and by others as in the water, and no representations of them are made. The shaman's spirit assistants, especially those of the great shamans, are more evil than good, but they can be beneficial to the petitioner when they use their evil powers against his and the shaman's enemies. Although images of these spirits are made and kept by each shaman, it is dangerous for any one except the shaman who owns the spirits to look at them. During the shamanistic ceremonies, however, they are shown to the public.

4. Religious ceremonies.—Among the Yurak Samoyed one of the male members of a family will often offer private sacrifices to their domestic god, but to propitiate the higher gods it is necessary to offer the sacrifice through a shaman. The domestic gods are propitiated by sacrifices of small objects or portions of food, but a sacrifice to the higher gods must take the form of a reindeer or a dog. If a private person sacrifices an animal to the domestic or to the clan gods, care must be taken that no blood is shed. The animal must be strangled by means of a rope twisted round its neck, the ends being held by a man on either side of the victim. While the deer is being choked to death, a third man prods it in the side with a goad, the object being to hasten the sacrifice along the road to the god or spirit for whom it is destined. The sacrifice is accompanied by petitions to the *num* whom it is designed to propitiate, that he may vouchsafe help to the worshippers in return for the sacrifice offered. If blood is shed, a shaman is summoned, and the petitioners await his pronouncement anxiously, hoping that he will only enjoin the sacrifice of another reindeer and say that they had chosen a wrong one or that one was not sufficient. For the shaman may say that the fact that blood came from the nostrils or mouth of the deer signifies that the god desires a human victim, and then somebody will die soon. Some unimportant fishing or hunting expeditions may be started with a private sacrifice, but important ones like the salmon-fishing on the Yenisei can never be started without a shaman.

One of the most important ceremonies of the

¹ Samoyedy, v domashniem i obshchestvennom bytu, p. 19.

² Quoted by Santeri Jacobson, 'Sredi Sibirskikh Samoyedov,' Sibirskaya Jitsn, no. 95, May 1916.

³ Ib.

Samoyed is the sacrifice to Yauman-Haddaku, goddess of the fishes.

The finest fish of the first catch of the season is opened and cleaned as for eating. It is then impaled on a stick and planted at the water's edge. The head of the fish is turned towards the water, and a small image of the goddess is placed astride its tail, the idea being that the goddess is riding the fish into the water. The entrails of the fish must be very carefully burnt; for, if any part of it is thrown away (as is usually done with the entrails), it will not reach the goddess, who may then do harm to the community instead of sending good fishing.

But the sacrifices are not necessarily all blood sacrifices. Reindeer may be consecrated to the gods without being actually killed, which means that nobody can make use of them. Children may also be consecrated, which means that they must not marry.

Another of the principal Yurak Samoyed ceremonies is the changing of the sledges on which the images of the gods are kept. This takes place once a year in the spring. The most elaborate performance is that connected with the sledge of the god Yahammü.

A shaman is usually the leader of the ceremony. It is a great privilege to make even one small part of the new sledge. Each man who has a share in the making of it kills a reindeer and smears with its blood the part that he has made. The work on the new sledge is carried on only while the sun is shining, and with the dusk every one retires to the *chum*, where the shaman shamanizes. This shamanizing is not for healing the sick, or any other practical purpose, but for the glory of Yahammü. No women or children may be present while the sledge is being made, or during the placing of the god on the new sledge, but they may take part in the shamanistic performances at night. The god is placed on the sledge so that he faces the south, the region of light and life, while the old sledge is placed behind the other, so that its forepart is turned towards the north, the land of darkness and death. In front of the sanctuary of Yahammü a regular forest of old sledges may be seen.

The Avamsk Samoyed, more strictly than the others, hold a sun-festival when the sun returns in January. It is now held only every second year.

It lasts about nine days and must be timed so that the sun will appear on the sixth day. The shaman shamanizes during all the dark hours of the first six days, and the dance begins on the sixth day, i.e. the first day of the sun's appearance. Great freedom is observed between young men and young women, but it does not reach anything like that displayed in the orgiastic spring dances of the Yenisei Ostyak. The shaman takes part in the dance, but on this occasion he lays aside his drum and some of his most important garments. Towards the end of the festival the shaman heals the sick and foretells the future. All the shamanistic performances are held in the 'clean *chum*,' a tent specially erected and made of the skins of young reindeer. This *chum* must not be used for taking meals or for any other purpose than that of shamanizing.

5. The soul.—The Yurak Samoyed, as well as the Yenisei Samoyed, believe that a man possesses three kinds of soul: (1) the soul through which he feels and thinks (the intellectual soul), (2) the soul-life (the physical soul), and (3) the soul accompanying a man outside himself (the shadow-soul). The soul-life is called *iindad*, and the same word is used for breath and also for the vapour which rises from the bodies of men and animals in winter. Thus the Yurak Samoyed say, '*Indytte ngaidapta*,' 'He let go his soul' ('He sighed'), and they believe that death is caused by the malevolent spirit Illike Nga carrying away a man's *iindad*.

There is no theory as to what happens to the *iindad* of an ordinary man after it is separated from his body; but the *iindad* of a shaman becomes an *iterma*, a spirit more dangerous than benevolent. In spite of the separation of the *iindad* from man and his other souls, the dead are believed to live in their own Land of the Dead in the north and also to have the power of returning to do harm to living men. This belief is shown by the Samoyed custom of moving with their *chums* from the place where a death has occurred and occasionally leaving behind a person at the point of death. Sometimes the body is nailed to the ground during the burial ceremony, and the eyes are as a rule covered with heavy objects. Another custom which may be

ascribed to fear of a dead person is that of turning away the head when driving near a tomb. The name of the dead is strictly tabued. The Land of the Dead seems to be at the mouth of a river—the Yenisei among the Yenisei Samoyed, and the Ob among the Yurak. The dead person receives all his belongings to assist him in his other life, which is supposed to be similar to the life that he led on earth. One or more of his personal reindeer are sacrificed, and the antlers are hung on the tomb, which is composed of a wooden box made of drift-wood; usually some of the poles of his tent are also used in its construction. The sledges and other objects are usually slightly damaged; for otherwise, say the Samoyed, the dead man will not have the use of them. There is always a reindeer-skin pouch containing valuables, including Russian money—not gold and silver coins, which the Samoyed value highly, but paper money; or even such paper as the wrappers of tobacco-packets, which resemble paper money in colour. Kai Donner¹ says that the Ostyak Samoyed believe the Land of the Dead to be at the mouth of the Ob and ruled over by a woman, who sends death to the Samoyed through her numerous spirit-assistants. She also regulates birth.

6. Totemism.—The social organization, especially the marriage regulations, of the Samoyed have been to a great extent modified or destroyed by contact with colonists. This is shown clearly by the acceptance by the Samoyed of the Russian names given to them at their official baptism, which often leads to their forgetting their own, and also by their acceptance of certain Russian marriage restrictions enforced by Russian law, while they remain true shamanists in the marriage ceremonies. It is therefore difficult to trace their totemism by a study of their exogamy, and it seems doubtful whether a regular relation between the two exists among them. We find clans with plant- and animal-names, but these are by no means exclusive or even in a majority; for alongside of such names we find many others, given to clans for some peculiarity which characterizes their members. Neither in terminology nor in mythology nor in real life do we find any relation between the clan-group named after an animal and the animal itself, such as is found among typical totemists. Thus the clans of the Yurak Samoyed of Obdorsk and Taz include: Horelle, 'bucks'; Nguluchi, 'of the grass'; Lampai, 'the base of the antlers of the buck reindeer'; Maryik, 'the neck of the wild buck reindeer'; Nohoi (Nokhoi), 'of the white fox'; but they have also clans with such names as Yadanye, 'walkers'; Shiallanke, 'runners'; Ngasyedda, 'without feet.'

The tales of the Yenisei Samoyed are rich in names of heroes suggesting totemistic elements: we hear in one tale about a fight between seven *chums* of Grass Fringes (the people of these *chums* would have grass fringes hanging on the back of their winter coats) and seven *chums* of Talnik Fringes (with *talnik*, or dwarf willow, twigs hanging on the back of their winter coats). The power of the first-named comes from their grass fringes, for another hero says to one of them: 'Comrade, how heavy you are; you look very small to me, but you have on your back a grass fringe, one string of which would make a canoe.' There is a hero named White Owl and another named Eagle Buck, but besides these there are heroes called Iron-Cube-Belt, Silver Buttons, Iron Boots, etc. With the exception of the Ostyak Samoyed, the Samoyedic tribes are much more given to ancestor- and hero-worship than to animal-worship. This does not prevent the anthropomorphic gods from having many animal characteristics (e.g., they

¹ Loc. cit.

can fly and can change into animals) nor certain animals from having special places assigned to them in the shamanistic mysteries as the shaman's spirit-assistants. As far as is known at present, only the Ostyak Samoyed have any beliefs which can be called totemistic. Itte, the hero of the epic of the Ostyak Samoyed recorded by Kai Donner,¹ had by one of his wives, the daughter of Massul-lözi, 'Forest-Spirit,' a son, 'Bear-Spirit' (Pärgäi-kuorgai lözi or Pärgäi-kuorg, *pärgäi* meaning 'bear-spirit'); from this son the Samoyed of the Ket river derive their descent. For this reason they call themselves Kuorgai-tämder, 'race of bears.'

Along the river Tym, Kai Donner found that the name for the forest spirit is Päryä, which must be the same word as occurs in the form Pärgäi-kuorg (Pärgäi-bear).² We can hardly reckon the animal monsters with which this epic is filled as traces of totemism; and even Pärgäi-bear is, after all, the descendant of Itte, a man-hero. It is only among the Ostyak Samoyed of the river Ket that the bear rises to the dignity of an ancestral god. Since, as far as is known, these Samoyed are the only ones who personify their ancestral god in animal form, it may be only a local variation in the method of picturing the ancestor. The worshipping of a tribal ancestor is common to all the Samoyed, and endowing him with the form of a bear may merely indicate his unusual origin, having no reference to totemistic beliefs. Much the same can be said about the shaman's spirit-assistants, which are represented by animal forms, though never identified with animals.

7. Mythology.—Samoyed mythology is extraordinarily rich not only in variety of motives but also in variety of forms. The two chief forms are the tale which is sung, called by the Yurak Samoyed *syodobobs*, and the tale which is told, *vahanoku*. We do not include in Samoyed mythology any songs, whether the shaman's songs, which are more or less alike among all the Northern natives, or the songs, so characteristic of the Northern Samoyed, which are sung at burials and match-makings. Thus the widower will sing at his wife's funeral a song expressing his sorrow and loneliness, while the young wooer will express his affection in song. These ceremonial songs are disappearing from Samoyed life more rapidly than the myths.

The tales of the Yurak Samoyed and Yenisei Samoyed can be divided according to their contents into customary tales and fantastic tales. Both are to a certain extent hero-tales. The customary tales relate various events in the life of the family or the clan, and are usually put into the mouth of the hero or heroine, who relates them in the first person. This device and the wonderfully artistic and realistic descriptions, obtained by the simplest means, make these customary tales a mine of rich material for the study of primitive mentality as well as of social anthropology. They are full of descriptions of hunting and fishing expeditions, marriage- and initiation-ceremonies, tribal law, and various incidents arising out of love affairs; and, though all are related as they really occur, yet, when touched with the characteristic logic of the primitive mind, they receive a mythical colouring. But it is the other kind of tale that really deserves the name of myth—the fantastic hero-tale, which perhaps originated as a customary tale, but from long ages of oral reproduction has received a hyperbolic form. Many details indicate that this type of Samoyed literature is older than the customary tales. The hero is usually a warrior wandering about in search of adventures. At the same time, he often possesses shamanistic power, or at least meets the great

shamans, so that the hero-tales are interwoven with religious beliefs. If the hero is a shaman, it is nearly always his struggle with another great shaman that forms the subject of the tale, and in this case the other shaman is very often of Yakut nationality, since the Yakut shamans have a widespread reputation. In a Yenisei Samoyed tale of the great shaman Kuobaldi, he fights the Yakut shaman first on land, then in the sky, and then under the water.

Far from disappearing with the decline of native life, the customary myths are actually growing. As to the fantastic tales, alongside of the ancient ones new ones occasionally come into existence even now, after the death of a prominent shaman or hunter; there are no more new legends of warriors, since the Samoyed no longer fight.

Although there are no myths concerned only with gods and spirits, these hero-myths have frequent references to them. There seems to be no type of zoological myth among the Samoyed as there is among the Palaeo-Siberians and among the people belonging to the N. Pacific culture-ring generally; but the heroes can temporarily change into animals, or at least assume animal characteristics, though they never cease to be men. To this class belongs the myth recorded by Kai Donner among the Ostyak Samoyed of the forest region along the rivers Ket and Tym, which he calls 'the Samoyed epic of the hero Itte.'¹ Itte's chief struggles were with the giant man-eater, Pünegusse, whom he at last vanquished. Although forced by foreign evil spirits to leave the Samoyed lands, he is expected to return one day to make the Samoyed rich and happy, just as the return of the hero Alba is looked for by the Yenisei Ostyak.²

M. A. CZAPLICKA.

SANCHUNIATHON. — A. HISTORICAL NOTICES.—Sanchuniathon (Gr. Σαγχουνιάθων, Σαγχουνιάθων) is said by Porphyry³ to

¹ *A Samoyede Epic*, p. 3 ff.

² See artt. OSTYAKS and SHAMANISM.

³ In Eusebius, *Præp. Evang.*, ed. Gifford, p. 31a.

¹ *A Samoyede Epic*, p. 6.

² *Ib.* p. 2.

have been a native of Berytus (Beirut) who lived before the Trojan war, about the times of Moses and Semiramis, who wrote in the Phœnician language a history of his people and of their religion, based on the records of the cities and the registers of the temples and on records received from a certain Hierombalos (=Jerub-ba'al), priest of the god Ieno (=Jahweh). This he dedicated to Abibalos=Abi-ba'al, king of Berytus. It was translated into Greek by Philo of Byblos.¹ Philo Byblius² says that Sanchuniathon was a man of much learning and curiosity, who searched out a history written by the god Thôth.³ He also found the secret writings of the *ammounis* (= *hammānim*, 'sacred pillars').⁴ The teaching of Thôth was preserved by the seven sons of Šuduk, the Kabeiroi, and by their brother Asklepios (= Eshmun). These stories were allegorized by a certain Thabion and handed on to the prophets and to their successors, one of whom was Eisirios, the brother of Chna (Canaan), who was afterwards called Phœnix (Phœnicia).⁵ Many generations afterwards a god Sourmoubelos and Thuro, whose name was changed to Eusarthis, brought to light the theology of Thôth.⁶ Suidas calls him 'a Tyrian philosopher, who lived about the time of the Trojan war, who translated into Phœnician a work of Hermes (Thôth) concerning the origin of things, who wrote in Phœnician on the institutions of the Tyrians, Egyptian theology, and some other matters.' He is also mentioned by Athenæus,⁷ by Eusebius,⁸ and by Theodoret.⁹

Sanchuniathon is not named by any Greek writer before Philo; but this is no proof of his non-existence, since a Phœnician author would not be known to Greeks unless he were translated. The references in Athenæus, Porphyry, Eusebius, Theodoret, and Suidas are probably all derived from Philo; but this also proves nothing, since Philo's translation was the only form in which Sanchuniathon was accessible to Greek readers. Sanchuniathon is a genuine Phœnician name, Sankun (or Sakkun)-yaton, 'Sakkun has given.'¹⁰ As far as it goes, this is evidence that he was a real person.

B. THE TRANSMISSION OF SANCHUNIATHON'S HISTORY.—The Phœnician original of Sanchuniathon, if it ever existed, has perished, and we know only the reputed Greek translation of Philo Byblius (q.v.). In 1836 F. Wagenfeld reported the discovery in Portugal of a MS of Philo.¹¹ This was soon shown to be a fraud, particularly by F. C. Movers.¹² Philo is known to us only from the citations in Porphyry, Eusebius, Johannes Lydus, and Stephen of Byzantium.

The fragments of Philo have been gathered by J. C. Orelli, *Sanchuniathonis Berytii quæ feruntur Fragmenta* (Leipzig, 1826). This edition is incomplete and uses a defective text of Eusebius. A better ed. is that of C. Müller, *FUG* iii. [1849] 560-576. Here Gaistord's revised text of Eusebius is followed. The bulk of the quotations of Philo are found in Eusebius (*Præp. Evang.* i. 9-10, iv. 16), who uses them in a furious attack on Porphyry to prove that the gods of the heathen are only deified men. Eusebius is ed. by T. Gaistord, *Eusebii Pamphili Evangelicæ Præparationis*, Oxford, 1843; and by E. H. Gifford, 4 vols. in 5, Oxford, 1903 (a more critical ed.). English translations of the fragments of Philo in Eusebius are given by R. Cumberland, *Sanchuniathon's Phœnician History*, London, 1720; I. P. Cory, *The Ancient Fragments*, do. 1826, 1832, 3rd ed. R. E. Hodges, 1876, and by E. H. Gifford, in vol. iii. of his ed. of the *Præp. Evang.*

C. CONTENTS AND COMPOSITION.—The extracts preserved by Eusebius fall into three groups.

1. A cosmogony (i. 10; 33b-34b).—According to this, the beginning of the universe was Dark Air and Chaos dark as Erebus. These correspond to darkness and the Deep (Têhôm) in Gn 1² and to Apsu and Tîamat of the Babylonian creation story.¹

From Darkness and Chaos sprang Wind (Pneuma) and Desire (Pothos). With this agrees the statement of Damascius² that the Sidonians 'before all things place Chronos and Pothos, and Omichles' (= אִמִּיכֶל, 'mother of every man'?). Wind corresponds to the Wind of Elohim in Gn 1². Desire is not found in the Babylonian or in the Hebrew cosmogony, but appears as Eros, 'love,' in Hesiod³ and as Pothos in the theology of the Ophites as reported by Epiphanius.⁴

From the union of Wind and Desire Môt was produced. This Philo defines as 'slime, or putrid water,' which shows that it is an abstract noun formed from the Phœnician and Hebrew word *mô*, or *may*, 'water' (cf. Eth. plu. *māyat*). It corresponds to the waters (*mayin*) of Gn 1² and to Mummu, 'waters,' the offspring of Apsu and Tîamat in the Babylonian cosmology.⁵ The same idea appears in Egypt.⁶ Môt had the form of an egg (following the textual emendation of Bunsen, Renan, and Baudissin). The conception of a world-egg was known in Egypt,⁷ in India,⁸ and among the Greeks.⁹ No trace of this conception is found in Babylonia, unless it be in the splitting of Tîamat and setting up of half as the dome of the sky; but it is suggested in Gn 1² by the statement that the Wind (or Spirit) of Elohim was *mērahēpheth* upon the face of the waters. Even if *mērahēpheth* does not mean 'brood,' but 'swoop,'¹⁰ still the word is applied only to birds and therefore hints dimly at the idea of the world-egg.

Within Môt were formed first 'germs of creation,' then 'animals without sensation,' and from the latter grew 'intelligent animals' called *zôphasēmin* (זֹפְשֵׁמִין), which Philo correctly translates 'observers of heaven.' The Aramaic form *semīn*, instead of Phœnician *samīm* (cf. [Saj]mem-roumos, 31d), is to be set to the credit of Eusebius rather than to that of Philo. All these creatures remained motionless within the world-egg until it opened. This is different from the Babylonian and the Hebrew accounts, which know no creation of plants and animals *in posse* before their creation *in esse*.

Môt then burst forth into light, and sun, and moon, and stars, and the great constellations. As a result of the action of the light, the waters were 'separated' (ἀπεκρίθη) and clouds were formed. This corresponds to the Babylonian narrative of the appearance of Marduk, the god of light, who split the body of Tîamat into halves and set up the upper half to form the sky, in which he placed the heavenly bodies. It corresponds also to the Hebrew narrative of God's creation of light and His 'splitting' the waters under the firmament from the waters above the firmament and setting the sun, moon, and stars in the firmament (Gn 1³⁻¹⁰, 14-19). The meeting of the clouds in the sky caused thunder, and on hearing this the animals that had been formed in the world-egg 'woke up and began to move, on land and sea, male and female.' With this corresponds Marduk's creation of plants and animals in the Babylonian story and the appearance of all forms of life at the word of Elohim (Gn 1²⁰⁻²⁵).

2. The origin of men and their discovery of the arts (i. 34b-36a).—The original pair were 'the wind Kolpa and his wife Bāau.' Kolpa=Kôl-pāh, 'voice of a breath,' which suggests the statement of Gn 2⁷ that Jahweh 'breathed into man the breath of life.' Bāau=Bôhā, the primal chaos of Gn 1²; it corresponds also to the 'dust' of Gn 2⁷ into which the breath of Jahweh entered to create man.

The children of Kolpa and Bāau were Aïôn, 'lifetime'=Hawwa (Eve), 'life,' and Prôtogonos, 'first-born'=Adam (first) 'man'; and Aïôn discovered the food obtained from trees, which corresponds to Eve's plucking of the forbidden fruit.

The children of Prôtogonos and Aïôn were Génos and Gené. Génos, 'race'=Enosh, 'mankind' (Gn 4²⁰), and Gené is his female counterpart. They first worshipped the sun, whom they called Beelsāmēn, which in the Phœnician language is 'Lord of Heaven' and in Greek Zeus.¹¹ In like manner Gn 4²⁰ says of Enosh that he was the first to call upon the name of Jahweh.

The sons of Génos were Light, Fire, and Flame. 'These discovered fire from rubbing pieces of wood together, and taught the use of it.' This recalls the myth of Prometheus and similar Aryan myths. There is no mention of the discovery of fire in Babylonia or in the narrative of the origin of the arts in Gn 4¹⁶⁻²²; still it is implied by Tubal-kayin's invention of the forging of metals (Gn 4²²). Kayin, son of the man (Gn 4¹, J), or Kaynān, son of man (Gn 5⁹, P), means 'smith,' and the smith's art is impossible without fire. Kayin's sacrifice (Gn 4⁸) also presupposes the use of fire. The Babylonian

fire-god Girru is specially described as the patron of smiths,¹ and Keyānā appears as a Sabāean God.² It appears probable, therefore, that the original Hebrew legend and other Semitic legends narrated the invention of fire.

From Fire the Giants were born who gave their names to the mountains of Phœnicia. These correspond to the Nephilim, or 'giants' (Gn 64 J. Nu 1333 JE), also to the monstrous brood of Tīāmāt in the Babylonian creation-story, and to the Giants and Titans of Greek mythology.³ To this race belonged [Sanchuniathon] Philo correctly translates. He was the first city-builder, to Cain, the city-builder, in Gn 417. He quarrelled with his brother Ousōs. This is the counterpart of Cain's quarrel with Abel, only here the brother's name is Ousōs, the equivalent of 'Esau'. The two pairs of hostile brothers Cain and Abel and Jacob and Esau have been confused. Ousōs was a hunter who invented garments of skin. This agrees with the characteristics of Esau in Gn 27¹¹. Ousōs originated the use of standing-stones in worship and the pouring of libations of blood upon them. This corresponds to Abel, who first offered bloody sacrifices. After his death he was worshipped as a god. There is abundant evidence that 'Esau, 'maker,' was the name of an ancient Canaanite deity.⁴

Sanchuniathon then enumerates six pairs of brothers who were inventors of the arts:

(1) Agreus, 'hunter,' and Halieus, 'fisher' = Phœn. Šid and Dayyōg (Heb. יָדָיָה). Šid is known as a Phœnician god.⁵ In character he corresponds to Nimrod, the mighty hunter of Gn 10⁹.

(2) Chrusor, or Hephaistos, and Zeus Melichios. Chrusor-Hephaistos = Heb. חֲרָשׁ, Phœn. Hārōsh, 'smith'.⁶ He was 'the discoverer of iron and the method of working it,' and also 'practised incantations and divinations.' This is a play on the two meanings of Hārōsh, viz. 'smith' and 'magician.' He is the counterpart of Tubal-kayin, or Tubal the smith, the father of every hōrēsh, or metal-worker (Gn 4²²). His brother Melichios = Mullih, 'the sailor,' 'invented the hook, and bait, and line, and raft, and was first of all men to make a voyage.'

(3) Technitēs, 'artificer,' and Gēinos-Autōchthōn, 'earth-born aboriginal.' These invented sun-dried bricks and roofs. Technitēs seems to correspond to Heb. קַיִן, 'artificer' (cf. Tubal-kayin, Gn 4²²), and Gēinos-Autōchthōn to Adam, who was made out of the ground, *ādāmā* (Gn 2⁷ 3¹⁹).

(4) Agrōs, 'country,' and Agrōtēs, 'countryman.' Of the latter 'there is a much venerated statue and a shrine drawn by yokes of oxen, and among the people of Byblos he is named pre-eminently the greatest of the gods. From them came farmers and huntsmen.' Agrōtēs seems to represent the local *ba'al* of Byblos.⁷ Agrōs will then be a minor *ba'al* associated with him. This inventor of agriculture corresponds to Cain, the 'tiller of the ground,' who 'brought of the fruit of the ground' (Gn 4²⁷).

(5) Amunos and Magos (both in acc., Amunon and Magon), 'who established villages and sheepfolds.' In 32b Philo speaks of the secret writings of the *ammoneis* hidden in the temples. This seems to refer to the *hammānīm* (Heb. חַמְמָנִים), or steles.⁸ In the inscriptions Hammōn, or Ammon, appears as a god in 'Abd-hammōn, 'servant of the stele,'⁹ or more frequently Ba'l-hammōn.¹⁰ Amunos, accordingly, seems to equal the well-known Phœnician god Ba'l-hammōn. Magos (in acc. Magon) = Ma'on, who appears as a god in the place-name Ba'al-Ma'on,¹¹ or Beth-Ba'al-Ma'on;¹² also mentioned in Nu 32⁸, 1 Ch 5⁴, Ezk 25⁹, Jos 18¹⁷; perhaps also in the name of the Arabian people Ma'on.

(6) Misor and Šuduk (משור and שֻדֻק), which Philo correctly translates 'straight' and 'just.' They are identical with Mesharu, 'equity,' and Kettu, 'justice,' the children of Shamash, the god of justice in the Babylonian religion.¹³ Šuduk, or Šedek, is a well-known Canaanite god.¹⁴ He also appears in S. Arabia¹⁵ and in many OT names compounded with Zedek.

(7) From Misor Taautos was born, whom the Egyptians call Thouth, the Alexandrians Thōth, and the Greeks Hermes. He was the inventor of writing. This is clearly the Egyptian god Thōth who has been incorporated into the Phœnician pantheon.¹⁶

(8) 'From Šuduk came the Dioscuri, or Kabeiroi, or Corybantes, or Samothracēs.'¹⁷ The Kabeiroi (קַבְרִי), whose cult spread so far in the Greek world, bore the Semitic name קַבְרִי, 'the mighty,' and were doubtless genuine Phœnician divinities. They were identified out of at least three independent counterparts of Gēnos and also Technitēs and Gēinos are the inventors of houses. Ousōs and also Agrōs and Agrōtēs are

the inventors of hunting. Ousōs, Melichios, and the Kabeiroi are the inventors of boats.

3. The theogony and war of the gods (36a-40d).—The original pair of gods were (1) Elloun, 'high' = Heb. 'Elyōn,' and (2) Bērōuth, an abbreviation of Ba'alat Bērūth, 'mistress of Beirūt,' or possibly 'mistress of the cypress' (= Aram. בִּירֻת, Heb. בִּירָה, 'who dwelt in the neighbourhood of Byblos').³ 'Elyōn was killed by wild beasts; i.e., he was identical with the Phœnician Adōn, Adonis, 'lord,' the consort of the Ba'alat of Byblos.³ The children of 'Elyōn were (3) Ouranos, 'sky,' and (4) Gē, 'earth.' Ouranos is Ba'al-Shamim, 'owner of the sky.'⁴ He corresponds to the Babylonian Anu, 'the sky,' 'father of the gods.' Earth is named as a Carthaginian goddess in the treaty of Hannibal.⁵ A trace of similar conceptions among the Hebrews is found in the formula of Gn 2^{4a}, 'These are the generations [i.e. 'offspring'] of the heaven and of the earth.' Similarly in Hesiod Ouranos and Gē are the parents of the Titans and gods.⁶

The children of Ouranos were (5) Elos = El, 'god';⁷ Philo translates Kronos (i.e. Saturn), in imitation of Hesiod,⁸ who makes the Titan Kronos the son of Ouranos; he was the builder of the temple and of the city of Byblos; (6) Baitulos = Bēth-el, 'abode of deity,' i.e. a *magēbbāh*, or standing-stone inhabited by a god;⁹ in *Prap. Erang.* 37d Sanchuniathon expresses the same idea when he says that 'Ouranos devised the *baitulia*, having contrived to put life into stones'; (7) Dagōn,¹⁰ which Philo translates *siṭōn*, 'corn' (= Heb. דָגָן), and says¹¹ that he discovered corn and the plough and therefore was called Zeus Arotrios, 'Zeus of ploughing'; (8) Atlas (Phœnician equivalent unknown), whom El threw into a deep pit and buried;¹² this deed Hesiod relates of Ouranos in his treatment of his children, which shows that Philo does not borrow this myth from Hesiod; (9) Zeus Demarous = Ba'al Tamar;¹³ he and his brother El waged unsuccessful war against (10) Pontos, 'the sea' (= עַלְיָה). The son of Ba'al Tamar was (11) Melcatros, or Hercules, i.e. Melkart, the Ba'al of Tyre.¹⁴ (12) Astarte = 'Ashtart' is 'the greatest goddess, who reigned over Phœnicia with Ba'al-Tamar and Hadad; she set the head of a bull on her head as a mark of royalty, and, finding a fallen star, she consecrated it as the holy island of Tyre.' (13) Rhea (= Tanit?) in Hesiod is the wife.

(14) To Dione = Baaltis, i.e. Ba'alat 'lyblos (Gebal). The Phœnicians say, 'evidently the old Ba'alat of Gebal.' (15) Eimarmene, 'fate' = Mēni, 'fate,' a god of the Arabs¹⁷ and of the Nabateans.¹⁸ is mentioned in Is 63¹³; perhaps also in the personal name Man(h)assen, 'Mēni has lifted up.' (16) Hōra, 'season' = Ate. Philo has confused the word, *ny*, 'season,'¹⁹ with *nyy*, the god 'Ate'.²⁰

In company with his brothers and sisters, El waged war on his father, the Sky, and eventually succeeded in emasculating him with a sickle, so that his blood stains the waters of one of the rivers of Phœnicia to this day. This is the counterpart of the war of the gods of light and order against the forces of chaos in the Babylonian creation epic and in the OT, and of Zeus's victory over the older gods in Hesiod, where also the sickle and the emasculation appear, only in Hesiod it is the children of Kronos who overthrow him, while here Kronos and his brethren overthrow their father Ouranos. Sanchuniathon adds that the allies of El were called Eloim, i.e. Elohim, 'gods.'

The children of El (Kronos) were as follows: (17) Persephone (Phœnician equivalent unknown); (18) Athene = Anath;²¹ the equation of 'to her was g'

(Phœn. אֶתְנָה) with the sword; (20) a daughter whose head El cut off; these correspond to the children of Kronos in Hesiod whom their father devoured as soon as they were born; (21) by his sister Astarte, seven daughters, the Titanides, and two sons; (22) Pothos, 'desire,' and (23) Eros, 'love'; by his sister Rhea, seven sons, one of whom was (24) Muth, 'death';²² (25) by his sister Baaltis, daughters; (26) Kronos (or El) of the same name as his father; (27) Zeus Bēlos (= Bēl, the Babylonian god),²³ the father of (28) Nereus (= Ea?), the father of (29) Pontos (= Ba'al-yam-mim), the father of (30) Sidon (= Šid)²⁴ and Poseidon (= Ba'al-Sidon); (31) by the nymph Anobret = 'En-obereth, 'overflowing spring,' or 'En-hobereth, 'uniting spring,' he had an only-begotten son called Iedud (Heb. יְעֻדָּה, 'beloved'); in a time of great danger El arrayed this son in royal apparel, prepared an altar, and sacrificed him.²⁵ It has often been claimed that this

story is based upon the Biblical narrative of Abraham's sacrifice of Isaac, especially because it was found in Sanchuniathon's *History of the Jews*, but there is no evidence of any direct connexion. More probably both stories go back to some common early Canaanite original.

D. AUTHENTICITY OF THE PHOENICIAN HISTORY OF SANCHUNIATHON.—1. Theory that Eusebius invented the fragments.—C. A. Lobeck,¹ on the basis of their euhemerism, holds that the reputed extracts from Philo are the invention of Eusebius himself or of another late Christian writer; but this is impossible in view of the strong Semitic flavour of the material. The names of the gods are mainly Phœnician, and the Phœnician words are correctly translated. The extraordinary frequency of *kal* at the beginning of sentences also indicates translation from a Semitic original. The stories have points of contact with the OT, but are so different that they cannot have been derived from it. In their divergences they have analogies in Babylonia and in other parts of the Semitic world. Neither Eusebius nor any other Christian writer of his period possessed the knowledge of Semitic religion necessary for the composition of these fragments. The genuineness of Eusebius's quotations is proved further by the fact that Johannes Lydus² gives an extract from the Phœnician *History* that is not found in Eusebius. This shows that he derived his information directly from Eusebius's source and not from Eusebius himself. In the other passages Lydus agrees closely with Eusebius, which shows that the latter has correctly reported his original.

2. Theory that Eusebius derived the fragments from Porphyry.—Eusebius³ quotes Porphyry, *Against the Christians*, as an authority in regard to Sanchuniathon. Gifford⁴ and others think that this shows that Eusebius derived his quotations of Philo from Porphyry. This is unlikely. Eusebius quotes Porphyry only as witness to the antiquity and credibility of Sanchuniathon. He never mentions him in connexion with the extracts, but names only Philo himself. This shows that he had access to Philo's work directly. Lydus also cites Philo, not Porphyry. Porphyry was a Neo-Platonist and defender of the old gods. He was the last man to approve and quote extensively the euhemeristic legends preserved by Eusebius. Still less is it possible that Porphyry invented the fragments ascribed to Philo. It is true that he was a native of Tyre, but he received a Greek education, was a pupil of Plotinus, and spent most of his life in Rome. It is improbable that he possessed the Semitic knowledge necessary for the composition of these extracts; and, as remarked above, they do not agree with his philosophy.

3. Theory that Philo invented the fragments.—F. C. Movers, in his earliest treatise on the subject, 'Die Unächtheit der Fragmente des Sanchuniathon,'⁵ pronounced the extracts given by Eusebius an invention of Philo. The claim to have discovered a work that had been hidden by the priests, which in its turn was based upon secret writings of the *ammounis*, bore on its face the mark of fraud. Philo was a native of Byblos and knew the names of the Phœnician gods and their popular identification with Greek divinities. He derived the stories which he ascribes to Sanchuniathon from Hesiod and other Greek poets and philosophers. This theory, like the foregoing, does not do justice to the strong Semitic character of the fragments and to their analogies in the OT and in other Semitic literatures.

4. Theory that Philo gathered late Phœnician traditions which he worked over to suit his

purposes.—Movers in his later works abandoned the extreme view that he held at first and maintained that Philo used genuine Phœnician traditions, but did not find them already collected by Sanchuniathon. This is the view also of Bunsen, Duncker, von Gutschmid, Baudissin, Wachsmuth, and most of the recent writers. This theory does justice to the Phœnician material found in the fragments, but emphasizes the lateness of the tradition as shown in the following characteristics.

(a) *Syncretism of the fragments*.—The Phœnician gods are identified with Egyptian and Greek gods, and the mingling of Egyptian, Hebrew, Persian, and Greek ideas in the legends shows, it is said, that the tradition cannot have arisen before the beginning of the Christian era.

In the case of Egypt the only clear borrowing is Thôth, the scribe of the gods and inventor of writing.¹ Here, however, it may be questioned whether this name, like Hermes, is not merely Philo's translation of some Phœnician god of writing, such as Nabu, the antiquity of whose cult in Canaan is attested.² Granted, however, that Thôth is original, Egyptian influence on the religion of Canaan began so early that we do not have to wait for the age of Philo for the introduction of this deity into the Phœnician pantheon.³

In relation to the OT there are many similarities in the fragments, but there is no evidence that any of the myths are derived from the OT; on the contrary, they are so independent as to indicate that they are both variants of a primitive Canaanite tradition.

Persian influence is claimed in the reference to Zoroaster the Magian in the *Sacred Collection of Persian Records*.⁴ This, however, is given by Philo, not as a quotation from Sanchuniathon, but as a new extract from a different work. The other supposed trace of Persian influence is Magos, 'the Magian,' who with his brother Amunos established villages and sheepfolds.⁵ The activity of this personage does not point to a Persian origin; and, as remarked above, it is probable that Magos does not mean 'Magian,' but is merely a transcription of the Phœnician name Ma'on.

Greek influence is shown in the identification of the gods of Phœnicia with Greek divinities, but this may be the work of Philo rather than of his Semitic originals. In most cases Philo gives the Phœnician name alongside of the Greek name, and the former may have been the only one in his sources. Movers claims that the supposed Sanchuniathon derives some of his stories from Greek etymologies; e.g., he states that Persephone, Περσεφόνη, 'died a virgin,' which shows that he derived Persephone from *παρθένος* and *φορή*; but this is too far-fetched to be probable. Of Astarte he says that she found a star and consecrated it as the island of Tyre, which shows that he derived 'Ashtart' from *ἀστὴρ*; but the connexion of 'Ashtart with the planet Venus can be traced back in Babylonia at least as far as the dynasty of Hammurabi.⁶ It is even possible that *ἀστὴρ* may be a derivative from 'Ashtar. It is claimed further that the supposed Sanchuniathon depends upon Hesiod in his theogony and war of the gods. Unquestionably Philo knows Hesiod and follows him in translating the names of the Phœnician gods; but, as remarked before, the numerous deviations from Hesiod show that he is not the source of the narrative. Both Hesiod and Sanchuniathon go back to a common Semitic original.

(b) *Euhemerism of the fragments*.—The fragments show throughout the effort to explain the gods as men who have been deified after death for the

services that they have rendered to humanity. This feature cannot be attributed to the translator; it lies in the very substance of the material. This theory of the origin of the gods was first given currency by Euhemerus, a contemporary of Alexander the Great. It gained favour, particularly among the Romans, at the beginning of the Christian era and found a fanatical advocate in Philo; accordingly, it is argued that its presence in these fragments proves their origin in the Greek period.

Against this view it may be argued that so-called euhemerism is far older than Euhemerus even among the Greeks¹ and existed still earlier among the Semites. The work ascribed to Lucian, *de Dea Syria*, which certainly depends throughout on Semitic sources, shows as pronounced euhemerism as do the fragments preserved by Philo. The legends in Gn 1-11, preserved not only by P but also by J, show a similar euhemerism. The names recorded both in J's and in P's list of the descendants of Adam are found elsewhere in the Semitic world as gods, but here they have become men, the discoverers of the arts, just as in Sanchuniathon. It seems, therefore, that this feature characterized already the primitive Canaanite tradition which underlay both Sanchuniathon and the OT.

5. Theory that Philo translated an older Phœnician writer.—Influenced by the foregoing considerations, Ewald, Renan, Tiele, and Spiegel accept the genuineness of the Sanchuniathon fragments and believe that Philo has given us a real, if somewhat free, translation. Ewald dates Sanchuniathon in the pre-Davidic age, Tiele in the Persian period, Renan in the Seleucid. Ewald attempts to prove that Porphyry knew the Phœnician original of Sanchuniathon and did not depend on Philo's translation. Renan argues from the scientific spirit of Philo that he would not have been likely to forge a document. It is impossible to prove the existence of Sanchuniathon, since we have only the testimony of Philo; still it is equally impossible to disprove it, so that critical opinion will probably continue to vacillate between this theory and the preceding one.

LEWIS BAYLES PATON.

SANCTIFICATION.—1. The term in theology.—In general, sanctification is the work of the Holy Spirit of God, in delivering men from the guilt and power of sin, in consecrating them to the service and love of God, and in imparting to them, initially and progressively, the fruits of Christ's redemption and the graces of a holy life.

¹ *ERF* v. 572.

The term ἀγιάζειν is also applied in the NT to (a) the reverent recognition or making known of an already existing sanctity (Mt 6⁹, 1 P 3¹⁵; cf. Nu 20¹², Is 8¹³, Ezk 20⁴¹); (b) the setting apart of material objects as holy, through their special association with God or with things divine (Mt 23¹⁷⁻¹⁹, 1 Ti 4⁵; cf. Ex 29³⁷⁻³⁷, Lv 27¹⁶⁻²¹); (c) God's consecration of Christ, or Christ's consecration of Himself, to the office and work of the Messiah (Jn 10³⁶ 17¹⁹; cf. Ex 40¹³, 2 Ch 5¹¹ 30¹⁷).

Sanctification is usually the subjective side of salvation (*q. v.*), particularly as viewed in relation to God's purity. That reinstatement of the sinful soul in the divine favour which the term 'justification' describes under the figure of a court of law (with reference to God's righteousness), and which the terms 'adoption' and 'regeneration' describe under the figure of family life (with reference to God's fatherliness), the term 'sanctification' describes in terms of ritual worship (with reference to God's holiness). Just as God's ceremonial purity, in the OT, forbade the near approach of that which was levitically unclean, until its defilement should be purged by the blood of sprinkling, and required that the offering should be withdrawn from profane or common use and dedicated in sacrifice upon the altar, so, in the NT, God's ethical holiness demands that the souls of sinners, who are in themselves unworthy to draw nigh to Him, shall be purged from the defilement of personal sin, sprinkled from an evil conscience through the blood of the everlasting covenant, separated from worldly and profane service, and dedicated to a progressive hallowing in the service and love of God (He 9¹¹⁻¹³ 10¹⁰⁻¹⁴, 19-22, 29 12¹⁴, Ro 12¹).

2. NT doctrine.—The following points receive emphasis in the NT. (a) The whole process is based upon and conditioned by Christ's perfectly achieved holiness, which grounds and guarantees the sanctification of all His followers and is a perpetual life within them, overcoming sin (1 Co 1³⁰, Eph 5²⁶, He 2¹¹ 10¹⁰, 12, 14 13¹²; cf. the use of καθάρσις, He 1³, 2 P 1¹⁰). (b) The gift and process of sanctification are primarily traceable to the free grace of the divine consecrating Spirit, normally associated with or taking full effect through baptism (Jn 17¹⁷⁻¹⁹, 1 Co 6¹¹, 1 Th 5²³, 2 Th 2¹³, Ro 15¹⁶); yet they also involve, though in a subordinate degree and as a result of the foregoing, the believer's own self-dedication and ethical striving, through faith, strenuous self-discipline, and moral habit (Ac 26¹⁸, 1 Th 4³⁻⁷, Ro 6¹⁰⁻²¹, 2 Co 7¹, He 12¹⁴, 1 Ti 4⁷; cf. the use of ἀγιάζειν in Ja 4⁸, 1 P 1²², 1 Jn 3³). These two necessary conditions, of human obedience and divine sprinkling, are brought together in 1 P 1² (cf. Ph 2¹⁰). (c) Sanctification has no prescribed limits set to it in this earthly life, and it is intended to be finally complete and perfect through the fidelity of God (1 Th 3¹³ 5²³, 1 Co 15⁹, Eph 1¹³, 14 3¹⁶⁻¹⁹); yet the term 'sanctified' (present participle) is applicable to all who are renewed in Christ Jesus, to whatever degree of holiness they may have attained (Ac 20³² 26¹⁸, 1 Co 1², He 10¹⁴). Generally, sanctification (ἀγιασμός), as an act or process, begun by God and ever going on 'in Christ,' is distinguished from holiness or sanctity (ἀγιότης [2 Co 1², He 12¹⁰]) and moral purity (ἀγισσύνη [1 Th 3¹³, 2 Co 7¹]), which are the state and quality respectively. See, further, art. HOLINESS, and *HDB*, s.v. 'Sanctification.'

In historically unfolding and developing the NT doctrine of sanctification the Christian Church has concerned itself chiefly with (a) the manner in which grace is related to faith in the work of sanctification, and (b) the degree to which sanctification may be carried in the present life.

3. Teaching of Augustine.—The Church's thought on the subject flowed first of all into the moulds provided for it by Augustine. His opposi-

¹ See art. CONSECRATION.

tion to Pelagianism ([*q.v.*] which represented a strong tendency in prior Catholic piety, especially in the East) led him to insist that the whole process of sanctification has its beginning, middle, and end in the grace of God, freely and spontaneously bestowed, man's co-operating effort being itself a divine gift. Further, his view of original sin, and of human nature as radically corrupted by the Fall, led him to conceive that sanctifying grace as a new supernatural impartation of divine life. Finally, his doctrine of the Church led him to regard that infused energy of grace as operating exclusively within the Church through the sacraments—a view not fully reconciled with his doctrine of predestination and the final perseverance of the elect. Augustine never lost sight of the importance of personal love to Christ as a constituent element of Christian holiness; yet the tendency of his system to take a metaphysical and almost physical view of grace (due to the influence of Neo-Platonism) and the absence from it of any due emphasis on the religious preoccupation of faith with the historic redeeming Christ, revealed in the gospel, as the prime factor in the transformation of the Christian's character, profoundly affected the subsequent theology of the Church in this as in other directions.

Augustine in theory allowed for the possibility of perfect sanctification in this life through the special operation of supernatural grace; but he somewhat weakened the judicial act of God, such as has been achieved. 'See how unexampled among men is an instance of perfect righteousness; but yet it is not impossible. For it might be achieved if there were only applied as much of a favourable will as suffices for so great a work . . . Now the fact that this is not realized, is not owing to any intrinsic impossibility, but to God's judicial act.'

4. **Mediæval Catholic developments.**—The teaching of Augustine was further developed by Aquinas and systematized into the mediæval doctrines of scholastic Catholicism, which received their dogmatic sanction and final form in the decrees of the Council of Trent. Ordinary human nature being incapable of forsaking sin, or meriting salvation, or truly apprehending God, supernatural grace is imparted, as 'aliquod habituale donum naturae superadditum,'² to raise the soul to a new level or higher order of being and so enable it to achieve its heavenly destiny and beatitude of knowing, possessing, and enjoying God. This sanctifying grace is derived in the first instance from the inexhaustible treasury of Christ's merit, at the disposal of the Church, and made available by means of sacraments, which prolong and universalize Christ's incarnate activities as Redeemer. From the divine side, the presence of this sanctifying or sufficient grace within the soul remits original sin, imparts a permanent habit of inherent righteousness, and carries within itself the promise and potency of all perfection. Out of it, as from a divine seed, emerges the tree of spiritual life, which branches out into the three theological and four cardinal virtues and yields ultimately the seven ripe fruits of the Holy Spirit. Only by mortal sin can its operations be neutralized or destroyed, the guilt which is contracted subsequently to baptism being removed by the eucharist in the case of venial sins and by the penitential system of the Church in the case of those that are more serious. From the human side, good works or supernatural acts of faith working through love have merit before God and secure increase of grace on that account; yet no such meritorious works are possible without the continuous assistance of actual, co-operating, or efficacious grace, which supplements the sanctifying grace originally bestowed, and mysteriously inclines the will, by its own effort, to give a free assent to righteousness. The resulting process

and goal of holiness are spoken of, not as sanctification (which is already bestowed in God's initial act), but as justification, or the actual making just or righteous, through infused grace leading to final perseverance, of him who was once a sinner but can now stand before the bar of God, deserving eternal life.

'Quae [justificatio] non est sola peccatorum remissio, sed et sanctificatio et renovatio interioris hominis per voluntariam susceptionem gratiae et donorum; unde homo ex injusto fit justus.'¹

According to Roman Catholic teaching, there is no particular sin which may not be wholly overcome by sanctifying grace, and no commandments of God which are impossible to the justified;² but the perfect eradication of all sin in this earthly life implies such a special infusion of assisting grace that it cannot be predicated of any one save of the Blessed Virgin.³ Nor can any one be so sanctified during this life as to be able to assure himself that he will not fall from grace.⁴ 'The Catholic can obtain the forgiveness of his sins only when he abandons them, and in this view the justified man—the man acceptable to God—is identical in every respect with the sanctified.'⁵

5. **Reformed doctrine.**—The Reformed doctrine of sanctification differed from the mediæval in laying stress on the category of sin and redemption rather than on that of nature and supernature. Grace did not mean to Luther a supernatural essence or virtually impersonal energy, derived from God and mysteriously yet infallibly infused into the soul by means of the sacraments. That view he found linked, in popular practice, to the immoral system of the sale of indulgences for sin. Rather, grace was conceived by him, more religiously, in the light of the teaching of the NT and his own experiences of inward piety, as the free, unmerited favour of God to sinners, in opening His fatherly heart to them in the forgiving love of Christ. This personal divine grace of Christ in the Holy Spirit, mediated primarily through the Word and only secondarily and derivatively through the sacraments, regenerates the soul and spontaneously evokes in us, in accordance with the laws of moral personality, a childlike confidence or trust (*fiducia*), which at once justifies us before God (thus delivering us from the guilt of sin) and through the further gift of the Holy Spirit continuously sanctifies us (delivering us also from the power of sin), so enabling us to produce good works.

'The soul, through faith alone, without works, is, from the Word of God, justified, sanctified, endued with truth, peace, and liberty, and filled full with every good thing, and is truly made the child of God.'⁶

Sanctification was thus conceived by Luther as the necessary corollary or complement of justification, the fulfilling of the law through love, though never in this life could that goal be perfectly attained.

In his view, 'the gospel . . . while it awakens faith, does not limit itself to the task of bestowing upon that faith forgiveness of sins through Christ, and, by assurance of this, pacifying the conscience. It proceeds further to bestow the gift of the Holy Ghost, in order that the soul may exhibit that reciprocity of love towards God which evinces itself in the fulfilling of the law. Although such fulfilment is of course always imperfect, it is still obligatory, because the law is of everlasting obligation.'⁷

The position of Calvinism was very similar, as may be seen from the following statements of the *Westminster Confession* (1647), ch. xiii.:

'(i.) They who are effectually called and regenerated, having a new heart and a new spirit created in them, are further sanctified really and personally, through the virtue of Christ's death and resurrection, by His word and Spirit dwelling in them; the dominion of the whole body of sin is destroyed, and the

several lusts thereof are more and more weakened and mortified, and they are more and more quickened and strengthened in all saving graces, to the practice of true holiness, without which no man shall see the Lord.

(ii.) This sanctification is throughout the whole man, yet imperfect in this life; there abideth still some remnant of corruption in every part: whence ariseth a continual and irreconcilable war; the flesh lusteth against the Spirit and the Spirit against the flesh.

(iii.) In which war, although the remaining corruption for a time may much prevail, yet, through the continual supply of strength from the sanctifying Spirit of Christ, the regenerate part doth overcome; and so the saints grow in grace, perfecting holiness in the fear of God.¹

6. Pietism, Moravianism, and Methodism.—The Reformers, however, largely because of their preoccupation with the Roman controversy and the doctrine of justification, did not fully develop the doctrine of sanctification; nor did it receive much attention from later Protestant scholasticism. A more experimental interest in the subject came with Pietism, Moravianism, and Methodism (*qq. v.*). Here the emphasis shifted from the ecclesiastical method and discipline of holiness, and all abstract theories and theological conceptions of grace, whether Catholic or Protestant, to a more directly personal, emotional, and evangelical inward communion with Christ Himself, as the Divine Sanctifier and ultimate object of faith, love, and adoration. It was claimed that hourly fellowship with Him, through the Holy Spirit, in the thoughts and activities of ordinary life, ought normally to lead to entire sanctification, an unswerving loyalty, at least, of love and fidelity to God.

In defence of this position it was argued (a) that it is the office and work of the Holy Spirit to administer as perfect an atonement inwardly as Christ on the Cross has accomplished for us outwardly; (b) that Christ Himself bade His followers be perfect; (c) that St. Paul contemplated the complete destruction of sin in the believer even in this life (Ro 6⁶. 7. 11. 22), and that St. John spoke of the continued presence of sin in the truly regenerate as an impossible event (1 Jn 3⁹); (d) that the NT repeatedly either prays, promises, or exhorts that men should be 'filled with the Spirit,' 'sanctified wholly,' 'perfected in love,' 'redeemed from all iniquity,' 'purified even as He is pure,' 'filled unto all the fulness of God,' 'presented unblamable before God at Christ's coming'; (e) that only a non-Christian (Gnostic or Manichean) view of human nature can regard sin as necessary, and entire sanctification as impossible, for physical reasons; (f) that 'evangelical' perfection, or blamelessness of sincere reaction against all sin, and inward consecration to the rule of love, in reliance upon divine grace, is quite compatible with intellectual mistakes, creaturely limitations, and even moral lapses due to transmitted tendencies to evil or the pressure of a hostile environment; (g) that sensitiveness to evil, humility arising out of past sin, vicarious penitence before God, and the corporate confession of the sins of others continue to be the marks of true holiness even among the blessed; (h) that the moral and spiritual conditions of entire sanctification cannot be affected by the physical fact of death, but must be the same here as they shall be hereafter.

'The NT gives no ground for supposing that there is such an absolute contrast between the conditions of the heavenly life and those of the Christian life in this world that sin must be entirely alien to the one and inevitable in the other. In the absence of such a contrast, the commands, instructions, and prayers which look to entire sanctification or perfect love carry a certain presumption that the state which these terms define is of possible attainment in this life.'¹

At the same time, it was recognized that, while such a sincere spiritual fidelity of the soul to its opportunities and ideals might be achieved in this life, no guarantee could be given that it would

consistently be maintained. See, further, artt. BACKSLIDING and PERFECTION (Christian).

The revivalist type of piety favoured an experimental and even doctrinal dualism between the soul's imperfect first love in conversion (which might easily cool or become lost) and the 'second blessing' of a perfectly clean heart in sanctification (or the conscious and glad experience of love habitually prevailing in all one's actions). Many, however, thought that this separated justification and sanctification too widely, and claimed that an immediate entrance into full sanctification, *per saltum*, as it were (yet not so as to exclude the progressive enlightenment of the mind and refinement of the conscience), was possible and incumbent upon all Christians. Others went farther and advocated full sanctification in a more absolute sense, denying the possibility of any progressive hallowing of the spiritually loyal will or conscience, as distinct from mere growth out of mental ignorance or mistakes of judgment. See art. HOLINESS, *ad fin.*

7. Kant.—An entirely new approach to the Christian doctrine of sanctification was made necessary by the revolutionary philosophical thinking inaugurated by Kant. Although reared in the atmosphere of Pietism, Kant broke away from the whole dogmatic system of supernatural or 'revealed' religion on which it rested and based the necessity of holiness solely on the nature of the thinking, experiencing, and acting self, and on the categorical claims of the moral law, without any reference to a theology of grace. Man's ethical nature demands, as its supreme good, the union of perfect virtue and perfect happiness. Such a consummation requires God to guarantee it, freedom to realize it, and immortality to perfect it. In this view, sanctification is construed in terms of moral character alone, and all hope of its being in any sense complete during this earthly life is swept away.

'The perfect accordance of the will with the moral law is holiness, a perfection of which no rational being of the sensible world is capable at any moment of his existence. Since, nevertheless, it is required as practically necessary, it can only be found in a progress in infinitum towards that perfect accordance, and on the principles of pure practical reason it is necessary to assume such a practical progress as the real object of our will.'²

8. Schleiermacher.—If Roman Catholicism conceived sanctification institutionally, and Kant ethically, Schleiermacher conceived it mystically and subjectively. Growth in holiness is the progressive domination of the God-consciousness within us over the merely sentient and ever morally defective world-consciousness. This is derived by us historically from the perfect and archetypal God-consciousness of Christ and mediated to us spiritually through the redemptive life-fellowship of the Church. Within that fellowship the Holy Spirit rouses our free, loving surrender to the attractive and formative personality of the Redeemer, who in His turn communicates to us, relatively but in ever-increasing measure, His own supreme blessedness and unclouded consciousness of God.² It is noticeable that, whereas Kant's moral and individualistic view of sanctification demanded a personal immortality for its perfecting, Schleiermacher's more emotional and social view looked to the perfecting of sanctification in a fellowship and was consistent in his mind with an almost impersonal pantheism.

9. Ritschl.—Ritschl's doctrine of sanctification was determined by his governing conception of the Kingdom of God. If in the experience of redemption we find ourselves forgiven and regenerate, it is not with a view to our subsequent personal holiness before God, as a Pietist might say, nor yet with a view to our attaining the freedom of perfect moral character, as Kant might say, but rather with a view to the practical fulfilment of our vocation as members of God's kingdom of goodness, righteousness, and love. This inward experience of redemption, begun in our awareness

¹ H. C. Sheldon, *System of Christian Doctrine*, Cincinnati, 1903, p. 468.

of reconciliation with God and restored harmony with the universe through the inner life of Jesus, historically and spiritually mediated to us through the Church, is consummated by the help of God the Holy Spirit. Ritschl, however, conceived the Holy Spirit, not metaphysically as a Person of the Trinity, but religiously and experimentally as 'the power of the complete knowledge of God which is common to believers in Christ,' 'an attribute of the Christian community,' 'the motive-power of the life of all Christians—a life which, as such, is necessarily directed to the common end of the Kingdom of God.'¹ This indwelling spirit of life imparts justification, regeneration, and sanctification primarily to the Church or community of believers and only secondarily to such individual members as personally appropriate these gifts through faith; since 'it is not permissible for any man to determine his relation to the Holy Spirit by observation of himself, in which he isolates himself from all others.'² The result is perfection, or 'faith in the Fatherly providence of God, which maintains a right feeling with God through humility, and with the world through patience, and which expresses and confirms itself through prayer . . . with the disposition to obey the moral law and with good action in one's calling.'³ Ritschl's repudiation of the Augustinian doctrine of original or transmitted sinfulness, and his own teaching that sin is not the violation of an absolute or statutory moral law, but only a relative failure to fulfil one's vocation in the service of the Kingdom and in the active exercise of patience, humility, and prayer, lead naturally to the view that sanctification may quite well be complete, qualitatively if not quantitatively, during the present life.

'The conception of a moral perfection in the Christian life ought on no account to be associated with the idea of a fruitless search for actual sinlessness of conduct in all the details of life. It rather means that our moral achievement or life-work in connection with the Kingdom of God should, however limited in amount, be conceived as possessing the quality of a whole in its own order . . . the realisation of the universal good within the special limited domain of our vocation.'⁴

ro. Modern Christian view.—This modern emphasis on social service and moral sacrificial action as integral parts of true holiness is heartily to be welcomed. 'It has been the bane of evangelical Christianity, and often its perdition, to have severed justification in the cross (or religion) from sanctification in the spirit (or ethic).'⁵ It is obvious, however, that in the course of our survey we have already travelled far from the original idea of temple-sprinkling and the conditions of approach to a holy God. Viewed in the light of NT teaching, Ritschl's doctrine is defective in three respects. (a) His interest in the practical aspects of religion, and his dislike of mysticism led him to conceive sanctification as a moral and social task of mutual loyalty laid upon the community in its dominion over the world, rather than as a religious privilege, training, and aspiration experienced by the individual in his fellowship with God. (b) While he dealt suggestively with the moral vocation of Jesus and His influence upon men as the Founder of the Kingdom and humanity's ideal representative before God, he related inadequately the work of Christ to the divine holiness and righteousness in taking away the sin of the world and so providing a moral and spiritual basis for forgiveness and sanctification. (c) He minimized the distinctive testimony of the Christian consciousness as to the nature and

function of the exalted Christ and the personal work of the Holy Spirit in sanctification.

It has been the work of subsequent theology to endeavour to remedy these defects. A modern Christian view of sanctification is likely to bring the Roman Catholic doctrine of grace objectively given and the Protestant doctrine of grace subjectively realized into closer relation with one another, by means of a more comprehensive and dynamic doctrine of the Holy Spirit, and so to regard justification and sanctification, not as separate and detached experiences, but as complementary aspects of one vital relationship of union with the living Christ. 'The attitude of faith in justification implies the implicit energy of sanctification.'¹ At the present day there is evidence of a revived interest in the more experimental aspects of Christian holiness. The increase in the number of clerical and lay retreats, prayer-circles, fellowships of silence, conventions for the deepening of spiritual life, and the like, shows that the subject of personal sanctification is again taking possession of men's minds. Of the growingly popular Roman Catholic retreats for working men, *e.g.*, it has been written:

'The effects are lasting. The men have had serious instruction, have faced life calmly and sensibly, have deepened their religious spirit. You meet them coming in from thirty leagues round to make a retreat, and you ask them where they are going; they answer: "To sanctify ourselves."'²

SANHEDRIN.—A certain reaction seems due against what may be termed historical scepticism as applied to the history of Israel. Uncritical acceptance of so-called traditions needed the severest testing and repudiation; but, when this process tends to an equally uncritical denial of all traditions, it must be the function of a true scientific criticism to redress the balance. In brief, legendary embellishments in an olden narrative do not necessarily destroy the whole trust to be placed in it.³ This judgment applies with special force to the Jewish 'traditions' as to the communal organization in Judaea. Criticism has been inclined to a catastrophic series, while tradition has posited continuity. Thus the 'Great Synagogue' forms the traditional link between the prophets and the teachers of the type who constituted the Sanhedrin.⁴ In the Great Synagogue were included, according to one form of the tradition, the latest of the prophets—Haggai, Zechariah, and Malachi. The activity assigned to the Great Synagogue was clearly meant to represent the completion of the work of Ezra and to account for the internal development during the Persian period, the records of which are so scanty. The functions of the Great Synagogue were taken to be threefold: 'the preservation of the Scriptures, the establishing of the Liturgy, and the foundation of the Oral Law.'⁵ Clearly, the 'tradition'

as to the Great Synagogue based itself on the reports contained in Neh 8-10. The returned exiles had to organize the community round the Second Temple as a centre. Hence the leaders constituted an assembly for the purpose. The traditional chronology regarding the date and contemporaneity of the leaders cannot be defended; thus the Tannaitic chronology treats the whole Persian period as extending over only 34 years. Then Alexander the Great appears, and with him ends the Great Synagogue.¹

Here, however, we are faced by the consideration to which allusion has been made above. As Bacher cautiously concludes, it must be assumed that some governing council of a more or less central character existed throughout the Persian period.² It is undeniable that a great change had occurred in the standard of conduct and in devotion to the Law between Nehemiah and Mattathias, a period of some two centuries.

This, as Krauss points out, 'can only be understood if, during that period, the laws were studied, commented upon, and taught. No high-priests of the class of Joiakim and Eliashib at the time of Ezra, or of Alcimus and Menelaus of the Greek period, would have been able to produce such a signal change in the life of the people. Quite a different class of men must have been at work, who executed and spread the divine teachings with the whole force of religious conviction. Such men were, according to Talmudical information, the men of the Great Synod.'³

Nevertheless, Schürer expresses the general conclusion when he asserts that 'the existence of a Jewish *γερουσία* earlier than the Greek period cannot be proved with any degree of certainty.'⁴ It was the work of Hellenism to reorganize the Orient; but, as Schürer concedes, such a council, with tolerably large powers, may date back to the Persian period. The new institution would be not a creation, but a revision. The main difference in the points of view between the Talmudic and the modern conceptions is the position of the priesthood. 'At the head of the Jewish commonwealth, and therefore of the *γερουσία* as well, stood the hereditary high-priest.' With the Maccabean triumph, the chief alteration was the substitution of a new line of high-priests, but throughout the Roman period the high-priest stood at the head of the *συνέδριον*—a term which, though probably current in this sense in the 2nd cent. B.C., first meets us in the decree of Gabinus, 57 B.C. The power of the Jerusalem Sanhedrin, especially as supreme court of justice, was emphasized by the Roman régime until in A.D. 70 the existing powers of the Sanhedrin were removed, and it became a civil and religious, instead of being a political, body. The Rabbinic tradition regarded the Sanhedrin as an academic court, composed of the teachers of the Law. But it is now recognized 'from the concurrent testimony of Josephus and the New Testament that, till the very last, the head of the sacerdotal aristocracy continued to preside over the Sanhedrin.'⁵ On the other hand, Schürer modifies his view by conceding that the growth of Pharisaism must have affected the constitution of the Sanhedrin so that in the Roman period the council was a composite body, consisting most probably of 71 members, among whom were included the Sadducean priestly aristocracy and the Pharisaic lay democracy.⁶

It is not proposed here to enter into the details of the powers and activities of the Sanhedrin, as referred to in the NT or Rabbinic period, beyond

¹ For a good account of Kuenen's view, to the effect that the 'Great Synagogue' was at most a temporary phenomenon of the age of Nehemiah, see J. A. Selbie, in *HDB* iv. 643f.; the literature on the subject is there given. An excellent survey of the whole question by W. Bacher is to be found in *JE* xi. 640 ff.

remarking that there is a fair consensus of opinion that the accounts of the trial of Jesus are in many respects irreconcilable with what is recorded in Jewish sources as to the legal and regular procedure before the court. But attention must be drawn to the fresh light thrown by recent investigation on another apparently irreconcilable conflict of evidence—the relation of priest to laity in the headship of the Sanhedrin. There is here a bold contradiction between the NT and Josephus on the one side and the Rabbinic records on the other. It has recently been urged that the two sets of documents relate to quite different bodies—that there were in fact two councils: (1) a political Sanhedrin, continuous with the *γερουσία*, and (2) a religious Sanhedrin of later institution. The two, on this theory, co-existed in the Roman period. The former directed public affairs and administered the criminal law (under the control of the procurator); of this Sanhedrin, mainly sacerdotal and aristocratic, the high-priest was president. The latter was lay and democratic, and almost exclusively Pharisaic. It supervised the religious life, supervised the priesthood, discussed the interpretation of the Law, regulated ritual, and arranged the calendar. At the head of this council was the *nasi*, a Pharisaic teacher.¹ This latter Sanhedrin survived the fall of the city in A.D. 70; at all events an academy of the type was founded at Jabneh and afterwards moved to Tiberias. Such an academy existed in Palestine until the 5th cent. A.D.; to it is due the great development of law and learning contained in the Rabbinic books.

A very curious revival of a Sanhedrin occurred in the year 1807. Napoleon convened this assembly of Jewish notables so as to use its decisions as a basis for his legislation. These decisions concerned chiefly the relations of Jews to the State and upheld the principle that the Jew in modern states is in no way precluded by his religion from identifying himself completely with the national life of the state of which he is a citizen.

LITERATURE.—See the works cited in the footnotes.

I. ABRAHAMS.

ŚĀṆKARĀCHĀRYA.—No name is better known in the history of Brāhmanic philosophy than that of Śāṅkarāchārya, and no doctrine has exercised greater influence than his on Hindu thought in general. Traces of its influence are unmistakable even at present, notwithstanding the existence of a number of rival systems of Hindu philosophy, whose main if not sole object was and has been to controvert his doctrine. With all this, it is surprising that very little that is of historical importance is known about the life of this great philosopher and the age in which he lived.

1. **Date.**—It is now generally accepted that Śāṅkara lived in the latter half of the 8th century. The view which assigned him to the 7th cent., and which was so eloquently propounded by Telang, has been completely refuted by the arguments of K. B. Pathak, who regards A.D. 788 as the year of Śāṅkara's birth, specially depending upon a MS from which he gives an extract in *JA* xi. [1882] 174 ff.²

2. **Life.**—Many legends of miraculous powers and fabulous incidents are associated with Śāṅkara's biography. The two works pretending to

¹ The view that there were two councils is admirably developed by A. Buchler, *Das Synhedrion in Jerusalem*, Vienna, 1902. A criticism of the view may be read in G. A. Smith, *Jerusalem*, London, 1907, i. 419 ff. The two councils are, on the other hand, accepted by J. Z. Lauterbach, in *JE* xi. 41 ff.

² Further discussion of this question of date will be found in *JRASB* xvi. [1885] 180, xvii. pt. 2 [1889] 63, xviii. [1891] 1, 147 (and esp. pp. 68, 213 for Pathak's further arguments); *JA* xi. 174, xiii. [1884] 95, xvi. [1887] 41, 160; H. H. Wilson, *Works*, London, 1861-77, i. 193; *Śāṅkara-Saṅkara-rīṣya*, ed. Kesnalāla Govindarāma Devaśrayi, Bombay, 1892.

give an account of his life are the *Śaṅkara-dig-vijaya* of Mādhavāchārya and the *Śaṅkara-vijaya* of Anandagiri. Both these biographers deify their hero, regarding him as an incarnation of the god Śiva for the special purpose of putting an end to Buddhists and dualists, and establishing the Brāhmanical religion and philosophy.

The account of his birth is related differently by the two biographers. According to Mādhavāchārya, in the Kerala country (modern Malabar), in a village named Kālaṭi, there lived a Brāhman named Vidyādhiraṇṇa who had a son named Śivaguru. This Śivaguru, after having completed his studies, married. Up to very old age he and his wife had no issue; so they worshipped Śiva, practising severe austerities. Śiva appeared before them in a dream and asked them if they would like to have one son of great merit and knowledge, but of short life, or many sons of the opposite character. The parents chose the former; and at last a son was born to them, when all the constellations were in their most favourable positions.

According to Anandagiri, Viśvajit and Viśiṣṭa were the parents of Śaṅkara. Viśvajit went into a forest to practise penance, and in his absence Viśiṣṭa, who lived at a place named (), worshipped Chidambareśvara ().

This Śivaliṅga entered into her, Śaṅkara. Even at a very early age Śaṅkara was master of all the sciences, and various miraculous exploits are attributed to him. Thus, e.g., he is said to have brought the local river near his house in order to save his mother the trouble of going to a distance for water. So also he is credited with having forced his mother to consent to his becoming a *sannyāsin*, while passing through a river, when a crocodile seized him by the foot and would not leave him, unless he made up his mind to retire from the householder's life. After some time Śaṅkara went to the forest called Govindanātha on the bank of the river Indubhava (Narmada, according to the commentator), where he met Govinda and became his pupil. We find the name Govinda in the various colophons in the works of Śaṅkara, who always calls himself 'Śrīmad-govinda-bhagavat-pūjyapada-śiṣya.' This Govinda is the pupil of Gauḍapādāchārya, who in his turn is supposed to be the pupil of Śuka, the son of Vyāsa, identified with the author of the *Brahma-Sūtras*. Next Śaṅkara, at the command of his guru, went to Kāśī and composed the commentary (*bhāṣya*) on the *Brahma-Sūtras*. At Prayāga he met Kumārīlabhaṭṭa, the great Mīmāṃsā-writer, who was burning himself as punishment for the sin of having destroyed the family of Sugata, his teacher, and of having discarded Śvara, out of his zeal for the Mīmāṃsā doctrine of Jainini.

The next great event in Śaṅkara's life is his visit to Maṇḍanamīśra, a very ardent exponent of Mīmāṃsā at Māhīmatī, and his dialectical contest with him, which lasted for several days and at the end of which Maṇḍanamīśra, accepting defeat, became a *sannyāsin* and Śaṅkara's most beloved pupil—afterwards known as Suresvarāchārya, the writer of a *vārtika* on Śaṅkara's *Bṛhadāraṇyakaopaniṣad-bhāṣya*. To be able to answer satisfactorily the questions pertaining to erotics put to him by the wife of Maṇḍanamīśra, Śaṅkara next entered into the dead body of a king named Amaraka and had all the experience of the science in question, a result of which was a poem ascribed to him, called *Amaruśataka*.

Śaṅkara then made a tour through India, refuting all doctrines except that of absolute monism (*kevalādvaita*) by his wonderful power of dialectic. He attracted several zealous and clever pupils—e.g., Padmapāda, Totaka, Hastāmālaka, and others. He succeeded in mounting the seat of omniscience (*sarvajña-piṭha*) in the temple of Śārada in Kashmir, while others could not even get through the doors of the temple.

Śaṅkara attended his mother during her last illness; and, when she was dead, the relatives refused to give him fire with which to burn her, since Śaṅkara was a *sannyāsin*. At this Śaṅkara cursed them all, saying that they would be excluded from the study of the Vedas (*veda-bahīṣṭa*), that no *sannyāsin* would receive alms from them, and that the cemetery would be very near their houses.¹ Śaṅkara died at the early age of thirty-two.

The great object of Śaṅkara's labours was the revival of the system of religion and philosophy taught in the *Upaniṣads*; and for this he wrote many works and carried on dialectical controversies all through India, from Kāmarūpa or Assam in the north-east to Kashmir and Kalkha in the north-west, and from the Himālayas down to Cape Komorin, and succeeded in putting down the heterodox systems and establishing the doctrine of absolute monism. He established four *mathas*, or seats of religion, at the four ends of India—the Śrīngerimatha on the Śrīgeri hills in the south, the Śārada-matha at Dvarka in the west, the Jyotirmatha at Badarikāśrama in the north, and the Govardhanamatha at Puri in the east. Each of these *mathas* has a *sannyāsin* at its head, who

bears the title of Śaṅkarāchārya in general, with a proper name of his own, and who exercises only a nominal control over the religious matters in the province.

3. Works.—The following is a brief notice of the works supposed to be written by Śaṅkara, but about the authorship of some we are not sure:

The best, of course, is (1) his commentary on the *Brahma-Sūtras*, which, apart from its philosophical value, is a masterpiece as a literary product. Śaṅkara also wrote (2) commentaries on the ten principal *Upaniṣads* and (3) on the *Bhagavad-Gītā*, the two other *prasthānas* of the Vedānta. His main object was to show that the *Upaniṣads* and the *Bhagavad-Gītā* contain no doctrine but absolute monism. There are also his commentaries (4) on the *Viṣṇu-sahasra-nāma* and (5) on the *Sanatsujatiya*, both *prakaraṇas* from the *Mahābhārata*. He also wrote several independent treatises dealing with the principal topics of the Vedānta-doctrine, such as (6) *Viveka-chūḍāmaṇi*, (7) *Upadeśasahasri*, (8) *Aparokṣānubhūti*, (9) *Ātmabodha*, (10) *Daśa-śloki*, (11) *Mohamudgara*, and many other minor works, such as (12) *stotras* in praise of Viṣṇu, Devī, and other deities.¹

4. Doctrine.—In Europe by the name Vedānta is generally understood the philosophical doctrine of Śaṅkara; but it is a misunderstanding. There are several philosophical schools which bear the name of Vedānta—e.g., those of Rāmānuja, Vallabha, Madhva, etc., which, however, differ essentially from each other, not only in the theological and practical parts, but even in the metaphysical part properly so called. For this reason the several Vedānta schools have their distinctive significant names also. The name which distinguishes the doctrine of Śaṅkara is 'Kevalādvaita,' or absolute non-duality. This doctrine may be briefly expressed in the well-known line: *Brahma satyaṁ jagan mithyā jīvo Brahmaiva nāparaḥ*, 'Brahman or the supreme spirit is real; the world is unreal; the individual self is only the supreme self, and no other.' Only intelligence (*chaitanya*), which is without form, without qualities, without any limitations of time, space, or causality, is real; everything else without exception is unreal, phenomenal, erroneously superimposed upon the self-existing, self-refulgent intelligence. Thus the unity of the Brahman or the supreme self, according to Śaṅkara, is absolute, without the slightest trace of plurality, which can belong only to the ephemeral and the empirical world; and, if the essence of philosophic thought consists in proceeding from plurality to unity, in finding the one which underlies the many that we see in us and around us, no human conception can go any farther.

(a) Nescience.—But how can unity be reconciled with the plurality by which we are surrounded and of which we cannot get rid? This question Śaṅkara solves by bringing in the principle of *māyā*, or illusion. Thus his doctrine has always two aspects, esoteric and exoteric, be it in reference to theology, cosmology, or psychology. This is the great merit of Śaṅkara, viz. that he has succeeded in a most satisfactory manner in reconciling the mutually opposed texts of the *Upaniṣads*, which sometimes speak of the unity of the supreme spirit, without attributes, which alone is real and of which one can give only a negative description, but sometimes assert the plurality, the supreme cause being possessed of qualities and capable of controlling from within the world intelligent as well as non-intelligent. The principle of illusion served like a two-edged sword to cut asunder all kinds of opposition. The world around us consists of souls with limited knowledge and of non-intelligent objects; and, if we once admit the existence of a supreme spirit without any limitation, omnipresent, omniscient, how can we explain the creation of souls with limited knowledge and of objects without intelligence, from this omniscient spirit, except as the result of ignorance or

¹ The ed. in 20 vols. of Śaṅkarāchārya's Works, published at Śrīrangam, 1910 ff., is recommended.

¹ And such is the case even at present in that part, remarks the author of *Śaṅkara-dig-vijaya*.

nescience, which, so to speak, puts limitations on the unlimited spirit? And that there exists such ignorance is not only a fact mentioned in the Scripture, but a matter of ordinary experience, as when one has consciousness in the form, 'I am ignorant.' If this consciousness is true, it is a proof of ignorance; if it is not true, it is an even better proof of the same ignorance.

Thus the highest intelligence, which is really without quality, without any limitations, appears to be possessed of qualities, limited in nature, owing to its being conditioned by nescience, which cannot be described as 'being' (*sat*), for it is, as a matter of fact, not real; nor can this nescience be described as 'not being' (*a-sat*), for its effects are incontestable. This nescience consists in erroneously superimposing on something something else that does not exist there, as, *e.g.*, mistaking a rope, which is not a serpent, for a serpent. This nescience manifests itself in various ways and is the cause of all the misery suffered by the soul, though, in its original nature, the soul is nothing but existence, intelligence, and bliss. The most striking and far-reaching example of this is the confusion of the subject with the object, of the knower with the knowable—in fact, of what is real with what is not real or what is only phenomenal.

'It is a matter not requiring any proof,' says Śaṅkara, in the very beginning of his commentary on the *Brahma-Sūtras*, 'that the object and the subject whose respective spheres are the notion of the "Thou" (the Non-Ego) and the "Ego," and which are opposed to each other, as much as darkness and light are, cannot be identified. All the less can their respective attributes be identified. Hence it follows that it is wrong to superimpose upon the subject—whose Self is intelligence, and which has for its sphere the notion of the Ego—the object whose sphere is the notion of the Non-Ego, and the attributes of the object, and vice versa to superimpose the subject and the attributes of the subject on the object. In spite of this it is on the part of man a natural procedure—which has its cause in wrong knowledge—not to distinguish the two entities (object and subject) and their respective attributes, although they are absolutely distinct, but to superimpose upon each the characteristic nature and the attributes of the other, and thus, coupling the Real and the Unreal, to make use of expressions such as "That am I," "That is mine."'¹

Śaṅkara gives several definitions of this superimposition (*adhyāsa*), but lays down at last that its essence consists in the apparent presentation of the attributes of one thing in another thing, with which agrees the popular view exemplified by expressions such as 'Mother-of-pearl appears like silver,' 'The moon, although one only, appears as if she were double.'

'This superimposition,' he says further on, 'learned men consider to be Nescience (*avidyā*), and the ascertainment of the true nature of that which is (the Self) by means of the discrimination of that (which is superimposed on the Self), they call knowledge (*vidyā*). There being such knowledge (neither the Self nor the Non-Self) are affected in the least by any blemish or (good) quality produced by their mutual superimposition. This mutual superimposition of the Self and the Non-Self, which is termed Nescience, is the presupposition on which there base all the practical distinctions—those made in ordinary life as well as those laid down by the Veda—between means of knowledge, objects of knowledge (and knowing persons), and all scriptural texts, whether they are concerned with injunctions and prohibitions (of meritorious and non-meritorious actions), or with final release.'²

Notwithstanding the fact that the whole objective world is the result of nescience, Śaṅkara allows that this objective world is real for all practical purposes (*vyavahārārtham*). Thus, although the *Brahman* alone has an existence real (*pāramārthika*) in the highest sense of the word, the objective world also has an existence, but with a reality of the second order, or practical (*vyāvahārika*); or we may say that the former represents the metaphysical or esoteric or absolute reality, while the latter represents only the practical or exoteric or relative reality. Thus, esoterically, the *Brahman* alone is real, while the individual souls (*chid*) and the inanimate world (*achid*) are unreal, mere appearance, a mirage. Exoterically, however,

the individual souls and the material objects exist for all practical purposes, and, as long as the right knowledge has not arisen, we cannot and must not ignore them.

(b) *Theology*.—Even the *Brahman* has, for Śaṅkara, a double character. Esoterically the *Brahman* is knowledge or realization itself, non-qualified, absolutely incapable of change, unknowable, indescribable, absolutely unique, nothing but existence, intelligence, and bliss—the *para* or *nirguṇa Brahman*. Exoterically, however, the *Brahman* is qualified, possessed of an infinite number of auspicious attributes, capable of producing the world from itself and of re-absorbing it into itself; in brief it is *Īśvara*, or God—the *apara* or *saguṇa Brahman*.

(c) *Cosmology*.—The exoteric cosmology, according to the natural but erroneous realism (*avidyā*) in which we are born, considers the world as real and can express its entire dependence on *Brahman* only by the mythical way of a creation of the world by *Brahman*, thus implying a temporal character of this creation. But this is against the 'beginninglessness' of the migration of souls. Śaṅkara, therefore, to reconcile this, teaches that there is not a single creation once for all, but that the world in great periods is created and re-absorbed by *Brahman*, and this succession of creation and re-absorption lasts from eternity, and no creation is the first. This never-ceasing creation is a moral necessity—it is not for God's glorification, not for His particular amusement, not for love of mankind. Thus explains itself the theory of *karma* and of *samsāra*, which goes on, as the sprout grows from the seed, which grows from a previous sprout, and so on.

The esoteric cosmology, however, says that all this is a mere representation of the truth. The manifold world is only an illusion (*māyā*), a mirage (*mṛgatīkṣṇikā*), a dream; and the reality is to be attained not by reasoning (*tarka*), but by introspective realization (*anubhava*). If you return from this variegated world to the inmost recesses of your soul, you will become aware of a reality, a timeless, spaceless, changeless reality. The same thing was said by Plato, according to whom this world is a world of shadows and not of realities, and also by Kant, to whom the world is an appearance only, and not the thing-in-itself.

(d) *Psychology*.—According to the esoteric psychology, the *jīva*, or the individual soul, is *Brahman*, or the supreme spirit itself, fully and totally possessed of eternity, omnipresence, omniscience, etc., but these divine qualities are hidden in the individual as the fire is hidden in the wood, and will appear only after the final deliverance. *Brahman* itself, which is one and limitless, appears as the *jīva*, limited and multiple, owing to its being conditioned by *māyā*, just as, *e.g.*, ether (*ākāśa*), which is one and all-pervading, is looked upon as so many different ethers limited (*e.g.*, the ether contained by a jar or that contained by a room), the notion of limitedness and multiplicity being due to the conditioning objects, but having nothing to correspond to it in the ether itself. Thus exoterically the individual souls are limited in size and qualities, infinite in number, one for each body, the cause of this concealment of their original divine nature being the external adjuncts which condition them (*upādhi*), such as the mind (*manas*), the sense-organs (*indriyāṇi*), and the vital airs (*prāṇāḥ*) which constitute the subtle body (*sūkṣmaśarīra*). This whole psychological apparatus together with *karma* accompanies the soul in all its ways of migration, without essentially infecting its divine nature. These *upādhis* are of course only part of the phenomenal world, due to the innate *avidyā*.

¹ SBE xxxiv. 31.² *Ib.* p. 6.

But whence comes this *avidyā*, this primeval cause of ignorance, sin, and misery? No satisfactory answer has been given to this question; or the question itself is inadmissible; for causality goes only as far as the *samsāra*, and we do not know anything farther.

(e) *Eschatology*.—From the conception of rewards in heaven and punishments in a dark region contained in the hymns of the *Rigveda* there arose the theory of *samsāra*, teaching rewards and punishments in the form of a new birth on earth. The Vedānta thus exoterically admits of a threefold division: those who perform good deeds, sacrifices, etc., follow the path of the fathers (*pitṛ-yāna*) and are born again; those who worship the qualified *Brahman* or *Īśvara* follow the path of gods (*deva-yāna*) and are on their way to final deliverance; and those who are evil-doers have a third place (*trītiya-sthāna*) reserved for them. Esoterically, however, the only reality is *Brahman* and its knowledge itself is *mokṣa*.

(f) *The pramāṇas, or sources of knowledge*.—According to Sāṅkara's system, there are three principal sources of knowledge—*pratyakṣa*, or sensuous perception; *anumāna*, or reasoning; and *śabda*, or word; to which later writers on Sāṅkara's Vedānta have added *upamāna*, or comparison; *arthāpatti*, or implication; and *abhāva*, or negation.¹ Of the three first *śabda* is the most important, while *pratyakṣa* and *anumāna* play only a secondary rôle, especially in the case of ascertaining the truth regarding purely metaphysical and abstract matters like the nature of the cause of the universe, etc. By *śabda* is meant revelation, or *śruti*, represented by the *Samhitās* and *Brahmaṇas*, which relate to action and form the *Karma-kāṇḍa*, and by the *Upaniṣads*, which relate to knowledge and form the *Jñāna-kāṇḍa*. It would appear curious to most philosophers that revelation could ever claim more than a subordinate place as a source of knowledge; but, if we remember that the highest object of the Vedānta is to prove that there is only one true reality, namely *Brahman*, and that the manifoldness of the visible world is but the result of that nescience which the Vedānta is meant to destroy, it will become easily intelligible why an appeal to the evidence of the senses or to inference would be out of place and almost self-contradictory.² Reasoning or speculation (*tarka*) is to be employed, but only when it does not go against the fundamental truths proclaimed by revelation. Thus Sāṅkara says, while commenting on *Sūtra* II. i. 11:

'In matters to be known from Scripture mere reasoning is not to be relied on. . . . As the thoughts of man are altogether unfettered, reasoning which disregards the holy texts and rests on individual opinion only has no proper foundation. . . . since we observe that even men of the most undoubted intellectual eminence, such as Kapila, Kaṇāda, and other founders of philosophical schools, have contradicted one another.'³

Sāṅkara is naturally taunted by his adversaries with using reason against reasoning. His final position according to Vedānta is that Scripture is the principal source of knowledge with regard to *Brahman*, and that reasoning is allowed only as it is subordinate to and in conformity with Scripture. But in other matters reasoning has its full scope.⁴

(g) *The doctrine of karma*.—Individual souls are partially bound by their former acts and are partially free to better or to worsen their lot. So far as they can claim any reality, they date from all eternity and not from the day of their birth on earth. They are clothed in their *upādhis*, or conditioning adjuncts, according to the merit or

demerit which they have acquired by their former, though long-forgotten, acts. This doctrine of *karma* (*q.v.*), which has remained to the present day and has leavened the whole of India, furnishes the principal moral element of the Vedānta. The whole world, such as it is, is the result of acts; the character and fate of each man in this life are the result of his acts in this or in a former life; and it entirely depends on his acts here what he will be in the next life. This is the solution of what we venture to call the injustice of God. A man who suffers, and suffers, as it appears to us, unjustly, is only paying off a debt or laying up capital for another life. A man who enjoys health and wealth is made to feel that he is spending more than he has earned, and that he has therefore to make up his debt by new efforts. It cannot be by a divine caprice that one man is born deaf, dumb, or blind, another strong and healthy. It can only be the result of former acts, whether, in this life, the doer of them is aware of them or not. The merit which can be acquired by man is such that he may rise even to the status of a god, though for a time only, for at the end of a *kalpa* even gods like Indra and the rest have to begin their career afresh.

(h) *Cause and effect*.—The relation between cause and effect is one of the questions that have engaged the attention of all the schools of philosophy. The Vedāntists in general hold that absolute identity of substance exists between cause and effect (*kārya-kāraṇābheda*). The effect, even before its production, is already existent in the cause; for it is in fact nothing but the cause (*sat-kārya-vāda*). This follows not only from the Scripture, but also from observation.

'The non-difference [of cause and effect],' says Sāṅkara, commenting on *Sūtra* II. i. 15, 'is perceived, for instance, in an aggregate of threads, where we do not perceive a thing called "cloth" in addition to the threads, but merely threads running lengthways and crossways. So again, in the threads we perceive finer threads. . . . in them again finer threads, and so on. On the ground of this our perception we conclude that the finest parts which we can perceive are ultimately identical with their causes, viz. red, white and black (the colours of fire, water, and earth); those, again, with air, the latter with ether, and ether with *Brahman*, which is one and without a second.'⁵

But this implies an element of plurality and modification with regard to *Brahman*, while the Scriptures declare *Brahman* to be one, without a second, unchangeable. How can such a *Brahman* be called the material cause (*upādāna*) of the intelligent and non-intelligent world? No such difficulty, however, exists for Sāṅkara, according to whom the whole of the world is unreal, while *Brahman* alone is real. What the rope mistaken for a snake is to the snake, that *Brahman* is to the world. There is no idea of claiming for the rope a real change into a snake, and in the same way no real change can be claimed for *Brahman* when perceived as the world. *Brahman* presents itself as the world, and, apart from *Brahman*, the world would be simply nothing. If, therefore, *Brahman* is called the material cause of the world, this is not meant in the sense in which the clay is the material cause of a jar. *Brahman* is only the real substratum of the apparent and illusory existence of the world. This is what is called the doctrine of *vivarta* ('illusory manifestation') peculiar to Sāṅkara, as opposed to that of *pariṇāma* ('modification') held by the other Vedānta schools and especially by the Sāṅkhya (*q.v.*).

(i) *Two kinds of knowledge and mokṣa*.—Corresponding to the twofold distinction of *Brahman*, higher and lower, owing to *māyā* or the two kinds of reality, absolute and relative, there are two kinds of knowledge and two kinds of *mokṣa* resulting therefrom. The higher knowledge consists in the distinction and thereby the freedom of the

¹ See, e.g., Dharmarājadhvarindra, *Vedānta-paribhāṣā*.

² Cf. *SBE* xxxiv. 323 f. Notice that the words *pratyakṣa* and *anumāna*, which ordinarily mean 'sensuous perception' and 'inference,' are used by the author of the *Brahma-Sūtras* in the sense of *śruti*, 'revelation,' and *smṛti*, 'tradition.'

³ *SBE* xxxiv. 314 f.

⁴ *Ib.* p. 315 ff.

⁵ *SBE* xxxiv. 331 f.

self from all its *upādhis*. It is the knowledge of the absolute unity of *Brahman*, apart from which nothing really is. The higher *mokṣa*, which arises simultaneously with such a knowledge, consists in the entire absorption of the individual soul into *Brahman*. This does not mean any approach of the individual soul towards *Brahman* or their union, such an idea being impossible where there is absolute identity; it is only a recovery, a restitution, a return, a becoming of the soul of what it has always been, a revival of its true nature.

On the other hand, the lower knowledge consists in the worship, or *upāsana*, of the lower *Brahman*, or *Brahman* in its phenomenal state, conceived as a personal Lord and Creator, *Īśvara*. This *upāsana* is obligatory on all who have not yet reached the highest knowledge. Such worshippers of a personal God are really worshipping *Brahman*, though in its phenomenal aspect, and they are promised as a reward, not only happiness on earth and in heaven, but, by way of preparation, a kind of second-class *mukti* (*krama-mukti*) which gradually leads to the complete deliverance or highest *mukti*.

In this sense it may be truly said that Śāṅkara did not attack or destroy idolatry, though with him it was always symbolism rather than idolatry. It may be easily understood how he condemned all ritualism and *karma* and at the same time defended the worship of popular gods. Idolatry, if understood in the right spirit, is nothing but religious symbolism, and, as such, it can be open to no objection. Symbolism there must be, whether in words or in things. Verbal symbols appeal to the ear and the symbols of things to the eye, and that is all the difference between them. Verbal symbolism is language; and, if this is allowed in religion, why should not also the other? At one stage of its growth idolatry is a necessity of our nature. When the religious spirit is mature, symbols are either given up or suffered to remain from their harmlessness. Thus Śāṅkara allowed idols as symbols of the great Infinite for those who cannot raise themselves to the comprehension of the one, changeless, non-qualified *Brahman*.

(j) *The means of mokṣa*.—Knowledge and knowledge alone can lead to *mokṣa*. For *mokṣa* (q.v.) is not something to be obtained or produced. It is only a realization of our real nature, of which we can never be really deprived, but of which we have been only forgetful; it is therefore only knowledge that can be the means of *mokṣa*. The performance of actions, however, and the practice of moral virtues are allowed as being preparatory to knowledge. Good works, even merely ceremonial works, if performed from pure motives and without any hope of reward, form an excellent preparation for reaching that highest knowledge which it is the final aim of the Vedānta to impart. It is in this sense that we read:

‘Brāhmanas seek to know Him by the study of the Veda, by sacrifices, by charitable gifts.’¹

Thus a person qualified for the study of Vedānta is described as being one who has studied the Vedas and the Vedāntas, who has got a general idea thereof, whose spirit has been entirely purified by the performance of the obligatory, occasional, and expiatory acts and by the avoidance of all interested and forbidden acts, who possesses discrimination between what is eternal and what is not eternal, who is indifferent and without the least attachment to the enjoyment of rewards here or in the next world, who has tranquillity of spirit, self-restraint, quiescence, endurance, concentration of mind, and faith, and who longs to be free. But, when the knowledge of the highest *Brahman* has

once been reached, all works, whether good or bad, fall away.

‘The fetter of the heart is broken, all doubts are solved, extinguished are all his works, when He has been beheld who is both high and low.’¹

(k) *Tat tvam asi*.—The well-known formula *tat tvam asi* (lit. ‘Thou art that’), which asserts the identity of the individual soul and the supreme self, would be interpreted according to Śāṅkara’s doctrine thus: *tat* literally means the *Brahman* with omniscience, omnipresence, absence of limitations, etc.; *tvam* literally means the *jīva*, or the individual self, with limited knowledge, powers, etc.; and the copula *asi* signifies the apposition (*sāmānādhikaranyā*) of these two. Now this is not possible in the full literal sense. So what is inconsistent in the connotations of the two terms is to be rejected and what is consistent is alone to be retained—which is only intelligence (*chaitanya*) pure and simple, indivisible and without attributes, all the rest being only phenomenal and consequently illusory. In other words, the identity of ‘thou’ and ‘that’ is not possible, unless one alone is real, and the other unreal. In the same way it to be understood the formula *sarvaṃ khalvidaṃ Brahma* (lit. ‘All this is *Brahman*’), which asserts the identity of the world and the supreme spirit.

LITERATURE.—Śāṅkara’s Commentary on the *Vedānta-Sūtras*, tr. G. Thibaut, in *SBE* xxxiv. [1890] xxxviii. [1890], tr. P. Deussen, Leipzig, 1897; *Vedānta-sāra*, tr. G. A. Jacob, London, 1891. There are many treatises and manuals in Sanskrit dealing with the system of Śāṅkara, like *Vedānta-paribhāṣā*, *Pañchadaśī*, *Advaita-siddhi*, *Naiṣkarnya-siddhi*, which cannot all be mentioned here. Some of these are translated in the volumes of *The Pandit and The Indian Thought*, H. T. Colebrooke, *Essays on the Religion and Philosophy of the Hindus*, new ed., London, 1855; A. E. Gough, *The Philosophy of the Upanishads, and ancient Indian Metaphysics*, do. 1882; F. Max Müller, *The Six Systems of Indian Philosophy*, do. 1899, *Three Lectures on the Vedānta Philosophy*, do. 1894; P. Deussen, *The Philosophy of the Upanishads*, Eng. tr., Edinburgh, 1906, may also be recommended.

V. S. GHATE.

SĀṆKHYA.—*Sāṅkhya* is the title of the oldest system of Indian philosophy, the founder of which was Kapila. Its origin must be sought in a reaction against the idealistic monism of the *Upanishads* (q.v.), and its rise may be attributed to the same district of India as produced Buddhism. According to the native tradition, the *Sāṅkhya* is older than Buddha (c. 500 B.C.), and was used by him as the basis of his own system. The correctness of this tradition is confirmed by a series of coincidences in doctrinal statement, and is not to be refuted by a reference to the fact that the specific text-books of the *Sāṅkhya* originate from a much more recent date. The oldest text-book of this system that has come down to us complete belongs to the 5th cent. A.D.

Originally the *Sāṅkhya* must have taken up a position of direct opposition to the doctrines of the Brāhmanas, as is proved *inter alia* by its polemic against their ceremonial. Nevertheless, in the 1st cent. B.C. the Brāhmanas began to adopt the doctrines of the *Sāṅkhya*, and later on it was received into the number of the so-called orthodox systems, after its adherents had acquiesced in a nominal recognition of the infallibility of the sacred scriptures of the Brāhmanas. The *Sāṅkhya* system flourished chiefly in the early centuries of our era; and, if we bear in mind the active relations which at that period existed between India and Alexandria, it is not to be wondered at that the Gnostic systems and Neo-Platonism have been deeply influenced by *Sāṅkhyan* ideas. Since that time the whole of Indian literature, so far as it touches philosophical thought, beginning with the *Mahābhārata* and the law-book of Manu, especially the literature of the mythological and legendary *Purāṇas*, has been saturated with the doctrines of the *Sāṅkhya*.

¹ *Brhadāraṇyaka Upan.* iv. iv. 22 (*SBE* xv. 179).

¹ *Mupṛajāka Upan.* ii. ii. 11 (*SEE* xv. 57).

The founder of the Sāṅkhya system was a clear and practical thinker of an altogether different class from the authors of the *Upaniṣads*, who, in a lofty and enthusiastic spirit, endeavoured to solve the great riddle of existence. Kapila did not attempt to find unity in everything, but sought to maintain variety. He not only rejected the *Brahman*, the All-Soul, but emphatically denied the existence of God. It is true that he continued to hold the ordinary Indian views to the extent of believing in the transient forms of the popular religion, in gods, demi-gods, and demons, together with heavens and hells; but this popular faith had nothing at all to do with the question of a real eternal God in the theistic sense of an independent creator and ruler of the universe. The denial of a God of this nature is one of the characteristic features of the Sāṅkhya philosophy, and the system is therefore in India described explicitly as atheistic.

The Sāṅkhya system is throughout rationalistic. It recognizes two uncreated substances, existing from all eternity, but differing essentially from one another. These are (1) matter, which Kapila, in opposition to the doctrine of the *Upaniṣads*, regarded not as an illusory appearance, but as something real; and (2) souls, which are conceived not as emanations from the world-soul, but as an infinite multitude of individual souls.

The material universe is traced back by a correct philosophical method to a first cause. The Sāṅkhya doctrine proceeds on the principle that the product is none other than the 'material cause' in a definite stage of evolution, and that the preceding stages are to be inferred from that which lies open before us. By this means a first principle was finally reached, which is of the nature of cause only, and not also of product. This is *prakṛti*, primitive matter, from which the universe is evolved in regular course. It further teaches the existence in the entire material universe of three substances (*guṇa*), united in dissimilar and unstable proportions, of which the first (*sattva*) exhibits the qualities of lightness, illumination, and joy; the second (*rajas*), of movement, excitation, and pain; the third (*tamas*), of heaviness, obstruction, and sloth. Hence the conclusion necessarily follows that primitive matter also was composed of these three constituents. Undeveloped primitive matter is the 'state of equilibrium of the three *guṇas*.' As the result of a disturbance, which is not more definitely described, of this condition of equilibrium, the material universe is evolved, first the subtle elements, out of which are formed the psychical organs of living creatures, and, lastly, the gross elements of matter. At the close of a world-period the products return by a reverse movement into the preceding stage of development, and so, finally, into primitive matter. By this process of re-absorption matter regains precisely the same condition in which it had existed in the period before the evolution, and remains in this condition until the time arrives for the development of a new universe. This cycle of evolution, existence, and decay has never had a beginning, and will never have an end.

Unconscious primitive matter then issues from its stable equilibrium and becomes the subject of evolution; and matter during the period of the existence of the universe continually brings forth new products. For this process it becomes necessary to assign some cause. The developments and combinations of inert matter which take place unceasingly would be inexplicable if they were not effected by a spiritual principle. This principle is the collective influence of the innumerable individual souls which—themselves

incapable of any activity—contemplate, as spectators from all eternity, the movement of matter. It is not by conscious will that the souls exert an influence on matter, but by their mere presence, which in a purely mechanical way excites matter to activity and development, just as the magnet acts on the iron.

As to the physiological side of the Sāṅkhya system, however great the difference of organization that may exist between living creatures endowed with souls, it is yet one of degree only, not of essence. Every living being, according to the Sāṅkhya doctrine, possesses within the gross material body, which suffers dissolution after death, an inner or subtle body which is formed essentially out of the psychical organs and the senses. This subtle body accompanies the soul in the cycle of existences from one gross body to another. It is, however, not only the basis of metempsychosis and the principle of personal identity in the various existences, but also the vehicle of personality in this life; for in the subtle body all the events and states which we are accustomed to term psychical have their home and origin.

Here we already touch upon the most peculiar part of the Sāṅkhya system, its psychology. It has already been pointed out that the Sāṅkhya professes the most uncompromising dualism conceivable, since it starts from the absolute and essential difference of matter and soul. In one respect only are the two alike—in the absence of beginning and end; but in this likeness is already involved the most important distinction between them; for the soul is eternally unchangeable, while matter is eternally subject to change. The soul is defined as 'pure spirit.' Further description in a positive sense is impossible. Whatever can be asserted of it is of a negative character. The soul is without attributes or qualities, without parts, and therefore imperishable, motionless, absolutely inactive and impassive, unaffected by pleasure or pain or any other emotion, completely indifferent towards all sensations. The soul being conceived in this negative manner, and since changes, according to the Sāṅkhya doctrine, can be effected solely and alone in matter, it is evident that all the states and events also which appear to us to belong to the realm of the psychical—*e.g.*, perception, idea, thought, feeling, will, etc.—belong in reality to the realm of matter. For they imply in fact an alteration, a change.

Mention has previously been made of the psychical organs, because the easily misunderstood expression 'inner organs,' which our authorities use, must be avoided until an explanation of the conception has been given. In the inner organs all those functions and affections take place which we erroneously call psychical. The inner organs are purely physical and material throughout—as material, to use the ordinary example of the Sāṅkhya texts, as pots and other objects of the external world. The Sāṅkhya philosophy assumes three such inner organs, which are closely related to one another. It treats them, however, very frequently as one, and the same course will be adopted in the following paragraphs. This combined material inner organ exactly corresponds, as regards its unspiritual nature and all the functions that the Sāṅkhya doctrine ascribes to it, to the nervous system. This comparison may be made in order to indicate the place of the inner organ in the animal organism, although naturally no teacher of the Sāṅkhya had any conception of the nervous system as it is understood by modern science.

When the inner organ receives the objects presented to it by the external world by means of the

senses, it assumes—as is said in the texts—the form of these objects; in other words, an image of the object rises up within us. The most diverse results follow. An impression latent in the inner organ may thereby be aroused, and so the recollection excited of earlier experiences. The images of external objects and recollection may suggest abstract conclusions, but may also call forth affection, aversion, joy, pain, desire, or other emotions. These in turn may excite the will and the determination to act, and may urge them on a definite course. All these numerous processes consist, just as simple perceptions, in changes or modifications of the inner organ, so that at each moment it assumes a different form. This incessant transformation, effected in the inner organ by perception, thought, emotion, and will, is not essentially distinct from the change and variety which are found everywhere in the external world. In the one case as in the other we have to do entirely with material changes, with purely mechanical processes carried on in matter.

What place, however, in a system which maintains such views is to be found for the soul? Strangely enough, former scholars who made exhaustive investigations into the Sāṅkhya system did not succeed in answering this question. They regard the soul in this system as entirely superfluous, and hold that its founder would have shown himself more logical if he had altogether eliminated it. And yet the function of the soul in the household of the individual life is, according to the Sāṅkhya doctrine, of the greatest importance. That the soul by its mere presence excites matter, and therefore the inner organ which belongs to matter, to the path of activity has already been mentioned. Here, however, we are concerned with a much more important office which the soul has to fulfil in the life of the individual. It is true that only figurative expressions are here employed by the original texts; but there is no possibility of mistaking their meaning when they ascribe to the soul the *illumination* of the processes going on in the inner organ. All these processes must indeed remain purely mechanical and unconscious, unless the soul, 'by virtue of its nearness,' illuminates them, i.e. brings them to consciousness. The soul remains, on its side, in the most complete passivity, in harmony with its nature, as already described. It is regarded by no means as an illuminating substance; and the texts emphasize the fact that in speaking of the illumination they use a metaphorical expression to explain the process. In the same sense in which the enlightening office of the soul is spoken of, our authorities employ a further illustration which in a similar way is intended to make intelligible the soul's independence of the processes in the inner organ, and its influence on these processes. The Sāṅkhya texts compare the soul with a looking-glass, in which the inner organ is reflected. It is certainly no accident that the Neo-Platonist Plotinus not only compares soul with light, as the Sāṅkhya philosophy does, but also, in order to explain conscious knowledge, makes use of the other comparison of the looking-glass in which the images of objects appear, just as it occurs in the Sāṅkhya texts. This fact supplies one of the arguments in favour of the direct dependence of the Neo-Platonic doctrine on the Sāṅkhya philosophy.

Briefly described, therefore, the relation between soul and inner organ in the Sāṅkhya system is conceived in the following way: from the purely immaterial soul a power that excites consciousness issues and flows forth uninterruptedly, so that no process in the inner organ remains unconscious. If the soul, then, according to the

Sāṅkhya doctrine, thus fulfils its office without either doing or suffering anything further, it is scarcely necessary to point out how closely related this view is to certain modern conceptions of the soul which assert the passivity of consciousness.

Like all the Indian philosophical systems (with the exception of materialism), the Sāṅkhya also aims at setting man free from the sufferings of earthly existence. In no other system, however, does the pessimistic view of the universe which lies at the basis of Buddhism find such distinct expression as in the teaching of the Sāṅkhya. All conscious existence is suffering; and even pleasure, which falls to the lot of comparatively few individuals, conceals pain in its womb, and leads infallibly to suffering. Thus pleasure also 'is accounted pain by the wise.'

The connexion of the soul with suffering consists, then, as may be inferred from the preceding, in the soul's bringing to consciousness the pain of which the body, or, more precisely, the inner organ, is the seat. This peculiar relation between soul and suffering or inner organ (which amounts to the same thing) is not essential to the soul; for in that case it would be totally impossible to bring it to an end. The Sāṅkhya regards this connexion as determined solely by 'want of discrimination,' i.e. by our failure to recognize the essential distinctness of soul from matter, and especially from the most subtle products of matter, the inner organ and the senses. The cause of this want of discrimination is the disposition innate in man, a fatal inheritance from the last existence, the after-effect of the want of discrimination at that time. Here also, if we look backwards, we arrive at a *regressus in infinitum*, as in the case of the retributive power of action.

As the 'want of discrimination' is the root of all evil according to the Sāṅkhya doctrine, the sole means of deliverance is the 'discriminating knowledge' by virtue of which we discern the absolute difference between soul and matter. When once we have recognized that it is in matter that everything which happens takes place, that the soul, the *ego*, has no part in any movement or change, any suffering or sorrow, and stands aloof from it all, and that the soul is just as little affected by re-birth and death as by the other processes in the inner organ, release is at once attained. For the soul of the wise matter ceases to be active, as the dancer ceases to dance when the spectators are satisfied.

That the life of the emancipated does not forthwith come to an end with the acquisition of knowledge, but still endures for a considerable time, 'as the potter's wheel continues to revolve in consequence of the initial impulse even after the completion of the pot,' is explained in the same way as in the other philosophical systems of the Brāhmins. The present life is the result of works, the seed of which has sprung up before the attainment of the emancipating knowledge. These works must come to full maturity, and for that purpose the continuance of life is necessary, while, on the contrary, the germinating force of those works whose seed has not yet sprung up 'is consumed by knowledge.' When the power of the works that bear fruit in the present life is exhausted, and death overtakes the emancipated man, for him no re-birth is possible.

With the close of the bodily life the soul of the emancipated attains independence. The inner organ connected with it is dissolved, and the subtle body, on which hitherto the wandering through various forms of existence has been dependent, perishes. The soul continues to exist individually in the state of emancipation, i.e. of final separation from matter; but it abides in eternal

unconsciousness, since, indeed, the material basis necessary for all the processes of knowledge and experience is wanting. Moreover, the remark constantly made in older treatises on the Sāṅkhya philosophy, that the text-books of the system do not describe the state of the soul after its release from earthly existence, is a mere error; for they expressly declare that during life the very same condition is temporarily attained in deep dreamless sleep, in swoons, and in abstraction that reaches the stage of unconsciousness as in emancipation after death. 'The soul therefore abides eternally released from the delusion and suffering of this world, as a seer who no longer sees anything, a glass in which nothing is any longer reflected, as pure untroubled light by which nothing is illuminated.' With these words H. Oldenberg closes his brief exposition of the Sāṅkhya system.

SANNYASA.—See RENUNCIATION (Hindu).

SANNYĀSĪ.—I. Meaning of the name.—The term Sannyāsi (Skr. *sannyāsin*) is defined as follows:

'One who lays down or deposits; one who abandons or resigns; an ascetic, devotee; especially one who retires from worldly concerns, and is no longer bound to read the *Mantras* and perform sacrifice, but only to read the *Āraṇyakas* or *Upanishads*.²

The name is sometimes applied to Vaiṣṇava ascetics, as in the case of the officiants at the Kṛṣṇa temple at Udipi in S. Kanara District, Madras.³ It is also used to designate the fourth stage (*āśrama*) of the life of an orthodox Brāhman, when he abandons earthly concerns and devotes himself to penance and meditation:

'But having passed the third part of (a man's natural term of) life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects. He who after passing from order to order, after offering sacrifice and subduing his senses, becomes tired with (giving) alms and offerings of food, an ascetic, gains bliss after death.'⁴

2. Numbers and distribution.—According to the *Census of India, 1911*,⁵ the Sannyāsis, also known as Swāmi ('lord') or Atīṭ (*[q.v.]* Skr. *atīta* 'gone by', 'past', 'passed away', 'dead'), numbered 147,016, of whom about half were found in Bihār and Orissa, and, of the remainder, the majority were recorded in the United Provinces and Rājputāna. But the designations and enumeration of the ascetic orders are very uncertain, and, though Sannyāsis are known in S. India,⁶ they do not appear under that name in the census returns.

Monier-Williams writes:

'A Sannyāsi may have been once a married man. But there are Sannyāsis (such as the late Dayānanda) who have become so without going through the previous stages of Gṛhastha [householder] or Vānaprastha [anchorite]. Equivalent expressions for Sannyāsis are Parivrajaka [wandering mendicant], Bhikṣu [beggar], Daṇḍin [one who carries a staff], and Maskarin [one who carries a cane] (Pāṇini, vi. i. 154); but the term Bhik-

shu is now applied in Western India to those clerical Brāhmanas (as opposed to lay) who perform religious ceremonies and are not engaged in worldly pursuits.⁷

3. Admission to the order.—As a general rule, the order is open to all Hindus except Sūdras.

'Any Hindu of the three first classes may become a Sannyāsi or Daṇḍi, or, in these degenerate days, a Hindu of any caste may adopt the life and emblems of the order. Such are sometimes met with, as also are Brāhmanas, who, without connecting themselves with any community, assume the character of this class of mendicants. These constitute the Daṇḍis simply so termed, and are regarded as distinct from the primitive members of the order, to whom the appellation of Daśnāmis [*ERE* vi. 382] is also applied, and who admit none but Brāhmanas into their fraternity.'²

In the Panjāb the rule is somewhat different.

'Some of the Sannyāsis in order to oppose the Muhammadan invasions, endeavoured to found a militant branch of the Order, but this was opposed by other Sannyāsis on the ground that the Order was spiritual, not secular. The Sangiri Maṭh, however, at last agreed that if Rājputs were admitted into the Order, Sannyāsis might bear arms.³ All the other Maṭhs concurred. Later on Vaiṣyas were also admitted and managed the finances and commissariat of the Order. Lastly, all restrictions were removed, and even men of inferior castes admitted, but they cannot rise to the position to which Brāhmanas and Rājputs may rise, and the higher castes never eat food cooked by them, nor may they learn the Vedas. In other words, caste restrictions hold good after admission into the Order.'⁴

They mark their devotion to Siva in various ways.

They 'not infrequently bear the *Saiva* mark upon the forehead, smearing it with the *Tripundra*, a triple transverse line made with the *Vibhūti*, or ashes which should be taken from the fire of an *Agnihotra* Brāhman [one who practises the cult of fire], or they may be ashes of burnt cowdung from an oblation offered to the god. They also adopt the initiating *Mantra* of all the *Saiva* classes, either the five or six syllable *Mantra*, *Nama Śivāya*, or *Om, Nama Śivāya* ["In the name of Siva I"].'⁵

For the organization of the order see art. GOSĀIN, vol. vi. p. 332 f.; *Census of India, 1911*, xiv., *Punjab*, pt. i., p. 117 ff.

4. Death rites.—The Sannyāsi death rites are of special interest.

'A dead Sannyāsi is always buried in the sitting attitude of religious meditation with the legs crossed. The grave may be dug with a side receptacle for the corpse so that the earth, on being filled in, does not fall on it. The corpse is bathed and rubbed with ashes and clad in a new reddish-coloured shirt, with a rosary round the neck. The begging-wallet with some flour and pulse is placed in the grave, and also a gourd and staff. Salt is put round the body to preserve it, and an earthen pot is put over the head. Sometimes coconuts are broken on the skull, to crack it and give exit to the soul.⁶ Perhaps the idea of burial and of preserving the corpse with salt is that the body of an ascetic does not need to be purified by fire from the appetites and passions of the flesh like that of an ordinary Hindu; it is already cleansed of all earthly frailty by his austerities, and the belief may therefore have originally been that such a man would carry his body with him to the afterworld or absorption with the deity. The burial of a Sannyāsi is often accompanied with music and signs of rejoicing. Mr. Oman⁷ describes such a funeral in which the corpse was seated in a litter, open on sides so that it could be seen; it was tied to the back of the litter, and garlands of flowers partly covered the body, but could not conceal the hideousness of death as the unconscious head rolled helplessly from side to side with the movement of the litter. The procession was headed by a European brass band and by men carrying censers of incense.'⁸

In the United Provinces the present writer witnessed the funeral of a Sannyāsi, in which the body was carried in a litter in procession to the bank of the Ganges, where it was tied up between four large slabs of stone. This coffin was carried in a boat to the middle of the river and flung into the water amidst the shouts of the mourners.⁹

² Wilson, i. 197.

³ This seems to imply that Sannyāsis were formerly not recruited from Rājputs. It may be that originally they were recruited only from Brāhmanas, as is indeed expressly stated by P. Harikishan Kaul.

³ H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, i. 141; but the same writer (i. 183) remarks:

'Although, however, *Sannyāsis* and *Vairāgis*, and other similar denominations are used, and correctly used in a wide acceptance, yet we occasionally do find them limited in meaning, and designating distinct and inimical bodies of men. When this is the case, it may be generally concluded, that the *Sannyāsis* imply the mendicant followers of Siva, and the *Vairāgis* those of Viṣṇu' (see art. BAIKĀṬ, vol. ii. p. 337).

5. The militant Sannyāsīs.—The Sannyāsīs from an early period have been known as a turbulent order. In A.D. 1567, when the emperor Akbar arrived at Thānesar in the S.E. Panjāb, he found an assemblage of Yogis and Sannyāsīs at the site of the great battle of the *Mahābhārata*, Kurukṣetra.

'In consequence of a feud which existed between these two sects, they came to the Emperor, seeking permission to settle it by fighting. The Sannyāsīs were between two and three hundred in number, and the Jogis, who only wear rags, were over five hundred. When the adversaries stood ready to begin the fray, by the Emperor's orders some soldiers smeared their bodies with ashes, and went to support the Sannyāsīs, who were the weaker party. A fierce fight ensued, and many were killed. The Emperor greatly enjoyed the sight. At length the Jogis were defeated, and the Sannyāsīs were victors.'¹

'The name of Sannyāsēe was applied familiarly in Bengal, c. A.D. 1760-75, to a body of banditti claiming to belong to a religious fraternity, who, in the interval between the decay of the imperial authority and the regular establishment of our own, had their headquarters in the forest-tracts at the foot of the Himālaya. From thence they used to issue periodically in large bodies, plundering and levying exactions far and wide, and returning to their asylum when threatened with pursuit.'²

SĀNSĪ, SĀNSIYĀ.—The Sānsī are a gypsy-like Indian tribe, numbering 34,459 at the census of 1911, found chiefly in the Panjāb, United Provinces, Rājputāna, Central Provinces, and Berār.

In occupation, if not in origin, they closely resemble the Bediāyā (q.v.). They are the vagrants of the Central Panjāb, seldom or never settling in one place. They catch all kinds of wild animals, clean and unclean, and eat carrion. They keep donkeys, sheep, goats, and pigs, work in grass, straw, and reeds, and beg, while their women dance and sing and are prostitutes. They have a curious connexion with the Jāts of the Central Panjāb, of whom they are the hereditary bards and genealogists, and even in Rājputāna they call themselves Bhāt (q.v.). They derive their name from their eponym, Sāns Mall of Bharatpur, whom they revere as their guru; and they are said to worship his patron saint under the name of Malang Shāh, Malang being the title of an order of *fagirs*, followers of Jaman Jātī, a disciple of Shāh Madār.³ In the Panjāb they also worship Gūgā or Guggā Pīr, a saint who was originally a snake-god. They cremate their dead, and after a death they feed their sisters' sons—a survival of mother-right. They are said to worship the sword, and an oath on it is held binding. Their religious beliefs, however, are almost entirely confined to the rites performed at birth, marriage, and death.

In the Eastern Panjāb they call on Rāma morning and evening, and worship Gūgā or Guggā Pīr. They cook rice in honour of the goddess Juālāmukhī (q.v.) and Kālīkā, the mother-goddess; they perform the usual death rites according to Hindu custom, but in an incomplete manner.⁴

'All Sānsīs are said to worship the sword; and so an oath sworn on a *talwar* [the Indian sword] is popularly said to be

binding on a Sānsī, but this may be a fiction set going by the Sānsīs for their own ends. In Sialkot, however, it is probably true to say that no Sānsī will ever take a false oath on a sword.'¹

In Bombay the most binding oath is on Gangā, the Ganges, or on Kālīkā. The former is taken by raising a pot containing water, salt, charcoal, and millet grains, and swearing to speak the truth; the latter by pouring a little liquor on the ground out of a bottle while affirming.²

Their deified ancestors appear to be of a malignant rather than a benignant type. The Sānsī have no clear idea of the fate of the soul after death, but women who die in childbirth are supposed to linger on in this world and torment living beings. Some members of the tribe act as sorcerers and practise an elaborate system of casting out evil spirits.³ In the United Provinces they have a vague idea of a Creator, and some worship the goddess Devi or Kālī. They are in constant fear of malignant ghosts (*bhūt*) and propitiate the dead by feeding virgin girls of the tribe in their honour. They revere a saint whom they call Miyān, 'Master,' who is said to be king of the snakes.⁴ They form one of the most notoriously criminal tribes in India, committing thefts, gang-robberies, and house-breaking. For this purpose parties of them go as far south as the Central Provinces, Bombay, and the Deccan.

LITERATURE.—In addition to the authorities quoted in the footnotes see R. V. Russell, *The Tribes and Castes of the Central Provinces of India*, London, 1916, iv. 455 ff.; M. Kennedy, *Notes on the Criminal Classes in the Bombay Presidency*, Bombay, 1903, p. 245 ff.; E. J. Gunthorpe, *Notes on the Criminal Tribes of Bombay, Berar, and the Central Provinces*, do. 1882, p. 46 ff.; D. C. J. Ibbetson, *Outlines of Punjab Ethnography*, Calcutta, 1883, p. 311. W. CROOKE.

SANTĀL.—The Santāl are a tribe of the Munda stock, inhabiting the Santāl Parganas, the southern portion of the Bhāgalpur Division, Bengal, and numbering 2,068,000 at the census of 1911.

1. Name and origin.—H. H. Risley has the following:

'According to Mr. Skreksrud, the name Santāl is a corruption of Sāntār, and was adopted by the tribe after their sojourn for several generations in the country about Sāont in Midnapur. Before they went to Sāont they are said to have been called Kharwār (q.v.), the root of which, *khar*, is a variant of *hor* "man," the name which all Santāls use among themselves. As regards the derivation of the name from Sāont, an obscure village, somewhat off the main line of their recent migrations, it may be observed that Colonel Dalton suggested a doubt whether the name of the place may not have been taken from the tribe, and this view seems to derive some support from the discovery of a small tribe of Sāonts in Sargujā and Keunjar. The point, however, is not one of great importance. At the present day when a Santāl is asked what caste he belongs to, he will almost invariably reply "Mānjhī" (literally "village headman," one of the commonest titles of the tribe), adding "Santāl Mānjhī." If further explanation is demanded of him.⁵

They seem to be connected with the Hazāribāgh tableland, as they venerate the Dāmodar river, by which its southern face is drained. Their features are of the Negritic type, and their colour varies from very dark brown to almost charcoal black. They speak a singularly elaborate language of the Munda family.⁶

2. Religion.—The creation legend of the tribe is of the totemistic type, tracing the origin of the tribe to a wild goose that laid two eggs, from which sprang the parents of the race; and many of the names of their septs and sub-septs are derived from those of animals and plants.⁷ Skreksrud traces in the background of their religion a faintest supreme deity, called Thākūr, 'Lord,' who troubles

himself little with human affairs; some identify him with the sun, and the Santāls regard him as a good god, worshipping him every fifth or tenth year with a sacrifice of goats. There are six great gods in their pantheon: Marang Buru, the great mountain, the leader of the group, with far-reaching powers by virtue of which he associates both with gods and with demons; Moreko, fire, now a single god, but formerly known in the form of five brothers; Jāir Erā, sister of Moreko, the goddess of the sacred grove (*jāhirthān*), which is preserved inviolate in every village as a home for the deities; Gosāin Erā, a younger sister of Jāir Erā; Parganā, chief of the gods (*bongā*), and in particular master of all witches—a function which causes him to be highly respected; and Mānjhi, the second in command to Parganā, a personage who is supposed to be particularly active in restraining the other gods from doing harm to men. Some of these names, like Gosāin (*q.v.*) and Parganā, 'a barony,' are derived from Hindu sources and suggest some contamination of beliefs since they came into contact with Hindus. All these, the greater gods, have their places in the sacred grove and are worshipped only in public, except Marang Buru, who also ranks as a family god. Besides these, each family has two gods of its own, the *orakbonga*, or household god, and the *abgēbonga*, or secret god. No Santāl will divulge the name of his secret god to any one but his eldest son.

'Men are particularly careful to keep . . . from their wives for fear lest they should with the bongas, become witches, and impunity when the protection of its god.

When sacrifices are offered to the *orakbongas*, the whole family partake of the offerings; but only men may touch the food which has been laid before the *abgēbongas*. Sacrifice is offered once a year, and each man chooses the most convenient time for offering it. There are traditions within recent times of human sacrifices being made to a mountain-god of unknown name.

3. Festivals.—The tribal festivals are especially interesting. The *Sarhāl* or *Bahāpūjā* is held towards the end of March, when the *sāl*-tree (*Shorea robusta*) blossoms.

Tribal and family sacrifices are held, many victims are slain and eaten by the worshippers, every one entertains their friends, dancing goes on day and night, and the best songs and flute-music are performed. A peculiar feature of this festival is a sort of water-bottle in which men and women throw water at each other until they are completely drenched.²

The most important feast is the *Sohrāi*, or harvest festival, held in November–December; the headman entertains the people, the cattle are anointed with oil and daubed with vermilion, and a share of the rice-beer is given to each animal. Public sacrifices of fowls are offered by the priest in the sacred grove; goats and fowls are sacrificed by private families, and a general Saturnalia of drunkenness and licence prevails; chastity is in abeyance for the time, and all unmarried persons may indulge in promiscuous intercourse, but this licence does not extend to adultery, nor does it sanction intercourse between persons of the same sept, though even this offence, if committed during the *Sohrāi*, is punished less severely than at other times.³ The agricultural festivals include those at sowing, offering of the firstfruits of millet, sprouting of the rice, and the offering of firstfruits of the winter crop. Bread, parched grain, and molasses are offered to dead relatives in November–December. *Māgh-sim*, the cutting of the jungle grass in January–February, marks the end of the year, when servants receive their wages and fresh engagements are made; the village officials go through the form of resigning their appointments,

and all the tenants give notice of throwing up their lands. But after a few days they agree to change their minds, and there is a general carouse of rice-beer. The *simabongas*, or boundary gods, are propitiated twice a year with sacrifices of fowls offered at the village boundary. *Jom-sim pūjā* is an offering of two goats, or of a goat and a sheep, to the sun. Every Santāl ought to perform this sacrifice at least once in his life. After a year's interval it is, or ought to be, followed by *kutam-dangra*, when a cow is offered to the household gods and an ox to Marang Buru and to the spirits of the dead; the fire-god, Moreko, receives an offering of three goats and many fowls when any calamity, such as a failure of the crops or an outbreak of epidemic disease, occurs.¹

Hunter, *The Annals of Rural Bengal*, London, 1897; *IGI* xxii. 60 ff. W. CROOKE.

SANUSI (fem. or plur. Sanusiyyah). — 1. History.—Sanusi is the name of a religious order founded by Sī Muḥammad ibn Sī 'Alī al-Sanūsī al-Khaṭṭābī al-Ḥasani al-Idrisi al-Muhajiri.² His name Idrisi was derived from his supposed ancestor Idris, great-grandson of Ḥasan II, son of Ḥasan the Prophet's grandson; his name Khaṭṭābī refers to the tribe Khaṭṭābīyah, to which his family belonged. He was born at Mostaganem in 1806 (or earlier) and migrated with his father to Fez in 1814, where he came under the influence of Shaikh Ahmad Tijāni, founder of the Tijāniyyah order. In 1829 he went on pilgrimage to Mecca, after having been initiated into numerous orders in Africa and having studied at al-Azhar, where he encountered opposition. In Mecca he attached himself to Sī Ahmad b. Idris of Fez, head of the Khidriyyah order, which had been founded in 1713 by Sī 'Abd al-'Aziz Dabbar. Sī Ahmad b. Idris taught in Mecca from 1797 to 1833; in the latter year, owing to difficulties with the other religious authorities, he fled to Sobia in the Yemen, whither Sanūsī with other adherents accompanied him. At his death in 1835 the Khidri order split into two divisions, headed respectively by Sī Muḥammad Salah Magharani and Sanūsī, who both returned to Mecca, where the latter established the first *zāwiyah* of his new order on the historic Mt. Abū Qubais. He continued to reside there till 1843, when his situation became intolerable owing to the opposition of the rival sect, which was more easily able to win the approval of the established authorities; he therefore, ostensibly in accordance with an injunction from the Prophet to go and found new *zāwiyahs* in other countries, returned to Africa and founded at al-Baida in the Jibāl Akhdar in the Tripolitaine the institution whence his system began to spread far and wide. Towards 1855, owing to the hostility of Turkish, Egyptian, and Meccan authorities, he transferred his headquarters to Jaghbūb, some days' march to the south-west of his former seat. It was in Baida that his sons, Shaikh Mahdī and Sī Muḥammad Sharif, were born; and on his death in 1859, as is usual with these orders he was succeeded by them; they were very young at the time, but they were well served by their guardians and instructors, and after a time assumed control, the former as administrator, the latter as spiritual teacher. The latter died in 1895; and in the same year the former secretly transferred his residence to the oasis of Kufra in the Eastern Sahara, where he remained till 1900;

² See also art. RELIGIOUS ORDERS (Muslim), § 38.

in 1900 he moved yet farther south to Garu in Dar Gurani of the Wadai region of the Sūdān. In 1902 his followers endeavoured to resist the French attack on Kanam, east of Lake Chad, and their failure caused him to die of chagrin on 30th May of that year. He was succeeded by his brother's son, Aḥmad Sharif, who again made Kufra his headquarters.

2. The Sanūsī doctrines.—The system advocated by Sanūsī and his followers appears to be a combination of Wahhabism with Sūfism (*q.v.*). It professes to aim at restoring the primitive 'purity' of Islām, as taught in the Qur'ān and the Prophet's *sunnah*; hence it prohibits music, dancing, singing, tobacco, and coffee. On the other hand, like other 'orders,' it prescribes certain forms of devotion; in prayer the arms are crossed on the breast, with the left wrist held by the thumb and forefinger of the right hand. The rosary should be carried in the hand, not hung on the neck. In the *dhikr*, or additional devotions, certain formulæ are to be repeated forty, others a hundred, times.¹ Several other practices are ascribed to them that are at variance with the Maliki practice, which, however, they profess (or professed) to observe; these are enumerated in a polemical treatise directed against them, of which Depont and Coppolani give a French translation.² What appears to be the greatest enormity criticized is that the Shaikh Mahdī received visitors only at particular hours and after repeated applications for an audience and habitually absented himself from public prayer, even on the Fridays. His admirers attributed this to his wish to meditate and pray in solitude.

The founder appears to have been unwilling to start an additional order in the style of the many already existing, maintaining that membership of another order was not inconsistent with adherence to his own society; he therefore, in spite of his puritanism, made certain concessions to orders that had adopted practices of which his system ordinarily disapproved—*e.g.*, the dances of the Maulawīyyah, the cries of the Rifā'iyyah, and the swaying of the Qādiriyyah. Certain practices which go farther than these in the direction of producing ecstasy were not tolerated; and indeed the main purpose of Sūfī practice—the production by hypnotism of the sense of unity or identity with the Deity—does not appear to have lain within his scope.

On the other hand, what rendered his order specially important was his insistence on a doctrine which orthodox Islām at times maintains, viz. that no Muslim should live in any region where Islām is not the dominant power. Hence, when a Muslim finds himself in a country which fails to answer to that description, it is his duty to emigrate; and the founder of the order sought in the desert of the Sahara that freedom from non-Muslim authority which was wanting in the large portions of Asia and Africa where Christian powers were dominant, and very imperfectly realized in those nominally independent Islāmic empires whose policy was subordinate to European guidance. Moreover, the Shaikh Mahdī was certainly identified by many of his followers, and possibly claimed identity himself, with the 'expected Mahdī,'³ a fact which would have rendered it impossible for him to subordinate himself to any other sovereign, Islāmic or non-Islāmic.

3. Spread of the order.—The founder, as has been seen, employed his followers, especially those among them who were illiterate, in building *zāwiyahs*. These were then organized on the

principle described in the art. DERVISH. In a few years after his arrival at Jibāl Akhdar it was literally covered with establishments; he then undertook new constructions, first in the rest of the Tripolitaine, then in the south of Tunisia, on the shores of the Sea of Marmora, in Egypt, Arabia, and Central Africa, among the Tawariq, and in the Sūdān. By the end of his life he was practically sovereign of the region bounded by the Mediterranean from Alexandria to Gabes and stretching south to the negro kingdoms. But he also acquired a great following in the Hijaz, where a number of tribes—the Banu Harb, Lam, Harith, Thaqif, and others—accepted Sanūsī as their supreme lord. It is asserted that all the Bedawin tribes of W. Arabia which had not embraced Wahhabi tenets adopted his; and the movement spread with no less rapidity among the Bedawin or nomad tribes of the Sinaitic peninsula and Palestine. Before leaving Arabia, in spite of the opposition which drove him thence, he had founded *zāwiyahs* in various places of importance in addition to the original institution on Abū Qubais, viz. Ta'if, Medina, Badr, Jedda, and Yanbu'. The original presidents of these and their successors are enumerated by Le Chatelier, *Les Confréries musulmanes du Hedjaz*, p. 273 f. In the *Manār* for 1330 (1912), pp. 532-538, there is an enumeration of the *zāwiyahs* belonging to this community to be found between Alexandria and Derna (140 miles N.E. of Benghazi); the distance is eleven stages for camel-riders, and there are about twice that number of *zāwiyahs*. The inhabitants belong mainly to the Wuld 'Ali, who are without exception members of the order. To each *zāwiyah* (according to this account) about 2000 persons are attached, who complete the Qur'ān once a month in the buildings, which also serve as hospices to travellers in this region; no money is taken from the guests, as the institutions are maintained out of the land which is attached to them. Surplus produce is sent as tribute to the head of the order at Jaghbūb or Kufra. In addition to these, the same writer enumerates many more in the adjoining country. His list exhibits a great advance on that of Depont and Coppolani,¹ which bears date 1897, both in the number of the institutions and in that of their adherents. It has at times been asserted that there are great numbers of secret adherents of the order in Egypt, the Sūdān, and other Islāmic countries, in addition to those who make no concealment of their membership.

4. Reason for the progress of the movement.—Rinn attributes the great success which attended the efforts of the Shaikh Sanūsī largely to his personal qualities; he understood how to organize the community which he had founded and to maintain rigorous discipline; further, he attracted adherents by the boldness of his teaching and the dexterity which he displayed in basing his profound and learned exegesis on the most orthodox conceptions.

'Hence it may be said that his moral and intellectual superiority impressed all the Muslims who approached him, since the austerity of his puritanical precepts, his gloomy and taciturn character, his severity towards himself and every one else, were not of a nature to win much sympathy.'²

This statement is scarcely borne out by experience in either Eastern or Western revivalism. His influence in Wadai was due to his having purchased a caravan of slaves which the nomads had plundered from the slave-dealers; these he manumitted, had trained at his *zāwiyah* in Jaghbūb, and, some years later, when he believed them to be sufficiently qualified, sent home as missionaries to their native country; from that time the negroes of Wadai regarded themselves as servants of the

¹ These are given by Rinn, *Marabouts et Khouan*, p. 503.

Sanūsī institutions, and their Sultan became one of the most faithful followers of the Shaikh Sanūsī.

Of his successor, the Shaikh Mahdī, the organ of reformed Islām speaks in glowing terms, similar to those quoted about his father; and the names of several followers are mentioned who seem to have been men of unusual energy and ability.

Besides these personal qualities, it is probable that the notion of creating an area in which Islām would be undisturbed by any foreign—i.e. non-Arabian—influence had great attractions for those who found Turkish rule unsupportable, and who, even if they recognized the blessings which European protection confers, held that they were too dearly purchased by the humiliation of Islām which such an arrangement involves. Further, the principle by which adherence to the new order was made compatible with membership of the older orders was likely to win for the Sanūsī system those whose spiritual needs required some such ritual as the orders enjoin, but who desired some sort of unity between the orders to be effected. We can scarcely be wrong in finding the main cause in the partition of Africa, which, commencing with the French occupation of Algiers, has now rendered the whole continent a European colony.

5. Political activities of the order.—The rise of the order was viewed with alarm by the French in Africa, as also by the Turks; for, although the order abstained from all warlike enterprises, there was a general belief that such were ultimately contemplated, and indeed that the head of the order in his oasis was amassing guns and ammunition for the purpose of starting a *jihad* when the time arrived. It was in this belief that in 1896 a French adventurer, the Marquis de Morès, led a small expedition into the interior of the Sahara with the view of offering his services as military leader to the Shaikh Mahdī at his oasis; he was, however, murdered at Bir Yusuf by the Tawariq before he reached his destination.¹ Nevertheless numerous earlier attempts to employ the supposed force of the Sanūsī chief in the interests of one Power or another had failed; thus in 1872 the Germans endeavoured to approach the Shaikh Mahdī with the view of getting him to preach the *jihad* against the French, but the envoys were not even permitted to enter the Shaikh's presence; the Ottoman Sultan was no more successful when he endeavoured to obtain the help of the Sanūsīs against the Russians in the war of 1876-78; the Italian mission to the Cyrenaica in 1881, the object of which was to form an alliance with the Sanūsīs in order to counterbalance French influence in Tunisia, was a failure; in the same year the Egyptian insurgent Arabi Pasha could gain no help from them; and in 1884 the Shaikh Mahdī not only declined to lend his aid to the Sudānese Mahdī, but publicly declared him to be a liar and impostor. The principle which was supposed to guide their action was not to attack, but to defend themselves when attacked; and probably the need for armed resistance on their part first materialized in connexion with the French advance in Central Africa early in this century. The first important victory for the French was the capture of the *zāwiyah* of Bir Alali in Kanen, north-east of Lake Chad, in Jan. 1902. After more than eleven years of war the Sanūsīs in 1913 still held six or more important *zāwiyahs*, some of them strongly fortified, in Borku and Tibesti. The capture of these was effected by the Largeau expedition in 1913-14. After severe fighting, Si Muhammad Sunni, the chief official of the Sanūsīs in these regions, his son Si Mahdī, and the remnant of the army fled to Kufra. As soon as the European War commenced

in 1914 the Sanūsī chief, Sayyid Ahmad, adopted a threatening attitude towards the Egyptian government, but it was not till Nov. 1915 that he definitely threw in his lot with the Turks and Germans. In that month two English steamers were torpedoed and one Egyptian steamer sunk by fire from a German submarine in Sollum harbour, while three coastguard posts were attacked by Sanūsī forces. The whole number of fighting men in the service of the Sanūsī Shaikh appears to have been under 10,000; he himself displayed no ability of any sort as a commander or fighter, but he had in his employ a Turkish officer of some ability, who had been trained in Germany, named Ja'far. It was necessary to prevent danger from this source assuming serious dimensions, and an expedition was sent against the Sanūsīs first commanded by General Wallace, who was succeeded on 9th Feb. 1916 by General Peyton. The campaign practically terminated in Feb. 1917, and was uniformly successful; from Matruh, to which the Sanūsī army had advanced, it was by a series of defeats driven westward, and afterwards southward into the desert. Sollum was taken on 26th Feb. 1916, when Ja'far and his staff were captured, and in Feb. 1917 Sayyid Ahmad was driven from the Siwa oasis, whither he had fled. It is possible that the disasters brought upon the sect by the part taken by this chief in the War may lead to a decline in its influence and eventually to its extinction.

SARAPIS.—See GRÆCO-EGYPTIAN RELIGION.

SARASVATI (Skr. *saras*, originally perhaps 'flowing water'; *sarasvat*, 'having water', 'watery', 'elegant').—In the *Rigveda* there is nothing to show that Sarasvatī is ever anything more than a river-goddess, but we find her in the *Brāhmanas* identified with Vāch, 'speech,' and in post-Vedic mythology she has become goddess of eloquence and wisdom, invoked as a muse and regarded as wife of Brahmā.¹

The Sarasvatī appears to have been to the early Indians what the Ganges (which is only twice mentioned in the *Rigveda*) became to their descendants. . . . When once the river had acquired a divine character, it was quite natural that she should be regarded as the patroness of the ceremonies which were celebrated on the margin of her holy waters, and that her direction and blessing should be invoked as essential to their proper performance and success. The connection into which she was thus brought with sacred rites may have led to the further step of imagining her to have an influence on the composition of the hymns which formed so important a part of the proceedings, and of identifying her with Vāch, the goddess of speech.²

The name is at present applied to two rivers in N. and W. India. The first, in the Panjāb, rises in the Sirmūr State and, after disappearing in the sand, emerges once more and joins the Ghaggar in Patāla territory; the second, rising in the Arāvalli range, falls into the lesser Rann of Cutch. The latter is visited by Hindus, particularly those who have lost their mothers, whose propitiatory rites are performed at Sidhpur. There has been much controversy as to the identity of the river of which the goddess Sarasvatī is the personification.

The name is identical with that of the Avestan river Haraqaiti in Afghanistan, and it may have been the latter river which was first lauded as the Sarasvatī. But Roth, Grassman, Ludvig, and Zimmer are of opinion that in the *Rigveda* Sarasvatī usually and originally meant a mighty stream, probably the Indus (Sarasvatī being the sacred and Sindhu the secular name), but that it occasionally designates the small stream in Madhyadesa (the first mentioned above) to

¹ See Auguste Pavy, *L'Expédition de Morès*, Paris, 1897.

which its name and its sacred character were in later times transferred. Max Müller believes it to be identical with the small river Sarasvatī, which with the Drśadvatī formed the boundaries of the sacred region Brahāvarta,¹ and which loses itself in the sands of the desert, but in Vedic times reached the sea. According to Īdham, a survey of ancient river-beds affords evidence that the Sarasvatī was originally a tributary of the Sutudrī (the modern Sutlej), and that when the latter left its old bed and joined the Vipās, the Sarasvatī continued to flow in the old bed of the Sutudrī.²

W. CROOKE.

SĀRIPUTTA.—Sāriputta was one of the two chief disciples of the Buddha. In Sanskrit works the name occurs as Sāriputra, Sāliputra, Sārisuta, and Sāradvatiputra, i.e. 'son of the woman Sārī, Sārī, or Sāradvatī.' He is also called Upatissa (Skr. Upatīṣya), which was probably his personal name, though the commentary on his verses in *Theragāthā*, 981 ff., explains it differently. The story of his conversion is told in art. MOGGALLĀNA. He has the title Dhammasenāpati, 'general of the Dharma,' and in *Sutta-Nipāta*, 557, the Buddha, when asked who is his general, declares that after himself it is Sāriputta who turns the Wheel of the Dharma.³ It is thus not surprising to find several discourses in the Scriptures as well as whole *suttas* ascribed to him.⁴ He is also found as the author of Mahāyāna works.⁵ In the list of chief disciples in the *Āṅguttara*⁶ he is mentioned as the first of those possessing great insight (*paññā*). An account of his previous existences is given in the commentary on the *Theragāthā*.⁷ The commentary on *Jātaka*, i. 391, makes the Buddha, when deciding to pass away, refer to the death of Sāriputta at the village of Nāla in the room in which he was born; but this looks like an accretion, as the account of Buddha's death in the *Mahāparinibbāna Sutta* ignores all reference to Sāriputta, though it does introduce him as a short time previously uttering his *sihanāda* (lion's roar), his great confession of faith in the Buddha; even this is probably inserted here from other parts of the Scriptures.⁸ There are still later accounts of his death, which naturally increase in detail.⁹ In the Mahāyānist *Saddharmapūṇḍarīka*¹⁰ he is transformed into a *bodhisattva*, who is to appear as the future Buddha Padmaprabha.

LITERATURE.—The sources are given above.

EDWARD J. THOMAS.

SĀRNĀTH.—Sārṇāth is the name applied to an extensive group of Buddhist ruins situated in the Benares District, United Provinces, India, about 3½ miles to the north of Benares city (*q.v.*), in N. lat. 25° 23', E. long. 83° 2'. The name properly belongs to a Śaiva temple called Sārṇāth to the south-east of the prominent Dharmekh *stūpa*. An annual fair is, or used to be, held close to the temple—a circumstance which caused its name to become well known. The locality seems to have been sacred and the resort of ascetics from very ancient times, even before the days of Gautama Buddha. Its fame is due to the belief that the site includes the Deer-park (Skr. *mṛgadāva*, Pāli *mṛgadāya*) adjoining Rṣipattana (Pāli *Isipattana*), where Buddha, in or about 523 B.C., preached to

his first five adherents the 'first sermon,' expounding the 'four noble truths.' The legend and the substance of the sermon may be read in most of the books about Buddhism. The Deer-park, now known as Sārṇāth, thus became one of the four principal holy places of Buddhism, the others being Kapilavastu with the Lumbini garden, Bodhi Gayā, and Kuśinagara (*q.v.*). The sanctity thus acquired naturally resulted in the erection of commemorative monuments, magnificent monasteries, and all the appurtenances of a first-class place of pilgrimage.

The construction of monuments probably began before the close of the 5th cent. B.C., but at present no part of the remains can be assigned with confidence to a date earlier than the middle of the 3rd cent. B.C., in the reign of Aśoka. The Buddhist buildings were destroyed by the Musalmān invaders a little before the close of the 12th cent. of the Christian era. The ruins of Buddhist edifices, so far as yet ascertained, consequently cover a period of about fourteen centuries and a half. A modern Jain temple and many ancient images indicate that the locality is and long has been sacred in the eyes of the Jains, while the existence of the shrine of Sārṇāth above mentioned and sundry mediæval sculptures prove that it is venerable also for Brāhmanical Hindus. But the whole interest of the site is connected with the Buddhist legends and remains, which alone need be noticed.

Exploration.—A visit of the Pādshāh Humāyūn to the site is commemorated by an inscription set up by his son Akbar in A.D. 1588, but the Musalmāns neither knew nor cared anything about the local history. Attention to the nature of the ruins was first attracted by excavations conducted in 1794 by a landholder for the sake of building material, which destroyed a *stūpa* and disclosed a relic casket and certain Buddhist images. Jonathan Duncan, then Resident at Benares, recorded a note on the subject. Other persons subsequently made desultory researches, but the first attempt at systematic exploration was made by Cunningham in 1834-36. Kittoe and others, between 1853 and 1865, did some more excavation. Cunningham recorded all information known up to date in his *Archæol. Surrey Report* for 1861-62, published as the first vol. of his *Reports at Simla* in 1871. Nothing further of importance was done at the site until 1904-05, when Oertel made interesting discoveries. The work was taken up officially by the Archaeological Department in 1907 and has been continued with excellent results. A museum has been built on the site, and a scholarly catalogue of its contents was published in 1914.

The site is divided into two distinct areas by an ancient wall running east and west. The monastery area to the north of that wall was occupied by four monasteries of various ages. The *stūpa* area south of the wall contains the remains of innumerable edifices, small and great. The 'main shrine' (*mūlagandhīkūṭi*) occupied the centre of the western section, and the Aśoka column discovered by Oertel stood to the west of the main shrine. The inscription, fortunately preserved, is classed as a 'minor pillar edict,' and is directed against schismatics. Jगत Singh's *stūpa*, the one dug up in 1794, is to the south of the main shrine. The Dharmekh (Dharmekhā) *stūpa*, a memorial of some sacred incident, not a depository for relics, stands in the south-eastern part of the area. It dates from the 5th or 6th cent. in the Gupta period and is adorned with fine decorative designs. It is impossible to enumerate the minor buildings. The principal establishment was known as the 'Monastery of the Wheel of the Law' (*dharmachakra*). Buddhists figured the first preaching of the Master as the 'turning of the wheel of the law.' Aśoka's column, accordingly, was surmounted by a wheel, and the symbol recurs frequently on the sculptures.

About A.D. 300 the leading sect at the locality was the Sarvāstivādin (*q.v.*). A little later the Sāpmitiā (*q.v.*) sect or school prevailed, and in Hiuen Tsiang's time it had 1500 monks. Both sects were Hinayāna.

The buildings, from Maurya or pre-Maurya times to the closing years of the 12th cent., were

destroyed more than once and frequently rebuilt. The first destruction perhaps occurred in the Hun period (6th century). Restorations are recorded in 1026 and the first half of the 12th century. The end came about 1193 at the hands of Kutb-ud-din's fierce Muslims. The traces of more than one burning are clearly visible.

The hundreds of sculptures include the magnificent capital, 7 ft. high, of the Aśoka column, the finest known Maurya composition, and multitudes of excellent works in the 'suave and gracious' Gupta style, some of which rank in the first class of Indian sculpture. In fact, the Sārnāth finds in themselves are almost enough to illustrate adequately a history of Indian sculpture. They are equally important as illustrations of Buddhism, and especially of the development of the Buddha cult and the later worship of minor deities, male and female. Jambhala or Vaiśravaṇa, Vasudhārā, Tārā, Mārīchī, and others are frequently represented. Only one *Jātaka*, that of Kṣāntivādin, has been noticed, but many discoveries of all kinds may yet be made.

LITERATURE.—Daya Ram Sahni, *Catalogue of the Museum of Archaeology at Sārnāth*, with introd. by J. P. Vogel, plan of the site, Calcutta, 1914 (well illustrated, gives the names of the sculptures); A. Cunningham, *Arch. Survey of India*, vol. 1, 1904-05, 1906-07, and 1907-08, Calcutta, 1906-12. The Chinese pilgrim Hsien Tsiang (Yuan Chwang), in any of the versions, gives a detailed description. See also the other pilgrims, sundry books about Benares (*q.v.*), and a multitude of publications listed in Vogel's bibliography.

VINCENT A. SMITH.

SARVĀSTIVĀDINS.—Sarvāstivāda is one of the eighteen schools of Buddhism¹ and was at one time the most wide-spread and influential of all. As a philosophy, it is a school which holds a realistic view, as the name indicates (*sarva*, 'all'; *asti*, 'exist'; *vāda*, 'saying,' i.e. one who maintains that everything, external as well as internal, is real); and it is one of the earliest, if not the earliest, in deviating from the opinions of the orthodox Theravāda school.

In the course of 100 to 200 years after the Buddha's *nirvāṇa*, i.e. after the Council of Vaiśālī, the object of which was chiefly to refute the ten theses of the Vajjian *bhikkhus*, the Buddhist Church is said to have split into various schools.² We are told in the *Dīpavaṃsa*, v. 47, that the Mahīśāsaka (Mahisāsaka) separated itself from the Theravāda, and from the Mahīśāsaka the Sabbatthivāda (=Sarvāstivāda) and the Dhammagutta (=Dharmagutta).

The Mahīśāsaka and the Dharmagutta will subsequently be found as the subdivisions of the school,³ and we may assume from this fact that these three schools did not differ much in their philosophical opinions. The history of this school, however, begins practically with the Council of Pāṭaliputra under King Aśoka, for it was in that Council (240 B.C.) that Moggaliputta Tissa, the head of the Council, compiled the *Kathāvatthu*⁴ to refute the schismatic views current at his time. This work directs only three questions against the Sabbatthivāda: (1) Does every thing exist? (2) Can an *arhat* fall from *arhat*-ship? (3) Is continuation of thought *samādhi*?⁵ All these questions would be answered in the affirmative by the Sabbatthivādas, contrary to the opinions of the orthodox school.

¹ The enumeration of eighteen schools is official as well as historical. See Takakusu, 'The Abhidharma Literature of the Sarvāstivādins,' *JPTS*, 1905, pp. 67-146.

² *Dīpavaṃsa*, v. 16-18; *Mahāvāṃsa*, v. 8.

³ See Takakusu, *A Record of the Buddhist Religion as practised in India and the Malay Archipelago* (A.D. 671-695) by I-tsing, Oxford, 1896, p. xxiv.

⁴ *Points of Controversy*, tr. with commentary by C. A. F. Rhys Davids, London, 1916.

⁵ C. A. F. Rhys Davids, *Points of Controversy*, I. 6 (p. 84), I. 2 (p. 64), xi. 6 (p. 260), and *JRAS*, 1892, p. 8.

Though it does not seem to have played a very important part at the time of King Aśoka, it must have found a new home in the northernmost regions and flourished vigorously there as the Vaibhāṣikas of Gandhāra and Kāśmīra. The word 'Vaibhāṣika' is derived from *Vibhāṣā* ('Option'), which is the name of a great commentary compiled some time after Kāśmīra's reign to explain the *Jñānaprasthāna* ('Origin of Knowledge') by Kātyāyana, a brilliant philosopher of this school.¹ The commentary receives its name from the fact that different opinions of the leading teachers of the school are carefully recorded, so that the reader may at his own option adopt whatever opinion he feels inclined to.

The *Vibhāṣā* and the *Mahāvibhāṣā* in three Chinese versions were translated in A.D. 383, 427, and 659 respectively,² and we have therefore to attribute the compilation to a period prior to the first date and to assume that the period during which this literature was studied must cover those dates. The Sarvāstivādins appear from this work to have been, after their first deviation from the original school, the upholders of a well-organized philosophical system. This is fully borne out by subsequent writers, especially Vasubandhu (c. A.D. 420-500)³ and his powerful opponent Saṅghabhadra, who often refer to and criticize the opinions of the Kāśmīra Vaibhāṣikas as a body of thinkers.⁴

According to Parāmartha (A.D. 499-569), the *Vibhāṣā* was a principal subject of philosophical discussion during the 5th cent., when there was also a great controversy between Buddhist and Sāṅkhya philosophers.⁵ The Neo-Vibhāṣanic activity seems practically to have ceased with the conversion of Vasubandhu to the idealistic philosophy, though his work appears to have been still in vogue among Buddhist scholars, Guṇamati, Vasumitra, and Yaśomitra successively compiling a commentary on it.⁶

Saṅkarācārya [*q.v.*] born c. A.D. 788), while explaining Bādarāyana's *Vedānta-sūtra*, remembers the Vaibhāṣika school and refutes its doctrine of realism (*sarvāstivāda*) along with the other systems of Buddhism, idealism (*vijñānamātratvavāda*) and negativism (*sarvaśūnyatvavāda*).⁷

Vāchaspatimiśra's *Bhāmātī* of the 12th cent. follows Saṅkarācārya in giving three schools of Buddhism, classifying the Sarvāstivādins as those of inferior thought (*hinamati*) against those of middle (*madhyama*, the idealist) and advanced thought (*prakṛṣṭamati*, the negativist).

In the 14th cent. the system is reviewed as one of the four Buddhist schools by Mādhavācārya.⁸ Here it is expressly stated that the Vaibhāṣikas acknowledge the direct perception of external objects (*vāhyārtha-pratyakṣatva*), while the Sautrāntikas (*q.v.*), to whom Vasubandhu himself was

¹ Hsien Tsiang's statement that this commentary was drawn up by 500 *arhats* in the Buddhist Council under King Kāśmīra is very doubtful, because the book relates a miracle which it says occurred formerly in the reign of that king; see T. Watters, *On Yuan Chwang's Travels in India*, 629-645, London, 1904-05, i. 277.

inclined, hold that external objects merely exist as images and can only be inferred (*vāhyārthānumeyatva*).

Though the existence of the Sarvāstivādins can be traced during more than fifteen centuries of Indian history, yet the exhaustive study of their religious practices was not undertaken till the 7th cent., when I-tsing translated the whole of their Vinaya literature and wrote a treatise on the current practices.¹ The geographical extension described by him is more minute than those of his predecessors. Fa-Hian (A.D. 399-414) says that the Sarvāstivāda was followed in Pāṭaliputra as well as in China in his time.² According to Hsien Tsiang (A.D. 629-645), the school was found chiefly in Kaśgar (Central Asia), Udyāna (Yusefzay, N.W. Frontier), and the neighbouring territories, in Matipura, Kanaui, and a place near Rājagṛha in Mid-India, and also in Persia in the West.³ I-tsing (A.D. 671-695), himself a Sarvāstivādin, gives a fairly detailed description of this school. The places enumerated by him as belonging to it are the following:

C. India	Magadha, where it is chiefly flourishing.
W. India	Lāṭa (Gujarāt) and Sindhu, where it had a few adherents.
N. India	Almost all belonged to it.
S. India	A few adherents are found.
E. India	Side by side with the other schools.
(Ceylon)	No adherents.
Sumatra, Java, Bali	Almost all belong to it.
Islands	
Champa (Cochin-China)	A few adherents.
S. China	The south valley of the Yang-tse-kiang, Kwang-tung, and Kwang-si, where it is chiefly flourishing.

The three subdivisions of this school, Dharmagupta, Mahīśāsaka, and Kāśyāpiya, are found in Central Asia (Kharachar, i.e. Kuche, and Kustana, i.e. Khotan) and the N.W. Frontier (Udyāna, i.e. Yusefzay); and the Dharmagupta alone is flourishing in E. China and also in W. China (Shen-si).⁴

The Tibetan Buddhism is said to belong to this school, while in Japan a tenet founded on the *Abhidharmakośa* is still studied as the foundation of a philosophical training. This wide-spread school was, according to I-tsing, in possession of a *Tripiṭaka* (sacred books so called) amounting to 300,000 *śloka*s.⁵ Whether this statement is to be taken as literally true or not, an examination of the extant Buddhist literature shows clearly that this school had a separate *Vinaya Piṭaka*⁶ and also a distinct *Abhidharma Piṭaka*.⁷ These are very complete in contents, a counterpart of almost all the Theravāda works being found in them. A striking resemblance between the names of the seven works of the *Abhidharma* of the two schools is so puzzling to the present writer that he has thought it necessary to show clearly that the two sets had no real connexion with each other.⁸

The whole of the *Abhidharma* literature centres on the work *Jñāna-prasthāna* ('Origin of Knowledge') by Kātyāyaniputra. Hsien Tsiang tells us that he composed this work about 300 years after the Buddha's decease, in a monastery called Tāmasāvāna of Cinabhukti, N. India, in which the

traveller himself found 300 brethren of the Sarvāstivādins learning the Hinayāna doctrine. The work treats of matter (*bhūta*, *bhauta*) and mind (*chitta*, *chaitta*) with all their bearings, giving definitions and classifications when necessary. Among the subjects discussed we find the supramundane state (*lokāgra-dharma*), knowledge (*jñāna*), thought (*chetanā*), meditation (*samādhi*), views (*dṛṣṭi*), person (*pudgala*), form (*rūpa*), elements (*mahā-bhūta*), bondage (*samyojana*), path (*mārga*), action (*karma*), and the like. It is to this work that six authors, either contemporaries or successors, wrote each a supplementary treatise called the *pāda* ('foot'). The six *pādas* take up the subjects again and try to systematize or supplement what is, in their eyes, wanting in their predecessors.

The *Saṅgīti* ('Rehearsal') by Mahākauṭhila arranges the subjects in the numerical order, while the *Prakarāṇa* ('Classification') by Vasumitra tries to group the questions under chief heads. The *Vijñāna-kāya* ('Consciousness-body') of Devaśarman, the *Dhātukāya* ('Element-body') of Pūrṇa, the *Dharma-skandha* ('Norm-group') of Śāriputra, and the *Prajñāpti* ('World-formation') of Maudgalyāyana treat of a subject each as the title indicates. These constitute the seven official works of the school,¹ but they by no means exhaust all the literature of the Sarvāstivādins.

As is shown in the present writer's 'Analysis,'² there are the *Vibhāṣā* (14 fasciculi, no. 1299) and the *Mahāvibhāṣā* (200 fasciculi, nos. 1263, 1264), each being a different translation of a commentary on the *Jñāna-prasthāna* just mentioned. This *Vibhāṣā* is practically an encyclopedia of the Vaibhāṣika philosophy, for it records carefully the often conflicting opinions of various realistic philosophers residing at the two great centres of Kāśmīra and Gandhāra.³ The bulk of this great commentary and the discrepancy of the opinions expressed in it gradually made the necessity of a concise treatise or a short versification keenly felt. To supply this need there appeared the *Abhidharmakośa* (no. 1269) of Vasubandhu early in the 5th cent.,⁴ and in opposition to it the two treatises of Saṅghabhadra called the *Satyānusāra* (no. 1265) and the *Samaya-pradīpikā* (no. 1266). Saṅghabhadra represents the orthodox opinion of realism, while Vasubandhu was much inclined towards the Sautrāntic philosophy and introduced some ideas foreign and heretical in the eyes of the orthodox. The brilliant leader of the Neo-Vaibhāṣikas soon proved the founder of the idealistic school. Of all the *Abhidharma* literature we have no original Sanskrit text at present, nor is there any prospect as yet of its being discovered in the remote Himalayan regions. The Chinese translation is, therefore, the sole authority.⁵ To compensate for this, we have Yaśomitra's *Abhidharma-kośa-vyākhyā-sphuṭārtha*, a Sanskrit commentary on the *Kośa* of Vasubandhu. This is almost the last work which reflects the activity of the Sarvāstivāda philosophy on Indian soil.

In Japan, however, the *Kośa* doctrine is still 1 That these were authentic classics of the school is seen from Yaśomitra's giving a list of these authors as handed down. See *Abhidharmakośa-vyākhyā Kārikā*, iii. The *Mahāvīryapatti*, §§ 65, 91-96, gives six works and omits *Vijñānakāya*. For Takakusu's list of Sanskrit, Tibetan, and Chinese (transliteration and translation) equivalents see *JPTS*, 1905, p. 75.

2 *JPTS*, 1905, p. 125 f.
3 The text cites the views of at least six schools, viz. Vibhāṣyavādin (Theravāda), Sautrāntika, Dharmagupta, Mahīśāsaka (the two are the subdivisions of the Sarvāstivādins), Vātsīputriya, and the school which holds the distinction of *chitta* (mind) and *chetanā* (thought). Among the names of philosophers quoted we find Dharmatrāta, Buddhadeva, Ghoṣa, Pārśva, Vasumitra, and Kātyāyaniputra.

4 See p. 198ⁿ, n. 3.
5 No text is found in Tibetan. The Tibetan *Dharmaskandha* (*Ido*, xx. 3, wa 33-46) to which M. Walleiser refers (*Die Philosophie. Grundle.*, Heidelberg, 1904, p. 18) proved, on comparison, to be an entirely different work (see Takakusu, in *JPTS*, 1905, p. 77).

¹ See Takakusu, *I-tsing's Record*, p. xxxvii.

² Fa-Hian, *Record of Buddhistic Kingdoms*, ch. xxxix., ed. J. Legge, Oxford, 1886, p. 90.

³ Hsien Tsiang mentions some thirteen places as belonging to this school, but the number of its adherents in India proper was not so great as in those of the other schools (see T. W. Rhys Davids, *JRAS*, 1891, p. 420).

⁴ See Takakusu, *I-tsing's Record*, p. xxiv.

⁵ A *śloka*=32 syllables.

⁶ For the list of nineteen works of the *Vinaya* in 150 volumes see Takakusu, *I-tsing's Record*, p. xxxvii.

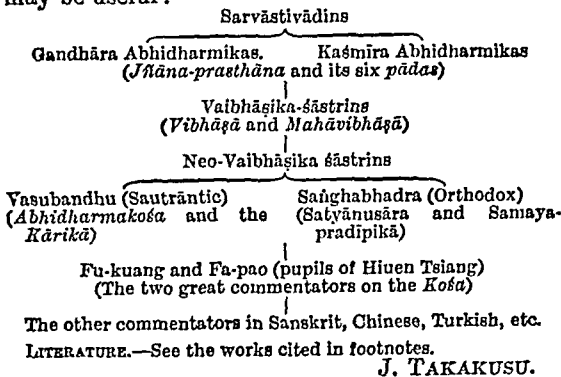

⁷ The present writer has analyzed the *Abhidharma* literature of this school in *JPTS*, 1905, pp. 67-146.

⁸ A question was raised by H. Kern and M. Walleiser as to a possible connexion of the Pāli with the Chinese, and the result of an examination was communicated to *JRAS*, 1905, pp. 160-162.

studied by Buddhist scholars, and a considerable amount of literature is in existence. Among others, we have the two priceless commentaries on the *Kośa* (each 30 vols., being notes of Hiuen Tsiang's lectures) by Fu-kuang and Fa-pao (A.D. 645-664 with Hiuen Tsiang) and two other commentaries of a little later date (each 29 vols.) by Yüan-hui and Tun-lin, all of which were lost in their original home, China.¹ The preservation of these works in the Far East, along with a Turkish commentary found in Central Asia,² is a proof of the wide propagation of the Sarvāstivāda school.

As to the religious life and the monastic rules of the school, there are numerous points of interest in which they differ from the orthodox school. These will become clear when all the *Vinaya-piṭakas* (eleven in all) have been examined, and then I-tsing's painstaking *Record* will assert its importance in religious history.³

There are some doubtful points as to the name of the school. Sarvāstivāda (Pāli Sabbatthivāda) is the regular name of it. The *Dīpavamsa*, v. 47, however, gives Sabbatthavāda, which looks like Sarvāsthavāda in Sanskrit, but 'attha' for 'atthi' is probably due to a euphonic change. The oldest Chinese name Sā-p'o-to (Jap. Sat-ha-ta) very probably represents the Pāli Sabbattha.⁴ An ingenious suggestion of F. W. Thomas of the India Office Library, that it may represent Sadvāda in contradistinction to Asadvāda, is very appropriate, if we can only adduce any evidence of the use of such a name in Buddhist literature.⁵ When the three minor schools⁶ became subordinate to it in the 7th cent., this school seems to have used the name Mūla-sarvāstivāda. A general appellation, comprising the four together, is, according to I-tsing, the Ārya-mūla-sarvāstivāda-nikāya, i.e. the 'noble fundamental school which affirms the existence of all.' We have no reason to doubt the accuracy of I-tsing's statement when we have the evidence of the name Sarvāstivāda (which is practically the same as Sarvāstivāda) used by Śāṅkarācārya and Vāchaspatimīśra.⁷ The *Mahāvvyūṭpatti*, § 275, further gives two forms of the name, Ārya-sarvāstivāda and Mūla-sarvāstivāda, in conformity with the names given by I-tsing. In conclusion a summary of the above description of the philosophical and literary activity of the school may be useful:

¹ First published in Japan in the Kyoto ed. of the *Tripiṭaka* (Continuation series, cases 84-86).

² This work is now being studied by E. D. Ross. It seems to have been translated into Turkish from Chinese.

³ The present writer is now engaged on publishing *Buddhaghosa's Commentary on the Vinaya, the Samantapāsādikā*, of which a Chinese text exists.

⁴ This name Sā-p'o-to is used from the Three Ch'in dynasty (A.D. 350-431). Watters restored it into a very unlikely form 'Sarvata.' Though phonetically this may fit better than 'Sabbattha,' we cannot assume that such a form as 'Sarvata' has ever existed as a name.

⁵ In *JPTS*, 1905, p. 72, the present writer gave *sarvavāda* instead of *sadvāda* by mistake.

⁶ See above, p. 199, n. 1.

⁷ See above, p. 193b.

SĀSANA.—This term, meaning 'instruction,' 'teaching,' 'injunction,' and etymologically allied to *sattāhā*, 'teacher,' and *śāstra* (Skr.), 'treatise,' 'didactic compilation,' appears in the earliest books of the Buddhist canon. There it almost invariably means the teaching, doctrine, or evangel of the Buddha.

There is this special touch of similarity with the word 'evangel' (εὐαγγέλιον) that *sāsana* is occasionally employed in the commentaries to mean 'message' or 'news'—e.g., 'the king sent a message, saying' . . .¹

In such passages as those translated 'the teaching of the Master,'² 'the doctrine of the Teacher,'³ 'Gotama's commandments,'⁴ the original is *sattāhu* or *Gotamassa sāsanaṃ*. And we find it repeatedly used as a co-ordinate and equivalent of *dhamma* and *vinaya*—'doctrine' and 'discipline,' or 'rule'; 'this is the Dhamma, this is the Vinaya, this is the Teacher's Teaching.'⁵ In fact, in so far as *dhamma* meant formulated doctrine, and *vinaya* meant spiritual discipline, *sāsana* implied both of these. For it connoted essentially 'precept,' 'ordinance,' enjoined by an instructor on a pupil as a rule of life; hence the term for a loyal recluse, *sāsana-karo* (-kari, or -kārako), 'doer of the *sāsana*'; and hence the frequent refrain of triumph when he realizes that he has graduated in such a course:

'And all the Buddha's ordinance is done.'⁷

Occasionally the *sāsana* so obeyed is ascribed to a notable teacher in the order, even though it were to a contemporary of the Buddha—e.g., Sister Paṭāchārā:

'THE SISTER: "Do ye the Buddha's *sāsana*" . . .

The will (*sāsana*) of her who spake, Paṭāchārā,

The thirty sisters heard and swift obeyed . . . they hailed her blest:

"Fulfilled is thy will!"'⁸

Once only is the teaching of one 'outside' the order (*ito bahiddhā*) called his *sāsana*. This was the saintly Sunetta,⁹ and he belonged to the din past.

Gradually the import of the word developed. From meaning the fluid series of personal teachings it came to represent both a body of compiled if unwritten literature (*pariyatti-sāsana*), which was to be committed to memory, and the system of conduct and mental training (*paṭipatti sāsana*), as enumerated in the *Niddesa*.¹⁰ It has been sought to reproduce this organic development in the term by the word 'rule':

'But I will in this Rule renounce the world.'¹¹

'If he the training in the Rule fulfil.'¹²

In its relation to the individual follower's consciousness, it coincides with the word 'religion.' And in historical documents of Buddhism, such as the account of the growth of the seventeen partly divergent schools,¹³ and the *Mahāvamsa* and *Dīpa-*

² *Dialogues of the Buddha* (SBB), tr. T. W. and O. A. F. Rhys Davids, London, 1910, ii. 135.

³ *Mahāvagga*, i. vi. 32 (SBE xlii. [1881] 98); cf. *Dhammapada*, 183, 185 (SBE x.2 [1898] pt. i. p. 61).

⁴ *Sutta-Nipāta*, ii. xiv. 19 (SBE x.2 pt. ii. p. 169).

⁵ *Anguttara Nikāya*, ii. 168, iv. 143, 280.

⁶ *Majjhima Nikāya*, i. 129, 234; *Anguttara Nikāya*, ii. 26; *Sutta-Nipāta*, 445 (SBE x.2 pt. ii. p. 70).

⁷ *Psalm of the Early Buddhists* (PTS), London, 1900-13, i. 26, etc., ii. 107, etc.

⁸ *Ib.* i. 74; cf. 95, where *anusāsani* ('instructions') is substituted probably *metri causa*.

⁹ *Anguttara Nikāya*, iv. 104; cf. 136: *ito bahiddhā*.

¹⁰ *Mahā-Niddesa*, 143. This is the canonical commentary on part of the *Sutta-Nipāta*; it is here commenting on the word *sāsana* (precepts) in verse 815 (SBE x.2 pt. ii. p. 151). 'Religion' would have been a better rendering here of *sāsana* than 'precepts.'

¹¹ *Psalm of the Early Buddhists*, ii. 313; cf. F. Max Müller, *Dhammapada*, 164 (SBE x.2 pt. i. p. 46).

¹² *Kindred Sayings* (PTS), London, 1917, i. 246, tr. of *Saṃvutta*, i.

¹³ *Points of Controversy* (PTS), London, 1916, p. 2, n. 1; see art. *Sects* (Buddhist).

vamsa, *sāsana* can rightly be translated 'the faith,' 'religion,' 'the church.'

So H. Oldenberg ('Will exist as long as the Faith'); W. Geiger and M. H. Bode ('Is there a kinsman of Buddha's religion?'); S. Z. Aung and O. A. F. Rhys Davids ('Now the Sāsana held on its way as these eighteen early schools').³

Such down to the present day is the significance of the term to a Buddhist.

LITERATURE.—See the sources indicated in the footnotes.

C. A. F. RHYS DAVIDS.

SASANIANS. — 1. History. — The national dynasty which, overthrowing the Arsacid line, ruled in Persia from A.D. 226 to 651 — George Rawlinson's 'Seventh Great Oriental Monarchy' — derives its name from Sasan, father of Papak (otherwise Babek), whose son Ardashir I. (same name as Artaxerxes) was the founder of the line of some 28 monarchs who ruled Irān for over four centuries. We are concerned here with this long dynasty only so far as it was connected with the history of the national religion as well as with Christianity. The question whether the great Achæmenian dynasty (559–331 B.C.), which was certainly Mazdean (for its kings proclaim themselves in their famous rock-inscriptions as 'Mazdayasnian'), was also Zoroastrian, as has been held by so many, or whether it professed another form of that cult, is still one of the unsolved riddles of history, in spite of J. H. Moulton's able advocacy of the former solution.⁴ The faith of the Parthian or Arsacid dynasty (250 B.C.–A.D. 226) is a subject of considerable obscurity; it was perhaps a debased form of Mazdeism, with a heterogeneous syncretism of alien and pagan cults. Still Zoroastrianism continued to subsist, at least in the more purely Persian parts of the empire, and the fragments of the sacred books which had escaped the (traditional) destruction by Alexander the Great were handed down during the 476 years of the dynasty; probably it was also during this period that the surviving portions of the Avesta were translated into Pahlavi, the daughter and successor of the Old Persian language.⁵ Be this as it may, with the Sasanians the Zoroastrian religion, though much altered from the days of the Prophet and his *Gāthās*, mounted the throne of Persia and became the undoubted national faith of a mighty empire. The kings of this line were ardent, and only too frequently intolerant, upholders of the faith. Ardashir himself on his coins styles himself from the beginning 'Mazdayasn', i.e. worshipper of Mazda, like the Achæmenian 'Auramazdiya,' and his successors retained the title. It was under the second king, Shahpuhr (Sapor) I., that Māni, the founder of the subsequently world-wide system of Manichæism (*q.v.*), first came into prominence. By the Persians he was always regarded as a heretic and his religion as a 'heresy' of Mazdeism. He was cruelly put to death by Varahran (Bahram) I. in 272. His execution seems to have been concomitant with an extensive persecution, by the Magian priesthood, not only of Māni's followers, but also of the Christians. The long reign of Shahpuhr II. (A.D. 309–380) is of importance in the religious history in that, at least according to the native tradition, the celebrated priest Aderbad Marehspond (Aturpāt-i Maraspondān) completed during it the final redaction and correction of all that remained of the Avesta texts in the form in which we now possess them.⁶ To him is also ascribed the compilation of the *Khorda Avesta*, or 'Little Avesta,' being selections from various sacred texts and

containing the *Nyayishes*, or 'Litanies,'¹ together with the *Gahs*, *Siroza*, and *Afringān*. Other original compositions in Pahlavi are attributed to him, especially his *Andarj*, or 'Book of Counsel' to his son.² Of Aturpāt and his fellow 'diaskeuasts' Geldner says:

'Out of the surviving remains and fragments [of the Avesta] they built up a new Canon. With old materials they erected a new edifice. What materials they found, what they themselves added, how far they reproduced passages literally or recast them, it is impossible to decide.'³

Probably we owe to them the division into chapters and verses. West takes a less favourable view of the work of these revisers. Certainly a great deal of the meaning of the sacred texts had been forgotten—many of them are still in a very corrupt state—and we do not exactly know in what script they were preserved; for, strange as it sounds, what is now known as the Zend or Avestan alphabet, in which all existing MSS of the sacred book are written and which is now used in printing, is posterior to and derived from the Pahlavi alphabet, and evolved from the latter possibly as late as the 6th cent. A.D., eked out with vowel characters borrowed from the Greek.

The reign of Yazdagird II. (Yazdakart, lit. *θεδακτος*), A.D. 438–457, is noteworthy in the religious history for his violent attempts to force the Mazdean religion upon the Armenians, and after a long religious war Zoroastrianism was imposed upon that nation, amidst bloody episodes, in 456. As a preliminary to this scheme of proselytism must be mentioned the celebrated 'Edict of Mihr Narseh,' the vazir or prime minister, addressed to the Armenian people and preserved to us by the Armenian historians. It is extremely curious in many ways. It begins with the solemn words: 'Ye must know that every one of those who live beneath the sky and hold not the Mazdean religion is deaf and blind and deceived by the demons,' and proceeds to give a summary of that faith, followed by a detailed criticism of the doctrines of Christianity, insisting especially on the absurdity of the divine incarnation, the crucifixion of God, abstinence and celibacy, and so forth. It is surprising to find, however, that the form of Mazdeism which this official edict sets forth is no other than what would be termed the heterodox one of Zervanism, or the reduction of the primitive dualism to the primordial principle or deity Zervan ('Time'), of whom were born in fantastic wise both Ormazd and Ahriman.⁴ We must suppose, therefore, that this represents the royal belief at the time. The Christian bishops under the catholicos Joseph drew up a reply to the document. What argumentation failed to effect was, as we have seen, subsequently carried out by ruthless persecution.

The eventful reign of Kobad (Kavāt) I. (A.D. 490–531) is remarkable for a most unusual episode in the history of the Zoroastrian faith. This was the rise of the second great 'heresy' in its midst, the extravagant communism of Mazdak (*q.v.*), a Magian priest, whose name is constantly coupled in the Pahlavi writings with that of Māni as a heresiarch in terms of special reprobation. The extraordinary thing is that the king himself fell under the influence of this wildly ultra-socialistic system and became not only a protector but even a proselyte of Mazdak. This led to his deposition in 498 and the substitution of his brother Jamasp. After his restoration Kobad broke with the sect, which was now plotting his overthrow, and inflicted a general massacre upon them. Mazdak himself survived till the next reign, but Chosroes

(Khusrau) I. exterminated the sect, slaughtering the heresiarch with 100,000 of his followers. It will be seen that, whilst Manichæism was a philosophical and theological system, Mazdakism was almost exclusively of a social and economic character, proclaiming communism not only of goods but even of women. Its extension in both Persia and Armenia was at one time very remarkable.

We now come to the most illustrious of all the Sasanian reigns, that of the well-known Chosroes Anoshervan (in Pahlavi, Khusrau-i Anōshak-rūbāno, i.e. 'the immortal souled'), A.D. 531-579. This was the golden age of the imperial Mazdean religion and of the Pahlavi literature. To it belong most of the many Pahlavi treatises which have been preserved to us and of which by far the fullest and best account is that of E. W. West in *GrP* ii. 75-129. It is quite evident that the court of this famous monarch was a great centre of intellectual activity. Foreign philosophers and men of science, Indian, Syrian, and Greek, from East and West, met and discussed; whilst even in the national religion itself we know that rival theological and philosophical sects existed side by side, on the evidence of an eye- and ear-witness, Paul the Persian.¹ The king himself seems to have taken a keen personal interest in theological questions. If we may credit a strange tale recorded by the Syriac historian Barhebraeus,² he summoned on one occasion a Nestorian catholicos ('who had formerly been a magus') and held a brief discussion with him concerning Cyril and Nestorius, apparently trying to persuade him to give up Nestorianism for Christian orthodoxy. It is distressing to learn that, as the royal logic did not convert the unfortunate man, he was incarcerated and subsequently put to death. Several Pahlavi compositions are attributed to Chosroes himself—it is difficult to say with what authority. There is a very interesting Asoka-like doctrinal proclamation, styled 'The Ten Precepts of the Immortal-souled Khusrau, King of Kings,' embodied in the *Dinkart*,³ and translated by the present writer in *The Babylonian and Oriental Record*.⁴ More interesting still is the *Andarj-i Khusrau-i Kavātān*, a little treatise first published with some others by Dastur Peshotan at Bombay in 1888. Whether this piece be merely a rhetorical composition of subsequent date, such as Xenophon's dying speech of Cyrus the Great is supposed to be, or whether it be genuinely the last will and testament of the great Sasanian monarch, in any case it is a noble composition of lofty morality and sentiments worthy of a Christian, surpassing in its reverent humility the words put by Xenophon in the mouth of his hero.⁵

'As soon as this life shall be parted from my body,' it begins, 'take this my throne and bear it to Ispahan, and in Ispahan set me up; before the face of the people make ye proclamation, saying: "O men, from doing sin preserve yourselves; and in the working of meritorious deeds be ye active; and the splendour of the world hold ye in contempt. For this is the body of him who yesterday was in the body, and whom men approached with three obeisances; in every place he cultivated purity and the splendour of this world. But to-day on account of his condition of impurity,⁶ every one who placeth his hand upon him is thereafter obliged to purify himself by the *bareshtum*, else to the worship of God and the converse of the good they do not admit him. Yesterday on account of the pomp of his sovereignty he gave not his hand to any one; to-day on account of his condition of impurity, no man putteth his hand on him!"'

There follow a number of truly admirable moral

⁶ It is well known that in the Mazdean system death, through the operation of the demon Nasu, renders the corpse impure—so held by the Parsis to the present day.

and religious precepts addressed to his people; and the conclusion is:

'From before the majesty of Aūharmazd have I come, for the purpose of overthrowing the Evil Spirit am I here; again before the majesty of Aūharmazd must I go; moreover this is required of me—holiness and the actions proper to the wise and the living in union with wisdom and the due ordering of my nature.'

It is of course only natural that all kinds of traditional utterances should gather round the name of so celebrated a ruler, of whom his subjects made not only an Alexander and a Justinian, but also a Solomon. Numerous conversations, shrewd replies, solutions of cases, and messages to foreign monarchs are preserved by Eastern writers, such as the Arab chronicler Tabari, and at least eighteen letters and speeches are quoted as his in Firdausi's great national epic, the *Shāh-nāmah*. One of these¹ he introduces with the words: 'I have seen in an old book that (Chosroes wrote as follows).'

Whatever be thought of the attribution to the King of Kings himself of participation by word or pen in the active literary and scientific life of his court, it is quite certain that the royal patronage stimulated an extraordinary intellectual activity in the national literature. We are told that he encouraged translations from foreign writers of all kinds, ordering the works of Aristotle and Plato to be rendered into Pahlavi, and that even Homer was similarly translated. Philosophers persecuted by Justinian were received with open arms, as well as Syrian scholars. Indeed it is to this golden age of Persian literature that the Arabs owed their introduction to Greek culture.² One important influence of the kind in Sasanian times was that of Greek medicine—an influence, by the way, which goes back to the Achæmenian dynasty (Demokedes, under Darius I.,³ Ktesias, Apollonides). The Greek Stephanos of Edessa cured Kobad I.⁴ It appears that at the same time was begun the compilation of a 'King's Book,' or royal chronicle, to which subsequently Firdausi owed so much of the material for his epic. Probably, too, several of the standard Pahlavi treatises began to take shape at this time. Among these the first rank belongs to the invaluable *Būdahishn* (or *Būndehesh*, lit. 'The Original Creation'), which, though doubtless extended and revised much later, preserves some very ancient material—in some cases old traditions and myths which are even pre-Zoroastrian, such as those referring to the creation and the first men. The very miscellaneous *Dinkart* ('Acts of Religion'), 'a collection of information regarding the doctrines, customs, traditions, history and literature of the Mazda-worshipping religion'⁵—the most extensive of all Pahlavi works—was certainly completed as a kind of encyclopædia or miscellany several centuries later in Muhammadan times; but it contains a good deal of older material, including

¹ J. Mohl, *Le Livre des rois*, Paris, 1870-78, vi. 408.

² It was at this time that there came from India the famous story *Kaṭila va Dimna*, translated into Pahlavi from Sanskrit, and with it the game of chess, the treatise on which, narrating the sending of the game to Khusrau, is still preserved in the little treatise, *Chatrang-nāmak*, published by Peshotan in 1885. From the Persian court both the tale and the now universal game rapidly spread throughout the Western world. On the important subject of Sasanian art see M. Dieulafoy, *L'Art antique de la Perse*, Paris, 1884, and, for the most recent (highly laudatory) appreciation, W. M. Flinders Petrie, *Eastern Exploration Past and Future*, London, 1918, pp. 30-42 ('Of the Sasanian Empire our estimate must be mainly from its political power and its artistic work. The huge rock-cut monuments . . . are of excellent work, equal to good Hellenic carving, and above what Rome could do at that age. The coinage of the Sasanians is quite equal to that of Rome in the third century. We want to know much more of this age, in order to trace the effect of Persian art on the West').

certain 'enclaves,' or short treatises, preserved, like flies in amber, in chapters of the larger compilation. Such a one is the medical tractate referred to in art. DISEASE AND MEDICINE (Persian), as also the *Andarj*, or 'Ten Precepts,' mentioned above. But its chief value is in the preservation of a detailed analysis of the contents of all the 21 *nasks*, or books, of the original Avesta, whose text had long since perished.¹ There seems no reason to doubt that these summaries may faithfully represent the subject-matter of the lost sacred books.

Chosroes II., known as Parvēz, grandson of Chosroes I. (A.D. 590-628), conquered Jerusalem and carried off the True Cross, afterwards restored under the emperor Heraclius. This was the last great king of the Sasanian dynasty. Four years after his death the ill-starred Yazdagird III. (A.D. 632-651), the last of his race, acceded and in the last-named year had the unhappiness to witness the final conquest of his kingdom by the Muslim, he himself perishing miserably by the hand of an assassin.

2. Relations with Christianity.—Christianity spread widely and was well organized in the Persian Empire under the Sasanians, especially in its Nestorian form. At the moment of the Musalmān invasion it counted seven metropolitan provinces and 80 bishoprics, stretching from Armenia to India. Not infrequently Christians enjoyed high favour at the court, especially during the great reign of the first Chosroes. Both that mighty monarch and his grandson namesake had Christian wives, the wife of the latter being the beautiful Shirin, renowned in Persian poetry, to whose influence may be largely attributed his proclamation of liberty of conscience and his liberality to the Christian Church. Notwithstanding all this, the history of the dynasty contains records of persecutions as terrible as any in the Church's annals. We have seen that the execution of Māni was the occasion of a massacre not only of his own followers but of Christians also. There were political as well as religious reasons for these persecutions. It is true that the Mazdeism of the time was intolerant on principle. The fourth of the 'Ten Precepts' attributed in the *Andarj* to the great Chosroes runs: 'To destroy with crushing severity the teaching of heretics from out of Irān, and the eighth: 'To smite, smash up, and overthrow the diabolical, violent, and idolatrous disobedience [to the religion] which may co-exist.' The Pahlavi treatises constantly group together Manichæans, Christians, and Jews among these heretics. There is a great amount of polemical argument in several of these treatises directed against Christian teaching, showing a considerable acquaintance with the books of both the OT and the NT. This is especially the case with the *Shtkand-gūmānik Vījār* ('Doubt-dispelling Explanation'),² which actually contains an (incomplete) Pahlavi version of the Lord's Prayer. Very remarkable is a passage in the *Dinkart*,³ which is a direct attempt to discredit the teaching concerning the Aḏyos in Jn 1.

But there was also, as said above, a strong political motive for many of these persecutions. The Roman emperors, now Christian, from being fierce persecutors, had become the friends and protectors of the Church. And the great Persian Empire, whether under the Arsacids or under the Sasanians, was the lifelong foe of 'the Empire of Rām.' The Christian religion was looked upon as

essentially 'the religion of Rām.' The natural sympathy of Christians in all lands with the now Christian Empire not unnaturally rendered them suspect to the kings who were the ardent followers and champions of the national 'religion of Irān.'¹

The Persian persecutions extended, with various intervals, from the reign of Shahpuhr II. to the 7th century. Their cruelty was often incredible—for excessively cruel punishments were a characteristic of Persian governments in all ages and under all dynasties, so that 'Persian torments' became an epithet of specially dreadful tortures. The most memorable of these persecutions is the one proclaimed in 340, which lasted till Shahpuhr's death. It is unequalled for its duration, its ferocity, and the number of the martyrs, said by some to have been 190,000. In spite of this, it is recorded that apostates were less numerous than during the great persecutions of the pagan Roman emperors. After Shahpuhr's death persecution of the Christians continued, but with less intensity until the reign of Bahram (Varahran) V. (A.D. 420-438), who, at the instigation of the Magian priests, ordered a general persecution, which lasted, with intervals, for thirty years. Under his successor, Yazdagird II., occurred the celebrated massacre of the Christians at Beit-Slokh in 446—said, perhaps with exaggeration, to have claimed 12,000 victims—the beginning of a persecution which may have lasted till 450. Under subsequent monarchs there occurred from time to time cruel treatment of Christians, though by no means on so vast a scale. Even Chosroes I. and Chosroes II. are stated to have made some martyrs.

The *Acta* of these Persian martyrs have received a considerable amount of careful and critical study of late years, and on the whole, with the natural exception of certain unreliable or exaggerated portions, their general credibility has been maintained. To Louis H. Gray belongs the credit of having most carefully worked over these *Acta Martyrum*, as far as they are yet available, in search of fresh material for the study of Mazdean religion of the times.² His research has revealed a considerable amount of Zoroastrian religious material.

These writings, he remarks, 'possess one great advantage over the pagan classical sources. They record, in many cases, the experiences and the words of converts to Christianity from Zoroastrianism. . . . What we read here will scarcely coincide with the Pahlavi treatises which date, at least in conception, from this same Sasanid period; but this is only a superficial objection. . . . Our concern is with the religion of the masses, on which a valuable side-light is cast by the Christian *Acta of the Saints*.'³

This remark seems to the present writer of great importance.

SATANISM.—The worship of the Devil alleged during the two final decades of the 19th cent. to have been carried on in various countries of Europe

¹ Christianity is known under various titles in Pahlavi literature, such as *Kesh-i Mashih* ('religion of the Messiah'), *Ahi-yākth* (apparently from *Kilīya*=ἐκκλησία), and the obscure name *Tarsak* (surely no connexion with Tarsus?). Also a 'white demon' (*ehēdii-epih*) is attributed to Christianity.

² His results are embodied in a valuable paper in the *Journal of the Manchester Egyptian and Oriental Society*, 1913-14, pp. 37-55.

and America was stated to have two branches or divisions. One of these, to which the name Satanism is more strictly applicable, was a worship of Satan, the adversary of God and of Christianity, admitting that he is an evil being, a rebel against God, a lost archangel. The worshippers are said to have had recourse to the Devil because they held that God had betrayed the human race; they knowingly entered into alliance with His adversary and worshipped him with rites which were a defiance of the true God. It was a counsel of despair; and we are not surprised to be told that the adherents of this mad cult consisted of 'scattered associations or isolated persons, labouring alone, or with the aid of a few seers, and pursuing a personal aim,' that they were in fact recluses, and that they had no relations with the other and more important group.¹

The latter group, with which we are mainly concerned, was known under the alternative names of Luciferians and Palladists. They were said to adore Lucifer, the equal and foe of Adonai, or Jahweh. He was in their view the God of light, the good principle, while Adonai was the God of darkness, the evil principle. In short, he was Satan himself. This worship was founded on a dualistic philosophy and was a sort of topsy-turvy Christianity.² The name of Palladists is derived from a palladium which they were said to revere, namely the Baphomet, or grotesque idol, the worship of which was one of the articles of accusation against the Knights Templars in the 14th century. It was alleged that the Baphomet was preserved in secret through nearly five centuries after the suppression of the order and ultimately carried by one Isaac Long in 1801, together with the skull of the last Grand Master, the unhappy Jacques du Molay, from Paris to Charleston in the United States of America. These relics were averred to have there become the sacred objects of a society which was a development of Freemasonry. The head of the society, we are told, was one Albert Pike, under whose influence it spread all over the civilized world. The tendencies already at work in his lifetime, but in some measure held in check by him, were left unfettered by his death. His successor, Adriano Lemmi, transferred the supreme direction of the society from Charleston to Rome. The practice of magic blossomed out in its lodges, accompanied by not merely nonsensical but foul, cruel, and obscene rites, culminating in the formal abjuration of Christ and His religion, the apparition of the Devil in person to his votaries, and their organized and periodical worship of him.

Some of these charges were among those brought against the Knights Templars in the year 1307. Charges to the same effect continued to be made against persons accused of witchcraft so long as the witch-trials persisted. Inasmuch as torture was nearly always practised in connexion with legal proceedings for witchcraft, the persecutors of witches could usually extract a confession in the sense they required. By that means they succeeded in securing against their victims a great mass of what they called evidence, which is now altogether discredited by every rational being. What astounds an intelligent reader is to find these ancient accusations, refurbished and mingled with new ones equally improbable, and indeed impossible, brought with an apparently serious purpose against a body of citizens of every civilized country in the last quarter of the 19th century. It behoves therefore to inquire into the circumstances of the 'disclosures' on which the accusations are founded.

The evidence for the existence of either Satanists or Palladists consists entirely of the writings of a group of men in Paris. The earlier of these writings seem to have suggested a novel called *Labas* (Paris, 1891), by J. K. Huysmans, a literary man of some reputation who had professed materialism and afterwards abandoned it. One of the chief personages of the novel is a certain Canon Doere, a renegade priest whose portrait is alleged to be sketched from a real man then living in Belgium. He acts as the leader of the Satanists and performs the Black Mass, which is of course a horrible and indecent parody of the Roman Catholic rite. In one form or other the Black Mass is a very old story; heretics and witches from the Middle Ages downwards have often been accused of it. Huysmans relates it in detail, sparing nothing. More tangible evidence of the existence of the Satanists and their worship than that of Huysmans in this novel and in his subsequent preface to the book by J. Bois cited above has yet to be produced. At any rate the allegations as to the sect have supplied little more than a background for the hardly less lurid 'revelations' concerning the Palladists.

These were originally undertaken by a young man named Gabriel Jogand, a Provençal, born at Marseilles in 1854. He was educated at a Jesuit college, but, speedily breaking loose from it, led a Bohemian life and attempted to make a livelihood by bitter vituperative attacks upon the Roman Catholic Church and everybody and everything connected with it. For his assaults on religion and libels on individuals he was repeatedly condemned by various French tribunals to fine and imprisonment. In 1881 he became a Freemason; but, as he left the order within the same year in consequence of a quarrel, it is obvious that he did not proceed very far into its mysteries. A man of considerable resource, restless, vain, he was constantly devising something fresh to bring himself before the public and to put into his pocket the money of which he was sorely in need. Suddenly in April 1885 he professed to be 'converted.' He repudiated his old opinions and his old associations. He expressed the deepest contrition. He offered himself to confession at the parish church of St. Merri. After a little suspicion and delay he was accepted and reconciled to the Church. Two years later he went to Rome, where he was solemnly received by the pope, Leo XIII., and his labours against the Freemasons were approved and blessed.

Immediately after his conversion he had begun the publication of a work in four volumes, entitled *Révélation complète sur la franc-maçonnerie* (Paris, 1886). From this time until 1897 one book and periodical after another poured forth from his pen and those of his co-operators, each of them containing 'revelations' more blood-curdling than its predecessor. They were boomed by the hierarchy and the religious press and greedily bought by the orthodox public in France, Germany, and Italy. In his unconverted years Jogand had adopted 'Léo Taxil' as his pen-name; and he continued to write under this signature. He had many assistants and ecclesiastical backers. Prominent among the latter were Fava, bishop of Grenoble, and Meurin, archbishop of Port Louis in the Mauritius, who distinguished themselves by the virulence of their anti-masonic writings. Meurin, in 1892, issued a book entitled *La Franc-maçonnerie, Synagogue de Satan*, in which he connected Palladism with the Jewish Kabbala and elaborated the mystic value of numbers into proofs of the enemy's diabolical conspiracy. Another assistant (or rather confederate) was a German, C. Hacks, who wrote under the name of Bataille.

¹ J. K. Huysmans, pref. to J. Bois, *Le Satanisme et la magie*, Paris, 1895, p. xvi.
² *Id.*

Another was Domenico Margiotta, who claimed to have been born in 1858 at Palmi, in Italy, and to have been a Freemason of very high dignity in the order. If we may believe his statements, he was 'converted' and from his former position was able to make very important revelations concerning masonic doings and beliefs. His principal work was published at Paris in 1894, on Adriano Lemmi, whom he alleged to be the supreme head of the Freemasons throughout the world. Even earlier than he, yet another German, Paul Rosen, originally of Berlin, but then in Paris, had published in French a work directed against the Freemasons under the title of *L'Ennemie sociale* (Brussels, 1890). But, valuable as was the help thus lent to him by others (and the enumeration above is not exhaustive), Léo Taxil was by no means dependent upon it. Fertile in his ingenuity, audacious, and cynical, he wrote rapidly and recklessly under the name by which he was known as a writer; and, when tired of that or desirous of creating a new sensation, he freely invented further pseudonyms. These were represented to be the real names of real persons whose adventures were sometimes mysteriously referred to, sometimes given more or less at length. One such was A. M. Ricoux, who pretended to have been a settler for four years in Chile. Under this name Taxil wrote in defence of his own allegation that there were female Freemasons. As Ricoux, he professed to have obtained a code of secret instructions to supreme councils and grand lodges, alleged to have been printed at Charleston in 1891, from which he claimed to have learned that the Supreme Directory of universal Freemasonry was centred in Berlin, with subordinate Directories in Naples, Calcutta, Washington, and Monte Video, a Chief of Political Action in Rome, and a Grand Depositary of Sacred Traditions, the Sovereign Pontiff of Freemasonry, at Charleston, an office then filled by Albert Pike.

Bataille's principal, but not his only, contribution to the revelations was a work which appeared in serial parts entitled *Le Diable au XIX^e siècle* (Paris, 1893-94). In it he related his travels and adventures among Freemasons in various parts of the world, including India and America, both North and South. In the course of his journeys he met (so he declared) a certain Miss Diana Vaughan, in whose company he visited the Mammoth Cave of Kentucky and was present at a *séance* with Asmodeus in person. Shortly afterwards this lady was more directly introduced to the gaping antimasonic public of Paris as the editor of the *Palladium régénéré et libre*, a periodical represented to be the outcome of a quarrel between herself and other highly-placed authorities of the Palladist organization. Only three numbers, however, appeared. Nominally directed to the advocacy of a reformed Palladism, it was obviously only a step to a further development. When it had served the purpose of an attempt to convince the world of the real objective existence of the Palladist society, Miss Diana Vaughan's conversion to the Roman Catholic Church was announced; and within a month afterwards, in July 1895, she began the publication of her autobiography, under the title of *Mémoires d'une Ex-Palladiste*. It proved quite exciting and supplied pabulum for the faithful during many months of serial publication. She averred herself a descendant of Thomas Vaughan, the twin brother of Henry Vaughan, the Silurist. Thomas Vaughan was always mystical. At one period of his life he was devoted to alchemy, which he appears to have afterwards renounced. Diana Vaughan imputed to him Rosierucianism, which he distinctly disclaimed; and she related that he was himself the executioner of Archbishop Land, and that he had steeped a linen cloth in the

'martyr's' blood, and burnt it by way of a sacrifice to the Devil. The Devil thereupon made his appearance and entered into a pact with him. Diana Vaughan sent her 'ancestor' subsequently to America, where he wedded Venus-Astarte, who came down out of heaven and remained with him for eleven days, leaving with him when she re-ascended a child, the fruit of their union. It need not be said that this is pure nonsense. Thomas Vaughan never was in America, so far as is known from any authentic record. Of the same character is Diana's account of her own birth and early life. She declares that she was early initiated into Palladism, advanced from grade to grade, ultimately appointed grand priestess of Lucifer, and destined to be united in marriage with no less a personage than Asmodeus. Her progress is described in the most melodramatic fashion. It includes of course interviews with Lucifer himself, exchange of affectionate passages with her future bridegroom, Asmodeus, the description of a terrific combat between the hosts of Lucifer and those of Adonai, which she was privileged to witness and describe after the manner of a war-correspondent, and her visit, transported in the arms of Lucifer, to a distant region of the universe in which he was supreme.

With the help of these and other writers, some real, some fictitious, a deluge of 'revelations' was poured forth for about twelve years. Not merely was the rise of Palladism narrated, or rather its development out of the highest grades of Freemasonry under the hands of Albert Pike, with its headquarters at Charleston and its subordinate branches throughout the world, but also the cleavage of the institution into two mutually hostile forces, the one led by Diana Vaughan, the other by Adriano Lemmi. The personal and family history of Diana Vaughan occupies a considerable part of the *Mémoires* with which she enlightened the world. Weird details accompany and complete the story. But they yield in extravagance to Bataille's marvellous travels. He started by being a ship's doctor on the Eastern service. If he may be credited, he was introduced into Freemasonry at Naples and by bribery succeeded in obtaining the highest degree. Armed with this, he penetrated the most secret dens of the order in East and West, one of which he describes as being a Presbyterian chapel at Singapore, where he witnessed the initiation of a Mistress-Templar according to the Palladian rite, that is to say, with revolting obscenity. He attended a lodge in Calcutta, at which Lucifer himself was present, delivered an oration, and accepted a human sacrifice. At Gibraltar he explored caverns in the great rock, which were occupied, so he says, by British criminals condemned to life-servitude. They were engaged in the making of Baphomets and other idols and of various instruments of black magic, including terrible poisons for putting away any one whose destruction was desired. These travels are cast in a form and adorned with particulars both grotesque and gruesome that would not have been out of place in mediæval witch-tales.

Léo Taxil and his co-operators succeeded in imposing, by such means, on a large number of the ecclesiastics and devout laity on the Continent. The 'revelations' were of course denied and denounced as lies by the Freemasons. Demands to produce Miss Diana Vaughan were eluded on the pretext that she was compelled to remain in concealment for the preservation of her life from the attacks of infuriated Freemasons and Palladists. Letters written in her name by (as it afterwards turned out) Léo Taxil's female secretary, and in some cases accompanied by presentation copies of her works, were received by high dignitaries of the

Church and the papal court and were replied to in the most flattering manner. The pope himself, if we may believe Léo Taxil, sent her his apostolic blessing. The bishop of Grenoble repeatedly affirmed his childlike belief in her existence and the sincerity of her conversion. He compared her with Joan of Arc and exhorted her to pray, to labour, to struggle, and even to die on the gallows if necessary; for victory sometimes exacted that price. Such rodomontade was naturally published by the conspirators to augment the faith of those who accepted the 'revelations.'

The excitement caused among credulous people aroused special interest in the Antimasonic Congress which was to be held at Trent in 1896. At the same town that was the scene of the great Council in the 16th cent. it was hoped to give the final blow to Freemasonry and Protestantism. The campaign started by Pope Leo XIII. against Freemasonry had acquired an added impulse by the 'revelations' of Léo Taxil and his confederates. Yet doubts as to the 'revelations' had been expressed in various quarters; and there was an undercurrent of scepticism. Léo Taxil faced the situation with characteristic courage and audacity. He went to Trent, met the Congress, and delivered an impassioned harangue. In answer to demands for information as to Diana Vaughan's existence, history, and conversion, he solemnly affirmed her existence; he declared that he had seen her with his own eyes, but she could not venture from her concealment, threatened as she was every hour by the daggers of the Freemasons. To a confidential committee only would he entrust his proofs. The result was a complete success. Doubters were silenced. Taxil was victorious. The hero of the hour, he was rewarded with enthusiastic and continuous thunders of applause, he was invited to the episcopal palace, where he was received by the bishop, and mingled with the most distinguished representatives of ecclesiastics and nobles from various Roman Catholic states.

But the imposture was now approaching its end. At the close of September Taxil had triumphed at the Congress. Scarcely more than a fortnight later Bataille (Hacks) threw off the mask. He wrote to the *Kölnische Volkszeitung*, expressing his complete contempt for the Roman Catholic religion, and a little later, on 2nd Nov., to the *Univers* at Paris, declaring that *Le Diable au dix-neuvième siècle* and Diana Vaughan were *Märchen* (idle tales) and a thorough swindle. Taxil brazened it out a few months longer. At last he announced a meeting at the Geographical Society's rooms, Boulevard St. Germain, Paris, on 16th April 1897, at which Diana Vaughan would make her public appearance. At the meeting he mounted the platform alone. To a crowded assembly he confessed that Palladism and Diana Vaughan were inventions of his own, and that the revelations that had poured forth so lavishly from his press for years were a gigantic fraud, or, in his own euphemism, 'a mystification.' 'I have always loved mystification,' he explained, and impudently went on to express his thanks to the Catholic press and bishops for the splendid help they had given him to organize the finest mystification of all, which was to crown his career.

The rage of his deluded victims was boundless, but impotent. At first they declined to believe his confession; they could not abandon their faith in Diana Vaughan; they distinguished between Taxil's earlier and later 'disclosures'; there must, they said, be substantial facts underlying at least the former. Some of course asserted that they had suspected the truth all along; and their efforts were directed to show that the pope and other high ecclesiastical authorities were not

committed to belief in the swindle. But the violence of the denunciations which were naturally heaped upon him did not disturb Léo Taxil. He had doubtless made money; he had achieved notoriety; he had imposed a succession of extravagant lies by the most ingenious methods on his open-mouthed disciples. When the bubble burst, as sooner or later it inevitably would, he retired to write the story of how he had befooled the Catholic world.

The soil had been prepared for the sowing, or the seed scattered by Taxil would not have taken root. During the long twilight of the Middle Ages and later a vast number of legends had accumulated concerning the relations of the spiritual world with humanity, including temptations by evil spirits in corporeal or quasi-corporeal form and leagues entered into by individual men with the Devil himself. These legends had never been repudiated by the Church of Rome. Rather they had been accepted and stamped with authority, seeing that they had been incorporated in monastic chronicles and in the lives and writings of the most eminent saints and teachers, they had been confirmed by confessions wrung from the victims of the witch-prosecutions, recorded solemnly by ecclesiastical and civil courts, as the evidence on which thousands of men and women had been condemned to the most barbarous deaths, and they had been taught as facts without any doubt by the Inquisitor Sprenger, the Jesuit Delrio, and other authors of works on magic and witchcraft. From early ages witchcraft, sexual immorality of the grossest kind, and foul rites, amounting to a rival and obscene religion, had been imputed to heretics and unbelievers. The Church had long been definitely opposed to Freemasonry—an opposition probably arising, first, from jealousy of its secrecy, and, secondly, from its well-known liberalism. Recently Pius IX. had denounced the Freemasons as 'the Synagogue of Satan' and had approved and encouraged a French fraternity, founded under the influence of the Ultramontane party to exterminate them. In 1884, the year before the 'conversion' of Léo Taxil, Leo XIII. by his Encyclical had inveighed against them in no measured terms as guilty of unbridled licence in crime, as regardless of the marriage-bond, as going about to destroy the foundations of law and morality, a sect whose object was to prepare the ruin of mankind; and he had called upon the faithful to unmask and oppose them. He thus practically initiated a new crusade, which he subsequently drove further by a succession of fresh appeals to the ignorance and bigotry of his flock.

Into a soil thus charged with sectarian bitterness and misrepresentation Taxil astutely dropped his seed. Charges of witchcraft and the Black Mass had been made in a sporadic manner during the previous century and a half. They had thus strengthened the traditional attitude of the Roman Church and provided new, if slender, foundations for the popes' battery of denunciation. Taxil's 'revelations' and those of his confederates were eagerly seized by the bigots and speedily spread all over the Continent. No sort of criticism was applied to them. The denials of the Freemasons were treated as negligible. The organization attributed to Freemasons and Palladists was in fact a parody of the real organization of the Jesuits. If the correspondence between the two was observed, the known existence of the Jesuit organization merely served to render credible to the minds of the faithful that of which their opponents were accused. An examination of Taxil's romances shows that they were derived from the old works of the Inquisitors and other writers on witchcraft, supplemented by hints from A. L.

Constant's *Dogme et rituel de la haute magie*² (Paris, 1861), written under the pseudonym of Eliphas Lévi, and from the researches of the French Freemason, Ragon. Hacks's yet more extraordinary stories were inspired by Archbishop Meurin's farrago. Diana Vaughan's confessions were founded on those of Taxil and Hacks. If any basis of fact underlay the superstructure of 'mystification,' it was supplied by allegations, widely believed, of the theft without apparent motive of the consecrated host from various churches in France and elsewhere. How far these allegations were true it is impossible to say; no prosecutions are known to have been instituted against any one for the crime. Taxil indeed after the crash was suspected by members of the committee of the Congress of Trent to have contrived such a theft from Notre Dame in Paris in order to provide sensational material for his pen; but the charge was probably mere gossip. So remarkable a hoax has seldom, if ever, been perpetrated; and it could not have succeeded in an environment less dense with ignorance and fanaticism.

LITERATURE.—Besides the works of Huysmans, Taxil, and others mentioned throughout, reference may be made to A. E. Waite, *Devil-worship in France*, London, 1896; A. Lillie, *The Worship of Satan in Modern France, being a Second Edition of 'Modern Mystics and Modern Magic'*, do. 1896, preface; and J. Rieks, *Leo XIII. und der Satanskult*, Berlin, 1897. The two English books named were published before the 'mystification' was confessed.

E. SIDNEY HARTLAND.

SATI.—*Sati* is a feminine noun formed from the verbal root *sat*, meaning what is real, true, good, or virtuous. A *sati* therefore signified a woman whom her religion considered as good and virtuous if she sought death on the decease of her husband and was burned along with his corpse. It was not until 1829 that this custom of widow-burning was declared illegal in British India. The Indian penal code enacted that whoever attempts to commit suicide and does any act towards the commission of such offence shall be punishable with imprisonment for a term which may extend to one year. The code further enacted that, if any person commits suicide, whoever abets the commission of such suicide shall be punished with imprisonment which may extend to ten years. Any one who applauds or encourages an act of *sati* is also held by the penal code to have abetted suicide.

Schrader¹ states that Indo-Germanic custom ordained that the wife should die with her husband, and this custom he ascribes to the desire to provide the deceased with what was dear to him during life as well as 'to make the life of the housefather safe on all sides, and to render him an object of perpetual care and anxiety to his family.'²

In the *Atharvaveda*³ the suicide of the widow on the death of her husband is said to be 'her ancient duty'; but, although she ascended the funeral pyre and lay by the side of her husband, she is said to have as her reward 'progeny and property.' Here, as in the *Rigveda*,⁴ the widow is made to rise up from the funeral pyre and is led away by a new husband. The *Atharvaveda* declares:

'Get up, O Woman, to the world of the living; thou liest by this one who is deceased; come! to him who grasps thy hand, thy second spouse, thou hast now entered into the relation of wife to husband.'⁵

The ancient custom and ancient duty of the widow to burn herself on her husband's death had therefore given place in Vedic India to a second marriage;

³ xviii. iii. 1.

⁴ x. xviii. 8.

⁵ xviii. iii. 2; see *Atharvaveda*, tr. W. D. Whitney and ed. C. R. Lanman (Harvard Oriental Ser., vol. viii.), Cambridge, Mass., 1905.

but in later times¹ the ancient custom was revived under the influence of Brāhmins anxious to obtain command over the property of the widow. In order to give the custom a religious sanction, a passage in the *Rigveda*² which directed the widow to rise from her husband's funeral pyre and go forth in front (*agre*) was altered into to go into the fire (*agneh*). The result was that, wherever Brāhmanic influences predominated, especially along the Ganges valley, in Bengal and in Oudh, as well as in Rājputāna, widow-burning increased from the 6th cent. onwards, while in outlying districts of the Panjāb it was not commonly practised and was forbidden in most parts of S. India.

A gifted writer and a zealous defender of Hinduism, T. Ramakrishna, of Madras, has forcibly stated the Hindu religious sanction for widow-burning in the words:

'If the husband predeceases the wife, she must face a new situation with a courageous heart, and remain to pray day and night for the repose of his soul, or, if unable to bear the pang of separation she wishes to ascend the funeral pyre to be consumed to ashes with her dead husband, her religion allows her to do so.'³

On the other hand, Romesh Chunder Dutt referred to *sati* as 'a barbarous custom' and as 'the most cruel of all human institutions.'⁴

LITERATURE.—See especially A. R. Coomaraswamy, 'Sati: a Vindication of Hindu Women,' paper given to Sociological Society, London, 1912. R. W. FRAZER.

SATISFACTION.—'Satisfaction' is defined by the mediæval Schoolmen as the third part of penance (*q.v.*).

'In perfectione autem poenitentiae tria observanda sunt: scilicet, compunctio cordis, confessio oris, satisfactio operis.'¹

1. History of the idea in the Latin Fathers and in the early Middle Ages.—The introduction into theology of the term 'satisfaction' is due to the quondam Roman jurist Tertullian, who, in describing the relation of man to God, frequently makes use of the word *satisfacere*, which is a term of Roman law belonging especially to the sphere of obligations. Here, in the wider sense of each word, *satisfacere* and *solvere* are equivalents: both refer simply to the discharge of an obligation in any manner whatever. But there is a distinction between *satisfacere* in the narrower sense and *solvere* in the narrower sense: *solvere* is the strict fulfilment of the obligation, *satisfacere* is the discharge of it by some other means than its strict fulfilment, which yet is agreeable to the creditor.

'Nam quia id quo quis contentus erat ei praeestabatur, satisfieri dictum est.'² In this sense it is said: 'Satisfactio pro solutione est.'³

Tertullian applies the term *satisfacere* especially to the sphere of penance. In the earliest times it was held by the Christian Church that after baptism, while lighter sins needed only to be confessed to the gracious God,⁴ serious sins excluded the offender altogether from the community.⁵ But this rigorous practice was soon broken through, and by a public confession of sins even gross sinners were allowed restoration, though at first not more than once. This mitigation is announced by Hermas as a special divine revelation:

'The sinner who repents must be received, but not frequently. For there is only one repentance for the servants of God.'⁶

The public confession (ἐξομολόγησις) was in each case associated with visible signs of humiliation, in order to testify to the genuineness of the repent-

ance experienced. Discipline was at first exercised by the community as a whole, but from the 2nd cent. onwards the community was represented in this matter by the bishop. Tertullian now views this penitential humiliation as a satisfaction to God. He regards God as the Roman law viewed an injured person :

'Thou hast offended, but thou canst still be reconciled ; thou hast One to whom to make satisfaction, who also is willing to receive it.'¹

The means of this satisfaction are self-humiliation and voluntary self-denial, above all fasting :

Man is to make satisfaction to God, through the same thing through which he had offended (in Adam's fall).² The penitent must 'offer to an offended God self-humiliation (*castigatio*) in food and dress.'³

It is important to observe that the idea of satisfaction thus constituted has two sides. (a) On the one hand, it touches the notion of merit (*q.v.*), of which it is in fact a sub-species.⁴ If merit in general establishes a claim to a reward, where an obligation has been caused by a wrong, the merit that has been acquired can serve as satisfaction, and the reward to which it establishes a claim is from the nature of the case pardon or remission of punishment. The thought in the background is of course that of the power of God to enforce His claim by punishment, if satisfaction is not forthcoming. Tertullian says :

'How foolish and unjust it is to leave penance unperformed and yet to expect pardon for our sins ! What is it but to fail to pay the price, and yet to stretch out one's hand for the reward ? The Lord has decreed that pardon has to be awarded at this price ; He purposes that the remission of punishment shall be bought by this payment of penance.'⁵

(b) On the other hand, penitential satisfaction is regarded in a way that brings it nearer to the conception of punishment than to that of merit. Here it appears not as a positive good work, which cancels the liability to punishment, but as a substitute for punishment, of kindred nature, but of different degree. Thus Tertullian says :

'So far as thou hast not spared thyself, so far, believe me, will God spare thee.'⁶ 'All these things penance does . . . that it may, by itself pronouncing against the sinner, take the place of God's indignation and by temporal mortification, I will not say, frustrate, but discharge, eternal punishment.'⁷ 'Every sin is discharged either by pardon or punishment, pardon as the result of self-chastisement, punishment as the result of condemnation.'⁸

The key-note of this conception of penance is the substitution of temporal for eternal punishment. We may finally observe that, in the above doctrine of Tertullian, satisfaction is not yet a *part* of penance, but the *whole* penance, including the public confession and the accompanying austerities, is viewed as a satisfaction to God.

The Latin Fathers after Tertullian continue, with some developments, the same ideas as to penance and satisfaction which we have found in him. On the one hand, we have passages where penance is regarded as a good work or merit, which avails as a satisfaction for post-baptismal sin. Thus Cyprian says :

'He who has thus made satisfaction to God, will not only deserve the Divine pardon, but also a crown.'⁹

This passage is noteworthy as bringing out the relation between merit and satisfaction which has already been explained—where merit does more than extinguish the debt of sin ; it wins a reward besides. In Cyprian, moreover, we see how the notion of the transferability of merit begins to affect penitential satisfaction.

'God can reckon to the penitent . . . whatever the martyrs have asked, or the priests have done, for such persons.'¹⁰ Yet, because penitential satisfaction was a sign of personal repentance, it could not have been entirely superseded by the merit of others.

Augustine follows in the same strain :

'The life must be amended, and God must be propitiated for past sins by almsgiving. . . . For He has given no one licence to sin, although in pity He blots out sins already committed, if proper satisfaction is not neglected. For the small and light sins of every day, however, . . . the daily prayer of the faithful is sufficient satisfaction.'¹ 'There are many kinds of almsgiving, the doing of which assists in the remission of our sins.'²

On the other hand, we have places in the Latin Fathers where penitential satisfaction is viewed as being of the nature of punishment. Thus Augustine says :

'In penance every one must use severity against himself, that, being judged by himself, he may not be judged by the Lord.'³ 'He who truly repents does nothing but refuse to allow what he has done wrong to remain unpunished.'⁴

So also Gregory the Great writes :

'God cuts away our sins either by our means, or by His own hand, even when He forgives them. For He seeks to wash away from His elect by temporal chastisement the stains of the wickednesses, which He hates to see in them for ever.'⁵

We have next to notice a change in the form of penance which affects the idea of satisfaction. In the East public penance died out after the union of Church and State under Constantine, which made ecclesiastical control of morals more difficult, in so far as a denunciation of mortal sin before a bishop became equivalent to a denunciation of crime to the State. In the West, to alleviate this difficulty, the severity of the ancient penance was modified in the case of secret sins (*peccata occulta*) from complete publicity to the publicity involved merely in belonging to the penitents. Such was the state of affairs at the break-up of the Western Empire. The stormy nature of the times which followed prevented a consistent practice of discipline from being enforced upon the new races who came in to occupy the territory of the Empire. For secret sins public penance fell altogether into disuse. In Ireland and England it was never enforced, though under the Carolingians it was restored in France for open sins. From the end of the 11th cent. onwards, however, public penance became 'a mere curiosity in the inventory of possible Church procedure against sinners.'⁶

On the other hand, there grew up in the West, at first side by side with public penance and ultimately almost entirely displacing it, a custom of private penance. This was a growth of the monastic spirit and aimed at extending the discipline of the Church over other sins than those which in the ancient Church were regarded as mortal. It was accompanied by an extension of the idea of mortal sin to the roots of sin in the heart. The circumstances of this private penance were confession to a priest and performance of a satisfaction which, as a condition of his absolution, he prescribed in accordance with the character of the sin. It is easy to understand how the pride of races who would not willingly submit to public penance (the outward humiliation of which they regarded as degrading to free men) favoured the extension of this private penance, originally intended for the discipline of the cloister, among the laity also.

In connexion with this newer penitential discipline three things in particular are to be noted :

(1) Penitential discipline was converted into a sacrament, in so far as confession to the priest assumes a continually more important position, and the theory establishes itself that his absolution converts even mortal sins into venial sins, which require to be expiated, not in hell, but in purgatory, unless they are cancelled by the satisfaction appointed by the priest. The pseudo-Augustinian treatise, *de Vera et Falsa Penitentia* (11th cent.), says :

'In that [the sinner] of himself speaks to the priest, and overcomes his shame by the fear of an offended God, there

comes about the forgiveness of the crime. For that which was criminal in the doing becomes venial through confession, and even if it is not purged away at once (i.e. by satisfaction) nevertheless that becomes venial, which as committed was mortal.¹

(2) Penitential satisfaction tends more and more to be regarded as a merit that can be detached from the person and treated upon commercial lines. This change is particularly evidenced by the 'Penitential Books' which were composed (on the basis of the ancient canons of various Church Councils as to penance), first in Ireland, then in England, and finally on the Continent, with a view to assisting the priest in his office as confessor. In the ancient Church it had been allowed that in cases of extraordinary penitence the satisfaction might be diminished. But in the penitential books we find a complete tariff of 'redemptions,' or commutations, by which the fasting of others might be substituted for personal fasting or the more exacting satisfaction of fasting might be redeemed by almsgiving.

(3) Closely connected with the 'redemptions' is a yet more momentous development in regard to penitential satisfaction, viz. that of 'indulgences' (q.v.). These were remissions of the temporal punishments which were still owed by those who had received absolution. Their origin is obscure, but it is clear (a) that they were in the first place episcopal indulgences, granted to those who made pilgrimage and brought offerings to a particular church on its dedication or other annual festival; (b) that they originated in the south of France before A.D. 1050.²

2. The mediæval doctrine of penitential satisfaction.—In the 12th cent. penance was definitely included among the seven sacraments by Peter Lombard, whose division of penance into the three parts of contrition, confession, and satisfaction has already been quoted. The mediæval doctrine of penance was, however, finally put into shape by the great Schoolmen of the 13th century. The following account of it, especially as concerns penitential satisfaction, is taken from Thomas Aquinas, *Summa Theologica*; the part which deals with satisfaction in particular is, however, from the author's earlier commentary on the *Sentences* to complete the doctrine of the sacraments, which Thomas left unfinished at his death.

The general basis for the doctrine of satisfaction is to be found in the distinction made³ between guilt (involving an obligation to eternal punishment) and an obligation to temporal punishment. Mortal sin involves a turning away from the unchangeable good and an inordinate turning to the changeable good. The former demands eternal punishment, the latter temporal punishment. Venial sin is an inordinate turning to the changeable good without a turning from the unchangeable good. Hence it demands only temporal punishment.

Qu. lxxxvii. art. 2 teaches that venial sins may be remitted without the sacrament of penance, though some act of a penitential character is required. But no new infusion of grace is necessary, as venial sin does not constitute a fall from grace. In the case of mortal sins the sacrament of penance is required.

According to qu. xc. art. 2, the form of penance is the absolution of the priest; its threefold matter consists in contrition, confession, and satisfaction. Contrition and confession, with the absolution of the priest, remove the guilt of sin and the obligation to eternal punishment and lessen the obligation to temporal punishment (in purgatory) to such a degree that it can be expiated by the satisfaction appointed by the priest.⁴

Suppl. qu. xii. deals with satisfaction, 'quoad ejus quidditatem.' According to art. 1, satisfaction is formally an act of virtue, in so far as it implies the idea of the mean, which is the formal essence of virtue. The mean which it implies is that of equality, 'for no satisfaction is said to be made except in accordance with a proportion of equality to somewhat.'

Further light is cast upon the subject by the treatment of the following difficulties:

(1) Satisfaction cannot be an act of virtue, for every act of virtue is meritorious. Satisfaction, however, is not meritorious; for satisfaction is in respect of debt, yet in so far as it is meritorious.

(2) Every act of virtue is voluntary, but satisfaction sometimes is involuntary, as when a man is punished by a judge for an offence.

Answer: In the case of satisfaction through punishment inflicted by a judge the act of virtue is in the judge; where, however (as in penance), a man punishes himself, the act of virtue is in him.

(3) The principal thing in virtue is choice, but satisfaction has to do, not with choice, but with external works.

Answer: The principal thing that makes satisfaction an act of virtue is choice, but the principal thing that differentiates it from other virtues is external works.

According to art. 2, since it is equality on which satisfaction turns, the particular virtue shown in it is justice, and, since the equalization takes place in respect of the debt created by an offence, the particular kind of justice exemplified is vindictive justice.

Art. 3 teaches that satisfaction is not merely compensation for past offences, but is also a preservative from future transgression. This medicinal office of satisfaction is another reason (cf. art. 1) why it is to be regarded as an act of virtue, for nothing can destroy sin except virtue.

Qu. xiii. deals with the possibility of satisfaction. According to art. 1, men cannot in the strict sense satisfy God, but only by means of an equality proportional to their relative positions. As sin is infinite in view of the infinity of the Divine majesty, so satisfaction obtains a certain infinity from the Divine mercy, so far as it is informed by grace, by which what man can do is made acceptable to God. Another form of statement is to say that satisfaction is sufficient by the virtue of the merit of Christ, which is in a certain way infinite; but this practically comes to the same thing, as grace is given through faith in Christ the Mediator. If, however, grace were given otherwise, satisfaction would still be possible.

Art. 2 states that one man can satisfy for another as regards the payment of the debt of sin, if he does it in charity. Such vicarious satisfaction, however, is not a medicine against future sin, except accidentally, so far as it merits for the other the grace which may help him to avoid sin; but this mode of operation is by way of merit rather than of satisfaction.

Qu. xiv. treats of the quality of satisfaction. According to art. 1, it is impossible to satisfy for one sin apart from others, since the removal of the offence is the same thing as reconciliation with God, which cannot take place as long as any hindrances to it remain.

Art. 2 teaches that, for similar reasons, it is impossible for one who has again fallen into sin to satisfy for sins already repented of.

Art. 3 maintains that it is impossible for works of satisfaction done out of grace to receive value from charity afterwards infused.

According to art. 4, works done without charity merit nothing 'de condigno'; by the Divine goodness, however, they merit somewhat 'de congruo,' viz. temporal mercies, a disposition to grace, and the habit of good works.¹

Finally, art. 5 teaches that works done without charity obtain a mitigation of eternal punishment only in so far as they avoid the sin of omission and also prevent a man from falling farther into sin.

Qu. xv. is entitled, 'De his per quæ sit satisfactio.' According to art. 1, satisfaction must be made by works of a penal character, in so far as the equalization demanded by justice in the matter of the offence requires something to be given to the offended party and something to be taken away from the offending party. As regards God, nothing can be given Him, but man can take away from himself by works of a penal character. It is clear also from its medicinal nature that satisfaction must be penal in character. Art. 2 teaches that God's temporal chastisements may become of the nature of satisfaction for us, in so far as they are voluntarily accepted by us.

Finally, according to art. 3, almsgiving, fasting, and prayer are the three forms of works of satisfaction. By them we humiliate ourselves before God, in our goods, our body, and our soul.

In qu. xxv. art. 1 Thomas discusses 'whether anything can be remitted from the punishment of satisfaction by means of indulgences.' His doctrine is that there is in the Church a treasure of merits, consisting both of the merit of Christ, as it exceeds by its infinity its effect in the sacraments, and of the merits of the saints, so far as they superabounded in works of satisfaction for the good of the whole Church. This treasure can then be applied for the good of the individual by the ruler of the Church (i.e. the pope), for the remission not merely of penitential satisfaction, but also of punishment in purgatory. According to art. 2, indulgences avail for their published value, if there be authority in the giver, charity in the recipient, and piety in the reason of the granting of the indulgence.

3. The controversy at the Reformation concerning penitential satisfaction.—The Reformation began with Luther's *Ninety-five Theses* of 1517 against indulgences, in which it was argued, among other things, that the repentance of a Christian man should be lifelong, that the pope could not remit any punishment beyond that of penitential satisfaction, and that every truly con-

¹ x. (25).

² See Look⁴, p. 495 f.

³ *Summa*, iii. qu. lxxxvi. art. 4.

⁴ Suppl. qu. ix. art. 2.

trite Christian has complete remission of both punishment and guilt, without any indulgence.

In his immediately subsequent sermon on indulgence and grace Luther went on to declare that the common division of repentance into contrition, confession, and satisfaction had no foundation either in Scripture or in the Fathers, and that it could not be proved from Scripture that the Divine righteousness required of the sinner any pain or satisfaction, except his true repentance and conversion, with the intention to carry the cross of Christ and do the fitting works (which, however, are not appointed by any). Christian men should not seek indulgence.

A protest against the doctrine of penitential satisfaction thus became a point in the propaganda of the Reformation. It is admirably voiced by Melancthon in his *Apology for the Augsburg Confession*, in the section 'On Confession and Satisfaction' (art. XII. vi.):

(19) The canonic satisfactions are not necessary by the Divine law for the remission of sins. 'For the opinion concerning faith must be preserved, that by faith we obtain the remission of sins for Christ's sake, and not because of our works either preceding or following.'

(20) The error here is aggravated by the Scholastic definition of satisfaction, viz. that it takes place for the placation of the Divine anger.

(21) Our adversaries, however, admit that satisfactions do not avail for the remission of guilt. But they fable that they are of value for the remission of punishments in purgatory or elsewhere. They teach that in the remission of sin God forgives its guilt and yet, since the Divine justice must punish sin, changes eternal into temporal punishment. They add also that part of this temporal punishment is remitted by the power of the keys; the rest is redeemed by satisfaction.

(22) All this is a fable, recently concocted without the authority of Scripture and the older ecclesiastical writers. The Schoolmen, in fact, mixed up things spiritual and political and imagined that the satisfactions, which were intended for ecclesiastical discipline, availed to appease God.

(23) True repentance is conversion and regeneration, which are followed by good works as their natural fruits.

(24) When Christ says 'Repent,' He speaks of regeneration and its fruits, not of the fictitious satisfactions of the Schoolmen.

(25) Though external works can be done beyond the Divine commandment, it is vain confidence to suppose that they satisfy the Divine law.

(26) True prayers, alms, and fasts are in the Divine commandment; what goes beyond it is of human tradition.

(27) The Schoolmen say that it belongs to the Divine justice to punish sin. God punishes it, however, in contrition, which is more truly the punishment of sin than any satisfaction.

The Reformation protest is met in the canons of the Council of Trent by a section 'de Satisfactionis necessitate et fructu' (sess. xiv. cap. viii.). The Catholic argument is briefly as follows:

Of all the parts of penance satisfaction is most attacked by the innovators, who assert that the remission of guilt is always accompanied by the entire remission of punishment. Scripture (Gn 31st, 2 S 12th, Nu 12th, 20th) and tradition combine to refute the Protestants together with reason, which shows that the Divine justice must make different demands upon those who sin in ignorance before baptism and those who sin against the Holy Ghost after baptism. Besides, penitential satisfactions are a great preservative against further sin, and the Church has always seen in them, if performed with true contrition, a guarantee against the Divine punishment. In them, further, we are conformed to Christ, who made satisfaction for us, and we know that, if we suffer with Him, we shall be also glorified with Him. Nor does our satisfaction take place without the help of Christ, so that we do not glory in ourselves, but in Him, through whom we live, and acquire merit, and make satisfaction. The sacrament of penance, again, is no judgment-seat of wrath, just as no Roman Catholic ever thought that our satisfactions obscured or diminished the virtue of the merit or satisfaction of our Lord Jesus Christ. When innovators make true repentance no more than regeneration, this amounts to taking away satisfaction altogether.

Finally, the *Decretum de indulgentiis* (sess. xxv., 'Continuatio sessionis') maintains that Christ has given to the Church the power of granting indulgences, which power has been in use since the earliest times (Mt 16th, Jn 20th). Indulgences, it is held, are therefore salutary for the Church and not to be done away with; but the power of indulgence is to be applied with moderation, that discipline may not suffer.

ROBERT S. FRANKS.

SATNAMĪS.—The Hindi word *Satnām* is said to mean 'the True Name' or 'the Name of Truth' and, like *Sat*, 'Truth,' has been used by several Hindu reformers to connote the Supreme Deity. *Sat* is usually stated to be a corruption of the Sanskrit *satya*, 'truth,' but this is phonetically impossible. It is most probably derived from *sattva*, 'true essence,' and hence, as a religious technical term, it connotes the abstract quality of purity and goodness. *Satnām* therefore really means 'He whose name is Purity and Goodness.' At least three religious bodies of N. India have adopted the term 'Satnāmī' as the title of their respective sects. We shall consider them separately.

i. The name 'Satnāmī' is employed among themselves by the sect of Sādhis (q.v.). It is probable that it was these Sādhis who were responsible for the Satnāmī revolt against Aurangzib in 1672.

The Sādhis claim an indirect spiritual descent from Rāi Dāsa, but, as is pointed out in the article devoted to them, the important unitarian side of their doctrine is derived rather from the teaching of another of Rāmānanda's disciples—Kabir.

2. The next sect calling itself Satnāmī was founded by Jag-jīvan Dāsa of Sardaha in the Bārabankī District of the United Provinces. He was born in 1682 and began his religious career as a Kabīrpanthī—indeed, according to some authorities, these Satnāmīs are merely a branch of that faith.¹ In the United Provinces they number about 75,000, but in other parts of India figures have not been recorded for them.

Jag-jīvan Dāsa lived the greater part of his life at Sardaha, gaining reputation and followers by his miracles. He was a Chandēl Thākūr by caste, and his four chief disciples were all of high caste—Brāhmanas or Thākūrs—but, like Kabir and Nānak, he adapted his teaching to all classes. Among his followers were low-caste Hindus, such as Chamārs (curriers), and he succeeded in establishing some community of thought between himself and Islām. Two at least of his disciples were Musalmāns. The fullest account of his teaching is that contained in the *Oudh Gazetteer* (see Literature); it has been repeatedly copied by subsequent writers.

The Satnāmīs profess to adore the so-called True Name alone, the one God, the Cause and Creator of all things, the *Nirgūṇa*, or He who is void of all sensible qualities, without beginning and without end. As in the Vedānta philosophy, worldly existence is illusion, or the work of Māyā, whom they identify with Bhavānī, the consort of Śiva. They recognize the whole Hindu pantheon, and, although they profess to worship but one God, they pay reverence to his manifestations as revealed in incarnations, particularly those of Rāma and Kṛṣṇa. Their moral code enjoins indifference to the world, its pleasures and its pains; devotion to the *guru*, or spiritual guide; clemency and gentleness; rigid adherence to truth; the discharge of all social and religious obligations; and the hope of final absorption into the Supreme. Caste-distinction is not lost on profession, and care is taken not to interfere with caste-prejudices or social customs. Fasts are kept, at least to a partial extent, on Tuesday (the day of Hanumān) and on Sunday (the day of the sun). A good deal of liberality is shown towards local superstitions, especially as regards Rāmachandra and his monkey-ally Hanumān, and the ordinary festivals are regularly observed.

The water in which the *guru's* feet have been washed is drunk only when his caste is equal to or higher than that of the disciple. The distinctive mark of the sect is a black and white twisted thread, generally of silk, worn on the right wrist. It is technically known as *ādū*. The full-blown *mahanth* wears an

ddū on each wrist and each ankle.¹ On the forehead is worn a *tilak*, consisting of one black perpendicular streak. The bodies of the dead are buried, not burnt.

The consumption of flesh, certain pulses, and intoxicating liquors is forbidden. It is also forbidden to eat the *brinjal*, or egg-plant. The last prohibition is due to the belief that, by prayer, it is capable of being converted into meat. The legend on which this belief is based will be found in most of the authorities quoted below.

Several works are attributed to Jag-jīvan. The most important, ranking as the sacred book of the sect, is called *Aghavināśa*,² 'The Destruction of Sin.' It is in verse and is believed to be inspired. Its contents are miscellaneous stories from the *Purāṇas*, lessons on morals, ethics, divinity, and rules of piety. Most of these are taken from earlier Sanskrit works and translated. Other works attributed to him are the *Jñāna-prakāśa* (dated 1761), the *Mahā-pralaya*, and the *Prathamagrantha*. The last is in the familiar form of a dialogue between Śiva and Pārvatī.

LITERATURE.—H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 356 ff.; *Gazetteer of the Province of Oudh*, Lucknow, 1877, i. 362 ff.; this has formed the basis of all subsequent accounts, such as B. H. Badley, in *JA* viii. [1879] 289 ff.; W. Crooke, *Tribes and Castes of the N.W. Provinces and Oudh*, Calcutta, 1896, iv. 299; H. R. Nevill, *Bara Banki Gazetteer*, Allahabad, 1904, p. 67 ff.

3. Another sect called Satnāmīs is found in Chhattisgarh in the east of the Central Provinces of India. In 1901 it numbered nearly 400,000 persons, of whom all but 2000 were members of the caste of Chamārs. It originated with Ghāṣī Rāma, a Chamār of Bilāspur District, between 1820 and 1830. He apparently got his inspiration from the Satnāmī teaching of the followers of Jag-jīvan Dāsa mentioned above, but the sect claims that it is a branch of the Rāi Dāsīs (*q.v.*) founded by Rāi Dāsa the Chamār, who was one of the twelve apostles of Rāmānanda.³ There seems to be no basis for the claim, and so little do these Satnāmīs know about their alleged founder that they miscall him Rōhī Dāsa and themselves Rōhī Dāsīs.

Ghāṣī Rāma was originally a poor farm-servant in a village named Gīrod, then in the Bilāspur, but now in the Raipur District. He took to ascetic practices and became venerated as a saintly man whose miracles quickly gained him fame. He next retired for a season to the forest and emerged with what he called a new revelation for the Chamārs, which was really a repetition of the tenets of Jag-jīvan Dāsa, with a few additions.⁴ His teaching included the worship of the name of one solitary supreme God; abstinence from meat, liquor, and certain vegetables including (as in the case of Jag-jīvan's disciples) the *brinjal*; the abolition of idol-worship; and the prohibition of the employment of cows for agriculture and of ploughing after the midday meal. His followers were bidden to cast all idols from their homes, but were permitted to reverence the sun, as representing the Deity, every morning and evening with a pious ejaculation. Caste was abolished, and all men were declared to be socially equal, except the family of Ghāṣī Rāma, in which the priesthood of the cult was to remain hereditary.

Since the death of its founder in 1850 this simple faith has become overlaid with much legend and superstition; and aboriginal social rites which, in spite of his teaching, had survived have only lately been abandoned in a few isolated localities, where they are said to be still occasionally practised. One of these was a kind of social prostitution in

which a newly-married wife had to submit for one night to the embraces of a number of men of the village whom she named to her husband as her *gurus*, or spiritual guides—a variation of the *jus primæ noctis*, in which the woman selected the men who were to be favoured by her. One important sub-sect has arisen, the schism turning on the question as to whether the use of tobacco is or is not prohibited. The pro-smokers claim that in his later years Ghāṣī Rāma withdrew his former prohibition; but, with tobacco, these *chungīās*, as they are called, have also returned to idolatry, and their villages contain stones covered with vermillion, which the true Satnāmīs eschew.

Satnāmīs admit to their ranks all persons except members of the impure castes, such as Dhōbīs (washermen), Ghāsīs (grass-cutters), and Mehtārs (sweepers), whom they regard as inferior to themselves. They bury their dead and observe mourning for three days. On the third day they have the head shaved, with the exception of the upper lip, which is never touched by the razor.

All over India the Chamārs are one of the lowest and most despised castes, and there can be no doubt that, as in the case of the Rāi Dāsīs and similar sects, the success of Ghāṣī Rāma's teaching was primarily due to his decree that caste was abolished, and that consequently the Chamār was as good as any other Hindu. It is this that has roused the bitter hostility to the sect on the part of Hindus of the higher castes—a hostility which is repaid with interest by its members. The women now wear nose-rings, an ornament hitherto forbidden to the lower castes, and the Satnāmīs show their contempt for orthodox Hinduism by rudely parodying Hindu sacred festivals. They insist on travelling in the trains in the same compartments with caste Hindus, who are defiled by their touch and against whom they do not hesitate to jostle. This anti-caste feeling has operated in more ways than one. It has created a feeling of independence among a formerly down-trodden people, which, in its basis, is worthy of all commendation; but its assertion has given rise to a bitter class-antagonism. The relations between a Chamār tenant and his Hindu landlord are often seriously strained, one side or other or both being to blame, and many Chamārs have developed into dangerous criminals, restrained only by their cowardice from the worst outrages against person and property.

LITERATURE.—The foundation of all accounts of these Satnāmīs is contained in J. W. Chisholm, *Bilaspur Settlement Report*, Nagpur, 1861, p. 45 ff. Based on this, in each case with additions and corrections, are the following: *The Central Provinces Gazetteer*, Nagpur, 1870, pp. 100 ff., 412 ff.; A. E. Nelson, *Gazetteer of the Raipur District*, Bombay, 1903, p. 70 ff.; R. V. Russell, *The Tribes and Castes of the Central Provinces of India*, London, 1916, i. 307. The last-named contains all that is in the preceding works, with some additional information.

G. A. GRIERSON.

SATYRS.—The word 'satyr' conjures up to the modern mind a fabulous creature half-man, half-beast, goat-footed, with pointed ears, shaggy body, a creature mainly malevolent, sportive but always on the verge of licence; unlike the solitary fawn, the Satyr hunts in troops; he is one of the *thiasos* of Dionysos. The picture is substantially correct, but with one important reservation. In origin the Satyr is not a mere imagined fabulous monster; he is an actually existing ritual mummer. This simple fact explains the whole being and functions of the creature. In the time of Antony it was still the custom for men to dress up and walk in procession as Satyrs.

Plutarch tells us that, when Antony entered Ephesus and was hailed as Dionysos, 'women disguised as Bacchæ and men and boys as Satyrs and Panes marched before him.'¹

We are apt to explain such figures as men dressed

¹ Ant. 24.

¹ An *ddū* is, properly speaking, the chain or hobble fastened round an elephant's ankles, when he is tied up.

² Misprinted *Agharīna* in *JA*, and so in later writings copied therefrom.

³ See art. RĀMĀNANDĪS, SĀHNS.

⁴ The present writer would suggest that this retirement to the forest really covered a visit to N. India, where he met some Chamār follower of Jag-jīvan and learnt from him the Satnāmī doctrine.

in imitation of Satyrs. We thereby disguise the simple fact that from these ritual figures the mythological conception of Satyrs or Panes sprang.

The *locus classicus* on the origin and nature of the Satyrs is Strabo, x. 3. He is mainly concerned to discuss the Kouretes (*q.v.*), but incidentally he throws out the priceless indication that a number of other mythological figures—Silenoi, Satyroi, Tityroi, Bacchæ—are of like origin. All these he calls *δαίμονες*—creatures half-divine, half-human. Their semi-divinity is instantly understood if we realize that they are not unreal monsters, but ritual mummers, real men, yet half-removed from reality, set apart, *i.e.* semi-divinized by their ritual disguise and function.

Once this substantial unity is clearly grasped, the diversity in forms and names need not embarrass us. Each local ritual would have for its *δαίμονες* its local ritual dress and local name. The disguise was usually half-animal; the worshipper was dressed up as a horse or a bull or a goat. The object of the disguise in animal form has been made abundantly clear by the study of beast-dances among primitive peoples all over the world. They danced as horses or goats or bulls according as they wished to promote the fertility of horse or goat or bull. Hence the *ταῦροι*, bull-*δαίμονες* of Ephesos, and the *ῥαῖοι*, goat-*δαίμονες* of Athens, the *ἵπποι*, horse-*δαίμονες* of the Peloponnese.

It is fortunate that in one case we are able from the monumental evidence to say with certainty what particular beast-form attaches to a special name. The horse-*δαίμονες*, creatures with horses' hoofs and manifest upspringing horse-tails, are Silenoi. This fact is put beyond doubt by inscriptions. On the early black-figured krater of Klitias and Ergotimos, now in the Museo Greco-Etrusco at Florence, three *δαίμονες* ithyphallic, with horses' ears, tails, and legs, are clearly inscribed 'Silenoi.'¹ It has long been the custom to call the horse-*δαίμονες* of the Attic vases, who constantly attend Dionysos, 'Satyrs'; accuracy obliges us to substitute the term 'Silenoi.'

It is to be regretted that we have no monumental certainty as to the precise animal-form of the Satyr. But the deficiency is less important than it seems. The particular animal-form is merely, as we saw, a matter of local differentiation springing from particular local circumstances and does not affect the ritual gist of the figure. As to the etymology of the word, again we cannot claim certainty. The most probable suggestion is that of F. Solmsen,² who holds that both *Σάτυροι* and *Τίτυροι* are authentic Greek words from the root *τῷ*, 'to swell,' appearing in *τύφος*, *ταῖφος*, etc. The Satyroi are *δαίμονες* of the budding, germinating, of plant and animal life; they are fertility figures, and with this their constant ithyphallic character quite agrees. Whatever the original animal-form of the Satyroi, the name came to cover pretty well the whole field of fertility *δαίμονες*. The cause of the dominance of the Satyr-name is lost to us.

As to the functions of the Satyrs, happily Strabo is explicit—they celebrated 'orgies'—and their relation to Dionysos was the same as that of the Kouretes to Zeus in Crete. Strabo's view is confirmed or rather anticipated by Euripides, whom he quotes.³ The ritual of Dionysos, son of Semele, is substantially that of the Phrygian Mother; the Kouretes are substantially the same as the Satyroi. The sacred mime that they enact is that of the birth, the rescue, and the initiation of the holy child. With the birth and magic growth of the child are re-enacted and magically

reinforced the re-birth and re-growth, the *renouveau*, of the whole animal and vegetable world.

The Satyrs far more than the Kouretes are essentially revellers. The Kouretes are essentially child-rearers, more quiet, more conservative. The rite of the birth and finding and cherishing of the child is, it is now known, only one factor in a wider magical folk-play—a folk-play that is in effect the utterance of the cycle of the life of man and of plants and animals. The play in full was cyclic—a birth, a contest, a death, a resurrection, a triumphant marriage, and again a birth. The whole cycle is preserved to us in the mime observed by R. M. Dawkins¹ at Viza in E. Thrace—the region of Dionysos himself. But it is obvious that in one place or another one feature of a plot so diverse may easily be emphasized in contrast to the rest. Crete and the Kouretes emphasize the birth of the child; the Satyrs emphasize the marriage, *κῶμος*. The Satyrs are in fact the *κῶμος*, the festival marriage procession incarnate; their leader is Comus. In the fragments of the recently discovered Satyr-play by Sophocles, the *Ichneutai*, 'Trackers,' the Satyrs, however, attend the birth of the wonder-child Hermes.² The Satyr-play lies at the basis not only of tragedy, but first and foremost of comedy—the song of the *κῶμος*. Whether the Satyr-play becomes tragedy or comedy depends on which point in the drama-cycle one elects to stop at. Tragedy ends with a death, comedy with a marriage.

But—and the point needs emphasis—it must never be forgotten that tragedy and comedy, important though they are to us, are late and purely literary developments. In the history of the ritual folk-mime they are, so to speak, episodic. Among the Greeks the ritual-mime, the Satyr-play, was caught up by men of conspicuous literary genius, Æschylus and Aristophanes, and used by them as the vehicle of tragedy and comedy. So splendid was the final transfiguration that the humble origin was all but lost, and only with difficulty has it been rediscovered by the industry of recent days. But it must always be remembered that tragedy and comedy alike, though especially tragedy, are exceptional phenomena occurring only sporadically and always calling for local and temporal explanation; it is the ritual-mime that is the permanent basic fact.

The reason is clear: the primary intent of the ritual-mime, the Satyr-play, was practical, *i.e.* magical, the object, to secure the fertility of man and flocks and fields. As in the Hymn of the Kouretes, the disguised worshippers 'leap for full years, and leap for fleecy flocks, and leap for fields of fruit and . . . leap for young citizens.'³ With the decay of magic and the emergence of full-blown Olympians to be approached by prayer and sacrifice rather than compelled by magic, the magical aspect of the Satyrs of course dwindled, and their practical magical dance was misconceived as an idle sport. Even as early as Hesiod the process is well-nigh complete. Hesiod tells of the

'worthless, idle race of Satyrs

And the gods, Kouretes, lovers of sport and dancing.'⁴

But—and this is conclusive for the substantial truth of the view here maintained—when Greek comedy and tragedy, splendid sporadic off-shoots, were dead and gone, the permanent element, the ritual-mime, lived on and lives to-day as a folk-play; and this folk-play is still credited with a faint magical potency; it is played at fixed seasons, mainly Christmas and Easter or Whitsuntide, and

played 'for luck.' The players are still disguised as beasts, with horns and beast-skins, and sometimes horses' or bulls' heads. They still enact the fight, the *ἀγών*, of summer and winter, the death, the ritual resurrection, the marriage with its *κόμος*, its revel rout (Comus). They still bring luck to the house where they enact their ritual-play. Finally, they are still always a band, a *ὄλαος*, pointing back to the days when the group and not the individual was the begetter of sanctities. We think of Dionysos as 'attended by a band of Satyrs'; it was from the band of Satyrs that Dionysos sprang.

LITERATURE.—For Satyrs in art and literature see E. Kühnert, in Roscher, s.v. 'Satyroi'; O. Navarre, in Daremberg-Saglio, s.v. 'Satyres'; O. Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1897-1906, s.v. 'Satyroi'.

SAURAPĀTAS, SAURAS, or SAURYAS.—This is the name of a small sect in Central and Southern India, whose special object of worship is the sun. According to the *Manual of the Administration of the Madras Presidency*,¹ those of the south are all Drāviḍa Brāhmanas, form a sub-tribe of that caste, and are very few in number. According to Wilson, they scarcely differ from other Hindus in their general observances. This is to be expected, for the worship of the sun forms a part of every orthodox Hindu's worship. The *tilaka*, or frontal mark, is of red sandal and of a special shape, and the necklace is of crystal. According to the *ICR* for 1901,² the *tilaka* of the Sauryas of Central India may be one of three varieties—three straight lines across the forehead, a single perpendicular line, or a double crescent joined by a bar in the middle. Here also 'they are nearly all Brāhmanas.'

They do not eat until they have seen the sun; and on every Sunday, and on the day of the sun's entry into a fresh sign of the zodiac, they eat one meal without salt.

For the general history of sun-worship in India see art. SUN, MOON, AND STARS (Hindu). Cf. also art. NATURE (Hindu), vol. ix. p. 230. The forest tribe Sauras (=Savarās) is treated in art. SAVARĀS.

LITERATURE.—H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, ed. R. Rost, London, 1861, p. 266, from which much of the above is taken; R. G. Bhandarkar, *Vaiṣṇavism, Śaivism and Minor Religious Systems* (=GIAP iii. 6), Strassburg, 1913, p. 151ff. GEORGE A. GRIERSON.

SAUTRĀNTIKAS.—I. Name, scriptural position, and character.—The philosophers of the Little Vehicle (Hīnayāna [q.v.]) were divided into two schools: on the one hand, the Vaibhāṣikas, who accepted the Abhidharma books of the Sarvāstivādin (the seven Abhidharmas) as 'revealed' scripture (*ṭpsissima verba*), and the commentary on them, *Vibhāṣā*, as the oldest and the most authoritative 'treatise' (*śāstra*); on the other hand, the Sautrāntikas, who considered the seven books simply as 'treatises' (*śāstra*) of human inspiration

and therefore liable to error, who maintained that Buddha had not composed treatises dealing with Abhidharma or given indications for the composition of such treatises under his authority (a working hypothesis in Pāli scholasticism),¹ but had taught Abhidharma doctrines in certain *Sūtras* (or *Sūtrāntas*).² According to them, these *Sūtras*, the *Arthavinīśchaya*, etc., constitute 'the Basket of Abhidharma.' Hence their name Sautrāntikas, the philosophers who recognize the authority of the *Sūtrāntas* alone.

They are also named Dārṣṭāntikas, 'philosophers who deal with similes' (*dārṣṭānta*);³ but there is some reason to believe that the Dārṣṭāntikas are a branch of the Sautrāntikas.

The following gives an accurate idea of the character of the school, and the progress accomplished by Buddhist thought is evident when the Sautrāntikas are compared with the older Pāli or Sanskrit schools:

The point to be discussed is of importance. Does the eye or the 'consciousness' (or the 'mind') see visible objects? (1) The Mahāśāṃghikas (an old sect and school) adhere to the letter of the scriptural text: 'When he sees an object with the eye . . . and believe that the eye—the subtle eye, not the eye of the flesh—sees visible objects. (2) The orthodox Pāli school (Vibhajjavādin) maintains that, in this scriptural statement, 'eye' indicates the necessary instrument of vision, as when we say 'wounded by a bow', when, in fact, the wound is inflicted by an arrow. The eye, they say, being matter, does not see; seeing belongs to 'consciousness' (*viññāna*).⁴ (3) The Vaibhāṣikas agree with the Mahāśāṃghikas: the eye sees, the consciousness or 'discernment' (*viññāna*) discerns (*viññāti*); they refute the Pāli point of view (by adducing a new simile, *mañchāḥ krośanti*, 'stalls applaud'). (4) The Sautrāntikas recognize the weight of the scriptural text: 'When he sees an object with the eye . . . but, by referring to other scriptural evidence, they show that the problem is not well stated: 'What is the use of this discussion? Very much like "chewing space." It has been said by the Lord that, "the eye being given and a visible object also being given, there arises, depending on both, a visual cognition." Therefore such a question as "Who sees?" is not justified, as therein no activity comes into play. These are only correlated phenomena, causes and effect—in fact a blue image resulting from a mechanical process, no seer, no vision. It is said that the eye sees, that the discernment (*viññāna*) discerns (*viññāti*)—mere metaphorical phrases which we must not take literally, on which we must not lay stress (*abhinīśeṣa*), says the Lord.'⁵

2. Sources.—Although the origin of the Sautrāntikas may be traced to the time of the rise of the Vaibhāṣikas—Sautrāntika doctors are quoted in the *Vibhāṣā*⁷—it seems that the Vaibhāṣikas preceded the Sautrāntikas in the systematization of their doctrines. That would explain why the views of the latter are to be found chiefly in commentaries on the books of the former. Vasubandhu, in his *Abhidharmakośa*, 'the scabbard of the Abhidharmas' (meaning the seven Abhidharmas of the Sarvāstivādin),⁸ sets out to state the views of the Vaibhāṣikas of Kāśmīr, but in his *Bhāṣya* (auto-commentary) to the *Kośa* he points out the errors of the Vaibhāṣikas, and these errors are dealt with in the *Vyākhyā* (sub-commentary) of Yaśomitra.⁹ A number of doctors, among them

Samghabhadra, thought that Vasubandhu had unduly sacrificed the 'orthodox system,' and they wrote purely Vaibhāṣika commentaries to the *Kośa*, refuting the particular views of the Sautrāntikas. These books (*Samayapradīpa*, *Nyāyānusāra*) exist only in Chinese translations.

There are a few references to the Sautrāntikas in the *Madhyamakavṛtti*¹ and in Vinītadeva's commentary to the *Nyāyabindu*.² Tāranātha gives some information on the history of the school and the activity of its scholars;³ and so do the Chinese pilgrims.⁴ Some Tibetan treatises (*sid-dhāntas*), especially the *Mañjuḥṣa-hāsavaśrasid-dhānta*, explain at length the position of the Sautrāntikas. These *siddhāntas* are intricate, and Wassilieff, who has summarized them, is not to blame when his statements are obscure.⁵ Most fortunately, Brāhmanical and Jain philosophers have paid attention to the theory of the origin of knowledge as stated by the Sautrāntika school, and they furnish us with the best account that we possess. In many cases their evidence is supported from Buddhist sources.⁶

3. Doctrines.—It is not possible to give a systematic account of the doctrines of the Sautrāntikas. On the other hand, a mere list of the points referred to in our authorities would involve the reader in a maze of obscure technicalities. A few remarks will show the variety and the importance of their views.

(1) Thought knows itself, just as a lamp renders itself manifest—a theory (*svasamvedana*, *svasamvitti*, 'self-consciousness') which has often been opposed by the Indian philosophers from the days of the *Upaniṣads*, and which is admitted in Buddhism by the Vijñānavādins alone,⁷ who have much in common with the Sautrāntikas.

(2) There is no direct perception of exterior objects (*contra* the Vaibhāṣikas); exterior objects are known by inference, not by evidence.

(3) The exterior object really exists (*vastuśat*); but it is an open and much debated question whether it possesses a form (*ākāra*) of its own. Some Sautrāntikas believe that 'form' belongs to the object; some maintain that thought 'imposes its own form on the object'; others, again, as the result of a more delicate inquiry, admit a compromise—the semi-realistic theory of the 'two halves of an egg.'

(4) The Sautrāntikas have had a certain share in the development of the atomistic theory. They say that there is no contact (*sparsa*) between

atoms; for, as atoms have no parts, contact could not be contact between parts; it would be contact between wholes and therefore would involve identity; a compound of atoms would not be larger than one atom (so far the reasoning of the Vijñānavādins, who deny the existence of matter). But there is 'contiguity' (between atoms—literally 'there is no interval' (*nirantaratva*) between them, for matter is impenetrable.)

(5) Matter (*rūpa*) is only 'colour' (*varṇa*), not 'shape' or 'figure' (*saṁsthāna*) (*contra* the Vaibhāṣikas).²

(6) Everything is painful. Pleasant feeling itself is painful, as it is only attenuated pain.

(7) Destruction has no cause: things are perishable by their very nature; they are not transitory (*anitya*), they are 'momentary' (*kṣanika*).³ Birth or production (*utpāda*) is 'existence after having not existed' (*abhūtāv bhāvaḥ*); neither the past nor the future exists. *Pudgala* ('soul') and space (*ākāśa*) are also mere names.

LITERATURE.—See the sources quoted in the footnotes.

L. DE LA VALLÉE POUSSIN.

SAVARĀS.—The Savarās, Saoras, or Sauras, a forest tribe of India, numbering 582,342 at the census of 1911, are found in largest numbers in Madras, the Central Provinces, the United Provinces of Agra and Oudh, and Bihār and Orissa. The name of the tribe, popularly derived from Skr. *śava*, 'a corpse,' is interpreted by Cunningham to mean 'axe-men,' the axe being the implement characteristic of forest-dwellers. They have been identified with the Śabarās, who were grouped with the Andhras, Pundras, Pulindas, and Mūtibas, 'the most degraded classes of men, the rabble for the most part.'⁴ In the United Provinces of Agra and Oudh they are represented by the Soerī, Soirī, or Suirī.⁵

As might have been expected in the case of a tribe dispersed over a large area of forest country, their environment preventing inter-communication between the various groups, there are considerable differences of belief.

In Bengal the members of the tribe in the Bankura District 'have become thoroughly Hinduised, and Brahmans serve them as priests in the worship of the standard gods. These Brahmans are received on equal terms by the *purohīts* (family priests) of Bagdis, Koras, Kewats, and other low castes. In Orissa the original faith of the tribe has been less modified by the influence of Hindu usage. The worship of the Brahmanical deities is indeed gaining ground among them, but the elder gods, Thānpātī, who dwells in the *thān* or sacred grove of the village, and 'Bansuri or Thākūrānī, no doubt the same as the blood-thirsty she-devil revered by the Bhuiyās,'⁶ still receive offerings of goats or fowls at the hands of the elders of the community, who have not yet been supplanted in their office by the professional Brahman.'⁷

The Soerīs of the United Provinces are worshippers of Śiva, Mahābir, or Hanumān, the monkey god, Sitalā Māi, the smallpox goddess, and the Pāñchoṣī Pīr.⁸

In Madras the tribal beliefs are of a more primitive kind. In the Vizagapatam District they worship Jākārā or Loddli, the latter being sometimes a generic term for the gods in a body, who have no regular temples, but are symbolized by a stone placed under a big tree. Sacrifices of goats are made to them when the various crops are ripening, and the victim must first eat food offered

to it.¹ The hill Savarās fear Jaliā, who in some villages is provided with a home under a small thatched shed, in which are placed images of household implements and requisites as well as figures of men, animals, birds, and the like.² F. Fawcett³ remarks that Jaliā is sometimes male, sometimes female, and very malevolent, going from one village to another and causing death. The god's shrine is provided with all sorts of furniture for his or her use or amusement; goats are killed close by, and the blood is poured on the platform. Among other gods he named Kitung, said to be the creator, who brought the tribe to their present settlements; Rathū, who causes pains in the neck; Dharmabojā or Lankan, 'the one above,' or Ayungang, the sun, who causes all births and is not always benevolent, sometimes bringing sickness; Kannī, who is very malevolent and lives in big trees, those haunted by him never being cut down. Some of these hill deities resemble the spirits of the dead. The same writer adds that the *kadang* is a medium, sometimes a woman, all to the manner born and needing no training, who communicates with the unseen world. Their gradual approximation to Hinduism is shown by the belief that they can gain union with the gods in a future life by worshipping at the Sivarātri, or 'night festival' of Śiva, at his ancient temple at Mehendragiri. There is no distinct evidence of human sacrifice like that of the Kandhs (*g.v.*); but J. Campbell remarks that they used to participate in the *meriah* rite of the Kandhs, though they did not seem to attach much importance to it and readily promised to discontinue the practice.⁴ They have no commemorative sacrifices or feasts, those which are held being intended to appease evil spirits, especially those of the angry dead. They make offerings to the sun at the mango harvest, an offering of food or a small sacrifice when a child is born, and an offering to Sattivā at the sprouting of the rice crop to secure a good harvest. On this occasion a stake made from a sacred tree is planted in the ground, the top of it is sharpened to a point, on which is impaled a live young pig or chicken, and over the animal an inverted earthen pot daubed over with white rings is placed.⁵

In the Central Provinces they worship the goddess Bhavānī under various names and Dulhā Deo, the young bridegroom who was killed by a tiger.⁶ He is believed to dwell in the house kitchen. In other places Bārḥā Deo, or Bad Rāul, is worshipped, and, as the tribe becomes Hinduized, he develops into Bhairava, 'the terrible one,' just as farther north the earth-god Bhairon is similarly transformed.⁷ Like all secluded tribes, they are notorious for their knowledge of sorcery, and their charms are specially valued by those who have to appease the spirits of persons who have died by violence. In former times, if a member of the family was seriously ill, they were accustomed to set fire to the forest, in the hope that by burning the small animals and insects they might propitiate the angry gods.

SAVIOUR.—See SALVATION.

SAVONAROLA.—i. Life.—Although we naturally associate Girolamo Savonarola, the prophet of the Italian Renaissance, with Florence, he was not and never regarded himself as a Florentine. Michele Savonarola, a Paduan scientist and man of letters, had settled at Ferrara in 1440 as physician to the court and professor in the university. His son Niccolò married a Mantuan lady, Elena Bonacossi, by whom he had seven children, the martyr being the third. Girolamo was born on 21st Sept. 1452. The second duke of Ferrara, Ercole d'Este, was making his capital a centre of the learning and splendour of the Renaissance; but the young Savonarola, profoundly conscious of the evils of the time and suffering the pangs of unrequited love, poured out his heart in a canzone, *De ruina mundi* (1472), bewailing the perversion of the world and the corruption of the life which he saw around him. He set forth the same conviction in a small prose essay, *Del Disprezio del Mondo*, invoking the divine intervention. On 24th April 1475 he left his home and entered the Dominican order at Bologna.

'The reason,' he wrote to his father, 'that moves me to enter religion is this: first, the great misery of the world, the iniquities of men, the ravishing, the adultery, the pride, the idolatry, the cruel blasphemies; for the age has come to such a pass that not one is found who acts rightly; wherefore, many times the day, did I sing to myself this verse with tears: *Heu! fuge crudeles terras, fuge litus avarum.*'¹

In his novice's cell he wrote a second canzone, *De ruina ecclesie*, deploring the decay of religious life and the corruption of the Church, praying for power 'to break those great wings' of temporal and spiritual power in the hands of the wicked. He returned to Ferrara to preach the Lent of 1481, but failed to impress his countrymen, and was transferred to the convent of San Marco in Florence. Lorenzo de' Medici was then at the height of his power; his rule, though there was no court and republican appearances were maintained, was a despotism in which even art and letters and festivities became instruments of statecraft for holding the people in contented servitude. The uncouth utterances of the new friar-preacher from the north were at first ignored by the cultured and sophisticated Florentines. Poring over the pages of the Hebrew prophets, himself seeing visions and hearing voices, Savonarola became inspired by the conviction that he was set by God as a watchman in the centre of Italy to warn her peoples and princes of impending doom. He first delivered his message at San Gimignano during the Lent of 1485, and then, with greater power and terrible predictions, in the Lent of 1486 at Brescia. The sensation caused by the latter sermons gained him a better hearing on his return to Florence (whither he was recalled at the instance of Lorenzo de' Medici), when, on the first Sunday of August 1489, preaching on the Apocalypse in San Marco, he repeated his three conclusions: the Church would be scourged, then renovated, and these things would come quickly. In 1491 he was elected prior of San Marco. He stood by the deathbed of Lorenzo de' Medici (April 1492) and, according to the disputed but still generally accepted story, bade him gain remission of his sins by restoring liberty to Florence.

Up to this time Savonarola had based his prophecies on natural reason and the authority of the

Scriptures. He now began to speak openly of his visions and to lay claim to divine revelation. In the same year (1492), on the night of Good Friday, he saw 'per immaginazione' the vision of the two crosses—the black cross of the wrath of God in the midst of Rome, the golden cross of the mercy of God rising up over Jerusalem. In the following Advent (Alexander VI. having been elected pope under scandalous circumstances in August) he had 'un' altra immaginazione,' in which he beheld a hand in heaven wielding a sword, of which the point was turned towards the earth. Throughout 1492, 1493, and 1494 his sermons increased in vigour and fearlessness of utterance, as he denounced the crimes and corruption of prelates and princes, bidding men turn for happiness and salvation to 'the simplicity and life of Christ and of the true Christians.' The prelates, he declared, had not only destroyed the Church of God, but had made a Church after their own fashion—the modern Church, which retained only the splendour of outward ceremonies, a mere show falsely satisfying men, like the festivities and spectacles introduced by secular tyrants. His prophecies of imminent chastisement culminated in the sermon on the Deluge (Gn 6¹⁷), delivered in the Duomo on 21st Sept. 1494, heralding the French invasion. The vision of the sword seemed fulfilled, and Savonarola hailed Charles VIII. as the minister of God who should reform the Church and the world. The friar's bearing in the crisis that followed the expulsion of the Medici, the passage of the French through Tuscany to the conquest of Naples, and their precipitous retreat in the following year gave him an almost unlimited power in Florence. Henceforth Savonarola claimed a supernatural sanction for his prophecies and conduct, in the religious and political sphere alike. From the pulpit he directed the reorganization of the Republic with a Greater Council, on the model of the Venetian constitution ('which was given them by God'), and the reformation of life and conduct that transformed the city into a theocratic state with Christ as King. There were bonfires of the 'vanities,' the streets echoed with processional hymns and chants of divine love, the children were organized into bands as the chosen emissaries of this holy time. At Ferrara the duke—with whom Savonarola was in constant communication, and who for a while believed unreservedly in his prophecies—attempted a similar reformation. The prior of San Marco was now the central figure in Italy.

'Tell me,' he cries in one of his sermons, 'ye who contradict, —did you ever in your times see a man preach in one city, and his voice run through all Italy and beyond Italy?'

Savonarola, while always professing absolute submission to the doctrines and decrees of the Church, now came into direct conflict, both spiritually and politically, with the pope. Alexander, who had vainly attempted to silence him or induce him to come to Rome, finally sought to bribe him by the offer of a cardinal's hat. The friar's answer was a terrible course of sermons on Amos and Zechariah, in the Lent of 1496, openly denouncing the corruption of the papacy. He continued in the same strain, preaching on Ruth, Micah, and Ezekiel, during this and the earlier part of the following year. At the same time he was engaged, together with the duke of Ferrara (whose faith, however, was wavering), in an intrigue for the return of Charles VIII., in opposition to the league for the defence of Italy formed by the pope, Venice, and the duke of Milan. In June 1497 Alexander issued a bull of excommunication against him. Savonarola respected the bull until Christmas Day, when he publicly celebrated mass. Dis-

regarding the advice of the Ferrarese ambassador, he followed this up by preaching in the Duomo on Septuagesima Sunday, 1498, declaring that the excommunication was invalid and the pope himself a broken tool. He began to talk of the summoning of a Church council. When the government, threatened with an interdict, forbade him to preach again, he prepared an appeal to the princes of Christendom, urging them to summon this general council and depose the pope as a simoniacal usurper. A preliminary dispatch to France was intercepted by a Milanese agent and forwarded to Rome. The duke of Ferrara had already dissociated himself from the friar's cause. Faced by a hostile government in Florence itself and by the increasing enmity of the populace, Savonarola had now no supporters save a dwindling party of religious enthusiasts. The abortive ordeal by fire (7th April 1498) precipitated the inevitable catastrophe. A Franciscan of Santa Croce challenged him to prove his doctrines by passing unscathed through the fire; Savonarola would perhaps have ignored the matter (as he had done on a previous occasion), but his chief follower, Fra Domenico da Pescia, impetuously accepted. The affair was probably an organized plot, and the fiasco was so contrived as to excite the popular indignation still further against him. San Marco was stormed on the following day (Palm Sunday). The friar and his two companions—Fra Domenico da Pescia and Fra Silvestro Maruffi—were subjected to repeated tortures, and Savonarola's depositions were falsified to make it appear that he confessed 'that he had not received from God the things he preached.' Finally, to conclude the prolonged martyrdom, papal commissioners were invited to Florence, and the three Dominicans were hanged and their bodies burned on 23rd May 1498. Savonarola's calm correction of the phrase of the bishop of Vasona in degrading him ('Separo te ab Ecclesia militante atque triumphante') was long remembered: 'Militante, non triumphante; hoc enim tuum non est.'

The personal character of Savonarola was unquestionably one of heroic sanctity. His letters to his mother and other relatives and his attitude towards women and children testify to his strong family affection and innate tenderness of disposition. A mystic and contemplative by nature, he was impelled to action solely by the spirit of holy zeal and the conviction that a special mission had been assigned to him by God.

'Zeal,' he declares in one of his sermons, 'is nought else than an intense love in the heart of the just man, which does not let him rest, but ever seeks to remove all that he sees to be against the honour of God whom he vehemently loves.'

In his *Dialogus de veritate prophetica* he pathetically describes his reluctance to enter the deep sea in his little boat, finding himself far from shore, yearning to return to his cell:

'All those who have known me intimately from my childhood, know that these things which I do at present are contrary and repugnant to my natural desire.'

His inordinate belief in his visions was due to a nervous and highly-strung temperament, to which must likewise be ascribed his intolerance towards political opponents. This at times marred his otherwise enlightened statesmanship; but nowhere in his career is there a trace of personal arrogance or self-seeking. The Ferrarese ambassador wrote of him, on his first accession to power in Florence: 'He aims at nothing save the good of all, seeking for union and peace.' In religious doctrine and practice he remained to the last a fervent and rigid Roman Catholic of the type of the mediæval saint. As a reformer he is the successor of St. Peter Damian, St. Bernard, Dante, and St.

¹ *Sermoni e prediche*, Florence, 1845, p. 555.

² *Dialogus*, ad init.

Catherine of Siena, rather than a precursor of Luther.

2. Works.—Savonarola's literary works are closely connected with his utterances from the pulpit.

¹ His religious treatises, including those in the form of epistles to the faithful, set forth, scientifically and more in order, the same ideas that are found scattered in his sermons.¹

Savonarola appears to have usually written his sermons beforehand in Latin, though they were delivered and consequently taken down in Italian. His more important treatises (with the exception of the *Reggimento e governo della città di Firenze*) were first published in Latin and afterwards, for the sake of the unlearned, in the vernacular; only in the case of the *Trionfo della Croce* is the Italian version from his own hand; he more generally relied on the assistance of one or other of his followers, such as the poet Girolamo Benivieni. In his shorter writings he used Italian or Latin according to the nature of the subject and the class of readers to whom they were addressed.

(i.) *Sermons*.—There are 15th or early 16th cent. editions of ten courses of Savonarola's sermons: (a) on the First Epistle of St. John (probably delivered in 1491); (b) on the Psalm *Quam bonus Deus Israel* (Advent, 1493); (c) on the Ark of Noah (mainly Lent, 1494); (d) on Haggai (1494-95); (e) on the Psalms (1495); (f) on Job (Lent, 1495); (g) on Amos and Zechariah (Lent, 1496); (h) on Ruth and Micah (1496); (i) on Ezekiel (1496-97); (k) on Exodus (1498). Several sermons were separately printed during the preacher's life. There are modern editions of (a) and (b), *Sermoni e prediche di F. Girolamo Savonarola* (Florence, 1845, and Prato, 1846), and of (h), *Prediche di F. Girolamo Savonarola*, ed. G. Baccini (Florence, 1889). An excellent selection is given by Villari and Casanova. Though the magic of the preacher's personality has passed away, and we are mainly dependent upon reporters (and sometimes upon an intermediate Latin version), enough remains to enable us to realize the terrible quality of Savonarola's eloquence, his apocalyptic fire and religious fervour, his zeal for righteousness, his fearlessness of men, and the profound emotion that these discourses must have stirred in his audience.

Savonarola claims² to have preached on four subjects: the truth of the faith, the simplicity of the Christian life as the highest wisdom, the imminence of certain future events, the new government of Florence. Consequently he regards as his most significant works the four in which these matters are set forth in writing: the *Trionfo della Croce*, the *Semplicità della vita cristiana*, the *Dialogus de veritate prophetica*, the *Reggimento e governo della città di Firenze*.

(ii.) The *De veritate Fidei in Dominicæ Crucis triumphum*, or *Trionfo della Croce*, the longest of Savonarola's works, was completed in the summer of 1497. Both the Latin and Italian versions are by himself, the latter not being a literal translation, but the setting forth of the contents of the work in a more popular and less scholastic form. He regarded it as the supreme vindication of his orthodoxy. 'From this book,' he wrote to the pope, 'it will appear manifestly whether I am a sower of heresy or of the Catholic faith.' Starting from a pageant of the triumph of Christ (suggested probably by the carnival *trionfi* of the Florentines), he attempts in four books to show that the Christian faith should be accepted, not only by supernatural revelation, but by the natural light of reason. Mainly Thomist in conception but more modern in form and treatment, it sought to give the Renaissance a volume of Roman Catholic

apologetics somewhat analogous to what Aquinas had given the 13th cent. with his *Summa contra Gentiles*.

(iii.) The *De simplicitate Christianæ Vitæ* (1496) was written in Latin and followed by an Italian version by Girolamo Benivieni. Here Savonarola defines the essence of the Christian life as the imitation of the life of Christ and the following of His teaching. Such a life is founded not on imagination or on natural reason alone, but on the grace of God which forms it, and the means by which it is chiefly preserved and increased are the sacraments of Penance and the Eucharist. Divine grace produces simplicity of heart, from which proceeds simplicity in external things, which must, however, be always relative, according to a man's state and position and his duty as a citizen. The end of the Christian life is man's true felicity, which consists in the contemplation and fruition of God. We may regard this work as a kind of scholastic companion to the *De imitatione Christi* of Thomas à Kempis.

(iv.) In 1495 Savonarola published his *Compendium Revelationum*, an account of his principal visions, some of which are related with no small dramatic power, while others read like the mere phantasies of the older mediæval seers. The *Dialogus de veritate prophetica* (1497, after the excommunication) is an apologia, not only for the previous work, but for the writer's whole attitude as a prophet of renovation. Its general purport is that he is convinced that he is neither a deceiver nor himself deceived, but that, over and above what he has derived from the light of reason, from the understanding of the Scriptures, and from the practice of the spiritual life, he has received a direct revelation from God. Among his arguments is the perfectly legitimate one, known to all students of mystical experience: these revelations have given him greater intensity and increased purity in his own spiritual life. Both the *Compendium* and the *Dialogus* appeared first in Latin and were followed by Italian versions not by Savonarola himself.

(v.) The *Trattato circa il reggimento e governo della città di Firenze* was written in Italian, apparently in the latter part of 1497 or (as Villari holds) in the first months of 1498, Savonarola intending to produce a larger work in Latin on the same subject later. It is divided into three parts. In the first he distinguishes between three forms of government: the rule of a single man (*regno*), an oligarchy (*governo degli ottimati*), and a genuine republic of all the people (*governo civile*), the third being the form most suitable for Florence. The second part deals with tyranny, of which the worst is that of a private citizen who has become a tyrant. It includes a striking picture of such a tyrant, an imaginary portrait, but with features manifestly drawn from the darker side of the character of Lorenzo de' Medici. The third part, with great insight and true statesmanship, shows how the new form of republican government in Florence, with its *consiglio grande*, is to be regulated, perfected, and maintained. Such a republic, accompanied by moral reformation and based upon faith in God, will transform the city into an earthly paradise, in which civic liberty and true Christian living will be indissolubly united.

(vi.) *Minor works*.—(a) *Poetry*.—The most interesting of Savonarola's poems are the two early canzoni, *De ruina mundi* and *De ruina ecclesiæ*, already mentioned. The imitation of Petrarch, here manifested, becomes devout parody in a few later sonnets and canzoni. Though not by nature a poet, there is true lyrical exaltation in some of his *laude*, hymns sung in procession to replace the profane *canti carnascialeschi* of the Florentines:

¹ Villari and Casanova, *Scelta di prediche e scritti*, p. lv.

² *Reggimento . . . della città di Firenze*, ad init.

O anima cieca, Ben venga amore, Jesù sommo conforto, Che fai qui core, and especially that on Christ as King of Florence (Viva, viva in nostro core, Cristo re duce e signore).

(b) *Philosophical*.—To the early days of Savonarola's priorate at San Marco belong three Latin works: *Compendium philosophiæ naturalis*, *Compendium philosophiæ moralis*, *Compendium logicæ*. Written for the use of friar-students, they are Aristotelian and Thomist in theory and treatment, with occasional traces of Neo-Platonic influence. A little later is the *De divisione, ordine, ac utilitate omnium scientiarum*; with an appended fourth book on the art of poetry. Here he protests against the use of pagan mythology by Christian poets, questions the spiritual utility of religious verse, and draws a curious contrast between the classical poets and the inspired prophets.

(c) *Mystical and ascetic*.—A somewhat large number of small religious treatises were composed by Savonarola from 1491 down to a few days before his death. Particularly noteworthy are the *Trattato della orazione mentale* and the *Trattato dell' amore di Jesù Cristo* (both in Italian, 1492); the former inculcates inner worship as more fruitful and more pleasing to God than outward ceremonial; the latter, a work of the highest spirituality, is both practical and mystical, a guide for the devout soul on the mystic way; the examples are usually from the life of the cloister, but they are applicable to all, the book ending in a long series of contemplations moving the soul to the impassioned love of Jesus. Two other tracts (originally in Latin) which also still hold their place in spiritual literature are the commentary on the Lord's Prayer, *Expositio Orationis Dominicæ*, and that on Psalm 79 (80), *Qui regis Israel intende*. The *Solatum itineris mei* (of uncertain date) consists of dialogues between the spirit and the soul, anticipating the matter of the *Trionfo della Croce*. Best known of all (partly from the fact of their having been republished by Luther) are the meditations on the Psalms *Miserere mei Deus* (50-51) and *In te Domine speravi* (30-31), written by Savonarola in prison a few days before

his death. The first is purely devotional in treatment, closing in the vision of the future renovation of Zion and the writer's oblation of himself as a victim upon the Cross of Christ. In the second, which was left unfinished, a more personal note is struck; it depicts the struggle between hope and despondency in Savonarola's own soul, ending with the vindication of his revelations as 'divine illuminations' and the utterance of his trust in the Lord and in His name.

No complete collection of Savonarola's letters has yet been edited. Some of them are practically tracts, like those on the exercise of charity and on discretion in prayer, addressed to the friars of his own convent, and the beautiful epistle to the sisters of the third order of St. Dominic. We have also tender letters to his mother and members of his own family, letters of spiritual or political counsel to various persons, and correspondence on affairs of Church and State. Peculiarly interesting among the last is his correspondence with the duke of Ferrara, throwing light not only on the character of the friar himself, but also on that of the conscience-tortured prince whom he addressed, and who besought him 'to be a good ambassador for us in the sight of God.'

SCAPEGOAT.

Greek (W. J. WOODHOUSE), p. 218.
Semitic (J. D. PRINCE), p. 221.

SCAPEGOAT (Greek).—The ideas and the ritual analogous, among the Greeks, to those covered by the term 'scapegoat' are connected chiefly with Athens and the festival of the Thargelia, held on the 6th and 7th of the month Thargelion (May-June).¹ Originally and essentially a festival of thanksgiving for the early harvest, or at any rate agrarian in origin and scope, the Thargelia in historical times included also certain ceremonies of purification and perhaps of expiation, connected with the Pharmakoi (Φαρμακοί)² hereafter described. Those ceremonies themselves were perhaps originally agrarian, though their original

¹ The Thargelia is known only as an Ionian festival; likewise a month Thargelion is not found in the calendars of Dorian or Æolian cities. For a definition of the word see A. Mommsen, *Feste der Stadt Athen*, p. 480. For the dates cf. Plut. *Symp.* viii. 1. 1f., who says that Plato was born at the time of the Thargelia in Athens, and on the 7th of Thargelion, which was also the birthday of Apollo, according to the Delian legend (Diog. Laert. iii. 2). Sokrates was born on the 6th of Thargelion (the birthday of Artemis), 'when the Athenians purify the city' (ib. ii. 44—doubtless alluding to the Pharmakos ceremony).

² Φαρμακός in Attic, but φάρμακος in Ionic Greek, as always in Hipponax (cf. frag. ap. J. Tzetzes, *Chiliades*, ed. Th. Kiessling, Leipzig, 1820, bk. v. p. 726 f.: φάρμακος ἀχθεῖς ἐνράκας βασισκεῖν); see O. Hoffmann, *Die griech. Dialekte*, Göttingen, 1898, iii. 180, 316.

Teutonic.—See PURIFICATION (Teutonic).

character had become obscured and in a sense moralized. The two elements, or strains of ritual, whether or not springing from the same agrarian stock, were kept so far distinct as to fall on separate days. On the 6th, after sacrifice of a ram to Demeter Chloe ('of green things') on the Akropolis, the city was 'cleansed' by the procession, expulsion, and perhaps ultimate stoning and burning, of the Pharmakoi; on the 7th cereal offerings of various kinds were brought to Apollo, these θαργήλια, 'firstfruits,' giving their name to the whole series of celebrations.

The earliest connected account of this ritual of cleansing is given by Istros (3rd cent. B.C.). He says:

'At Athens they used to lead forth (ἐξήγον, perhaps a ritual term) two men to be purifications for the city (καθάρσια τῆς πόλεως) at the Thargelia, one for the men, and the other for the women.'¹

Then he gives a legend of a certain Pharmakos, who, having stolen libation-cups from Apollo's temple, was caught and stoned to death by the

¹ See Harpokrat. s.v. φαρμακός; cf. Hesych. s.v. φαρμακοί καθαρτήριοι, περικαθαίροντες τὰς πόλεις ἀνὴρ καὶ γυνή, where the last words may be due to misunderstanding. But apparent parallels (e.g., Paus. vii. xix. 2 f.) would suggest that sometimes a woman really may have been among the victims.

'companions of Achilles'; of this the ceremony at the Thargelia was, he says, an 'imitation' (*ἀπομιμήματα*).¹ Hence it would appear that at the Thargelia two unfortunates were actually stoned to death, or that at least a show was made of stoning them, as the concluding act of a ritual procession. An earlier allusion to the Pharmakoi, in the speech, attributed to Lysias, against Andokides for impiety (date, 399 B.C.), contains no direct statement as to their violent death; but this may be due to the speaker's wish to confine himself to ritual terms—which of course may mean much more than they say.² Nor is the ultimate fate of the Pharmakoi made any clearer in the account of Helladios (3rd cent. A.D.),³ who tells us that it was the custom in Athens to lead in procession two Pharmakoi with a view to purification (*πρὸς καθαρὸν ἀγομένους*), the one intended for the men having a string of black figs about his neck, while the one intended for the women wore white figs; they were also called by the mysterious title *Συβάκχοι*. He adds that this ceremony was meant to ward off plague, and gives a legend of the usual type to account for it.⁴

Only the very latest authorities assert in so many words that the Pharmakoi were slain.⁵ Of these latest accounts the most detailed is that given by Tzetzes (A.D. 1150).⁶ He says:

'The Pharmakos was a purification of this sort of old. If by God's wrath a visitation fell upon a community—famine or pestilence or other ill—they led forth to sacrifice the ugliest of them all for a cleansing and medicine for the suffering city.⁷ And, setting the sacrifice in the fit place, they gave him cheese in his hand, and barley-cake and figs; and, having smitten him seven times on his genitals with squills, wild figs, and other wild things, they finally burned him with fire, with faggots of forest trees, and the ashes they scattered to the sea and the winds, a purification of the suffering city.'

Tzetzes proceeds to quote illustrative extracts from the Iambic poet Hipponax of Ephesos (540 B.C.), who is thus embodied as our earliest authority in our latest. Hipponax writes as he does by way of pointing insult at his enemy Boupalos,⁸ expressing the hope that Boupalos may share the fate of a Pharmakos; he is alluding to a familiar ritual in vogue either at Ephesos or at Kolophon. It is quite perverse to say that his phrases are 'all comic or rhetorical curses' invoking 'an obsolete and imaginative punishment' on his victim.⁹

It seems, then, that both in the cities of Ionia and in Athens, at some time or other, there was consummated, either annually or at intervals, a ritual man-slaying of human sacrifice, i.e. a public religious rite involving and centring in the taking of human life, apparently by stoning. In the history of religion there are many strange contradictions; and the bondage of

ancient ritual is often stronger than the strongest civilizing instinct of the most progressive race.¹ It is obvious that the establishment of this as a fact for Athens would gravely affect our general view of Attic culture. To dispute the applicability of the term 'sacrifice' here (as, e.g., Harrison, *Proleg.* 2 p. 103: 'it was not really a sacrifice in our modern sense at all . . . not a sacrifice in the sense of an offering made to appease an angry God') seems to the present writer to be quite beside the mark. Who can say what exactly was the mental attitude of the participants in the ritual? Yet upon that question the definition must ultimately turn. For us the real point is simply this—Was human life annually taken, at Athens, as part of public State ritual? No 'misunderstanding of the gist of the ceremony' (*ib.*) can be invoked to defeat this question of fact or to cloud the issue. Whether the evidence is sufficient in amount and quality to enable us to answer it one way or the other is, of course, an entirely different matter.

That at some time in the history of Attica sacrifice of human victims at the Thargelia was in vogue as an element of the national religious cycle is beyond serious dispute. Whether the practice survived as a periodical rite as late as the 5th cent. B.C. is a question generally answered upon purely subjective grounds by appeal to *a priori* ideas of what is appropriate to Periclean Athens, rather than in the light of the facts of tradition, i.e. the extant literary evidence. Consequently, neither this nor the general phenomenon of human sacrifice in Greece at large in historical times is treated very honestly; so that it seems necessary here to review the salient facts.

Recorded instance of the offering of human life in Athens belongs to the time when Epimenides was 'purifying Attica by human blood'² after the Kylonian massacre, and a youth named Kratinos voluntarily gave himself for his country (*ὅτι τῆς θρησκείας*); his friend Aristodemos 'also devoted himself to death, and so the calamities of the land were stayed.'³ Again, just before the battle of Salamis, three Persian prisoners of high rank, nephews of Xerxes himself, were brought to Themistokles, and the prophet Euphrantides 'bade him sacrifice them all to Dionysos Omestes (Cannibal), for so would there be deliverance and victory for Greece. Themistokles was horrified at the prophet's strange and monstrous pronouncement; but, as is generally the case in great crises and times of difficulty, the multitude, pinning its faith to irrational rather than rational methods, invoked the god with one voice, and bringing the captives to the altar insisted upon the sacrifice being consummated as the prophet had directed.'⁴

That in the fifth century, such sacrifices, even as a desperate expedient in great danger, revolted Attic feeling, of which we can take Aeschylus and Euripides as safe interpreters,⁵ is a dictum somewhat hard to reconcile with the surprising frequency with which Euripides avails himself of just this motive of the bloody sacrifice of a noble youth or maiden—once at least apparently quite gratuitously⁶—and still harder to reconcile with the repeated deliberate and official acts of cold-blooded ferocity which stain the pages of Athenian history during that century.⁷ When Plutarch, in his account of the battle of Leuktra, describes the searchings of heart of the leaders of the Theban army (371 B.C.), by reason of the vision of

¹ CGS iv. 275.

² Athen. *Deipn.* xiii. 78.

³ Diog. Laert. i. 110 has a somewhat different account: 'οἱ δὲ τὴν αἰτίαν εἰπὼν (sc. Epimenides) τοὺς λοιποὺς τὸν Κυκλωπιδῶν ἄγος, σημαίνοντα τὴν ἀναλαχρῆν καὶ διὰ τοῦτο ἀποθάνειν δύο νεαροὶς, Κρατῖνον καὶ Κρησίβιον, καὶ Λυθίγαν τὴν συμφορὰν. That the sacrifice was voluntary (according to the account given by Athenaeus) does not alter its character; theoretically, every victim was supposed to offer itself willingly.

⁴ Plut. *Themist.* 13, Arist. 9, *Pelopid.* 21. This narrative, Plutarch observes, is from Phanias (Phaenias) of Lesbos, 'a man not unversed in letters and philosophy.' The general modern attitude towards it is reflected by Grote, who remarks (*Hist. of Greece*, new ed., London, 1854, iv. 479) that 'it is pleasing to find sufficient ground for rejecting it.' The incident is, on the contrary, as well vouched for as almost any detail in Greek history that depends upon purely literary authority. Cf. the burying alive in the Forum Boarium at Rome, after the battle of Cannae, of a 'Gallus et Galla, Graecus et Graeca' (Liv., xii. 57), and the sacrifice of 300 prisoners to Zeus Ithomatas by Aristomenes (Clem. Alex. *Protrep.* 36).

⁵ CGS iv. 277.

⁶ E.g., Makaria (*Herakleid.*); Iphigenia (*Iph. in Aul.*); Chthonia (*Erechth.*); Polyxena (*Ilec.*); Menoikeus (*Phan.*). It is possible that the sacrifice of Makaria was the poet's own invention, independent of tradition; cf. A. Lang, *The World of Homer*, London, 1910, p. 210: 'This enables him to please an Ionian audience by introducing their favourite incident, the sacrifice of a princess: Attic traditions harp eternally on this un-Iliadic horror' (speaking of the poet of the *Cypria*), and p. 211: 'the Ionian author of the *Cypria* cannot deny himself an allusion to human sacrifice'; see also p. 279.

⁷ E.g., Agina (Thuc. ii. 27, iv. 57); Skione (*ib.* v. 32); Melos (*ib.* v. 116). The sole example of compunction and mercy, that in regard to Mitylene (*ib.* iii. 36), is dealt with at remarkable length by Thucydides precisely because of its rarity.

¹ The term *ἀπομίμημα* can mean (1) a 'reproduction,' death-scene and all; (2) a 'make-believe' or piece of play-acting. Nothing can fairly be based upon its use here, by asserting the one sense to the exclusion of the other.

² Lysias, vi. 103: νῦν οὖν χρὴ νομίζειν τιμωρομένους καὶ ἀπαλλασσομένους Ἀνδοκίδου τὴν πόλιν καθαίρειν καὶ ἀποδιοπομπεύσαι καὶ φαρμακὸν ἀποπέμπειν καὶ ἀλιτηρίου ἀπαλλάττεσθαι, ὡς ἐν τοῦτων οὗτός ἐστιν. The speech, though perhaps not by Lysias, is by a contemporary. The passage quoted is described by G. Murray, *Rise of the Greek Epic*, p. 827, as 'comic abuse'!

³ See Phot. *Bibl.* p. 534.

⁴ Phot. *Bibl.* 279, p. 534, Bekk.: τὸ δὲ καθάρσιον τοῦτο γομικὸν νόμον ἀποροπιασμὸς ἦν, λεβὼν τὴν ἀρχὴν ἀπὸ Ἀνδρόγα τοῦ ἡρητός, οὗ τεθνήκτος ἐν ταῖς Ἀθήναις παρανόμως τὴν λοιμικὴν εἰσέσσαν οἱ Ἀθηναῖοι νόμον, καὶ ἔκράτει τὸ ἔθος αἰὶ καθαίρειν τὴν πόλιν τοῖς φαρμακοῖς.

⁵ Cf. Suid. li. 2, p. 1423: φαρμακοῖς τοὺς δημοσίᾳ τρεφομένους, οἱ ἐκάθαρον τὰς πόλεις τῶ ἐναντίων φόβῳ.

⁶ *Chilind.* v. 726 f.

⁷ τῶν πάντων ἁμφορότερον ἦγον ὡς πρὸς θυσίαν | εἰς καθαρὸν καὶ φάρμακον πόλεως τῆς νοσοῦσης. The phrase ὡς πρὸς θυσίαν indicates the purpose in the mind; it does not mean 'as if for sacrifice.' During the ceremony a certain special strain was played on the flutes (cf. Hesych. s.v. Κραδῆς νόμος: νόμον τινα ἐπαυλοῦσι τοῖς ἐκπεμπομένοις φαρμακοῖς, κρᾶδαι καὶ ἐριεῖς ἐπαυλοῦσιν).

⁸ Hipponax, therefore, is the progenitor of the use of the word *φάρμακος* as, like its equivalent *κάθαρμα*, 'offscouring,' a current term of abuse and contempt in Attic Greek; cf. Aristoph. *Ran.* 732: οἰανὴν πόλιν πρὸ τοῦ | οὐδὲ φαρμακοῖσιν εἰς ῥέδους ἔχρησας ἄν, and *Eg.* 1405. These usages throw no light upon the ritual.

⁹ Murray, p. 327.

Pelopidas, which seemed to point to the sacrifice of an 'auburn virgin' as the price of victory, that will prove nothing for Athens, but at best is evidence only for the culture of Pelopidas himself and certain of his colleagues.¹ In the dialogue *Menos*, attributed to Plato, the speaker declares that human sacrifice is in vogue among barbarians, but is considered 'illegal and unholy' by the Greeks²—though he is fain to confess that it still survived on Mt. Lykaion and at Halos in Thessaly.³ When Aeschylus calls human sacrifice *ἀνομος*,⁴ or Euripides calls it *οὐκ ὁσίος*,⁵ that proves little enough for average Greek sentiment at normal temperature and nothing at all for Greek practice at fever heat. For 'it is a marked feature of the evolution of Greek religion that the lower and more embryonic forms of faith survive through the ages by the side of the higher and more developed.'⁶

It is clear enough that, in the popular conception, the gods were little more than the bestowers of physical and material goods, the guardians of herds, of crops, and of human increase, and that the primary purpose of worship lay in the mere instinct of social preservation. The higher thought which found literary expression moves upon a plane widely removed from the conceptions and religious practices of the people as a whole. In some respects, indeed, the religious history of the time exhibits obvious symptoms of retrogression and a resurgence here and there of what may be called the underlying primeval religious magma; e.g., it is only in the 3rd cent. B.C. that we get the extended use of magic tablets, the so-called *Defixionum Tabellae*, or leaden plates of spells or curses, by means of which the life of a man's enemy was devoted to destruction by nailing down his name.⁷

We may agree, therefore, with the conclusion that 'such sacrifices may have survived in the Greek world sporadically,⁸ or as an expedient in a great crisis, far on into the Hellenistic period,'⁹ and even later;¹⁰ but we must repudiate the demand that by one means or another the Athenians must be certificated as having emancipated themselves from such practices a long time in advance of the rest of the Greeks.¹¹ It is at any rate impossible to pitch upon any particular date as marking the time after which a literal performance of the Pharmakos rite is unthinkable for Athens; certainly such date would not fall within the 5th century B.C. The fate of the six generals

¹ Plut. *Pelop.* 21; Polyæn. ii. 3. 8. The solution of the dilemma by the apparition of the mare and chestnut filly was, of course, a happy thought on the part of Pelopidas and his prophet Theokritos. The arguments purporting to be those of the Theban war council are an invention of the amiable and humane Plutarch himself (though Murray, p. 331, seems to regard the narrative as an authentic record of what actually passed). The story is rather different in Plut. *Amat. Narr.* 3.

² See § 815 C: *ἡμῖν μὲν οὐ νόμος ἐστὶν ἀνθρώπων θύειν, ἀλλ' ἀνρίσιον. . . καὶ μὴ ὅτι βάρβαροι ἀνθρώποι ἡμῶν ἑλλοισι νόμοις ἁρσύνται, ἀλλὰ καὶ οἱ ἐν τῇ Λυκαίᾳ οὗτοι καὶ οἱ τοῦ Ἀδύμαντος ὀρχομενοῖας θυσίας θύουσιν Ἕλληνας ὄντες.* Cf. Plut. *Quæst. gr.* 38 (Orchomenos).

³ Cf. Plut. *Quæst. gr.* 39; Paus. viii. xxxviii. 7: *πολυπραγμοσύνη δὲ οὐ μοι τὰ ἐς τὴν θυσίαν ἥδη ἦν, ἔχεται δὲ ὡς ἔχει καὶ ὡς ἔσχεν ἐξ ἀρχῆς*—the reluctance of Pausanias to speak of it seems to indicate that the sacrifice was still in vogue in his day (c. A.D. 170). For Halos see Herod. vii. 197, where note the expression *καθαρὸν τῆς χώρας ποιεῖν* μὲν Ἀχαιῶν ἐκ *θεοπροπίου* Ἀδύμαντα τὸν Διόδου καὶ μελλόντων μυθῶν. It seems fairly clear (though Farnell [CGS i. 93] is doubtful) that this sacrifice, without any pretence, was in vogue in 480 B.C., or at any rate that Herodotus thought so.

⁴ *Agam.* 158.

⁵ *Iph. in Taur.* 460.

⁶ L. B. Farnell, *The Higher Aspects of Greek Religion*, London, 1912, p. 5.

⁷ For specimens see E. S. Roberts and E. A. Gardner, *Introd. to Greek Epigraphy*, Cambridge, 1887-1905, li. 520. The oldest and most numerous of these plates come from Attica. The Greek term from these *Divæ* is *κατάδεσμοι*.

⁸ Unless he is simply copying some older authority, we learn from Ovid that in his time the old rite in all its naked horror was still annually observed at Abdera (a colony of Klazomenai)—*Ibis*, 467: 'Aut te devovet certis Abdera diebus, | Saxaque devotum grandine plura petant,' on which the schol. says: 'Mos erat in Abdera civitate singulis annis homines immolari pro peccatis civium, sed prius septem diebus excommunicari, ut sic omnium peccata solus haberet.' Cf. Strabo, p. 633 (of a promontory near Kourion in Cyprus): *ἀφ' ἧς ῥίπτουσι τοὺς ἀφαιμένους τοῦ βωμοῦ τοῦ Ἀπόλλωνος*—apparently a similar ritual then still in use.

⁹ CGS iv. 277.

¹⁰ Cf. Lactant. *de Div. Inst.* i. 21: 'apud Cyprios humanam hostiam Jovi Teucrus immolavit, idque sacrificium posteris tradidit, quod est nuper, Hadriano imperante, sublaturum'; and cf. Paus. viii. xxxviii. 7 (quoted above).

¹¹ Cf. E. Rohde, *Psyche*, Tübingen, 1907, ii. 78, note 2: 'Gegen die bestimmten Zeugnisse können Erwägungen allgemeiner Art nichts ausrichten'; cf. Murray, p. 31: 'Practices that to us seem like the scarce credible stories of a remote past were to the fifth-century Athenian possibilities and even dangers.'

who saved Athens at Arginusai (406 B.C.), only to be swept to their doom by the 'burst of mournful and vindictive feeling'¹ following the Apaturia festival, on the part of a people which cried out that it was 'monstrous if the Demos shall not be allowed to do as it likes,' is a measure of what in moments of excitement the Athenian populace was capable of doing.²

There is ground for drawing a distinction between what may be called the normal annual ritual of the Pharmakos and exceptional occasions of its use. Neglect or ignorance of this distinction has affected the ancient accounts, as is apparent in the two versions of the scapegoat ritual in use at Massilia (a colony of Phokaia). According to Lactantius, a pauper was induced to 'sell' himself for the purpose, and, having been fed at public cost a full year upon specially selected diet, was, on a great day, conducted through the town and finally stoned to death by the people, outside the walls.³ The account of Servius, copied from Petronius, represents the ceremony, not as an annual lustration, but as exceptionally used in time of plague.⁴ So Tzetzes, whether it be the Athenian rite that he has in mind or only that of the Ionian cities, speaks of it as occasional and as applied in times of plague, famine, or other visitation.⁵ Similarly the schol. on Aristoph. *Eg.* 1136 says:

'The Athenians used to feed up certain very ill-favoured and worthless creatures, and in time of national calamity—pestilence, I mean, or such like—used to sacrifice them, by way of getting cleansed from the defilement.'⁶

It seems that the divergence here noted may be best explained by supposing that, apart from the regular annual purification, extraordinary occasions of public calamity, especially of plague or famine, may have led to repetitions of the ceremony or to its performance at the due date with special solemnity—that is to say, with a reversion for the nonce to the full primitive savage ritual which in normal times was replaced by a fiction or simulation, as is so frequent in the history of religious practice.⁷ Such recrudescence of primitive barbarism is a familiar phenomenon.⁸

¹ Grote, vii. 437.

² Xen. *Hell.* i. 7. 12: *τὸ δὲ πλῆθος ἐβόα δεινὸν εἶναι, εἰ μὴ τίς ἔσσει τὸν ἔθνον πράττειν ὅ ἂν βούληται.* Cf. Grote, vii. 449: 'Ces pères de famille sont capables de tout'—the same words, understood in a far more awful sense. . . sum up the moral of this melancholy proceeding at Athens.'

³ Lact. *Plac. Comment. in Stat. Theb.* x. 793: 'Lustrare civitatem humana hostia Gallicus mos est. Nam aliquis de egentissimis prolicebatur praemis, ut se ad hoc venderet, qui anno toto publicis sumptibus alevatur purioribus cibis, denique certo et sollemni die per totam civitatem ductus ex urbe extra pomeria saxis occidebatur a populo.'

⁴ Serv. on Verg. *Æn.* iii. 57: 'Nam Massilienses quotiens pestilentia laborabant, unus ex pauperibus offerebat alendus anno integro publicis sumptibus et purioribus cibis. Hic postea ornatus verbenis et vestibus sacris circumducebatur per totam civitatem cum execrationibus, ut in ipsum reciderent mala totius civitatis, et sic prolicebatur (praecipitabatur, Stephanus): hoc autem in Petronio lectum est.' The terms *quotiens* and *anno integro* are clearly mutually irreconcilable.

⁵ *Chiliad.* v. 728 l.: *εἰς τὸν λιμὸν εἴτε λοιμὸς εἴτε καὶ βλάβος ἄλλο.*

⁶ *ἐτρέφον γὰρ τινὰς Ἀθηναῖοι λίαν ἀγενεῖς καὶ ἀχρήστους, καὶ ἐν καιρῷ συμφορᾶς τινος ἐπελθούσης τῇ πόλει, λοιμοῦ λέγω τὸ τοιοῦτον τινός, ἐθνον τούτου ἐνεκα τοῦ καθαρῆναι τοῦ μαινομένου;* οὗς καὶ ἐπωδονάζον καθαίρματα.

⁷ Cf. Serv. on Verg. *Æn.* ii. 116: 'scilendum in sacris simulata pro veris accipi.'

⁸ Cf. CGS ii. 442: 'Where the view prevailed that the animal took the place of the human life, we can believe that in times of great peril the latter might actually be offered as the more real and acceptable sacrifice'; G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 62: 'Like most manifestations of early religion, they (the Oracles) thrived upon human terror: the more blind the terror the stronger became their hold. In such an atmosphere the lowest and most bestial elements of humanity tended to come to the front; and religion no doubt as a rule joined with them in drowning the voice of criticism and of civilization, that is, of reason and of mercy. When really frightened the oracle generally fell back on some remedy full of pain and blood.' Cf. Plut. *Quæst. gr.* 26: the Ainales, when they lived in the Cirrhan plain, stoned their king to death in time of drought, in obedience to an oracle, no doubt that of Delphi.

This would help to explain the peculiarity that the Athenian ceremony is never described as one belonging to a remote prehistoric past, as a piece of barbarism later eradicated, or at least ameliorated, under conditions which formed the matter of a sacred story, such as that told about Artemis Triklaria at Patrai,¹ or Artemis of Brauron, upon which Euripides wrote a play. We could still imagine that such amelioration, as the outcome of a slowly developing sense of humanity and justice, did come about as a matter of use and wont under normal circumstances. It is to be remembered, however, that the Greek communities—and this is true of them not merely in the political sense—were ever in a condition of unstable equilibrium. How easily these old horrors could blaze up afresh is well illustrated by the way in which Apollonios of Tyana hounded on the populace of Ephesos to stone to death an old bear-eyed beggar, making out that he was the embodied plague-demon which vexed the city.² Even in Athens in the 5th cent. B.C. it was still possible seriously to propose the expulsion of the foremost man in the State, on account of his descent from one who had been guilty of sacrilege nearly two hundred years previously.³

Some have thought to save, as it were, the credit of Athens by imagining that only criminals already condemned to death for their crimes were taken for the fatal rôle of the Pharmakos.⁴ For this idea, as applied to Athens, there is not a particle of evidence in the tradition, which insists, characteristically, not upon the moral depravity, but upon the physical deformity, of the victims;⁵ they are chosen not for their badness, but for their ugliness.

That in some places a condemned criminal was used as a Pharmakos is very true. Thus in Rhodes annually, on the 6th of their month Metageitnion, a man was sacrificed to Kronos. A criminal who had been publicly condemned to death was reserved for the anniversary of the Kronia. Then he was led outside the gates, in face of the image of Aristoboule, and was filled with wine and so slain.⁶ A further development is found at Leukas. From the famous crag Leukatas the Leukadians used annually to hurl a criminal into the sea as a scapegoat. To break his fall, he was fastened about with feathers and live birds, and small boats waited below in order to pick him up, if he survived, and to carry him beyond the frontier. This took place at the time of a sacrifice to Apollo, who had a sanctuary at Leukas.⁷ At the Town Hall and by each head of a family in his own house, and once duly performed by Plutarch himself, who describes it.⁸ It was called the 'expulsion of hunger' (βουλιμον ἐξέλασις), and Plutarch speaks of it as an 'ancestral sacrifice' (θυσία πατρίας). A slave was ceremonially beaten with rods of *agnus castus* and then driven forth with the formula: 'Out with hunger, in with wealth and health.' At Delphi the ritual, recurring every ninth year, which Plutarch characterizes as a 'sacrifice with admixture of purification,'⁹ connected with the

use of an image or puppet (παῖδικόν εἶδωλον), called after Charila, is an example of the Pharmakos ceremony in its most attenuated form.

The significance of the Pharmakos ritual was probably not so much that of vicarious pincular sacrifice—of expiation or pardon for the sins of the community at the price of a human life—as the more primitive belief that the Pharmakos was a real sin-carrier, whose death purged the community of its sins and misfortunes by virtue of magical transference in a literal and quasi-mechanical way. Combined with this, however, in the inconsistent and illogical manner characteristic of religious thought and procedure, is a function of the Pharmakos in which he acts as an incarnation of the vegetation-power. Hence he is decked out with fruits of the soil, and chastised with stimulating herbs and branches, and finally put to death in order to impregnate the soil with his magically fructifying ashes.¹ Possibly the sacrifice to Demeter Chloë with which the Thargelia opened at Athens on the 6th of the month indicates that originally the Pharmakos incarnated the primitive earth-goddess, who once demanded human victims in Greece, and to whom the cereal offerings of the Thargelia perhaps belonged before Apollo came on the scene. It has also been suggested that the human victims at the Thargelia more particularly masqueraded as spirits of fig-trees, and that the strings of black and white figs hung about their necks were an imitation of the process of caprification or artificial fertilization of cultivated fig-trees by hanging strips of wild figs among the branches.² The ceremony, as regards this detail, was therefore one of imitative magic, to assist the fertilization of the fig-trees.³

W. J. WOODHOUSE.

SCAPEGOAT (Semitic).—In the Pentateuch (Lv 16) it is stated that on the day of expiation Aaron, the high-priest, was commanded to enter the sanctuary after purifying himself and putting on the sacred vestments. Two goats were chosen as a sacrifice for sin, a young bullock for a sin-offering, and a ram for a burnt-offering. The two goats were placed before Jahweh at the entrance of the tabernacle. The high-priest cast lots upon the two goats, one lot for Jahweh and the other for the scapegoat, which was allotted to the demon Azazel (q.v.). The goat upon which the lot for Jahweh fell was sacrificed at once as a sin-offering along with the bullock and the ram. The high-priest, placing his hands on the head of the living goat, confessed over it all the sins of Israel, which were in this manner transmitted to the animal. A special messenger was deputed to lead away the goat into the desert, where it was abandoned to the demon Azazel. Both the high-priest and the

¹ Hence Farnell (CGS iv. 231) would explain the etiological legend given by Istros, of the stealing of Apollo's cups by Pharmakos and his atoning, as an indication that the Pharmakos (perhaps in some of the Ionian cities) was, previous to his immolation, treated as an incarnation of the god and carried his emblems. The story of the ugly *Xeop*, who was accused of stealing temple treasures at Delphi, and was thrown from the rock Hyampela (Plut. 657b), will probably be a reflex of the same ritual.

² 'Though it must be confessed,' remarks Frazer, *GM*, pt. vi. *The Scapegoat*, p. 259, 'that the ancient writers who describe the Greek custom appear to regard it merely as a purification of the city and not at all as a mode of fertilizing fig-trees.'

³ See W. R. Paton, 'The *pharmakoi* and the Story of the Fall,' in *RA*, 4th ser., ix. [1907] 551.

¹ Paus. vii. xix. 2.

² Philostr. *Vit. Ap.* iv. 101.

³ Thuc. i. 127; cf. Aristoph. *Eq.* 445.

⁴ Cf. CGS ii. 439: 'Two human καθάρματα, being probably criminals, were sacrificed in a sort of religious execution.' This was written in 1896. In 1907 (*ib.* iv. 276) Farnell rightly sees that 'we cannot apologize for them [the contemporaries of Perikles and Demosthenes] by saying that, like the Rhodians, they reserved their worst criminals for this fate and merely condemned to a religious death those who deserved a secular.' See also Harrison, p. 104: 'Civilized Athens had its barathron: why should civilized Athens shrink from annually utilizing two vicious and already condemned criminals to "purify the city"?'.

⁵ Cf. Tzetzes, *Chiliad.* v. 7281: τῶν μάντων ἀμορφότερον ἦγον; schol. in Aristoph. *Eq.* 1136: λίαν ἀγενεῖς καὶ ἀχρηστοὺς; schol. in Aristoph. *Ran.* 783: τοὺς φαύλους καὶ παρὰ τῆς φύσεως ἐπιβουλενομένους, 'victims of nature's malice.' At Massilia the scapegoat, being 'aliquis de egentissimis (unus ex pauperibus),' was clearly not necessarily a condemned criminal.

⁶ Porphyry, *de Abst.* ii. 64: εὐεῖτα . . . ἀνθρώπος τῷ Κρόνῳ. ὁ δὲ ἐπὶ πολλὰ κρατῆσαν εὖος μετεβλήθη· ἐν γὰρ τῶν ἐπὶ θανάτῳ θυσιαστικῶν κατερίθιτον μέχρι μὲν τῶν Κρονίων συνέχρη, ἐνταύθως δὲ τῆς ἐορτῆς προαγαγόντες τὸν ἀνθρώπον ἐξω πύλων ἀντίκρουσιν τοῦ Ἀριστοβοῦλῃς εὐνοῦ, οἷον ποτίσαντες ἐσφαγόν. Aristoboule is probably Artemis. What happened if there was no convenient criminal? Were there Rhodian analogues to the argument used to Athenian juries in order to secure a conviction? (cf. Aristoph. *Eq.* 1359 f.; Lysias, xxvii. 1).

⁷ Strabo, p. 452: ἢ δὲ καὶ πάντων τοῖς Λευκαδίοις κατ' ἐνιαυτὸν ἐν τῇ εὐθείᾳ τοῦ Ἀπόλλωνος ἀπὸ τῆς σκοπῆς ῥητρεῖσθαι τὴν τὰν ἐν αἰτίαις ὄντων ἀποτροπὴν χάριν, κτλ. Cf. the custom elsewhere of throwing every year a young man into the sea, with the words, 'Be thou our offscouring' (περίφνημα ἡμῶν γεινοῦ); see Suid. and Phot. s.v. Περιφνήμα (locality not given). The word περίφνημα occurs in 1 Co 413: ὡς περικαθάρματα τοῦ κόσμου ἐγενήθημεν, πάντων περίφνημα, where it is rendered 'offscouring' in AV and RV.

⁸ Quæst. Conv. vi. 8.

⁹ Quæst. gr. 12: μεμιγμένην τινὰ καθαρῶς θυσίαν.

person whose duty it was to lead away the scapegoat were enjoined to purify themselves after the rite of transmission. It is interesting to note in this connexion that a similar usage was followed with birds at the purification of a leper. If the leprous pustules had disappeared from the patient, the priest took two birds, one of which was killed and its blood poured into a vessel over running water. The patient was sprinkled with the blood of the dead bird. The living bird, however, after being soaked in the blood of the dead bird and in this manner infected with the disease, was set at liberty 'out of the city into the open fields' (Lv 14⁵³).

It should be noted in connexion with the symptoms of leprosy that the disappearance of the pustules is very common at the beginning of the malady. The initial hyperæmia tends to diminish and to remain latent until the ultimate attack of the leprous fever—sometimes a year later than the first appearance—when the pustules reappear more violently than in the first stages of the disease. It is probable that this fact was not known to the ancient Hebrews, and that they regarded the frequently long disappearance of the leprous symptoms as the result of the rites just described. The subsequent development of the disease was no doubt looked upon as a fresh attack.

These species of transmission rites were not confined to the Semitic peoples. The western Irish still believe, e.g., that whooping-cough may be diverted by passing the patient three times under the belly of an ass, and that certain fevers may be cured by carrying the patient three times round a special kind of tree. In these instances, of course, the triple repetition is due to the belief in the Trinity, in whose name the act is always done.¹ The disease in each case is thought to be transmitted from the patient to the ass or to the tree. In the same way, children with measles or scarlet fever are often given a kitten to play with, in the belief that the animal will contract the malady and thus remove it from the sufferer.

That sin and disease were closely allied in the minds of the ancient Semites has been fully shown in the artt. GOD (Assyro-Babylonian) and DISEASE AND MEDICINE (Assyro-Babylonian), so that the parallel seems to be perfect between the Semitic ideas of transmission and those of the Celtic Irish. Such a natural primitive conception, however, does not imply any connexion between peoples of such different origin who may have held it.

A highly interesting question as to the existence of a rite similar to that of the scapegoat among the Assyro-Babylonians has been discussed technically by the present writer in several articles.²

The following inscription seems to indicate a belief in a species of transmission rite:

'Ea, the king of the abyss, speaks to his son Marduk: Go my son Marduk. The plague has seized the man. Take thou the *mās-gul-dub-ba*. Place its head upon his head. Chase the plague from the presence of the king, the son of his god [= the patient]. May his saliva run freely in his mouth. May this king be clean; may he be without spot. The man shall no longer know the plague. May it go forth from his body.'³

The expression *mās-gul-dub-ba* really means 'the horned animal which alleviates pain' and seems to point to a belief that a living scapegoat was actually employed in very much the same manner as appears in the Hebrew sources. The idea that the *mās-gul-dub-ba* was a living animal has been called in question by Fossey,⁴ who adduces certain passages which we may now cite.

In Zimmern's *Beiträge zur Kenntnis der bab. Religion*, Leipzig, 1896-1901, p. 122, the following interesting passage appears:

'Then with clean purifications thou shalt purify the king. As soon as thou shalt have finished the purification, thou shalt

¹ The usual formula after the invocation is: 'Good-morning to you bear-tree bush, Good-morning to you. I come for to leave the heart-fever with you.'

² *JALOS* xxi. [1900] 1-22; *JAL*, July 1903, pp. 133-150, with contradictory notes by C. Fossey, the reply to which is published in *AJSL* xx. [1904] 173-181.

³ Paul Haupt, *Akkadische und Sumerische Keilschrifttexte*, Leipzig, 1881-82, no. 12, lines 34-43.
⁴ *JAL*, July 1903, p. 143, note 2.

make them [the patients] go forth out of the door. Then with the *mās-zulduppā*, with the sheep of life, with the copper of . . . of the great bull, and with seed-corn tho . . . ce [= the house].

Here it will be noted that the patients are brought out of the house and the dwelling is purified by various means, among which the *mās-zulduppā* and the *lu-ti-la*, 'the sheep of life,' or perhaps 'the living sheep,' play the principal part. It is certainly significant to find the *mās*, or animal, of the torch mentioned among these means of purification, as flame was a recognized purifying agent. We are forced to conclude, owing to the presence of the Sumerian word *mās*, 'a horned animal,' that all these words were originally names of certain kinds of horned animals which were primitively used in a ceremony like that of the Hebrew scapegoat. When, therefore, we read the phrase cited above, 'place its head [that of the *mās-gul-dub-ba*] on the patient's head,' the conclusion seems unavoidable that this was distinctly a ceremony of transmission. A strikingly analogous passage in IV. Rawl. 26, no. 6, 22 ff. is too significant to be ignored:

'The *urīqu* [a sort of horned animal] has been given for his [the patient's] life; the head of the *urīqu* has been given for the head of the man; the neck of the *urīqu* has been given for the neck of the man; the breast of the *urīqu* has been given for the breast of the man.'

This passage plainly shows that an *urīqu* (probably = *mās*, 'horned animal') might serve vicariously for the life of a man, and the parts of the animal are enumerated one by one with the corresponding parts of the man.

An important point in this connexion is now to be observed. Fossey compared the Sumerian word *mās-gul-dub-ba* (= Semitic *mās-zulduppā*) with *gis-zul-dub-ba*, which occurs in another passage, undoubtedly as the name of an implement probably used in a purification ceremony. This *gis-zul-dub-ba* is not the *mās-gul-dub-ba*, although it may have been used in the same manner. A flood of light is thrown upon the difficulty by the passage in IV. Rawl. 21, no. 1, 28-28, an inscription giving directions how to avert evil, which reads: 'in order to avert anything evil, the *mās-gul-dub-ba* is set up in the door-way.' Here is the key to the whole difficulty. In this passage and in the passage just cited from Zimmern the *mās-gul-dub-ba* is an image of the original horned animal which alleviates pain and is probably identical with the *urīqu* whose parts were to correspond with the parts of the patient and whose life was given for the life of the man. Zimmern's 'living sheep' or 'sheep of life' was probably an image of the same sort.

In other words, the appearance of the *mās-gul-dub-ba* in Zimmern as a probable implement of purification is merely a development of the original force of the *mās-gul-dub-ba* seen in the passage in Haupt, no. 12, p. 30 ff. In the primitive rite the horned animal was a live creature endowed with malevolent powers. It might, however, by the use of the proper incantations, be made to carry away disease. This was done, in the one instance, by driving away the evil influence from the patient and, in the other case, by first bringing it into contact with the patient and then driving it away. It may be supposed that in the course of time the practical difficulty of procuring a live animal for the ceremony gave rise to the use of an image of the original animal which was employed ritually in the manner just indicated. In short, the horned animals were malevolent in so far as they represented disease, but might be turned to a benevolent use by the power of the incantation for their expulsion. Hence the pregnant expression arose, *mās-gul-dub-ba* = 'the horned animal which assuages evil or pain.'

A further instance of transmission among the Babylonians is seen in the following passage:

'Place the gazelle which ranges the plain before Shamash [the sun-god]. Give the bow to the king, the son of his god [the patient]. When he shall go forth from the house of purification, let him kill the gazelle before Shamash. When the king draws the bow against the gazelle, may the fatal affliction . . . the impure malady, the sorcery, everything which causes evil, every ailment which at the rising of the sun was in his body go far forth from his body like the flight of the arrow.'¹

To sum up on this point, the facts relating to the transmission rites among the Assyro-Babylonians are as follows. The inscriptions in Haupt, no. 12, deal most plainly with the destruction and expulsion of certain horned creatures which are equivalent in effect to the evil demons. They are sent forth to an unclean place. Then follows the inscription of the *mās-gul-dub-ba*, which is to be sought by Marduk and its head placed against the head of the patient, after which the patient is to recover. Then follows the reverse, describing the bowshot which shoots away into the gazelle the malady of the patient. How are we to conclude otherwise than to suppose that the Babylonians, like the Hebrews, had a well-defined transmission ceremony similar to the Biblical rite described above?

LITERATURE.—See the works cited in the footnotes.

J. DYNELEY PRINCE.

SCARABS.—The scarab is one of the most characteristic productions of ancient Egyptian art, and one of the best-known. Scarabs take much the same place in the art of Egypt as coins do in the art of Greece or as the *netsuké* and the *tsuba* (sword-guard) do in that of Japan. We cannot, it is true, claim exactly the same specialized position for the study of the scarab as we can for that of the coin, but nevertheless the two are analogous. Egypt had no coinage, and her artists found in the fabrication and decoration of the scarab the same scope for the exercise of their ingenuity and felicity of design in 'small art' as the Greek and the modern do in their coin or the Japanese in his *netsuké* and *tsuba*. The scarab has a further, a religious, interest. Its religious signification makes it as important a relic of Egyptian religion as it is of art. And, like the coin, though not to so great an extent, it has a historical value.

Stated simply, the scarab is, properly speaking, a seal made in the form of a certain religious amulet, the figure of the sacred beetle, or *scarabæus*, the *Ateuchus sacer*,² as entomologists call it. But by no means every scarab was a seal. It was only during the second period of the development of the scarab that most specimens were intended to be seals as well as amulets. Later it became, as it was originally, almost invariably an amulet only, but still retained in most cases the old seal-base, with its inscription or design like that of a seal. Later still images of the insect pure and simple, without inscription, became common again.

Egyptian seals were not from the beginning made in the form of scarabs. It was not till the beginning of the XIIth dynasty that the fashion became general of having one's seal, in the form of the sacred beetle, strung on a ring, string, or necklace. The oldest Egyptian seals were generally, though not invariably, cylinders, meant to roll over the sealing-clay like their congeners in Babylonia and Assyria. Later, under the Vth dynasty, the 'button-seal,' a form apparently introduced from the Ægean islands and Crete, became popular, and from this was developed the scarab-seal. Actual scarab-beetles had been occasionally buried with the dead as early as the pre-dynastic period.³ Little uninscribed images of

the scarab, usually made of blue glazed steatite or of ivory, had been buried with the dead under or even before the VIth dynasty, and doubtless were worn by the living as amulets. Under the VIth dynasty the seal, in itself in some sort an amulet, since it bore the name of the owner—and all students of simple magic know how magically important his name is in the mind of primitive man¹—became combined with this particular amulet, at any rate in the case of kings. Under the XIIth dynasty private persons chose to have their seals made in the form of the little scarab-amulet instead of the simple 'button' or rosette. Its form was convenient for the purpose: the oval base on which it stood was well-adapted for seal-design; and the name derived added protection from being inscribed on the sacred object.

1. Popularity of the scarab.—Under the XIIth dynasty most scarab-inscriptions are names and titles, whether royal or private, and the scarabs are real seals, of hard stone or faience, intended for use as such. When no inscription appears, the base is usually adorned with a spiral or other linear design of Ægean origin, often combined with plant motives and very beautiful, which was very soon used as a seal too for ordinary purposes when no name was necessary. These seals were worn by the living and buried with the dead. Towards the end of the Middle Kingdom, however, more purely amuletic scarabs began to appear. They bore designs of religious or semi-religious import, lucky symbols, etc., and one can see that they could be regarded as amulets only, though they were still used on occasion as seals. If amulets pure and simple, it was evident that their material need not always be so durable as that necessary for real seals; so faience and a composition ware became more common than hard stone for their fabrication under the XVIIIth dynasty. This was the time of the great manufacture of the scarab. So far it had been, if not exactly an object *de luxe* intended for the use only of kings and great persons, at any rate not a common object in the possession of everybody. But under the XVIIIth dynasty it was vulgarized. Millions of cheap scarabs were made of blue and green glazed steatite or faience, which any *fellah* could string round his neck and use as a seal, if it did not break in the process. We admire their colours now, when these have survived the centuries, and give high prices for them, but to the XVIIIth dynasty Egyptian they were the commonest objects, and probably of no more value than picture postcards are now. The present writer uses the word advisedly. The scarab was now the picture postcard of the ordinary Egyptian. If he went to some well-known shrine to pray, to some religious fair, or *molid*, as his modern descendant would call it, he brought away his cheap memento, his picture postcard, his 'present from Margate,' in the shape of a scarab. Did he go to Karnak, he took home a scarab with an inscription on it—'Good is the coming to Epetesut'—which may almost literally be translated as 'A present from Karnak.' The virtues of the god of Karnak and Thebes are celebrated on thousands of scarabs: 'Amen is strong to help,' 'Fear not; Amen is near,' and so forth. Nor did Ptah of Memphis yield in popularity to Amen, at any rate in the north; and a little later, under the XIXth dynasty, when Egyptian snobbery exalted the Memphite god, to whom the new northern dynasty was more especially bound to pray, the pilgrim could buy at Memphis as good a scarab, advertising the virtues of Ptah, as he could one advertising Amen at the rival shrines of Thebes. Most of the scarabs that we have were the property of the 'man in the street.' Pos-

¹ See art. NAMES (Primitive).

² J.A., July 1903, p. 143, lines 14-21.

³ See art. CHARMS AND AMULETS (Egyptian), vol. iii. p. 432. Scarabs were often made in the likeness of other allied species, such as *Sc. venerabilis*, and other genera such as *Catharsius*, *Copris*, *Gymnopleurus*, and *Hypselogenia* (Petrie, *Scarabs*, p. 6).

⁴ Petrie, p. 2.

sessors of fine blue scarabs with the name of Thothmes III. or Rameses II. on them are wont to believe that their treasures were once the property of the kings whose names they bear. What millions they must have possessed! A few of the scarabs in our chief collections may have been (some, from the circumstances of their discovery, are known to have been) actual royal possessions, but the old Egyptian liked to have his king's name on his scarab as much as anything else, just as the modern British person likes to have pictures of the King and Queen in his home. But, just as Queen Victoria's was a name universally venerated, and her portrait appeared among the possessions of high and low, so with the Egyptian was the name of Thothmes III. one to conjure with, and that speaking literally. Its magical virtue was obvious, and so it appeared on scarabs innumerable; it was the most popular of all scarab-inscriptions, and that not only during the king's own long life, but for centuries after his death, so that it is now the commonest of scarab legends. Almost half the royal scarabs in existence are of Thothmes III. and of one or two later kinglets who aped his throne-name 'Men-kheper-ra.' Scarabs bearing this name alone are as many in number as all those bearing the names of all the rest of the kings of Egypt. And Phœnicians, understanding nothing of its meaning, went on putting his name on the imitation scarabs which they made for the Greek and Italian market a thousand years after his death.

2. *Decadence and disappearance.*—It is impossible to say much more of the popular scarab of the XVIIIth and XIXth dynasties, to recount any of the innumerable variations of inscription and design that are found on them: wishes for children, for a good wife or husband, glorification of gods, scenes of the king, as leader of his people, offering to the gods, and so on *ad infinitum*; the most cursory examination of any good collection in one of our museums will show their infinite variety. One of the most characteristic forms of the later XVIIIth dynasty is a picture postcard pure and simple, or rather a cheap popular medal. Thousands of this peculiar type were no doubt made; now we possess but a few specimens, which are regarded as very valuable varieties. We refer to the large scarabs of Amenhetep III., with their proclamatory inscriptions announcing his marriage with Queen Tii, his slaying of lions and wild bulls, etc. These were issued and were acquired by his loyal subjects just as a popular medal commemorating a royal marriage might be now. But all scarabs were not of course of this popular cast, and we have many beautiful specimens which were undoubtedly made for persons of taste and state, even for the royal household itself. Still, even in the best of them, the old beauty of the true seal-scarabs of the XIIth dynasty has gone, and, when we come to certain cheap scarabs of the XIXth dynasty, which were cast in a mould instead of cut or modelled by hand, we see decadence fully setting in, from which not even the manufacture of some really very pretty specimens by the archaizing artists of the XXVth and XXVIth dynasties can save the scarab. Then the Mediterranean commerce of the 7th and 6th centuries B.C. took the scarab abroad into all lands: Naukratite Greeks made it in its cheapest form, and Phœnicians peddled it to Sardinian savages; the Greek artists took it up and made very beautiful Greek scarabs, with purely Greek intaglio designs, in hard stone, to be used as seals; Etruscans acquired them as part of their borrowed raiment of civilization; like Greek vases, they were 'the proper thing' to possess, and 'all the best people' in Etruria used them. And then, whether because they had become too common and the outer foreigners

thought too much of them or not, they suddenly lost their charm for their originators. With the coming of the Persian the seal-scarab absolutely disappears. Under the Ptolemies stone scarabs are still made, but without the characteristic seal-base; they are amulets only, and, as one of the quaint conceits of the beast-worshippers of the Nile, they end grotesquely and pitifully under the Romans. The scarab is practically no longer made at all,¹ and the figure of the *scarabæus* appears only in company with absurd cock-headed demons wearing Roman uniform on Gnostic gems or furnishes a telling image either of reprobation or of comparison to early Christian apologists. For the religious importance of the *scarabæus* was as great as, or greater than, ever, and to this we must now return.

3. *Religious importance.*—What was the religious idea of the scarab? The scarab-beetle, *Ateuchus sacer*, was the emblem of Khepera or Kheperi, the self-begetting, self-creating sun-god, originally a primeval Nilote deity distinct from the sun-god, Ra, or Re', of Heliopolis.² The name Kheperi means 'he who becomes (or creates),' from the verb *khop*, 'to become (or create),' written with the scarab hieroglyph. The insect itself was called *khepror*, a form of the same word, which seems to have had also the meaning of 'rolling,' 'the roller.' The peculiar habits of the scarab-beetle seemed (as Apion, quoted by Pliny, said) to the indigenous Nilotes to typify the movement of the sun, which appeared to be rolled across the sky like the ball of dung which the beetle rolled along the ground. The beetle therefore became the emblem of the sun-god holding the solar disk, as the beetle holds his dung-ball. And, further, out of the ball of dung, according to the erroneous popular belief, came the little *scarabæi* when their time came to be born. This is an erroneous idea, because, as the great French naturalist, J. Henri Fabre, has shown,³ the dung-ball of the scarab-beetle is intended to be his food, and has nothing to do with the pear-shaped ball, never seen above ground, in which the female lays her eggs, thus providing food for the larva when it is hatched. The Egyptians appear to have had no idea of the metamorphosis of the insect, and thought that the scarab issued from the egg as a fully-formed beetle. The fact that the round dung-ball is made only by the male beetle was also not known; there seemed to be no difference between the sexes, and so the scarab was supposed to be male only, and to create his offspring without the intervention of a female. This seemed to typify the idea that the sun-god was self-creating.

'Since it was *αὐτογενής*, the scarab was also *μονογενής*, and in Horapollo⁴ we find it cited as the symbol of *μονογενής*. This idea, connected with the fact that the scarab lays only one egg, was taken by Christian writers to allow of the scarab being spoken of as a type of Christ, the "only-begotten" son of God, and we even find Our Lord described as "the good Scarab" or as "God's Scarab."⁵ *Scarabæus in cruce* . . . *Bonus Scarabæus qui clamavit e tigno* are phrases used of Our Lord by St. Ambrose in his exposition of St. Luke's Gospel.⁶ 'It may be questioned whether this was not a slight misunderstanding, and whether the word *μονογενής* means in the case of Our Lord quite the same thing as it does in Horapollo with regard to the scarab; he seems to use it rather in the sense of "born of one sole person," in this case the male scarab, without the intervention of a female.'⁷

The idea of personal resurrection was also associated with the scarab in late times. The old Egyptians had no such idea.

'It was a new life in the Underworld that, they hoped, was assured to the dead man by the placing over his heart of a stone image of the *Scarabæus*-beetle, type and emblem of life

¹ The latest known is one of Antoninus Pius, in the Louvre.

⁷ Hall, *loc. cit.*

ever renewing itself unaided, as its race seemed to beget itself unaided and to spring in multitude from the revolving ball, fosterer of their life as the revolving sun-ball fostered the life of man. So they prayed that with the help of the Scarab over his heart the dead man might find just judgement in the "Hall of Double Truth," that the Powers of the Underworld might not be hostile to him and that the result of the Weighing of his Heart in the presence of the Guardian of the Balance might be satisfactory. In the latter days of Egypt this hope of just judgment and renewed life in the Underworld seems to have been confused with a foreign idea (perhaps of Indian origin?) of renewed life upon this earth, which in fact was confounded by the Christians with their idea of the resurrection of the actual body at the Last Day.¹

4. The heart-scarab. — The heart-scarabs, intended as amulets for the protection of the dead, were usually larger in size than the ordinary seal-scarabs, which were primarily intended as amulets for the living, though, of course, constantly buried with the dead. They were emblems of the protecting power of the living sun. In the under world the sun also shone, the dead sun, Osiris, and it is only on the large heart-scarabs of comparatively late times that his figure appears. On the scarabs of the living he is never seen.

The supposed relation of the Scarab to the heart of a man does not seem very clear to us. Perhaps the heart, as the seat of life, was regarded as specially connected with the Creator god Khepera and his emblem the Scarab, the symbol of "coming-into-being" and of existence generally. In any case, the Scarab was ritually connected with some of the more important chapters of the Book of the Dead, which were believed to save the life of the dead man in the next world, notably the all-embracing chapter lxiv., which was the quintessence of all the magical protective formulae. The rubric of this chapter and of chapters xxx. and xxxb. prescribe that it shall be said over a Scarab of basalt or green stone, set in an electrum or gold mount or rim, which shall be placed on the heart of a man, after the ceremony of the "Opening of the Mouth" has been performed. This Heart-Scarab, one side of which was sometimes fashioned in the form of a heart, was usually placed over the place of the heart, on the breast of the mummy.²

Its green colour is probably an allusion to the green dung-ball of the beetle. A typical specimen of an early heart-scarab of this kind is that of King Sebekemsaf, of the XIIIth or XVIIth dynasty (c. 1800 B.C.), which is in the British Museum.³ It is a green jasper scarab, $\frac{3}{4}$ in. long, with domed back and human face, set in a gold plinth, rounded at one end, and $1\frac{1}{8}$ ins. long. The legs of the scarab are represented in relief, splayed out on the surface of the gold plinth. On the base and sides of the latter are beaten in sentences from ch. xxxb. of the *Book of the Dead*:

"To be said over his mouth as an incantation: "My heart of my mother, my heart of my mother, my heart of my existences, may naught stand up to bear witness as an enemy against me before the judges." Made over the King Sebekemsaf, justified."

In accordance with a superstition peculiar to the Old and Middle Kingdoms, the legs of the bird-hieroglyphs are omitted, so that they should not run away from the amulet and so impair the efficacy of the inscription. The providing of the scarab with a human face is a peculiarity of the Middle Kingdom. This face developed under the XVIIIth dynasty into the negro-head which is seen at the back of many scaraboids of that time.

In later times the heart-scarab, not unusually made of faience, is often inlaid in various colours. Sometimes the figure of the scarab disappeared altogether, and it became an amulet entirely in the shape of a heart, possibly with a human head, and with, cut upon it, a representation of the *bennu*-bird, the sacred crane of Ra of Heliopolis, which was regarded as 'the soul of Kheperi' after the union of the solar cults. Under the Saïtes, and even earlier, the heart-scarab was often given detachable wings, fastened with thread, and sometimes we see it in the centre of a pylon-shaped pectoral, placed on the breast of the mummy.

We have already said that at a late period we also meet with a small scarab purely amuletic in

character and without inscription of any kind, as it has no base on which to put it. Instead of the base is a small ring for suspension.

In a very interesting set of amulets in the British Museum, exhibited exactly as they were found, we find that this base-less Scarab was put over the throat of the mummy, while a seal-scarab with base was placed with a model signet-ring (all are made of faience) below its left shoulder, the shoulder over which the scribe usually carried, slung, his writing materials.⁴

Monstrous forms of the scarab sometimes occur in late times, purely amuletic and without the seal-base like those just described. An instance is the bull-headed scarab, usually made of hæmatite. This was connected with the moon-god Khons, as Horapollo says.⁵ Horapollo speaks of the ordinary scarab of Kheperi as 'having the form of a cat,' and also mentions a single-horned scarab sacred to Thoth. The latter, as Petrie says,⁶ is no doubt the long-beaked *Hypsilogeton*, its beak being compared with that of the ibis, the sacred bird of Thoth. The present writer does not know of any monstrous ibis-headed or cat-headed scarabs, though the former is by no means inconceivable. It is difficult to see any resemblance between the ordinary *scarabæus* and a cat.

The scarab is often figured in the *Book of the Dead*,⁷ and sometimes Kheperi appears there as a beetle-headed man. Gigantic stone *scarabæi* were sometimes set up in the temples. There are two (one of remarkable size, but uninscribed) in the British Museum, and one with a long inscription on its high pedestal was found at Karnak by Georges Legrain. In Gnostic iconography the scarab often appears.

5. Modifications of the scarab. — We thus see how it was that the small amulets representing this very sacred object were early adopted as seals on account of their convenient size and material, as well as their magical power; how the two aspects of the scarab are inextricably intermingled; and how it is difficult to treat apart the scarab-seal and the scarab-amulet, with the result that the pure signet of non-scaraboid form, such as the ring, the button-seal, and the cylinder, appears in a comprehensive catalogue like that of the British Museum collection of seals and scarabs at one end of the scale, with at the other the heart-amulet, which has nothing of the seal (or even sometimes of the scarab, except implicitly) about it. The two are connected by the scarab, in its double capacity as seal and amulet, and by its modifications, such as the 'scaraboid,' with scarab-like form and inscribed base, but with back either plain or cut or impressed in various forms like that of the head of a negro, a cynocephalous ape, and so forth; by the 'cowroid,' which is a cross between a scaraboid and a head of lentoid shape, originally made in the form of a cowry-shell (but afterwards losing all trace of this original) and inscribed on its flat base in the same way as the scarab; and by the 'plaque,' which has lost all trace of the scaraboid form and is merely a plaque-shaped amulet developed from the flat bend and inscribed in the same manner as the seal-scarabs, usually on both sides.

Various combinations of the Scaraboid and the Plaque are met with. All these derivatives of the Scarab partake of the nature of beads, as also does the Scarab itself to a great extent, since all are perforated for stringing, and, when worn as amulets, were usually strung with beads on necklaces, etc. . . . When intended not to be strung as a bead, but, as was often the case, to be mounted as the bezel of a signet-ring, the Scarab or Plaque was still always perforated, and was secured to the ring by means of a metal wire passing through the perforation.⁸

Much light was thrown on the popular use of the scarab as an ornament of the living, strung on

¹ Hall, p. xx.

² Id. p. xiv.

³ P. 3.

⁴ Oddly enough, it was occasionally confused with another beetle, the *aphaia*, which had an unlucky significance.

⁵ Hall, p. vii. There is the exception of the small late uninscribed scarabs with a suspension ring beneath, instead of a perforation (see above, § 4).

³ No. 7576; Hall, no. 211.

necklaces, etc., by the discovery of hundreds of small necklaces of scarabs and beads of faience in the dust-heaps of the temple of Queen Hatshepsut at Deir el-Bahri, in Western Thebes. They were the poor offerings of the *fellahin* at the shrine of Hathor, which the queen annexed to the great temple which she built in honour of Amen. These, when damaged or broken, or when the shrine became too full of them, were thrown out by the sacristans chiefly into the deserted courts of the ancient funerary temple of King Mentuhotep close by, used in Hatshepsut's time as a dust-heap, where they were found during the excavations of the Egypt Exploration Fund in 1903-07.¹ Nearly all are of XVIIIth dynasty date, and Deir el-Bahri has been one of the most fruitful sources of the fine blue scarabs of Hatshepsut's reign that are to be seen in our collections.

6. Material and colouring.—This brings us back to the artistic interest of the scarab. 'As the gem and coin are microcosms of Greek art, so the scarab is a microcosm of the art of Egypt.'² On some scarabs we see miniatures, whether good or bad, of the great scenes sculptured on the temple-walls, executed within the compass of an oval space half an inch long. On others cheap and inferior artists produced only the roughest of scenes, the rudest of hieroglyphs.

'To trace the development of the scarab and its ornaments from the elaborately conventionalized scenes of the XIIth dynasty with their beautiful spiral patterns or the finely cut legends of their priestly or official owners, through the fine designs of the XVIIIth dynasty to the delicately glazed pale blue faience amulets of the XXVIth, is one of the most interesting studies in the whole realm of ancient art.'³

The first and always the most generally used material for the making of scarab-seals was steatite or steaschist, a grey schistose stone (silicate of magnesium) resembling, but not so soft as, soapstone. This when used for scarabs was usually glazed, generally either blue or green. Faience appears under the XIIth dynasty, and was generally used from the time of the XVIIIth dynasty. Under the XIXth the faience scarabs of the cheapest kind were often cast in moulds, with disastrous effect. A fine deep blue glaze was used under the VIth-XIIth dynasties. A delicate blue glaze at the beginning of the XVIIIth dynasty gave way to the brilliant blue of the reign of Hatshepsut and the beginning of that of Thothmes III. During his reign green became the fashion and persisted under the XIXth, though blue is often found. In later times green was usual, until under the Saïtes a delicate light-blue glaze took its place. The preservation of the colour is more usual on faience than on steatite scarabs. On the latter it has often disappeared or has turned brown. On faience, when the colour goes, blue usually turns white. A homogeneous hard blue paste, usually light-blue, was also used under the XIIth and XVIIIth dynasties, and a soft paste, also light-blue, was very common under the XXVIth. Hard stones of the finest kinds were used from the XIIth to the XIXth dynasty. Amethyst was the most usual in the earlier period, and the amethyst scarabs of the XIIth dynasty often have a gold plate on the base, on which the inscription was engraved. Usually, however, this plate has disappeared, or was never fixed, so that the scarabs have no inscription, though amethyst scarabs with inscriptions cut directly on the base are not unknown. The beautiful light-blue feldspar was also used at this time, as well as hæmatite, carnelian, green jasper, crystal, quartz (sometimes glazed blue), lapis-lazuli, and obsidian. Under the XVIIIth dynasty carnelian was the

favourite stone, though it was used more for cowroids than for scarabs proper. Bright yellow jasper followed at the end of the dynasty, and under the XIXth dynasty red jasper, red feldspar, carnelian, sard, and red stones generally, were in fashion, as also were crystal and chalcedony, and even jade (for heart-scarabs), but less commonly. Malachite and turquoise scarabs are very rare. Under the later dynasties lapis-lazuli supplanted all the others for small scarabs, and granite, diorite, and basalt were all used for the large heart-scarabs, as well as a stone usually called 'green basalt,' which is not a true basalt, and is called by Petrie¹ 'durite.' This was common at all periods for heart-scarabs, but was rarely used for the small scarabs. Metal scarabs are rare, though we may well suppose that they were often made of gold, especially under the XIIth and XVIIIth dynasties; and the splendid find of XIIth dynasty jewellery at Dashur includes golden scarabs splendidly inlaid with lapis, feldspar, and carnelian. Silver is so perishable that a silver scarab would be a great rarity. Bronze scarabs are usually Ptolemaic or Roman, rarely XXth dynasty. Blue glass scarabs are known under the XVIIIth and XIXth dynasties; they are often small and rudely cut, obviously of the cheapest description. Amber scarabs are very rare, but there is one of the Middle Kingdom in the British Museum.² The material is very perishable. Wood occurs under the XIIth dynasty, but is very rare. Ivory was also rarely used; the small amuletic scarabs of the VIth dynasty may be mentioned, and larger ones are sometimes found later on: these have usually magical inscriptions.³

7. Historical value.—The types of the scarabs of the various periods of the XIIth to the XXVIth dynasty are easily distinguishable. Under the XIIth dynasty a very naturalistic type was in vogue side by side with an oblong conventionalized type, which is the commoner of the two. In this type the legs are merely marked by striations at the sides. Under the XIIth dynasty larger and more oval scarabs of this type were usual. The wing-cases of this type were often not marked, under both dynasties. At the end of the Middle Kingdom we find the wing-cases often replaced by little serrated lines, like palm-sprigs. At the beginning of the XVIIIth dynasty a purely oval base was usual, and the hinder end of the scarab was sharply raised or hunched up; this is characteristic of the time of Amenhotep I. Later a naturalistic form, with less oval base and with triangular marks at the corners of the wing-cases, was *de règle*; this is the characteristic form of the reign of Thothmes III. and persisted with variations till the time of the Saïtes. Under the XIXth dynasty highly arched backs were common, and the legs were often cut free. Aberrant forms with almost pyramidal backs and elaborately cut heads are met with under both the XIIth and the XIXth dynasties, but are rarely found in the intervening period; the XIXth dynasty scarab-cutters seem occasionally to have tried to revive the forms of the Middle Kingdom. Under the Ethiopians (XXVth dynasty) began the archaistic revival of art generally, which went for its models back to the Old and Middle Kingdoms. Scarab-forms of the XIIth dynasty were now commonly imitated, and even their spiral base-designs were occasionally revived. But under the Saïtes of the XXVIth, though the sculpture of the Old Kingdom was imitated, scarabs of the Old Kingdom could not often be imitated, because there were so few to imitate—those in our museums which bear the names of monarchs of the IVth dynasty, for instance, are

considered by most writers on the subject to be all posthumous.¹ So a typical Saite form was evolved, with a characteristic bulbous abdomen which cannot be mistaken. Names of ancient monarchs were often put on them, as had already been the case under the XIXth dynasty. And that of Thothmes III. is almost as common on scarabs of the XXVth dynasty as on those of his own time.

This fact is apt to make us doubt the historical value of the scarab. If a scarab bearing the name of Menkaura is probably not, or one bearing that of Thothmes III. is not necessarily, of the time of the king whose name it bears, of what value is it as a means of dating objects with which it may be found? If the name of one king can be imitated on later scarabs, why not that of another? We know, however, that only a limited number of royal names were so imitated, and, when we find that a scarab bearing the name of Thothmes III. is identical in style with one bearing that of his successor, Amenhetep II., whose name was never imitated later, we know that the Thothmes scarab is of the XVIIIth dynasty. And so in all other cases. All scarabs of unimportant monarchs are contemporary, as are also all scarabs of Akhenaten and the other 'disk-worshippers,' who were regarded by all later Egyptians as abominable heretics, and whose names would never be commemorated. There is really very little uncertainty in the matter. So royal scarabs can be used by archaeologists well acquainted with scarab-lore as important evidence of the date of other antiquities with which they may be found. A crucial instance of this is the discovery of scarabs and rings of Amenhetep III., Queen Tii, and Akhenaten with Mycenaean antiquities in Greece. This was rightly taken to prove the date of these antiquities long before the other confirmatory evidence, which has conclusively shown that the Mycenaeans and Minoans were contemporary with XVIIIth dynasty Egypt, was available. At the time of the original discovery the study of scarabs in connexion with other Egyptian antiquities had not progressed so far as it has of late years, and doubt as to the contemporaneity of the scarabs with the monarchs whose names they bore was not altogether unjustified. But the criterion of style settles the matter now, and the possibility of a scarab being older than the antiquities with which it is found can thus be dealt with, and its evidence discounted. In the British Museum there is an obsidian scarab of the XIIIth dynasty which has the name of Shishak (XXIInd dynasty) cut upon it.² Its real date is settled by its style, about which there is nothing archaistic. The archaistic scarabs of the XXVth-XXVith dynasty are distinguishable (though sometimes with difficulty) from those which they imitate. They are most easily identified when they bear inscriptions which must demonstrably be later in date than the Middle Kingdom. Some confusion is caused by the habit of the XXVth dynasty Egyptians of putting names of imaginary kings on scarabs. Our other knowledge and the suspicious forms of the names themselves enable us to put these on one side as historical evidence. The only really 'historical' scarabs are the great medal-like scarabs of Amenhetep III., already referred to. But the value of the ordinary scarab as historical evidence is clear. The existence of a Hyksos king, Aapehti Nubti, who had been regarded as doubtful and been relegated by Eduard Meyer to the realm of religious fable, has possibly been confirmed by a British Museum scarab³ bearing his name. Its style is unmistakably of his time, the period just about the beginning of the XVIIIth dynasty. It

and any typical scarab of Aahmes and Amenhetep I. are as alike as two peas, both in style of make and in cutting of inscription. There is the possibility that the scarab may belong to Thothmes I., who bore the name Aapehti among his titles,¹ but it is equally possible that the scarab is King Nubti's. Then a scarab of Thothmes III., usurped by Hatshepsut, which is in the British Museum,² confirms to some extent the view of K. Sethe as to the peculiar succession of these two monarchs.³ Other analogous instances might be quoted. Indirectly much may be gleaned from scarabs. An interesting sidelight on history is given by the design, common on the remarkable scarabs of the Hyksos period, which shows the conflict between the desert lion and the river crocodile, probably typifying the contest between the Hyksos of the north and the Thebans of the south. The peculiar semi-barbaric designs of the scarabs of the Hyksos seem to have persisted in the north under the XVIIIth dynasty, and the Hyksos types come again into prominence, in a somewhat modified form, under the XIXth dynasty, where the style of the later 'Delta-scarabs' strongly reminds us of that of the Hyksos scarabs, which are often known by the same appellation. This is an interesting confirmation of the view that the Hyksos strain was by no means rooted out of the Delta by the XVIIIth dynasty kings, and that the people of the Delta, when it resumed its importance under the XIXth dynasty, were largely of Hyksos origin. The devotion to the god Set which was professed by the XIXth dynasty kings, and the constant appearance of this deity of the Hyksos, so hated in Upper Egypt two centuries before, on the Tanite or Delta scarabs (often in his Hittite form as Sutekh, with horns and pigtail), are strong confirmation of this view. Ptah, the god of Memphis, is naturally also commemorated on scarabs of this period, when the seat of government was in the north. Ptah was the deity of the Memphites, and the Hyksos Set-Sutekh was the god, not only of the court at Tanis, but of the people of the Delta generally, under the XIXth dynasty. It was only when the Ramessids of the XXth dynasty returned to Thebes that Ptah resumed undivided sway over the north, the worship of Set disappeared, and the Hyksos-Tanite style of scarab went out of fashion. We thus see that the historical value of the scarab is by no means negligible, and that on all counts—religious, historical, and artistic—the little Egyptian seal in the form of the sacred beetle is one of the most interesting objects which antiquity has handed down to us.

LITERATURE.—S. Birch, *Catalogue of the Egyptian Antiquities at Alnwick Castle*, privately printed, 1880, p. 103 ff. (the first considerable catalogue of scarabs); E. A. W. Budge, in *Catalogue of the Hilton Price Collection*, London, 1897, p. 20 ff.; *The Lady Menz Collection*, London, 1896, p. 185 ff.; *Catalogue of the Egyptian Antiquities in the Fitzwilliam Museum*, Cambridge, 1891, p. 87 ff. (all valuable for inscriptions); W. J. Loftie, *An Essay of Scarabs*, London, n.d. [1881] (the first general book on the subject; uncritical, but illustrations good); W. M. F. Petrie, *Historical Scarabs*, do. 1889 (the first comprehensive work on royal scarabs); Budge, *The Mummy*, Cambridge, 1894, p. 231 ff. (valuable on the religious side); G. W. Fraser, *Catalogue of Scarabs*, London, 1900; F. L. Griffith, 'A Collection of Historical Scarabs' (The John Ward Collection), *PSBA* xxii. [1901] 305 ff., 386 ff., xxiii. [1901] 19 ff., 70 ff. xxii. [1910] 113 ff., should also be mentioned, and the art. 'Scarab,' by F. L. Griffith, in *EB*¹¹ xxiv. 301. (It should be noted as a curious fact that practically nothing has been written on scarabs by any but British archaeologists.)

H. R. HALL.

SCEPTICS (σκηπτικοί, ἐφεκτικοί).—In this article the term 'sceptics' is used strictly of the adherents of the doctrine which we know best from Sextus Empiricus (2nd cent. A.D.). There were, of course, sceptical tendencies in Greek philosophy long before his time. Xenophanes was regarded by the later sceptics as almost one of themselves, and with considerable justification. Protagoras (*q.v.*), the real author of the sceptical formula 'no more such than such' (οὐδὲν μᾶλλον τοῖον ἢ τοῖον), prepared the way for scepticism, but he was no sceptic himself, and his chief work was known as *The Truth* (Ἀλήθεια). We must carefully distinguish between real scepticism and disbelief in the trustworthiness of the senses, such as we find in the school of Democritus (*q.v.*) and in that of the Megarics (*q.v.*). Both of these rejected sensation altogether, but both maintained the reality of something inaccessible to sense. A disciple of Democritus, Metrodorus of Chios, said indeed,¹ 'None of us knows anything, not even this, whether we know or do not know,' but he also said,² 'All things are which one can think' (ἀ ἅν τις νοήσει), and he taught the doctrine of atoms and the void. The Megarics held that the senses were deceptive, but they maintained the reality of the Good, which they identified with the Eleatic One. The Academy (*q.v.*) under Arcesilaus and Carneades is often regarded as sceptical, but the genuine sceptics refused to admit that it was. The Academics, they said, were really dogmatists, since they affirmed dogmatically that things were 'incomprehensible' (ἀκατάληπτα), and to assert scepticism dogmatically is to cease to be a sceptic. Moreover, the Academics held that a belief might, for practical purposes, be more or less probable or justifiable (εὐλογον) or more or less convincing (πιθανόν). Sextus³ even reports a statement that Arcesilaus used scepticism only to test his pupils, and that he communicated the doctrine of Plato to those whom he found fit to receive it. The truth of the matter appears to be that the scepticism of the Academy was primarily a scepticism *ad hoc*, directed against the 'comprehensive impression' (καταληπτικὴ φαντασία) of the Stoics, and in opposing that doctrine Arcesilaus and Carneades were faithful to the teaching of Plato, who held firmly that it was impossible to have scientific knowledge of the world of becoming. The Academic doctrine of probability is also Platonic; for Plato conceived it to be possible to give a 'likely account' (εἰκότα λόγον) even of this world. Neither Arcesilaus nor Carneades wrote anything, and of course their controversies with Zeno and Chrysippus would attract more attention than anything else that they may have taught; but there is no evidence that they felt any inconsistency between their official positions as 'successors' (διάδοχοι) of Plato and their doctrine. Cicero and Plutarch, who represent the best Academic tradition, are quite unconscious of any departure from Platonism on their part. It may be that they became so absorbed in their criticism of the materialistic dogmatism of the Stoics that they let the other side of Platonism fall into the background, but there is no reason to think that their sceptical attitude to the Stoic theory of knowledge would have been disowned by the founder of the Academy. In any case, though the sceptics derived most of their arguments from the Academy, they were quite justified in holding that they were separated from it *to toto caelo*.

¹ Frag. 1 (Diels).

³ *Pyrrh. Hyp.* i. 234.

² Frag. 2 (Diels).

The favourite formula of the sceptics was that the wise man would withhold his assent from all opinions and would 'suspend his judgment' (ἐπέχεσθαι), and there is good evidence that this formula is due to Arcesilaus. That created a difficulty for the sceptics, who did not wish to appear indebted to the Academy for anything, and it probably explains the fact that they claimed *Pyrrho of Elis* as their founder and liked to call themselves *Pyrrhoneans*. Pyrrho belonged to an earlier generation than Arcesilaus, and it was possible to represent the Academy as having borrowed its weapons from him. It is very difficult to accept this account of the matter. Cicero often names Pyrrho, but never as a sceptic. For him he represents the doctrine of apathy (*q.v.*), or insensibility to feeling (ἀπάθεια), and he also tells us that he regarded virtue (ἀρετή) as the highest and even the sole good. He says too, more than once, that the doctrine of Pyrrho had long been extinct, and these things make it necessary for us to examine the alleged scepticism of Pyrrho more closely.

For the originality of Arcesilaus cf. Cicero, *Ac.* ii. 77: 'Nemo umquam superiorum non modo expresserat, sed ne dixerat quidem, posse hominem nihil opinari, nec solum posse, sed ita necesse esse sapienti'; and Diog. Laert. iv. 23: (Ἀρκεσίλαος) πρῶτος ἐπισχὼν τὰς ἀποφάσεις. The present writer was therefore wrong in saying (in art. ACADEMY, § 2) that Arcesilaus 'made use of the weapons provided by scepticism.' The doctrine of ἐποχή is entirely his own. In the *de Finibus* Cicero takes Pyrrho as the type of extreme moral rigorism, more extreme even than that of Ariston of Chios at a later date. He apparently knows nothing of a Pyrrhonian scepticism.

Our difficulties are considerably increased by the fact that Pyrrho, like Arcesilaus, wrote nothing, and we are confined to what we can learn on good authority of his life. According to Diogenes Laertius, the chronologist Apollodorus² said that he was originally a painter and had 'heard' Bryson (the Megaric philosopher).³ Subsequently he attached himself to Anaxarchus (the Democritean) and followed him everywhere, so that he associated with the 'Gymnosophists' and 'Magi' in India. That was, of course, when Anaxarchus went there in the train of Alexander the Great (326 B.C.). The authority for this is Pyrrho's younger contemporary, Antigonos of Carystus, who wrote a special treatise on him and visited Elis shortly after his death to collect information about him. Diogenes Laertius⁴ quotes him as follows:

'Antigonos of Carystus in his work on Pyrrho says of him that he was originally a poor painter with no reputation, and that a work of his called *Torchbearers* is preserved in the Gymnasium of Elis, which is fairly good. He used to frequent solitary and desert places, and showed himself only on rare occasions to his people at home. This he did from hearing an Indian reproaching Anaxarchus, saying that he could not teach anything good to any one else, since he himself haunted the courts of kings. He was always in the same disposition, so that, if any one left him when he was still speaking, he finished what he had to say for himself, and yet he had been excitable in youth. Often too he went on a journey without giving notice to any one and wandered about with whomsoever he chanced to meet. And once, when Anaxarchus fell into a pond, he passed on without going to his assistance, and, when some blamed him, Anaxarchus himself commended his indifference and absence of affection (τὸ ἀδιάφορον καὶ ἀσπασχον αὐτοῦ). And once, when he was caught talking to himself and asked the reason, he said he was practising to be good. He was not overlooked by any one in their inquiries; for he would speak both at large and in answer to questions, so that even Nausiphanes fell a victim to him in his youth and said one should try to combine Pyrrho's character and one's own theories. He said too that Epicurus admired Pyrrho's way of

¹ Cf. ii. 43, iii. 12, iv. 43.

² F. Jacoby, *Apollodorus Chronik*, Berlin, 1902, p. 340.

³ Much confusion has been caused by the apparent statement in Diogenes that Pyrrho 'heard Bryson the son of Stilpo.' The present writer would read καὶ ἤκουσε Βρύσσωνος [τοῦ Στίλπωνος, ὡς Ἀλέξανδρος ἐν Διαδοχαῖς] etc. etc. etc. Bryson belonged to the first generation etc. etc. etc. mentioned in Plato's thirteenth etc. etc. etc. the chronological difficulties raised by Zeller. The interpolated extract from Alexander no doubt refers to Timon (see below).

⁴ ix. 62.

life and constantly asked questions about him. Pyrrho was so honoured by his native city that they appointed him chief priest and gave immunity from taxation to all philosophers on his account.¹

This passage has been quoted in full because it is the earliest well-attested instance of Indian influence on Greece, and it reflects with obvious fidelity the astonishment of the good people of Elis on finding that they had produced a saint. We see that those who knew Pyrrho well described him as a sort of Buddhist *arhat*, and that is doubtless how we should regard him. He is not so much a sceptic as an ascetic and a quietist.

As we see from Antigonus, Pyrrho was accustomed to expound his views orally, but they were known to later times only from Timon of Phlius (c. 322-232 B.C.), whom Sextus² calls the prophet of his doctrines. Timon is an interesting figure, and we know a good deal about him, as Antigonus also wrote a life of him, some notices from which have found their way into Diogenes Laertius. He had 'heard' Stilpo,³ but subsequently attached himself to Pyrrho at Elis. After making a competence as a 'sophist' at Chalcædon, he settled at Athens, where he lived to a great age. His best-known work was the *Silloi*, a mock-heroic poem, in which he satirized the philosophers of the past and those of his own day without mercy, in order to bring out the superiority of Pyrrho to them all. He addresses him thus:⁴

'O aged man, O Pyrrho, how or whence didst thou find a way of escape from the service of the beliefs and empty-mindedness of the sophists, and burst the bonds of all deceit and persuasion? Thou didst not care to inquire whose⁵ breezes rule in Hellas, whence and whither each one goes.'

This means that Pyrrho had emancipated himself from the vain subtleties of the Megarics (for they are meant by 'sophists' at this date), and there is probably an allusion to the great popularity of Stilpo. In any case, Timon is particularly severe on the Megarics, though he himself was brought up in their school. But he does not mean that Pyrrho found release in scepticism. This is made quite plain in a passage from his elegiac poem *Indalmoi*:

'This, O Pyrrho, is what my heart is longing to hear, how it is that, while as a man thou livest in such great ease and quiet, without a care and immovably constant, thou dost yet rule alone among men, like the god that ranges over the whole earth in his chariot, displaying the fiery burning circle of his rounded sphere.'⁶

And Pyrrho answers:

'Truly I will tell thee, as it appears to me to be, the word of truth (for I have a straight rule to judge how the nature of the divine and of the good is ever) whence comes for a man the most equable life.'⁷

A sceptic can hardly speak of a 'word of truth' (*μῦθον ἀληθινόν*) or of a 'straight rule' (*ὀρθὸς κανὼν*) or of the true 'nature' (*φύσις*) of the divine and good. Sextus⁸ feels the difficulty and gets over it only by putting an unnatural emphasis on the words 'as it appears to me to be' (*ὥς μοι καταφαίνεται εἶναι*). It is surely clear, however, that Timon is making Pyrrho declare a higher truth of some sort. What this was we may partly infer from a quotation from one of Timon's prose works preserved by Aristotle:⁹

'He himself [Pyrrho] has left nothing in writing, but his disciple Timon says that the man who is to be happy must look to these three things: (1) what is the nature of things, (2) what attitude we should take to them, and (3) what those who take this attitude will gain by it. He says that he declared that things were in an equal degree indifferent and unstable and incapable of being tested. For this reason neither our senses nor our opinions are true or false. So we must not put our trust in them but be free from beliefs and inclinations and un-

shaken, saying of each thing in turn that it no more is than it is not, or that it both is and is not, or that it neither is nor is not. And those who take this attitude, Timon says, will gain first speechlessness (*ἀφασία*) and then imperturbability (*ἀταραξία*).'¹⁰

Now it is easy to see how this could be regarded as scepticism, and so in fact Aristotle regards it. But that is a superficial view. In the first place, all the apparently sceptical phrases are Democritean and such as Pyrrho might well have learnt from Anaxarchus, the disciple of Metrodorus of Chios; and in particular the appeal to the nature of things (*ὅσα πέφυκε τὰ πράγματα*) is one which a sceptic is debarred from making, though quite in order for a Democritean. It is possible too that the doctrine of imperturbability is Democritean, though the importance given to it by Pyrrho is more Indian than Greek. In the light of that we see that the passage has really much more to do with the supposed good things and bad things of life than with speculative questions, and that it is, in fact, a recommendation of the indifference (*ἀδιαφορία*) and apathy (*ἀπάθεια*) towards these which is the only doctrine that Cicero attributes to Pyrrho. The really remarkable thing is that Sextus can quote so little of a definitely sceptical character even from Timon. He refers to a saying, 'That honey is sweet, I do not lay down; that it appears sweet, I admit,' which is sound Democritean doctrine, and to an argument that 'nothing divisible can arise in an indivisible time,' which is plainly Megaric. To appreciate the importance of this argument from silence, we must remember that Timon lived at Athens when the controversy between Arcesilaus and Zeno was in full blast, and that he attacked both of them without mercy. If he had ever said anything about suspense of judgment (*ἐπαχρή*), we may be sure that Sextus would have repeated it. The speechlessness (*ἀφασία*) of which Timon did speak is a different thing. Sextus is quite aware of this, and he explains¹¹ that the sceptics do not receive the doctrine of *ἀφασία* in the sense that the nature of things is such as to produce speechlessness (which is just what Timon says it is), but as a mere indication of a temporary condition (*πρόσας*) at the moment when they pronounce the word. Sextus is far too candid a writer to identify the sceptical 'suspense of judgment' with an attitude based on the 'nature of things,' which implies a dogma.

The actual words of Sextus are: Τὴν ἀφασίαν παραλαμβάνομεν οὐχ ὡς πρὸς τὴν φύσιν τοιοῦτων ὄντων τῶν πραγμάτων ὥστε πάντως ἀφασίαν κινεῖν ἀλλὰ δηλοῦντες ὅτι ἡμεῖς τὴν, ὅτε προφερόμεθα αὐτήν, ἐπὶ τῶνδε τῶν ζητούμενων τοῦτο πεπρόσμεν.¹²

We have seen that Cicero regarded the philosophy of Pyrrho as extinct, and this is confirmed by Menodotus, who is himself reckoned as one of the leading sceptics before Sextus, and who stated distinctly that Timon had no successors, and that the school (*ἀγωγή*) lapsed till it was revived by Ptolemy of Cyrene.¹³ The writers of *Successions* of course give us a complete list of the successors of Pyrrho down to Sextus, but the names are mere names for us, and there are in any case too few of them to bridge the interval. The first tangible personality we come to is Ænesidemus, who is of fundamental importance in the history of scepticism as the author of the 'ten tropes.' According to Aristotle,¹⁴ it was he who revived scepticism at Alexandria, and it is certain that he wrote a work called *Pyrrhæan Discourses* (*Πυρρῶναι λόγοι*). This was dedicated, Aristotle tells us,¹⁵ to one L. Tubero, who had been a member of the Academy along with Ænesidemus, who had deserted it on the ground that 'those of the Academy, especially the present, sometimes agree with the Stoic doctrines, and, if the truth must be told, they are

like Stoics fighting with Stoics.' We know that it was Antiochus of Ascalon who introduced Stoicism into the Academy, and it is argued that, as Sextus¹ uses very similar language of Antiochus, Ænesidemus must refer to him too. In that case, as Antiochus died not long after 70 B.C., Ænesidemus must be earlier still. This would make it very difficult to explain Cicero's statement that Pyrrhonism was extinct in his time. It is easier to suppose that the successor of Antiochus, his brother Aristus, continued and even aggravated his eclectic tendencies. Cicero stayed with him at Athens in 51 B.C. and was shocked by the 'topsy-turvy' (*sursum deorsum*) condition of the Academic philosophy in his hands.²

Aristocles³ says that no one paid any more attention to the old sceptics than if they had never been born, and that it was only the other day that 'one Ænesidemus' began to rekindle the rubbish at Alexandria (ἐχθές καὶ πρῶν ἐν Ἀλεξανδρείᾳ τῇ κατ' Αἰγυπτὸν Αἰνησιδηνός τις ἀναξωπυρεῖν ἤρξατο τὸν ὕβλον τοῦτον). Aristocles belongs to the 2nd cent. A.D., and his words suggest a fairly recent date. On the other hand, H. von Arnim has found at least eight of the ten tropes in Philo⁴ and concludes that Ænesidemus must have been earlier than Philo. That, however, is not quite decisive, since the tropes are mostly to be found already in Cicero's *Academica*,⁵ which means that they are crumbs from the table of Carneades and may have been put together before Ænesidemus. The idea that the Academy came to an end with Philo and Antiochus is responsible for a good deal of faulty argument on this subject. We know little about it between that time and the rise of Neo-Platonism, but it still went on without interruption. We cannot, therefore, say at what date Ænesidemus seceded from it.

The *Pyrrhonian Discourses* of Ænesidemus were read by the patriarch Photius in the 9th cent. A.D., and he has left us an analysis of their contents. The first book dealt with the divergence between the sceptics and the Academy, and we see that Ænesidemus definitely laid down that things were incomprehensible either by sense or by thought. That, then, is a complete scepticism and the first of which we have any clear record. The subjects of the remaining books, however, are just those we know to have been treated by Carneades and do not suggest any great originality. We are certainly doing Ænesidemus too much honour if we attribute to him the argument against causation reported by Sextus.⁶ In this the noticeable thing is that, while he gives a subtle proof of the impossibility of a corporeal thing being the cause of any thing either corporeal or incorporeal, he simply takes for granted that the incorporeal is not the cause of any thing, since it is intangible (ἀναφής φύσις) and cannot act or be acted upon. Now Carneades might assume this in arguing against Chrysippus, who would admit it at once, but it is not a sufficient refutation of all possible theories of causation, as it ought to be. The natural conclusion is that we have here simply an argument of Carneades transcribed from Clitomachus. The arrangement in eight 'tropes' (τρόποι) of the various fallacies into which people fall in dealing with problems of causation⁷ is more likely to be the original contribution of Ænesidemus to the subject.

Quite distinct from these are the ten 'tropes' (τρόποι, also called τόποι and λόγοι) with which his name is chiefly associated. These are simply a rather unsystematic list of sceptical common-places. They are as follows:

(1) From the divergence of animals (some animals have one sense highly developed, some another); (2) from the divergence of human beings; (3) from the different constructions of the organs of sense; (4) from circumstances (sleep, waking, jaundice, etc.); (5) from positions, distances, and situations (the colours in a dove's neck, the square tower which appears round at a distance, the oar which appears bent in water); (6) from mixtures (we never perceive anything by itself, but always accompanied by light, heat, moisture, etc.); (7) from the quantities and

structure of objects (scrapings of horn are white, but horns are black; scrapings of silver are black, but silver is white); (8) from relativity (τὸ πρὸς τι); (9) from frequency or rarity of occurrence; (10) from laws and customs, mythical arguments, and dogmatic prejudices.

Even in the case of Ænesidemus the sceptic still eludes us. According to Sextus,¹ he was not a true sceptic any more than the Academics; for he regarded 'Pyrrhonism' simply as 'a way to lead us to the philosophy of Heraclitus,' and Sextus more than once speaks of 'Ænesidemus after Heraclitus' (Ἀνησιδηνός or αὐτὸς περὶ Ἀνησιδηνόν καθ' Ἡράκλειτον). Zeller and Diels regard this as impossible. It is suggested that Ænesidemus merely gave an account of the philosophy of Heraclitus or that he really meant to say that the philosophy of Heraclitus was a way to lead us to scepticism. It seems impossible to accept either of these explanations. Sextus must have known perfectly well how the matter stood, and he appears to be making a verbal quotation. If we remember that in the Academy, to which Ænesidemus had belonged, scepticism must always have been regarded, at least officially, as a way to lead us to the philosophy of Plato, it is not hard to understand the point of view. There is a perfectly intelligible sense in which a scepticism like that of Ænesidemus might lead to a philosophy like that of Heraclitus (*g.v.*). The Ephesian himself founded his philosophy on the contradictions of the world of appearance, and it was just on those that Ænesidemus insisted. The Stoics themselves appealed to Heraclitus as their precursor, and they distorted his doctrine accordingly, and Ænesidemus may very well have thought that he understood it better than they did, and that it was better approached from the side of scepticism than from that of dogmatism. If that is the true explanation of his attitude, he was quite right in his view, but Sextus was also quite right in refusing to recognize him as a true sceptic.

The man who really formulated the canons of scepticism—those with which Sextus works—was Agrippa, of whom we know nothing whatever except that he must have lived between the time of Ænesidemus and that of Sextus. His name does not occur in any of the lists. His tropes are on a far higher level than those of Ænesidemus and may be given thus:

1. *The argument from discord* (ὁ ἐκ τῆς διαφορίας). An object proposed we find, both in life and in death, and there is a divergence from which there is no escape. One assertion (φάσις) has no more claim to be accepted than its opposite; for each is a part of the discord (μέρος τῆς διαφωνίας).

2. *The argument from infinite regress* (ὁ ἀπὸ τῆς εἰς ἀπειρον ἐκτάσεως). If we attempt to demonstrate our assertion, that which is brought forward as a proof itself requires a proof, and that in turn another, and so on *ad infinitum*. As we cannot find a point from which to start, we are reduced to suspense (ἐποχή).

3. *The argument from relativity* (ὁ ἀπὸ τοῦ πρὸς τι). An object appears such and such relatively to the judging subject and to the things along with which it is observed, but we must suspend our judgment as to what it is relatively to nature (πρὸς τὴν φύσιν).

4. *The argument from hypothesis* (ὁ ἐξ ὑποθέσεως). This is applied when the dogmatists arbitrarily select a point in the infinite regress and take it for granted.

5. *The argument from circular reasoning* (ὁ ἐκ ἀλλήλων τρόπος). This is applied when the dogmatists give as proof of a thing something which itself requires to be confirmed by that thing.

To these Sextus² adds two tropes formulated by 'the more recent sceptics.' These are:

'Everything is apprehended either from itself or from something else. But (1) that nothing is apprehended from itself is proved by the discord among philosophers with regard to all things sensible and intelligible, from which discord there is no appeal, since we can make use of no criterion sensible or intelligible, because whatever we take is untrustworthy as being subject to discord. So (2) nothing is apprehended from anything else; for, if that from which a thing is apprehended always has to be apprehended from something else, we fall either into the argument in a circle (ὁ ἐκ ἀλλήλων τρόπος) or into the infinite regress (ὁ ἀπείρος τρόπος).'

⁷ Sextus, *Pyrrh. Hyp.* I. 180.

Scepticism had at last found its formula, and it was soon to find a singularly competent exponent. The date of Sextus Empiricus is quite uncertain. He is mentioned in Diogenes Laertius, but not by Galen, so we may probably refer him to the beginning of the 3rd or the end of the 2nd century A.D. Nor do we know where he lived. From his own works it appears that he was a doctor, and his name suggests that he belonged to the empirical school. On the other hand, he expressly denies¹ that the empirical school of medicine was to be identified with the sceptical philosophy. The sceptic would rather adopt the principles of the methodic school. However that may be, the preservation of his writings (which fill over 750 pages in Bekker's edition) is one of the greatest pieces of good fortune in the general wreck of Hellenistic philosophical literature. That is partly, no doubt, because it has preserved so much of the acute dialectic of the Academy (a point which has not yet been sufficiently attended to), but not altogether so. Sextus is a real personality and a genuine thinker, and he is actually at his best in such parts of his work as are obviously original, above all in his polemic against the grammarians. He mentions 'imperturbability' (*ἀταραξία*) in a perfunctory way, as he was bound to do, but he himself would not have cared for such a state in the least. He has an active mind and a passion for clearness. The ordinary arguments against scepticism do not touch him at all; for it is an attitude with him, and not a doctrine. He is thoroughly sceptical about scepticism itself. He also makes a strong impression of sincerity and candour, and he has great learning and considerable humour. His works are the only key we have to the real meaning of Hellenistic philosophy.

The books entitled *ὑποπαρασκευασμένων* *ΑΒΤ* are the most valuable for our purposes, as they contain an outline of the whole system with historical notices. In the MSS the two other works of Sextus are combined under a common title, *Πρὸς μαθητικούς* (*adv. Math.*), which properly belongs only to the books against the teachers of the *ἐγκύκλια μαθήματα* or liberal arts (= *adv. Math.* i.-vi.), while the treatise against the dogmatists (*Πρὸς δογματικούς* = *adv. Math.* vii.-xi.) is further subdivided into three sections, *Πρὸς λογικούς* (two books), *Πρὸς φυσικούς* (two books), and *Πρὸς ἡθικούς* (one book).

It is, of course, impossible to give here any idea of the wealth of matter in the works of Sextus; but it is desirable to note two points of interest in his philosophy. In the first place he was faced with the necessity of finding some rule of life. The Academic plan of taking probability as our guide was not open to him; for he is too clear-sighted to admit that a sceptic can regard anything as more probable than anything else. He therefore falls back on the rule that we should follow the usage of the society in which we live (*ἡ συνήθεια*). There is no more reason to suppose that this usage is wrong than to suppose that it is right; and, that being so, the simplest thing is just to follow it. At the very least that will save us from being ridiculous, as the Stoics were apt to be. They declared things which were shocking to ordinary people to be 'indifferent,' but the sceptic has no more reason to believe them indifferent than not, so he will respect all the conventions. Sextus has a true enthusiasm for this doctrine of conformity, and it gives great value to his discussion of grammar, where it is really applicable. It is not a heroic creed, but it will save a man from the worst excesses. The other point is more immediately connected with his medical profession. Though he refuses to admit that anything can be an 'indicative sign' (*ἐνδεικτικὸν σημεῖον*) of anything else, he fully admits the existence of the 'reminiscent sign' (*ἀναμνηστικὸν σημεῖον*). There is, after all, a sort of sequence (*ἀκολουθία*) in appearances, and it is possible to make observation

¹ Sextus, *Pyrrh. Hyp.* i. 236.

(*τήρησις*) of this and to act accordingly. When he is on this subject, he uses language very much like that of positivism (*q.v.*), and it may be questioned if he is always quite faithful to his scepticism. Perhaps, if the matter is pressed home, he is not; but he satisfies himself on the point. We have seen that we are to follow the usage of society in our actions, and, if nature too has ways of its own, we may as well conform to these. Everywhere conformity is the lesson of scepticism.

LITERATURE.—N. MacColl, *The Greek Sceptics from Pyrrho to Sextus*, London, 1869; V. Brochard, *Les Sceptiques grecs*, Paris, 1887; A. Goedeckemeyer, *Die Gesch. des griech. Skeptizismus*, Leipzig, 1905; see also R. Hirzel, *Untersuchungen zu Cicero's philos. Schriften*, do. 1877-83, iii. 64 f.; P. Natorp, *Forschungen zur Gesch. des Erkenntnisproblems im Alterthum*, Berlin, 1884, p. 63 ff., and the Appendix.

The fragments of Timon of Philus have been last edited by Diels along with the *Life of Diogenes Laertius in Poetarum Philosophorum Fragmenta*, Berlin, 1901. The most recent edition of Sextus Empiricus is that of Bekker (Berlin, 1842), but a new one by H. Mutschmann was in preparation before the War.

JOHN BURNET.

SCEPTICISM.—See AGNOSTICISM, BELIEF, DOUBT.

SCEPTICISM (Buddhist).—I. Buddhism a 'rationalism.'—Buddhism is a 'faith,' since it is ultimately based upon the authoritative word of the Master, the omniscient one; but it is also a 'free thought' or a philosophy, since the Master is not satisfied with a blind adhesion to his word and emphasizes the necessity of personal conviction, of personal inquiry. A Buddhist walks by 'sight' (*darsana*), not by 'faith' (*śraddhā*):

'Now, O monks, are you going to say: "We respect the Master, and out of respect for the Master, we believe this and that"?—No, O Lord!—Is not what you will say to be true, that exactly which you have yourselves, and by yourselves, known, seen, apprehended?—Exactly so, O Lord.'

This attitude of the Buddhist mind, which is an early one and may be described as the attitude of 'criticism,' is illustrated by the formula, 'Every thing that is well and truly said is a word of Buddha'—a recast of an earlier formula, 'Every Buddha's word is well said.'² The Buddhist philosopher is justified in developing any consequence of the traditional sayings, in evolving any theory—even a quite new one—which 'is' right, in denying the truth of any traditional saying which seems to be wrong. That has been taught by Buddha, not because it is true, but because it is useful.

That *sūtra* is not a *sūtra* of "an obvious meaning" (*nītārtha*), but of a "meaning to be understood" (*neyārtha*); that has been said with an intention (*samudhaya*); for "it is the habit of Buddhas to comply with the world."³

Buddhists, if not from the beginning, at least at a very early stage in the development of their philosophy, have been sceptics as concerns the truth of the obvious meaning of the Buddha's sayings: that only is to be regarded as true which can be proved to be true.

2. Scepticism properly so called.—Scepticism is likely to arise from rationalism, as soon as the philosopher admits that what does not support critical, dialectical inquiry (*vicārāsahā*) cannot be true. Such is the position of the Buddhist philosopher who recognizes in pure reasoning the standard of truth. The later Buddhism states this position very clearly;⁴ but early Buddhism also gives evidences of it.

¹ See *Majjhima*, i. 265; cf. i. 71, and *Mahānidāna*, p. 225; L. de la Vallée Poussin, 'Authority of the Buddhist Agamas,' *JRAS*, new ser., xxxiv. [1902] 375. *Evaddhime: Opinions sur l'histoire de la dogmatique*, Paris, 1902, p. 153, *The Way to Nirvāṇa*, Cambridge, 1917, p. 155.

² Cf. and cf. *Suttanipāṭa*, p. 78, and *Sikṣāsamuccaya* (Bibl. Buddh. I., Petrograd, 1902), p. 16.

³ See *Mūlamanidhyanaka* (Bibl. Buddh. II., Petrograd, 1912), pp. 41, n. 1, 291.

⁴ See artt. *MATHYAMAKA*, *MAHĀTĀNA*, *NIMLIEH* (Buddhist), *PHILOSOPHY* (Buddhist).

Early Buddhism¹ denies the existence of a 'doer,' of a permanent self. It does not deny that there is a 'doer' or a self from the experimental or common standpoint (*sammutisachcha*). People at large (*mahatī janatā*) believe that 'thought, mind, or consciousness' is an 'I,' but this belief is the result of the inveterate habit of regarding thought as an 'I'; for, if we examine the notion of a permanent 'I,' we see that such an 'I' would be the master of his sensations. There are perceptions, feelings, states of consciousness; a permanent 'I' cannot be these perceptions, or the place of these perceptions, etc. Later Buddhism criticizes not only the notion of 'I,' but also either the notion of an exterior thing (*bāhya*)—the Vijñānavādins²—or all notions—the Mādhyamikas (*q.v.*).

The last-named philosophers have surpassed all Buddhists in dialectical inquiry; they have no tenets of their own; their only aim and task is to show the real or supposed antinomies which destroy all the commonly accepted ideas:³

Who walks? The man who has not begun walking, or the man who has finished walking, or the 'walker' (*gantā*)? Not the walker, since there would be two 'walkings': the walking by reason of which the walker is styled a walker and the walking which is attributed to the walker if one were to say that the walker walks.

Who obtains liberation? The man who is bound or the man who is not bound? Not the former, for he is bound; not the latter, for he is liberated.

The object of knowledge is previous to, or simultaneous with, or posterior to knowledge. The three

A cause (*pratyaṃ*) is so called because it is produced by reason of it. As long as a cause is not produced, the so-called cause is not a cause and cannot produce any effect. Seeds do not produce oil, just as sand does not produce oil, because, as long as oil is not produced, seeds, just like sand, are not a cause.

The effect is either existent or non-existent. If it is existent, it does not require a cause; if it is non-existent, thousands of causes cannot do anything to it.

There is a doer because there is a deed; there is a deed because there is a doer. Does the doer exist first and then the deed? or the deed first and then the doer? The existence of both is very much jeopardized.

Knowledge, say the Vijñānavādins, knows both itself and its object, just as a candle renders visible both itself and the non-self. If that were the case, darkness would darken itself as it does darken the non-self, and darkness therefore would not be visible.

Several of the Madhyamaka antinomies look rather sophistical and even childish; some may be worthy of attention. But is the general principle of their inquiry sound? Are facts (*vatthusachcha*) ascertained through the right means of knowledge (*pamāṇa*) to be rejected because we fail to understand them, to give a satisfactory definition of them (*lakṣhanasachcha*)? Is the dialectical method the criterion of existence and non-existence? Śāṅkara rightly criticizes this philosophical position, and his remarks are worth considering.⁴ But, as a matter of fact, Buddhists do not deny the existence of the things which they regard as logically impossible; they are sceptics as concerns ultimate reality, not as concerns mere existence. In the same way, Śāṅkara himself believes that individual experiences and objects exist without being real; and we may wonder how Śāṅkara, who

has stated so clearly the contrast between the two truths, existence and reality, in the *Upaniṣads* and in the Vedānta, could be so slow in discovering his own theories in Buddhism.

LITERATURE.—See the works quoted in the footnotes.

L. DE LA VALLÉE POUSSIN.

SCHISM.—1. Meaning of the word.—The word *σχίσμα*, as used in classical Greek, means a 'tear' or 'rent.' Aristotle¹ employs it to denote a cleft or division in a hoof, and Theophrastus² to denote a division in a leaf. In the Synoptists it has the same literal meaning. In Mt 9¹⁶ = Mk 2²¹ it means a rent in a garment. In the Gospel of St. John and 1 Cor. it has a metaphorical sense, signifying in Jn 7⁴³ 9¹⁶ 10¹⁹ a difference of opinion about our Lord, and in 1 Co 1¹⁰ 11¹⁸ party strife in the Church. In the second of the passages from 1 Cor. it is connected with *αἵρεσις*:

ἀκούω σχίσματα ἐν ὑμῖν ὑπάρχειν . . . δεῖ γὰρ καὶ αἵρεσις ἐν ὑμῖν εἶναι· ἵνα οἱ δοκιμοὶ φανεροὶ γένωνται ἐν ὑμῖν.

Various attempts have been made to distinguish between *σχίσμα* and *αἵρεσις* in this passage,³ but the two words probably mean much the same.⁴ If there is any distinction to be made between them, *αἵρεσις* may imply the formation of a separate society or faction, not merely the holding of views different from those of the majority. In any case the difference is of degree, not of kind.

In the writings of the 'Apostolic' Fathers *σχίσμα* is used in much the same sense as in the passages quoted from 1 Cor., of party strife within the Church.⁵ On the other hand, *αἵρεσις* has already come to mean 'false belief,' as in Ignatius, *ad Trall.* vi., where, speaking of Docetism, he says:

ἁλλοτρίας δὲ βωτάνης ἀνέχεσθαι, ἥτις ἐστὶν αἵρεσις.⁶

But differences of opinion in the Church tended to become separation from the Church, especially when the Church began to spread among men of various nationalities and modes of thought. Thus, in course of time, the word *σχίσμα* came to denote a separation from the main body of the Church, not involving the rejection of any of the fundamental doctrines of the faith, while *αἵρεσις* was confined to a denial of one or more of the fundamental doctrines. This use of *σχίσμα* appears first in Irenæus, whose words are:

Ἀνακρινεῖ δὲ καὶ τοὺς τὰ σχίσματα ἐργαζομένους κενούς ὄντας τῆς τοῦ θεοῦ ἀγάπης, καὶ τοὺς ἰδίῳ λυσitelῆς σκοποῦντας, ἀλλὰ μὴ τὴν ἐν ὧσιν τῆς ἐκκλησίας καὶ διὰ μικρὰς καὶ τὰς τυχοῦσας αἰτίας τὸ μέγα καὶ ἐνδοξον σῶμα τοῦ Χριστοῦ τέμνοντας καὶ διαίρουσας, καὶ οὖν τὸ ἐπ' αὐτοῖς, ἀναίρουσας . . . Οὐδεμία δὲ ἡλικιότης δύναται πρὸς αὐτῶν κατόρθωσις γενέσθαι· ἡλικίη τοῦ σχίσματος ἐστὶν ἡ βλάβη.⁷

Among the Fathers writing in Latin Augustine may be regarded as representative. In his treatise against Faustus he defines schism, as distinct from heresy, in the following terms:

'Schisma . . . est eadem opinantem atque eodem ritu colentem quo ceteri solo congregationis delectari discedit.'⁸

Some of the Fathers assert indeed that schism tends to become heresy. Jerome says:

'Inter haeresim et schisma hoc esse arbitrantur, quod haeresis perversum dogma habeat; schisma propter episcopalem disensionem ab Ecclesia separatur. Ceterum nulum schisma non sibi aliquam confingit haeresim.'⁹

¹ Hist. An. ii. 1. 26.

² Ph. iii. xi. 1.

³ E.g., Trench, *NT Synonyms*, London, 1876, p. 359.

⁴ Theodoret, in his commentary on the passage (J. A. Cramer, *Catenæ Græcorum Patrum in NT*, Oxford, 1844, v. 214), says: Σχίσματα οὐ δογματικὰ λέγει· ἀλλ' ἐκεῖνα τὰ τῆς φιλαρχίας . . . αἵρεσις τὰς φιλονεικίας λέγει, οὐ τὰς τῶν δογματικῶν διαφορὰς. Cf. Cyprian, *Test.* iii. 86, 92. In Tit 3¹⁰ αἵρετικός = σχισματικός. But cf. *Essays on the Early Hist. of the Church and the Ministry*, ed. H. B. Swete, London, 1918, pp. 45, 319.

³ See *Nyāyasūtra*, ii. i. 8; and Vasubandhu's *Vimśakakārikā*, ed. and tr. in *Muséon*, xiii. [1912] 53.

⁴ The Buddhist maintains that external things are impossible; for aggregates can be defined neither as different nor as non-different from the atoms, etc. 'This conclusion we reject as improper, since the possibility or impossibility of things is to be determined only on the ground of the operation or non-operation of the means of right knowledge; while, on the other hand, the operation and non-operation of the means of right knowledge are not to be made dependent on preconceived possibilities or impossibilities. Possible is whatever is apprehended by perception or some other means of proof; impossible is what is not so apprehended. Now the external things are, according to their nature, apprehended by all the instruments of knowledge; how then can you maintain that they are not possible, on the ground of such idle dilemmas as that about their difference or non-difference from atoms?' (Comm. on *Vedāntasūtra*, n. ii. 23, tr. G. Thibaut, *SBE* xxxiv. [1890] 421).

And Cyprian appears even to identify the two.¹ But on the whole the distinction in meaning between the two words is preserved both by ancient and by more recent writers.²

2. The Church and schism.—Cyprian is the first writer to discuss the relation of the Church to schism. He had to combat Novatianism, which, like Montanism and the later Donatism, was a Puritan movement on the part of men impatient of the evils in the Church and dreading the contamination of what they regarded as Catholic laxity.³ 'Those who tolerate such laxity,' they said, 'cease to be a part of the true Church.'⁴ Cyprian's attitude towards schism may be gathered from his letters and especially from his tract *de Unitate Ecclesiae*.

'Deus unus est,' are his words, 'et Christus unus, et una Ecclesia eius, et fides una, et plebs una in solidam corporis unitatem concordiae glutino copulata . . . Quidquid a matrice discesserit, seorsum vivere et spirare non poterit.'⁵

He heaps up metaphors to illustrate the unity of the Church. It is like the unity of the three Persons of the Godhead. He who does not keep this unity does not keep the law of God or the faith of the Father and the Son:

'Hanc unitatem qui non tenet, Dei legem non tenet, non tenet Patris et Filii fidem, vitam non tenet, et salutem.'⁶

The schismatic is worse than the apostate. The latter sins and may repent; the former sins daily and glories in his sin. Apostates injure themselves only; the schismatic endangers the souls of very many.⁷

Augustine had to deal with the Donatists (*q.v.*). He takes much the same view of schism as Cyprian had done. The Donatists argued that the Catholics by their laxity had forfeited their baptismal privilege, and that the Donatists alone formed the true Church. To this Augustine replied that the validity of a sacrament does not depend upon the holiness of him who administers it, and that the only feature by which the true Church can be recognized is its catholicity.

'Securus iudicat orbis terrarum, bonos non esse qui se dividunt ab orbe terrarum.'⁸

Schismatics like the Donatists should be punished. Those who are outside the Church have not Christ, the head of the Church.

'Clamate, si audetis puniantur . . . sceleris sive libidinis facinora seu flagitia; sola sacraligia volumus a regnantibus legibus impunita.'⁹ 'Habere autem caput Christum nemo poterit, nisi qui in eius corpore fuerit.'¹⁰

But he does not go so far as Cyprian, who had maintained that sacraments administered by separatists were invalid.¹¹ He only asserts that no schismatic can receive them validly, so long as he remains a stranger to that unity in love which is the Catholic Church. And in his general attitude towards schismatics, like Optatus of Milevis, he is more kindly than Cyprian.¹² But schism, in his view, as in that of Cyprian, is a grievous sin.

¹ Cyprian, *Ep.* iii. 3, lii. 1, lxxii. 2, lxxiv. 11, quoted by Harnack, *Hist. of Dogma*, Eng. tr., London, 1893, ii. 92.

² Cf. Hooker, *Ecclesiastical Polity*, v. GS. 6 ad fin.: 'Heretics, as touching those points of doctrine wherein they fall, and schismatics, as touching the quarrels for which or the duties wherein they divide themselves from their brethren . . . have all forsaken the true Church of God.'

³ 'Schism may have what we must call a nobler root [than pride and self-assertion]. It may spring from impatient, undisciplined zeal against evil in the Church' (O. Gore, *Roman Catholic Claims*, London, 1905, p. 120).

¹² Optatus, *de Schism.* Don. i. lii. 28: 'Sunt sine dubio [Donatistae] fratres, quamvis non boni.' For Optatus see O. R.

Schism, then, since it is rebellion against authority, and since it causes a breach in the unity of the Church, was always regarded in early times as a very serious matter. To maintain unimpaired the unity of the Catholic Church was the duty of all good Christians.¹ But how was this unity to be maintained? By means of the sacraments, especially the Eucharist, the *sacramentum unitatis*. And, further, the centre of unity was the bishop. What Ignatius² constantly affirmed of particular churches Cyprian transferred to the Church as a whole.

'The Episcopate is one,' he says; 'the individual bishops are members of a great brotherhood, bound together in a corporate unity. Bishops form a kind of equal co-partnership.'³

This view of the episcopate, however, gradually gave place to another. Quite early in the writings of the Fathers is found the idea that churches founded by the apostles and churches to which they wrote letters were able to say with more certainty than others what the teaching of the apostles really was. Irenaeus speaks of Rome and Smyrna as such churches. His words are:

'Maximae et antiquissimae, et omnibus cognitae, a gloriosissimis duobus apostolis Petro et Paulo Romae fundatae et constitutae ecclesiae, eam quam habet ab apostolis traditionem . . . indicantes, confundimus omnes eos . . . qui praeterquam oportet colligunt.'⁴

And a little later:

Καὶ Πολύκαρπος . . . ὑπὸ Ἀποστόλων κατασταθεὶς . . . ἐν τῇ ἐν Σμύρνῃ Ἐκκλησίᾳ, ἐπίσκοπος . . . ἐξῆλθε τοῦ βίου, ταῦτα διδάσας αἰ, ἃ καὶ παρὰ τῶν Ἀποστόλων ἔμαθεν, ἃ καὶ ἡ Ἐκκλησία παραδίδωσιν, ἃ καὶ μόνον ἐστὶν ἀληθῆς.⁵

Tertullian⁶ enumerates Ephesus, Smyrna, Rome, Corinth, Philippi. Fulgentius⁷ speaks of Rome, Alexandria, Jerusalem. In all these lists Rome appears. Rome had been the capital of the world, and the bishop of Rome came to occupy a position of exceptional influence, partly because of the orthodoxy of the Roman Church, partly because of the position and history of Rome. The bishop of Rome, in fact, wielded in the Church the same kind of authority as the emperors had wielded in the State. Thus, in course of time, obedience to the Roman pontiff became the test of catholicity. Those who refused to submit to his authority were branded as schismatics. Optatus⁸ is perhaps the first of the Fathers to claim for the bishop of Rome universal jurisdiction—a claim which eventually came to be admitted by the Western Church generally. The growth of papal absolutism was indeed slow and was not without its checks—as, e.g., when Gregory the Great repudiated for him-

Vassall-Phillips, *St. Optatus of Milevis*, London, 1917. The Church recognized degrees of schism. The gravity of the schism was in proportion to the degree of separation from the main body (J. Bingham, *Antiquities of the Christian Church*, ed. London, 1870, ii. 870 f.). The worst form was the setting up of altar against altar. For Augustine's general attitude towards schism see P. Batiffol, in *The Constructive Quarterly*, v. [1917] 30-55.

¹ Cyprian is praised by Augustine because (in spite of the unjust claims of Stephen, bishop of Rome) he did not break the unity of the Church by separation. He is regarded as a typical instance of the 'unschismatic temper' (Augustine, *de Bapt.* v. 25-26; cf. Jerome, *adv. Lucifer.* 25).

² Cf. *ad Ephes.* 4, *Smyrn.* 8, *Trall.* 3. 'Ignatius is the incarnation, as it were, of three closely connected ideas: the glory of martyrdom, the omnipotence of episcopacy, and the hatred of heresy and schism' (P. Schaaf, *Hist. of the Church: Ante-Nicene Christianity*, new ed., Edinburgh, 1881, ii. 657).

⁵ *Id.* iii. 4.

⁶ *de Praescr.* 32, c6.

⁷ *de Trin.* 1.

⁸ *Id.* 2 (vii. 3): 'In qua una cathedra [Romae] unitas ab omnibus servaretur . . . ut iam schismaticus et peccator esset, qui contra singularem cathedram alteram collocaret.' Cyprian has sometimes been claimed as a supporter of the 'papal' view on the strength of his use of the phrase 'Cathedra Petri' (*de Unit.* 4). But his whole argument shows that the phrase denotes, not the see of Rome, but the bishop's seat of authority in each several church. See Gore, *The Church and the Ministry*, London, 1900, p. 156 n.; *Roman Catholic Claims*, p. 177 n. ff.; *The Early Hist. of the Church and Ministry*, p. 250 ff.

self the title of universal bishop.¹ But, on the whole, it was steady, till at length Thomas Aquinas in the 13th cent. could say, in language which was accepted as authoritative by the whole Church in the West:

'Et ideo proprie schismatici dicuntur qui propria sponte et intentione se ab unitate Ecclesiae separant . . . Caput [Ecclesiae] est ipse Christus, cuius vicem in Ecclesia gerit summus pontifex. Et ideo schismatici dicuntur qui subesse reuocant summo pontifici.'²

He goes on to distinguish between heresy and schism:

'Haeresis per se opponitur fidei; schisma autem per se opponitur unitati ecclesiasticae charitatis . . . Peccatum schismatis est gravius peccato infidelitatis . . . Schisma est contra bonum multitudinis, id est, contra ecclesiasticam unitatem; infidelitas autem est contra bonum particulare unius . . . Schismatici habent aliquam potestatem quia retinent ordinem . . . Potest sacramentum tradere separatus . . . Duplex est spiritualis potestas—una quidem sacramentalis—alia jurisdictionalis' (schismatics have the former, but not the latter; cf. the whole section).

The final stage in the growth of papalism was reached in 1870, when the Vatican Council promulgated a series of decrees, one of which runs thus:

'Nos dogma esse definimus: Romanum Pontificem, cum ex cathedra loquitur—id est, cum doctrinam de fide vel moribus ab universa Ecclesia tenendam definit, ea infallibilitate polleere qua Divinus Redemptor Ecclesiam suam instructam esse voluit: ideoque definitiones ex sese, non autem ex consensu Ecclesiae, irreformabiles esse.'³

No doubt such claims were, in themselves, not new. The bull *Unam Sanctam* of Boniface VIII. at the beginning of the 14th cent. had claimed for the pope absolute authority, but this was repudiated in the next century by the Council of Constance, which demanded that the pope should obey its decisions in matters of faith. The Vatican decree makes the pope independent of Councils.⁴

3. Revolts from Rome.—Absolutism, in Church as in State, tends to produce restlessness and eventual revolt. And it is roughly true that the majority of the 'schisms' from the 11th cent. onwards have come about as the result, direct or indirect, of the absolutism which finds its chief expression, in matters ecclesiastical, in the Church of Rome. The first great revolt was the separation of the Eastern Church from that of the West. Up to the 11th cent. the external unity of the Church had been, on the whole, maintained. The various schisms—Montanism, Novatianism, Donatism—had not seriously impaired that unity. But in 1052 the long-standing differences, partly racial, partly ecclesiastical, between Rome and Constantinople were brought to a head by the formal excommunication of the Eastern Church by Pope Leo IX. The position taken up, and held ever since, by the autocephalous Churches of the East is that the Western Church, by introducing innovations regarding the foundations of Church government, separated herself from the Mother Churches of the East, which are the true heirs of the old undivided Church.⁵ It has been argued that this separation was not a pure schism, since a point of doctrine was involved. But the addition of the *Filioque* clause to the Nicene Creed was not, in itself, important doctrinally. In the words of Laud it was 'but a question in manner of speech, and therefore not fundamental.'⁶ The protest of the East was chiefly against its insertion in an ecumenical creed on purely Western authority—that of Pope Nicholas I. Thus the separation of

⁵ See art. EASTERN CHURCH.

⁶ A Relation of the Conference between William Laud, Archbishop of Canterbury, and Mr. Fisher the Jesuit, London, 1639, § 9; Laud, *Works*, Oxford, 1849, ii. 27.

East and West was, fundamentally, a protest against papalism.¹ In the West external unity was maintained, not infrequently by force, till the 16th cent., when a considerable part of Europe broke away from the papal obedience. In England the Reformation was conservative in character. Episcopacy was retained. The ancient creeds of the Church were kept as the authorized expression of the faith. The public services were founded on the primitive offices. But elsewhere, save in Scandinavia, Episcopacy was rejected. In Germany the reforming movement took the form of Lutheranism (*q.v.*); in Scotland and, to a limited extent, in France Calvinism (*q.v.*) became the accepted form of Protestantism. So far as England is concerned, the last stage in the separation from Rome was reached when, in 1570, Pope Pius v. published his bull of excommunication, *Regnans in Excelsis*. By the bull the Anglican 'schism,' hitherto regarded as provisional, was made definite.²

4. Post-Reformation schisms.—The reign of Queen Elizabeth saw the rise of Puritanism (*q.v.*) and Presbyterianism (*q.v.*) within the Church of England. In the latter part of this reign the Puritan party became influential, and it grew still further in strength during the next reigns, though there was, as yet, no considerable secession from the Church. Congregationalism (*q.v.*), from small beginnings in Elizabeth's reign, became prominent during the Commonwealth. It would have nothing to do with the parochial system. The visible Church was, in its view, made up of faithful men and women, and of such only,³ freely gathered together into congregations, each congregation being autonomous. Thus, in one of its main features, it resembled Donatism. In 1633 the first congregation of Baptists⁴ was formed by a secession from the Congregationalists. Both these bodies were democratic and therefore farther removed than the Anglican Church from Roman Catholic autocracy. The final separation between that Church and Puritanism was brought about by the 'fatal' Act of Uniformity of 1662. From this Act Dissent took its rise. The next great secession was that of Methodism (*q.v.*), under the leadership of John Wesley. He himself declared that he lived and died a member of the Anglican Church, but his action in ordaining bishops and presbyters made separation inevitable. 'Ordination,' in Lord Mansfield's words, 'is separation.' Since that time numerous separated bodies have come into existence in Britain, America, and the British colonies. This 'fissiparous tendency' has been ascribed to the 'centrifugal force of Protestantism.' Probably, however, since it is found chiefly among Anglo-Saxons, it is, in essence, racial—the result of a strong individualism, and perhaps also of a certain self-regarding temper and an impatient zeal against evil in the Church. Nor must it be forgotten that the Anglican Church has in the past displayed something of the arrogant spirit which brings about schisms. She has too often shown a want of sympathy with new ideas

¹ The 'schism' of Antioch in the 4th cent. did not result in a permanent separation from the main body of the Church, and the 'Great Western Schism' (1377-1417) was not, strictly speaking, a schism at all, since it did not involve any denial of papal authority, but was a dispute as to which of the rival popes had the right to wield that authority.

² Roman Catholic theologians active and passive schism, the notion from the Church on the part of those whom the Church rejects by excommunication. Thus the Anglican Church can say: 'Schisma patitur, non fecimus.'

³ 'The kingdom of God is not to be begun by whole Parishes, but rather by the worthiest were they never so few' (Robert Browne, *A True and Short Declaration*, Middelburg [1583]; see art. BROWNIISM).

⁴ See art. ANABAPTISTS.

and new movements. In striving after uniformity she has, not infrequently, sacrificed unity.

5. The ethics of schism.—Two opposite views have been held in regard to schism on its ethical side. (1) There is the view, first formulated by Irenæus in the passage quoted at the beginning of the article, that schism is so great an evil that nothing can justify it, and that no reforms brought about by schismatics can make up for the harm caused by the schism.¹ (2) The opposite view is that churches, like commercial undertakings, are all the better for competition, and that schisms are desirable in that they promote a healthy rivalry—that in short 'a plurality of independent Christian communities in the same country is the ideal state of things.'² The latter view has been largely abandoned during the last few years by Nonconformists as well as by Churchmen. The words of Richard Baxter, 'He that seeth not the necessity of unity knoweth not the nature of the Church,'³ represent, on the whole, the attitude of the great majority of thoughtful people at the present time. 'We have at least ceased to be proud of our divisions,' says a leading Nonconformist. 'A great longing possesses many of us to break down the barriers which separate us one from another.'⁴ And indeed it is difficult, if not impossible, to maintain this view if the teaching of the Bible is accepted. Just as the prophets of the older Dispensation deplored the division between Israel and Judah (Is 11¹², Ezk 37¹⁶, Jer 3¹⁸, Hos 1¹¹), so our Lord and the NT writers constantly put forward unity in the Church as the ideal (Jn 10¹⁶⁻¹⁷, esp. vv. 20-23, Eph 4, Ro 16¹⁷, Gal 3²⁸). Moreover, the metaphors used to describe the Church—family, vine, body, temple, etc.—all emphasize the thought of oneness in Christ. There are, further, the practical evils of division—overlapping, waste of power, and rivalry, often degenerating into mutual hostility. In regard to the former view, it may be admitted that schism is an evil, since it is contrary to charity and that unity which is Christ's ideal for the Church, and is in many cases an act of disobedience to lawful authority. But the question remains, At whose door does the sin lie in any particular case of schism? The selfish and arrogant temper which is both the cause of schism in others and itself schismatic may be found in the body from which separation is made as well as in that which separates. In the case of the 'Anglican schism' the contention of the great Anglican divines of the 17th cent.—Hooker, Jewel, Jeremy Taylor, and the rest—is that the Church of England was compelled by the arrogant demands of Rome to break away from her obedience, and that, if that Church has separated from Rome, she has never 'swerved either from the word of God, or from the Apostles of Christ, or from the primitive Church.'⁵ It may be thought that the English reformers displayed too much impatience and were over-

hasty in some of their proceedings. In no ecclesiastical quarrel is one party wholly in the right. But, when all deductions are made, it remains true that 'we were justified [in our separation from Rome] because the only terms on which we could retain communion with Rome were sinful terms.'¹ The Dissenters took up much the same position in regard to the Church of England. They contended that it was impossible for them to remain in communion with her, since they honestly and *ex animo* believed that they would be committing sin if they did so.² The extremists among them went so far as to declare that the Church of England had ceased to be a Christian Church. In like manner the separation of the Free Church of Scotland from the Established Church in the 19th cent. was regarded by the secessionists as the assertion of a great spiritual principle which made it impossible for them any longer to remain members of the Establishment.

If, then, schism is sometimes justified, it is yet clearly contrary to the ideal of our Lord and His apostles. The principle of schism has rarely been defended. At the present time the evils of separation are becoming felt more perhaps than at any previous era in the history of the Christian Church, and suggestions are being made in various quarters with the view of healing the divisions of Christendom. These are, as yet, for the most part tentative, although in Australia the question of the reunion of the Australian Church in communion with the Church of England and the Presbyterian Church seems to have advanced beyond the tentative stage.³ But, before any large plans for reunion can be carried into effect, it would seem necessary that the various separated bodies should make it quite clear what they regard as essential and what they are prepared to sacrifice. Rome, officially at least, demands submission to the authority of the pope as the only condition of reunion. The Anglican Church, following the lead of the American Episcopal Church,⁴ has, in the 'Lambeth Quadrilateral' of 1888, laid down 'as a basis for reunion' the following principles: (1) the acceptance of the Holy Scriptures as the rule of faith; (2) the acceptance of the Apostles' and Nicene Creeds as the sufficient statement of faith; (3) the recognition of the two sacraments, Baptism and Holy Communion; and (4) the recognition of the historic episcopate.⁵ In March 1917 the 'Federation of Evangelical Free Churches of England,' wishing 'to seek closer federation with one another for the better witness to, and service of, the Gospel,' adopted the reports of four Committees which were drawn up with the object of promoting 'unity and communion . . . with other branches of the Church of Christ.' By action such as this the ground is being cleared and the hope of ultimate reunion and the healing of schisms brought nearer to realization. But it will take time and demand the exercise of much faith and patience before the consummation comes about. We must

¹ Mason, p. 542.

² W. B. Selbie, in *Mansfield College Essays*, London, 1900, p. 29 ff. and the authorities there quoted. 'In the case of the protestant dissenters the whole argument turned upon the point whether the terms of communion with the church of England were or were not sinful. Church writers were ready to admit that if they were *thought* to be sinful, those who thought so were bound in *foro conscientiae* to secede' (Mason, p. 542).

³ H. Lowther Clarke (archbishop of Melbourne), in *The Constructive Quarterly*, v. 19 ff.

⁴ See Lacey, p. 216 ff. The document of the American bishops, drawn up in 1888, differs somewhat in form, though not in essentials, from that emanating from the Lambeth Conference.

⁵ Episcopacy has been the instrument of the Spirit . . . [but] it is conceivable that it may be changed out of recognition or that another instrument may be found. You may hold with unhesitating faith that the Church of Christ is one, and that its unity will, in good time, be made manifest, but it may be unwise to pin your faith exclusively to episcopacy' (Lacey, p. 45).

Campbell, *A Spiritual Pilgrimage*, do. 1917, p. 298 ff.; P. T. Forsyth, *Lectures on the Church and the Sacraments*, do. 1917 ('We look forward to an Ecumenical Christianity').

⁵ Jewel, *Works* (Parker Society), Cambridge, 1848, iii. 59 ff. For other references see A. J. Mason, *The Church of England and Episcopacy*, Cambridge, 1914, ch. i.: 'There is no Catholic principle which can justify us in supposing that either the . . . Eastern Church or the Anglican Church has been guilty of the sin of schism, in that sense in which schism is the act of self-withdrawal from the Church catholic' (Gore, *Roman Catholic Claims*, p. 137).

not make the old mistake of identifying unity and uniformity. In the early Church there was practical unity combined with a great variety of local use and custom. And at the present time certain 'Uniat' Churches of the Roman obedience have their own rites. 'In una Fide nihil officit consuetudo diversa.' And, finally, we must recognize that 'the necessary prelude to reunion is not a common formula but a whole-hearted acceptance of a common principle of thought and conduct.'¹ The unity of the Church must be put on a religious rather than a theological basis. We must recognize that all Christians are brothers in Christ, and this recognition will enable us to promote τὴν ἐνότητα τοῦ πνεύματος ἐν τῷ συνδέσμῳ τῆς εἰρήνης (Eph 4⁸).

H. W. FULFORD.

SCHLEIERMACHER. — Friedrich Daniel Ernst Schleiermacher was born in Breslau in 1768 and died in Berlin in 1834. He is among the most important and influential of German theologians and has been called, not without reason, the father of modern theology. The boldness of his new departures, the wide range of his thought, and his experimental method mark him out as a pioneer.

I. Life and character.—Like many great men, Schleiermacher owed more to his mother than to his father. His mother, née Stubenrauch, was a woman of keen intellect and deep piety; she guided her son's earlier education, and throughout her life the two were knit together by bonds of the closest affection. His father, Gottlieb, was chaplain to a Prussian regiment in Silesia. His duties took him frequently away from the home and so left the family largely to the mother's care. He was a Reformed theologian of the old school and of a stern and unbending orthodoxy. As might be expected, plain living and high thinking were the rule in his household. The young Schleiermacher began his school-days at five years of age. In 1783 he was sent along with his brother and sister to a Moravian school at Niesky in Upper Lusatia and two years later to the Moravian College at Barby. In his many journeys the father had come into close contact with the Moravians and coveted for his children the pious atmosphere and healthy moral discipline of their educational system. To the son also this was at first equally congenial, but later the bonds began to chafe his restless spirit. He confesses to a constitutional scepticism, or itch for inquiry, which caused him no little mental disquiet and ultimately led to a temporary breach both with his teachers and with his father. He declined to bow to their authority and insisted on his own intellectual and spiritual independence, but always in the most filial and reverent spirit. At the same time he was deeply influenced by the Moravian teaching and tone, and to this he owed the strain of deep piety which is so marked in all his writings. In 1787, with the full consent of his father, Schleiermacher

left Barby and entered the University of Halle. At that time Halle was a centre of rationalism under the influence of Semler and Wolf. Schleiermacher attended their lectures and those of Eberhard, from whom he learned that love of Plato for which he afterwards became conspicuous. He also studied NT criticism, but neglected the OT, to his lasting disadvantage. But his main interest was in the work of Kant, Jacobi, and Spinoza. Even as a student he began a reconstruction of Kant's system on lines suggested by his study of Plato, while from 'the holy and blessed Spinoza' he derived the foundation ideas of his ethical system. This eclectic course of study left him, at the end of his university career, with little more than the hope of 'attaining, by earnest research and patient examination of all the witnesses, to a reasonable degree of certainty, and to a knowledge of the boundaries of human science and learning.'¹

In 1790 Schleiermacher obtained his licentiate and became tutor in the house of Count Dohna at Schlobitten in W. Prussia. For such a position his independent spirit was not altogether suited, but there is no doubt that he gained considerably in ease of manner and *savoir faire* from the home life of the Dohna family. In 1794 he was ordained and became for a time assistant to his uncle, the aged pastor of Landsberg-on-the-Warthe. Two years later he moved to Berlin to become chaplain to the Charité Hospital. This early sojourn in Berlin was the most formative period in his career. His ecclesiastical duties were largely formal, and he spent most of his time in philosophical and theological study and in intercourse with a wide and charming circle of friends. This drew him out of himself and completed the process of refinement begun at Schlobitten. It was the time when the Romantic movement was at its height, and Schleiermacher's sensitive and imaginative spirit was deeply influenced by it. His intimacy with F. Schlegel and his rather dangerous platonic friendship with Eleonore Grunow, the wife of a Berlin pastor, stirred his emotional nature to its depths and enriched his human sympathies. The firstfruit of this period of fermentation was the epoch-making work, *Reden über die Religion*, issued in 1799, in which, as against its 'cultured despisers,' he vindicated the place of religion in man's nature and laid the foundations of a theology based upon experience. The following year appeared the *Monologen*, in which he outlined his ethical system and asserted the freedom of the human spirit in its relations both with society and with the universe. Both books show the influence of his deeper studies in Spinoza and Fichte.

In 1802 Schleiermacher left Berlin in order to become pastor in the little town of Stolpe in Pomerania. The change was altogether to the advantage of his moral and spiritual development. It released him from the too fascinating literary and æsthetic influences of Berlin and gave him time to think and to cultivate his soul. While at Stolpe, he completed the translation of Plato which he had begun along with Schlegel—a task which confirmed him in the belief that he was dealing with the greatest of the philosophers. There, too, he published the first of his strictly philosophical works, *Grundlinien einer Kritik der bisherigen Sittenlehre*—a Herculean labour which produced but little effect owing to its obscurity of style and its purely negative and critical spirit. He passes in review the systems of Plato and Spinoza, Kant and Fichte, and decides very strongly in favour of the two former; but even these he considers deficient in that they give no complete account of the laws and ends of human life as a whole. What Schleiermacher desiderated and

sought himself to supply was a moral system which would regard the universe as a realm of ends. During this period also he paid more attention to preaching, which he regarded as the best means of bringing his personal influence to bear on the general sense of mankind in the mass. He sought by it to bring home to men the power of religion, especially in its ethical and practical aspects.
